PRESIDENT'S MESSAGE

Welcome to College of the North Atlantic (CNA)!

Congratulations on making the most important step toward your future – securing a post-secondary education that includes essential skills, knowledge, hands-on training, experiential learning, access to highly qualified expertise and state-of-the-art equipment, and experiences that will make you in demand for today's industry needs.

Whichever program you've chosen at CNA – whether it's online, in person or blended – be assured that it will be the beginning of an exciting journey towards success! We want you to know that you will achieve all of this in an inclusive and diverse learning environment where there is a team of faculty and support staff ready to work with you to develop all the tools you need.

We value the connection we've made with you so far and we can't wait for that to grow into a long-lasting bond as you make the transition from student to graduate to alumni! It will happen quicker than you think!

Thousands of students, just like you, are eager to learn, develop their ideas and talents, and explore new concepts. Some of you are coming to CNA fresh out of high school, or you may be a mature student returning to college after a long absence, or you're interested in upskilling and earning microcredentials, or you're an international student wanting to pursue new opportunities.

Whatever the path is that brought you here, we are so happy to help you reach your dreams and goals.

With creativity, innovative thinking and hard work, a rewarding career to establish your place in a continuously evolving workforce is within your reach.

Let's get ready to start this journey – now!

Elizabeth Kidd
CNA President and CEO

ABOUT THE COLLEGE

College of the North Atlantic (CNA) is Newfoundland and Labrador's public college, with a rich history dating back more than 55 years. One of the largest post-secondary educational and skills training institutions in Atlantic Canada, CNA operates 17 campuses across the province and offers more than 100 full-time diploma, advanced diploma and certificate programs in:

- Academics, Applied Arts and Tourism
- Business and Information Technology
- Engineering Technology
- Health Sciences
- Industrial Trades and Natural Resources

CNA also delivers more than 250 online courses and more than 20 programs through its award-winning distributed learning service. Exploring beyond traditional approaches to education and training, the College serves individuals of all ages and interests, offering responsive, asynchronous and synchronous learning platforms and individualized, custom-designed contract training programs

With a commitment to accessibility, diversity and life-long learning, CNA offers exciting experiential learning opportunities through cross-cultural exchanges, community development and applied research projects. Each year, approximately 2,500 students graduate and pursue rewarding, creative careers doing what they were trained to do.

Enacted by the House of Assembly, through the College Act, 1996, CNA is headquartered in Stephenville on the island's west coast.

IMPORTANT NOTICE

This Calendar is intended to assist readers in understanding the academic and administrative structure, policies and procedures of College of the North Atlantic ("the College") and to provide information about current course offerings at the College.

Various academic and administrative departments have developed the material contained in this publication. All general information and course references have been checked for accuracy, but some inconsistencies or errors may remain. If you become aware of any, please bring these to the attention of the College Registrar. The College reserves the right to make changes to the information contained in this publication without prior notice.

Students are responsible for familiarizing themselves with the specific information, rules and regulations of the College, as well as the specific requirements of each diploma, certificate or other recognition sought. While advice and counseling are available, it is the responsibility of each student to ensure that the courses selected at registration are appropriate to the requirements of the student's chosen program.

If there is any inconsistency between the general academic regulations and policies as published in this Calendar, and the regulations and policies established by resolution of the Board of Governors or the College's administration, the version established by the Board of Governors or the College's administration will prevail.

By the act of registration, each student agrees to be bound by the policies and regulations of College of the North Atlantic.

College of the North Atlantic disclaims all responsibility and liability for loss or damage suffered or incurred by any student or other party as a result of errors in, interruptions to, or delays or termination of its services, courses, classes or operations, which are caused by events beyond the reasonable control of the College, including force majeure, fire, flood, pandemic, riot, war, strike, lock-out, damage to College property, financial exigency, computer failure or the incompatibility of College computing systems with other systems.

ACCESS TO INFORMATION AND PROTECTION OF PRIVACY (ATIPP) ACT

College of the North Atlantic is committed to the protection of privacy and confidentiality of our students. The College collects, uses, and discloses your personal information in accordance with the *Access to Information and Protection of Privacy Act, 2015 (ATIPP)* and under the authority of the *College Act, 1996*.

Personal Information

Personal information means any identifiable information about you including your name, an identifying number such as your social insurance number or driver's license number, your birth date, your contact information, or your credit card information.

College of the North Atlantic collects and uses only as much of your personal information as is necessary to achieve the purposes for which it was collected, for uses consistent with that purpose, or where authorized by the *ATIPP* or another federal or provincial Act.

Collection

College of the North Atlantic collects your personal information for the purposes of facilitating admission, registration, academic progression, graduation, alumni relations, student services, and other activities related to our programs and courses. The type of personal information we may collect from you includes:

- a. Contact information (e.g., name, address, e-mail address, telephone number).
- b. Demographic information (e.g., age, gender, industry, occupation).
- c. Registration and enrolment information (e.g., educational records, transcripts).
- d. Proof of identity information (e.g., signature).
- e. Financial information (e.g., social insurance number).
- f. Health information (e.g., MCP card number, health insurance).

Use

College of the North Atlantic uses your personal information to deliver our programs and courses and provide services to you. College employees and third parties contracted by the College who need the information in the performance of their assigned duties or services will use your personal information for:

- a) Assessing an applicant's suitability for enrolment in our programs and courses.
- b) Administering academic awards, scholarships, and financial aid.
- c) Delivering programs and courses.
- d) Maintaining program accreditation
- e) Recording academic progress and achievement.
- f) Providing access to our student services such as Counselling and Personal Development Services, Career Employment Services, Accessibility Services, Residence Services, and Library Services.
- g) Maintaining student records.
- h) Maintaining tuition accounts.
- i) Collecting payments.
- j) Issuing tax receipts.
- k) Administering alumni and development operations.
- l) Performing program evaluation and accreditation processes as well as statistical and institutional research.
- m) Communicating with students regarding college business.

Disclosure

The College may disclose your personal information to facilitate admissions, registration, academic progression, graduation, alumni relations, student services and other activities related to our programs and courses (such as accreditation). Your information may be disclosed to:

- Student associations who need the information for administering their services.
- Federal and provincial government agencies who need the information for funding, statistical analysis, and planning purposes.
- Accrediting bodies

College of the North Atlantic will only release your personal information to third parties such as parents or funding agencies with your signed consent.

Deidentified information will be used for planning and organizational research purposes.

Contact

If you have any questions about the College's collection, use, and disclosure of your personal information, please consult <http://www.cna.nl.ca/About/Your-Privacy.aspx> or contact the college's Access and Privacy Coordinator for more information:

HEADQUARTERS ADMINISTRATION LIST

President's Office

Elizabeth Kidd, President & CEO
Geoff Peters, General Counsel & Corporate Secretary

Human Resources

Deidre Dunne, Associate Vice-President – Human Resources

International

Elizabeth Vincent, Associate Vice-President – International

Public Relations

Heidi Staeben-Simmons, Associate Vice-President – Public Affairs
Morgan Pond, Director – Policy & Planning
Roger Hulan, Director – Marketing and Brand Strategy
Wayne Quilty, Director – Partnership, Entrepreneurship & Community Engagement

Finance and Administration

Annette Morey, Vice President – Finance & Administration
David Chow, Director – Information Technology
Rosalind Strickland, Director – Employment Services
Kelly Hanlon, Director – Finance
Sharon McLennon, Director – Workforce Innovation Centre

Campus Operations

Fergus O'Brien, Associate Vice President – Campus Operations
Judy Dobson, Director – Customized & Continuous Learning

Academics

Jason Rolls, Vice President – Academic & Applied Research
Stephanie King, Academic Planning Controller
Amanda Skanes, Director – Academic Development & Planning
Gary Thompson, Director – Industry Innovation
Theresa Pittman, Director – Strategic Initiatives
Kyle Massey, Director – Academic Quality Assurance
Jenn Wicks, Director – Teaching and Learning Innovation
Michael Long, Dean – Applied Research & Innovation
Sonny Hegde, Dean – Engineering Technology
Rex Oldford, Associate Dean – Engineering Technology
Brent Howell, Dean – Industrial Trades & Natural Resources
Marty Madore, Associate Dean – Industrial Trades & Natural Resources
Barbara Elliott, Dean – Health Sciences
Cheryl Dyke, Associate Dean – Health Sciences
Mary Parrott, Associate Dean – Health Sciences
Davida Smith, Dean – Academics, Applied Arts & Tourism
Lori Chaulk, Associate Dean – Academics, Applied Arts & Tourism
Mary Lewis, Associate Dean – Academics, Applied Arts & Tourism
Gus Yetman, Associate Dean – Academics, Applied Arts & Tourism
Stephen Warren, Dean – Business & Information Technology
Brenda Lockyer, Associate Dean – Business & Information Technology
TBD, Dean – Sustainable Development

Student Services

Shirley Woodward, Associate Vice President – Student Services
Jeff Martin, Director – Student Experience
Lori Hovey, Director – Student Services & Supports
Lisa Downey, Registrar
Michelle O'Quinn, Associate Registrar – Registration & Records
TBD, Associate Registrar – Admissions

ACADEMIC DATES 2023-2024

Fall 2023

July 31 – August 11 (Monday-Friday)

On-Line Registration for Fall Semester

September 4 (Monday)

College CLOSED – Labor Day

September 5 (Tuesday)

Fall Semester Starts – Welcome Back Campus Orientation

September 6 (Wednesday)

First Day of Course Instruction – Fall Semester

September 12 (Tuesday)

Deadline for submission of Credit Transfer/Exemption/PLAR requests – Fall Semester

September 19 (Tuesday)

Last day to add courses – Fall Semester

October 2 (Monday)

College CLOSED – National Day for Truth and Reconciliation

October 3 (Tuesday)

Fees Due – Fall Semester

Last day to opt out of Health & Dental – Fall Semester

October 9 (Monday)

College CLOSED – Thanksgiving Day

October 31 (Tuesday)

Last day to drop courses without academic prejudice – Fall Semester

November 13 (Monday)

College CLOSED – Remembrance Day

November 27 – December 8 (Monday-Friday)

On-Line Registration for Winter Semester

December 11 (Monday)

Last Day of Classes for Fall Semester (for courses with final exams)

December 12 - 21 (Tuesday-Thursday)

Exam Period for Fall Semester (includes Flex Day)

The Examination Timetable for the CAS Transfer: College-University program may vary from the above as it is aligned to the MUN Examination Schedule.

December 22 (Friday)

Last day of Fall Semester

Final Grade Submission by Instructors (9:00 am)

Final Grade Posting for Fall Semester (1:00 pm)

Christmas Break Begin

January 1 (Monday)

College CLOSED – New Year's Day

Winter 2024

January 2 (Tuesday)

Winter Semester Starts – Welcome Back/Orientation/Advising

January 3 (Wednesday)

First Day of Course Instruction – Winter Semester

January 9 (Tuesday)

Deadline for submission of Credit Transfer/Exemption/PLAR requests – Winter Semester

January 16 (Tuesday)

Last day to add courses – Winter Semester

January 30 (Tuesday)

Fees Due – Winter Semester

Last day to opt out of Health & Dental, New Students – Winter Semester

February 1 & 2 (Thursday & Friday)

No Classes for students / PD for employees

February 27 (Tuesday)

Last day to drop course without academic prejudice – Winter Semester

March 4 – 8 (Monday-Friday)

Reading Break – Winter Semester

March 29 (Friday)

College CLOSED – Good Friday

April 1 - 12 (Monday-Friday)

On-Line Registration for Spring/Intersession

April 15 (Monday)

Last Day of Classes for Winter Semester (for courses with final exams)

April 16 – 25 (Tuesday-Thursday)

Exam Period for Winter Semester (includes Flex Day)

The Examination Timetable for the CAS Transfer: College-University program may vary from the above as it is aligned to the MUN Examination Schedule.

April 26 (Friday)

Final Grade Submission by Instructors (9:00 am)

Final Grade Posting for Winter Semester (1:00 pm)

Last day of Winter Semester

Intercession / Spring 2024

April 29 (Monday)

Trades Intercession Starts – Industrial Trades programs only

April 30 (Tuesday)

First Day of Course Instruction – Trades Intercession

May 6 (Monday)

Intercession/Spring Semester Starts

Last day to add courses – Trades Intercession

Deadline for submission of Credit Transfer/Exemption/PLAR requests – Trades Intercession

May 7 (Tuesday)

First Day of Course Instruction – Intercession/Spring Semester

May 13 (Monday)

Deadline for submission of Credit Transfer/Exemption/PLAR requests – Intercession/Spring Semester

Fees Due – Trades Intercession

Last day to drop courses without academic prejudice – Trades Intercession

Last day to opt out of Health & Dental, New Students – Trades Intercession/Intercession/Spring Semester

Last day to add courses – Intercession (Non-Trades programs)

May 17 (Friday)

Last day to add courses – Spring Semester

May 20 (Monday)

College CLOSED – Victoria Day

Fees Due – Intercession

Last day to drop courses without academic prejudice – Intercession

June 3 (Monday)

Fees Due – Spring Semester

June 12 (Wednesday)

Last day of Classes for Intercession (course with final exams)

June 13 (Thursday)

Last Day of Classes for Trades Intercession

Some Industrial Trades programs may end sooner/later than the last day of classes for Intercession as Trades programs must follow the Provincial Plan of Training.

June 13 – 18 (Thursday – Tuesday)

Exam Period for Intercession (Non-Trades programs)

The Examination Timetable for the CAS Transfer: College-University program may vary from the above as it is aligned to the MUN Examination Schedule.

June 20 (Thursday)

Final Grade Submission by Instructors (9:00 am) – Intercession

Last day of Intercession

June 21 (Friday)

Final Grade Posting for Intercession (1:00 pm)

June 24 (Monday)

College CLOSED – June Day

June 28 (Monday)

Last day to drop courses without academic prejudice – Spring Semester

July 1 (Monday)

College CLOSED – Canada Day

August 8 (Thursday)

Last Day of Classes for Spring Semester (for courses with final exams)

August 9 - 20 (Friday-Tuesday)

Exam Period for Spring Semester (includes Flex Day)

August 21 (Wednesday)

Last day of Spring Semester

Final Grade Submission by Instructors (9:00 am) – Spring Semester

August 22 (Thursday)

Final Grade Posting for Spring Semester (10:00 am)

******Please note the Academic Dates are subject to change******

REGISTRAR'S OFFICE

The Registrar's Office is responsible for the administration of academic policies and procedures and for an effective system of operations for admissions, registration, enrollment, transfer credit, grades processing, student awards, student fees, student loans, transcripts, graduation and certification. This office is also responsible for the provision of information regarding all College programs and courses.

ADMISSIONS REGULATIONS

As per Admission Policy AC-102, the College will admit applicants who fulfill the admission requirements for credit-based programs and trades entry programs based on available resources. All credit-based programs and trades entry programs will have defined admissions requirements, approved by Academic Council where appropriate.

The College will admit applicants based on either a "First Qualified, First Accepted" admissions process or a Competitive Entry admissions process. For programs with "First Qualified, First Accepted" admissions, the College will have standardized admissions processes to ensure consistency across campuses. For programs with Competitive Entry admissions, the College will have objective procedures that guide the admission process.

Irrespective of the above, the College reserves the right to develop admissions policies, procedures and requirements for designated groups. The College may reserve space for aboriginal, international, and out-of-province applicants in any of its regularly funded programs. The College reserves the right to develop policies and regulations in recognition of industry and government partner requirements and the College scholarship requirements.

Applications may be submitted at any time. Students currently in high school must be in their final year of high school at the time of application submission.

Entry into Full-Time Programs

Candidates applying for full-time status must satisfy the following requirements as per Admission Operational Procedure AC-102-PR:

1. Apply on-line or in writing on the approved application form and submit the non-refundable application processing fee.
2. Meet the educational and other requirements for entry into the particular program; minimum of high school graduation diploma or recognized equivalent, or as otherwise specified.
3. In the case of high school students, provide an official copy of high school transcript. In the case of ABE students, provide a Record of Achievement or other equivalent official transcript.
4. Official transcripts or degree certificates issued in languages other than English must be translated into English and submitted to College of the North Atlantic along with the original official document. An official translation is an exact English translation of the academic documents that has been prepared by the issuing institution or a professional translator.
5. Provide required documentation or report for an interview or for testing when requested.
6. Meet physical entrance requirements of the program, where applicable.
7. Irrespective of 1 & 2 above, applicants may apply for admission under Special Admissions or may be considered as a Mature Student (Refer to Mature Student Requirements).

Admission Requirements

Applicants must meet all identified admission requirements of the program (AC-102-PR 1.1).

International applicants are advised to refer to the International Students section of the calendar for additional information regarding application and admission regulations, language requirements, international student fees, and other regulations for international students.

1. High School Graduation
High school graduation means the successful completion of required credit courses as specified by the applicable Department of the Government of Newfoundland and Labrador, or other equivalent Canadian jurisdiction.

High School students who complete modified courses with the third digit "6" or alternate courses with a third digit "7" will require further assessment before eligibility is determined. The completion of a modified course may prevent the applicant from being accepted into regular College programs. Applications from such applicants will be referred to the Accessibility Services Coordinator. (Refer to Procedure SS-207-PR).

2. High School Equivalency
Graduation with the following High School equivalencies will be considered for acceptance into any College program:
 - a. Basic Training for Skill Development (BTSD) Level 4 Certificate
 - b. Adult Basic Education Certificate (ABE) Level 3 (Level 4 prior to 1991)
 - c. General Educational Development (GED) Certificate
 - d. Grade XI Certificate (Department of Education, Public Exams prior to 1982)

Persons holding certificates as listed in a., b., or c. may require further evaluation before being accepted into a program; and upon being accepted, those applicants may be required to complete additional courses before entering the program.

3. Comprehensive Arts & Science (CAS) Transition

To be accepted into regular College programs, CAS Transition students must meet the admission requirements of their chosen subsequent program as articulated under the relevant program section of the College Calendar.

4. Mature Student Requirements

Applicants who do not meet the educational prerequisites for programs with “First Qualified, First Accepted” admissions process may be considered for Mature Student admission on an individual basis provided the following conditions are met:

- a. Applicants must be at least 19 years of age at the time of application and out of school for at least one (1) year.
- b. Applicants present an official transcript of grades for the highest educational level attained.
- c. Applicants must engage in CNA’s Mature Student Admissions Process.

Specific academic course prerequisites, in disciplines such as English, Math, Biology, Chemistry, and Physics, or any others specifically identified for admission cannot be waived via the Mature Student process.

Mature student status does not apply to programs with competitive entry admissions processes.

5. Special Admissions

Special circumstances may exist whereby applicants who fail to meet all of the criteria for admission may be recommended for acceptance. In such cases, the application will be referred to the Committee on Special Admissions.

The College may choose to designate groups comprised of individuals who face traditional barriers to post-secondary entry. In such cases, applicants who are high school students who do not meet the academic requirements (including having reached the legal school leaving age on the date of commencement of the program) must provide a letter of recommendation from the high school principal or guidance counsellor or any other special admission requirement as established by the College. In such cases, the College will establish a committee to review applications and ensure fairness through transparency in the admission process.

Applicants with disabilities, who do not meet program admissions requirements, will undergo further review to determine eligibility for admission, as outlined in Procedure SS-207-PR.

Specific academic course prerequisites as detailed in program admission requirements in the Academic Calendar, in disciplines such as English, Math, Biology, Chemistry, and Physics, or any others specifically identified for admission cannot be waived via the Special Admissions process.

6. Non Program Specific

Students may enroll in up to two (2) General Studies courses per semester or one (1) course in Intersession, up to a maximum of eight (8) courses over the lifetime of a student. The admission requirement for candidates wishing to apply for a credit course through General Studies is the course prerequisite, if applicable. Admission into General Studies is only available if entry into CAS Transition or another program is not an option as determined by the Registrar or designate. Registration/enrollment in a course does not constitute a commitment to or admission into any College program.

7. Home Schooling Admission Guidelines

Home schooled applicants who do not possess a High School Graduation Diploma, as specified by the applicable Department of Government of Newfoundland and Labrador, will be reviewed for general admission by the College’s Committee on Special Admissions. The applicant may be asked to provide some proof of standardized assessment results and/or complete an assessment instrument used by the College and attain the required scores for the selected program.

Admissions Portfolio Guidelines

Per AC-102-PR, Section 1.2, some programs may require submission of a portfolio (as approved by the relevant School Dean and identified in the Academic Calendar). The guidelines will be outlined in the program details contained in the Academic Calendar, and shall include:

1. Required pieces of applicant’s work and documentation.
2. Materials sought.
3. Appropriate format.
4. Whether original work is required.
5. Established evaluation criteria.
6. Return of materials procedures.

The College assumes no responsibility for loss of or damage to portfolios submitted.

Portfolio Screening:

Each program area will identify how portfolios will be screened, with criteria as approved by the School Dean responsible for the program.

Application Process

Further to AC-102-PR, 1.3, the following process will be followed.

1. Submit an application and pay the non-refundable application fee.
2. Applicants cannot have an active application for more than two programs for the same academic year. If more than one program applied for, the primary and secondary choice must be indicated. If an applicant applies for more than two programs the applicant must advise which of the first two programs are to be withdrawn.
3. Forward required official documents (NOTE: certified copy of transcripts must be obtained from the high school or Department of Education; faxed or e-mailed copies directly from these institutions will be accepted). Applications are not complete until all required documentation is received. All required documents must be received within three months of date of application or the application will be withdrawn, except for programs that have posted deadline dates in which instance documents must be submitted by the posted date.
4. Applicants enrolled in their final year of high school must provide a certified copy of their Level I & II transcript, and Level III courses they are registered for, at the time of application. Applicants who are accepted will be accepted conditionally pending receipt of final year results.
For provincial applicants presently in Level III of High School, CNA will obtain a copy of your final high school marks directly from the Department of Education once final marks are available, provided the Provincial School Number is included on the application.
For provincial applicants who graduated prior to June 2020 and who provide their MCP number, CNA will obtain a copy of your final high school marks directly from the Department of Education.
5. Applicants will be sent an acknowledgement upon receipt of their application. Communications will be via e-mail. Some notifications may be sent via SMS text (where applicants have consented).
6. Programs with "First Qualified, First Accepted" Admission Process:
Acceptance into these programs will follow the "First Qualified, First Accepted" admission process as outlined in AC-119-PR, subject to the following:
 - a. Applications must be correctly completed and must contain all required documentation.
 - b. Complete applications will be dated as of the date of receipt of the last document received in order to assess program eligibility.
 - c. Applicants must meet all educational and any other requirements;
 - d. All required fees must be paid.
7. Admission to programs with a competitive entry admissions process will not be conducted on a "First Qualified, First Accepted" basis, but will be determined by a process in which applicants are ranked using the results of each admissions component to produce an overall candidate score. For more details, please refer to the specific program entry requirements in the Academic Calendar.
8. When accepted, applicants will be asked to confirm in writing (or electronically) their intent to register and will be required to pay a confirmation fee within two weeks of the date of the letter of acceptance.
9. Within three to four business days after a letter of acceptance has been sent, staff will follow up (via telephone for domestic applicants and e-mail for international applicants) to determine if the applicant has received the letter and if they intend to accept the seat. If the applicant indicates they are declining their seat, the staff person will send a message to the e-mail address on file confirming the application will be withdrawn per the telephone conversation (or per the e-mail received, as applicable). The application will then be withdrawn and the seat will be offered to the next eligible applicant.
10. When accepted within two weeks of program start date, applicants will be asked to confirm in writing (or electronically) their intent to register and will be required to pay a confirmation fee within two days of the date of the letter of acceptance.
11. The confirmation fee is non-refundable and cannot be transferred to an alternate program.
12. If applicants fail to confirm within the time specified their application will be withdrawn and they will be required to re-apply for admission.
13. If an applicant has confirmed a seat in their primary program, the application for the secondary program will be withdrawn.
14. If an applicant has confirmed a seat in their secondary program, the application for the primary program will be kept active.
15. Applicants can only be confirmed in one seat. If applicants wish to change their confirmed seat, the confirmation fee must be paid for the alternate choice.
16. Applicants who confirm their seat, in programs with waitlists, and who do not register during the designated dates for online registration will have their application withdrawn and they will be required to re-apply for admission.
17. Applicants who confirm their seat, complete online registration, and subsequently do not show up, withdraw their acceptance, or discontinue from the program will have to re-apply.
18. Applicants who wish to transfer their application to another campus can do so using the Application Transfer: Campus to Campus form. The eligibility date (if applicable) will be as of the date of the transfer of the application.
19. Applicants who wish to transfer their application to another program can do so using the Application Transfer: Program to Program form and must pay the appropriate application fee. The eligibility date (if applicable) will be as of the date of the transfer of the application.

First Year Engineering Technology: CNA allows students to attend the first two semesters of an Engineering Technology program at select campuses, as noted on CNA's website. After successful completion of the first two semesters, students then progress to the Technical Intercession in the program (and campus) for which a seat was reserved.

Individuals must submit their application to the campus where they intend to complete the first two semesters of their program. This begins a first-qualified, first-accepted provincial process that reserves a seat at the designated campus for the appropriate Technical Intercession, and subsequent years of program study.

Re-Admission of Students

1. Academically Dismissed Students (AC-102-PR, 1.4)
 - a. Applications from academically dismissed students will be received at any time but students will not be accepted to return on a full time basis in the program in which they were academically dismissed from until the appropriate period from the date of dismissal has elapsed.
Notwithstanding the above, and pending availability of space, students who have been academically dismissed will be permitted to register for one (1) course for credit in the program from which the student is dismissed.
 - b. Students who have been academically dismissed from a program on two or more occasions will not be eligible for re-admission to the College in the program in which they were academically dismissed from for a period of two years from the date of dismissal.
 - c. Students who are promotion denied (i.e. do not achieve a pass in all courses and a GPA of 2.0 or better) and are not able to continue with their program, must submit an application (and pay the applicable application fee) to return to the College to complete deficiencies. Re-admission will be considered pending seat availability.
 - d. Students who are required to withdraw from the College under a. and b. above must apply for re-admission and pay the applicable application fee. Their names will be placed on the existing eligibility list as of the date of re-application.
2. Voluntary Withdrawal
Students who are in good standing and who voluntarily withdraw due to extenuating circumstances (confirmed by the counsellor or a campus director/manager) will be required to re-apply to return to the program, but the application fee will be waived. To be eligible for re-admission under this instance, the application for re-admission must be submitted within two (2) years of the date of leaving, with the exception of Health Sciences students who must re-apply within one year so as to align with the Awarding Diplomas and Certificates Procedure (AC-104-PR, Section 1.4). Students who left for medical reasons must supply a medical note of clearance before re-admission is granted. These students will retain their original date of eligibility and will be admitted into the first available seat in accordance with Program Eligibility List and Program Waitlist procedures (AC-119-PR).
3. Involuntary Withdrawal
Students who are withdrawn/suspended by the College will be required to re-apply to return to the program. Subject to any conditions placed at time of withdrawal/suspension, eligibility will be from the date of re-application to the program. These students will be admitted in accordance with Program Eligibility List and Program Waitlist procedures (AC-119-PR).

Student Numbers

1. As per AC-102-PR, 1.5, student numbers will be assigned at the time of first application or first CCL enrollment.
2. Students will use the number assigned to them regardless of the number of times they apply to the College.
3. Student numbers must appear on all documents added to students' academic or financial files.
4. Once student numbers are assigned, they will not be reassigned.
5. If a student has been assigned multiple numbers, the student should contact Student Services. The College will determine which number will be used going forward.

Entry into Regular Programs: Part-Time Student Status

As per AC-102-PR, 2.0, a part-time student is a student who is enrolled in courses but who does not meet the program specific criteria of a full-time student. Students who apply for part-time status in any program must meet all the requirements outlined for full-time status. Some programs may not be able to accommodate part-time enrollment.

Entry into Regular Programs: Concurrent Studies Student Status

As per AC-102-PR, 3.0, students in or about to enter their final year of high school may be admitted into College level credit courses by the Committee on Special Admissions in accordance with the following:

1. Students must hold an academic record with a minimum overall high school average of 80% based on the marks for all courses completed in high school.
2. Students will be accepted on a "First Qualified, First Accepted" basis on the provision that space is available and that the program does not have competitive entry admission process.
3. All fees and deadlines for regularly admitted students will apply.
4. Students applying for admission under this policy will be required to submit:
 - A completed application form;
 - An official high school transcript;
 - A letter from the high school principal or guidance counsellor clearly recommending admission to "Concurrent Studies"; and
 - A letter from the applicant providing rationale to be considered for concurrent studies and requesting enrolment in a specific course.

Permanent Residents, Refugees and Other Canadian Status Students

If the applicant's first language is not English, the College reserves the right to test English proficiency or request official scores on internationally recognized tests of English language proficiency as per Section 5.2 - English Proficiency of the Admissions Procedure (AC-102-PR).

Official transcripts or degree certificates issued in languages other than English must be translated into English and submitted to College of the North Atlantic along with the original official documents. An official translation is an exact English translation of the academic documents that has been prepared by the issuing institution or a professional translator.

Eligibility Lists

Per Procedure AC-119-PR, a program eligibility list is a list of applicants meeting program admission requirements based on the date of completed applications.

1. Placement on Eligibility List

For programs with “First Qualified, First Accepted” admissions, applicants who meet admissions criteria will be placed on a program eligibility list by time stamp based on the date that the application is complete (i.e. date the last required piece of documentation of application package is received).

Comprehensive Arts and Science (CAS) Transition Subsequent Program applicants will be time stamped based on the date of receipt of the student’s application to the program for which they are currently enrolled.

For Competitive Entry programs, candidates who meet admissions criteria will be placed on a program eligibility list by the rank determined by the competitive entry process. Unsuccessful applicants who are not offered a seat in a competitive entry program in a given academic year will not be maintained on a program eligibility list after the last day to add courses. Should applicants wish to be considered for the next program intake, they will be required to re-apply for the next available program start date.

2. Selection Process: “First Qualified, First Accepted” programs

Applicants meeting admission criteria for programs with “First Qualified, First Accepted” admissions will be made an offer of admission in the order in which they are placed on program eligibility list (i.e. based on the date of completed application).

3. Program Entry: Programs with “First Qualified, First Accepted” Acceptance

Qualified applicants are admitted from program eligibility lists and program wait lists as/if space becomes available. It is expected that applicants will be prepared to begin their program any time after the term for which they applied.

Applicants who are made an offer of admission into a program BEFORE AND UP TO six (6) weeks prior to the scheduled program start date AND who decline their offer will be removed from the program eligibility list or program wait list and will be required to re-apply for admission.

Applicants on program eligibility lists or program wait lists who are not offered a seat in an academic year will not be required to re-apply, but will have their applications rolled over with applicants retaining their original time stamp date of eligibility until a seat is offered.

1. Deferment of Acceptance

Deferment rules for applicants offered seats with LESS THAN six (6) weeks’ notice.

Applicants who are notified of admittance into a program LESS THAN six (6) weeks prior to program start and who are unable to accept a seat may request a deferment for the next program in-take. Applicants who defer a seat with LESS THAN six (6) weeks prior to program start will retain current program eligibility/wait list placement.

2. Deferment rules for applicants offered seats in the same program at a different campus

Applicants who are offered seats in the same program at a different campus and who are unable to accept a seat may request a deferment for the next program in-take.

Applicants who defer a seat in the same program at a different campus will retain current program eligibility/wait list placement for their original program choice.

Program Wait Lists

Once available seats in a program are filled, remaining eligible applicants will be moved from the program eligibility list and placed on a program wait list by time stamp based on the date that the application was complete (i.e. date that last required piece of documentation of application package is received).

As seats become available, applicants on the program wait list will be offered seats in the order they are placed on the program wait list.

After the last day to add courses (or, in the case of out of sequence programs, two (2) weeks after the first day of classes), applicants on the wait list will be contacted and asked:

1. EITHER: if they wish to keep their application active for the next intake of the program. If applicants wish to keep their application active for the next intake of the program, they will be required to indicate in writing their request to be placed on the program eligibility list for the next available intake of program within a specified time period. Wait listed applicants who wish to remain on the list will be placed on the program eligibility list for the next available intake, and will retain their original application time stamp position.
2. OR: if they wish to withdraw their application. If applicants indicate they want their application withdrawn, or do not respond within the specified deadline, the application will be withdrawn and the applicant will be required to re-apply for admission.

ACADEMIC REGULATIONS

Definitions of Academic Terms

Below are the standard definitions for academic terms.

Academic Year

Academic year is the period from September 1 to August 31 consisting of three distinct 15-week semesters.

Access Programs

Developmental programs that students may enter prior to admission into regular certificate/diploma level programs.

Credit Course

An approved and recognized body of content, knowledge, skills assigned a credit value.

Credit

The weighted value of a course based on the depth and breadth of the learning objectives.

Diploma Program

An approved program of study consisting of a prescribed combination of courses that must address:

1. occupational skill development;
2. academic or general study;
3. self-interest or personal growth.

Diploma Programs will normally:

1. be prescribed over a minimum of a four-semester period;
2. be comprised of a minimum of 80 credits; and
3. consist of a maximum of seven courses per semester.

Advanced Diploma

An approved program of study consisting of in-depth training for graduates of a diploma program or equivalent.

Advanced Diploma Programs will normally:

1. be prescribed over a minimum of one semester;
2. be comprised of a minimum of 20 credits.

Post Diploma

A diploma issued upon successful completion of a minimum two-semester program that requires either graduation from a recognized two- or three-year post-secondary diploma or degree, or a combination of other post-secondary work and industry experience acceptable to the College as an entrance requirement.

Certificate Program

An approved program of study consisting of a prescribed combination of courses that must address:

1. occupational skill development;
2. academic or general study;
3. self-interest or personal growth.

Certificate Programs will normally:

1. be prescribed over a two-semester period;
2. be comprised of a minimum of 40 credits; and
3. consist of a maximum of seven courses per semester.

Certificates of Achievement and Certificates of Participation

(For further information on Customized and Continuous Learning Certificates, please refer to Policy No. AC-106 - 5.0 Programs Designated to be Awarded a Certificate of Continuous Learning, and also Procedure AC-120-PR, 1.0)

Certificate of Achievement

A Certificate of Achievement (Program/Course) is awarded upon successful completion of a Continuous Learning program or course for which learning is measured and evaluated.

Certificate of Participation

A Certificate of Participation (Program/Course) is awarded upon completion of any non-formalized Continuous Learning program or course which addresses one or more of the following areas of study: occupational skill development, academic study, general study, and personal interest/growth, and for which specific learning or performance is not measured or evaluated.

Workforce Development

The College may enter partnerships for the purpose of developing and/or delivering courses or programs. Such partnerships will be formally recognized on parchments in one of the following ways:

1. College Parchment - when a course or program is developed by the College, either in partnership with or on behalf of another institution, agency or industry; a College parchment will be issued. This parchment may contain the phrase "designed in partnership with..." as an additional description of the course/program.
2. Joint Parchment - when a course or program is developed and/or delivered in partnership with another educational institution, a joint certificate formally recognizing both institutions may be awarded. This parchment would recognize both institutions and may contain the signatures of duly authorized officers of both institutions.

Full-Time Student

A full-time student is one who is registered for a minimum of four courses or more in course-based programs and in the case of individual programs, a minimum of 18 hours per week.

Part-Time Student

A part-time student is one who is registered for less than four courses in course-based programs and in the case of individualized programs, less than 18 hours per week.

Semester

A 15-week period that includes class/learning time as well as administrative and evaluation time. The academic year is divided into three semesters, the dates of which will be determined on an annual basis.

Intersession I

A period up to eight (8) weeks that includes class/learning time as well as administrative and evaluation time—usually scheduled at the beginning of the Spring Semester.

Intersession II

Normally a period of five to eight (5-8) weeks that includes class/learning time as well as administrative and evaluation time—usually scheduled in the second half of the Spring Semester.

Mature Student

A person who does not meet the entrance requirements for admission into a full-time program, but who is at least 19 years of age at the time of submitting an application, and who has been out of school for at least one year.

Registration Procedures

Date of Registration

Students will register online on the dates and at the times prescribed and publicized by the College. Registration for out-of-sequence programs will be scheduled, and students will be admitted as programs start.

Late Start Date

In extenuating circumstances students may be permitted a delayed start date. Prior approval for a late start date must be provided by the campus administration.

Admission to Classes

Students will not be admitted to a class until they have satisfied the regulations regarding entrance and complied with the General College Regulations.

Course Load

The number of courses constituting a normal semester workload for a student is specified in the outline for each program as published in the College Calendar.

Extended Course Loads

Students who wish to register for extra courses must submit a Request for Extended Course Load form to the campus admissions/student services office for approval by the campus administration or designate.

Repeating Courses

With the permission of the campus administration or designate, students may repeat any course for which a passing grade has previously been awarded. *The original passing grade will remain on the transcript and a second entry will be recorded with the new grade. The highest mark attained will be used in the calculation of the G.P.A.

*Space limitations and other considerations will determine approval.

Independent Study

When required courses are not available in a particular semester, full-time students may submit an Independent Study Contract form to the campus admissions/student services office for approval by the campus administration or designate to register for such courses through independent study. The Independent Study Contract must be submitted to the campus admissions/student services office within 7 calendar days from the semester start date.

Access to courses through independent study may be permitted when resources are available and with the permission of the campus administration or designate and the instructional coordinator (where applicable) in consultation with the faculty. Strategies to ensure adherence to course requirements must be documented in contract format to be signed by the student, the course instructor, the campus administration or designate, and the Instructional Coordinator (where applicable).

Change of Registration

Adding Courses

The last date for adding courses is 14 calendar days from the semester start date (7 calendar days from the semester start date of Intercession) in which that course begins. Restrictions may apply in some programs where pre-requisites and/or safety courses have already occurred within this time frame. When adding courses, additional fees may apply.

In extenuating circumstances, the deadline period may be extended. Students must submit the Change in Course Registration form to the campus admissions/student services office for approval.

Dropping Courses

Courses may be dropped without academic prejudice up 56 calendar days from the semester start date for a regular semester (for Intercession - 14 calendar days after the semester start date). Courses dropped after the dates noted above are recorded as "Dropped/Fail" unless, in extenuating circumstances, the student has received the written permission of the campus administration to drop a course without penalty. Students are required to submit a Change in Course Registration form to the campus admissions/ student services office for approval.

Withdrawing from the College

It is recommended that students who wish to withdraw from the College discuss the situation with the appropriate student services official. The Withdrawal/Status form must be completed and signed by the appropriate faculty/counselor and the campus administration or designate. If a student e-mails from a CNA e-mail for the student, staff will accept this notification in lieu of a signed form.

Involuntary Withdrawal

Students who are withdrawn/suspended by the College will be required to re-apply to return to the program. Subject to any conditions placed at time of withdrawal/suspension, eligibility will be from the date of re-application to the program.

Program Transfer

Students wishing to change their program of studies or campus must apply for the transfer.

Transfer Process for Engineering Technology - First Year

1. Engineering students wishing to change their original program choice MUST request a program transfer and complete the Program Transfer Request, which is available through the campus admissions/student services office.
2. Applicants cannot request a change in program prior to entry into the first year. A request to transfer does not guarantee entry into one's alternate, "new" program choice. Program transfer will be granted only if sufficient space is available.
3. The Program Transfer Request Form must be received at the campus admissions/student services office by February 15th.
4. Transfers are granted based on (a) space availability and (b) the student's weighted average at the end of semester one. In cases where the student has been exempted from courses in the first semester, the mark(s) obtained by the student at another post-secondary institution or high school will be used in calculating the weighted average.

All Other Programs

1. Students wishing to change their program must submit an Application for Admission (pay the application fee) and go through the normal admissions process.
2. Entrance requirements for the new program of study must be met.
3. Date of eligibility will be as of the date the new application (or meeting entrance requirements, if applicable).
4. Applications will not be accepted for programs that have closed applications.

Program Transfer: Campus to Campus

1. Students must discuss their request with the counsellor and receive written approval from campus administration.
2. Applications for campus transfer will be available from the campus admissions/student services office.
3. Date of eligibility will be as of the date of signing the transfer form.
4. As certain programs are offered using different instructional methodology at the various campuses, transfer may be limited to the end of given semesters.
5. Campus admissions/student services staff will contact the campus administration at the receiving campus to determine space availability and appropriate transfer time frame.

Audit Courses

- Students may audit a course, which will permit them to attend without being evaluated for credit, without seeking a grade or credit for the course. Courses available for audit will be at the discretion of the campus administration. There must be a seat available in the program or course (i.e. a student may not audit a course if the capacity of the course is already reached).
- Order of priority for class fill is as follows:
 - a. Full-time students in the course's program.
 - b. Part-time students in the course's program.
 - c. Full-time students in another program.
 - d. Part-time students in another program.
 - e. Auditing students not currently enrolled.
- Students with an outstanding balance are not permitted to audit courses.
- Audit students must meet course requisites.
- Audit students cannot attend until officially enrolled in the course.
- Students wishing to transfer from audit to credit must do so before the last day to add classes deadline by submitting the Change in Course Registration form.
- Students wishing to transfer from credit to audit must do so before the last day to drop courses without academic prejudice deadline by submitting the Course Audit Application.
- For students not enrolled in a course/ program, the deadline to add an audit course is three calendar days after the last day to add classes (except for programs that have courses taught in block sequence, e.g., Trades).
- Students in Distributed Learning (DL) will not be provided access to online material through D2L until they are officially enrolled in the course.
- Audit students are not required to complete course work, assignments, and exams; however, auditing students are expected to take part in all course activities and maintain satisfactory attendance. The degree of participation in a course for an audit student is at the discretion of the instructor.
- Audit students will not have access to assessments identified in the official course outline.
- No course credits are granted for an audit course. An Audit Grade (AU) appears on student transcripts but it is not included in Grade Point Average (GPA) calculations.
- Audited courses do not count in course load (i.e., towards a student's full-time/part-time status).
- Students must pay all applicable fees associated with the course.
- Audited courses cannot be used to meet pre-requisites to other courses.
- Audited courses cannot be used to meet program entrance requirements.
- Audited courses cannot be used for credit transfer, course challenge, exemption, or Prior Learning Assessment and Recognition (PLAR).
- If a student wishes to withdraw from an audited course, regular course withdrawal deadlines and refund processes apply.
- The grade AU (Audit) is recorded on the student's permanent record when the student has met the attendance/participation requirements specified by the instructor.
- CNA reserves the right to terminate the agreement to audit at any point.
- T2202As are not impacted as audit courses do not affect course load.

Credit Transfer/Exemption/Prior Learning

Transfer of Credit Status (Other than Industrial Trades)

Transfer of credit status is awarded for any course completed at the Marine Institute or at any one of the former Colleges provided the course uses the same course description and course number. When transfer of credit is awarded, the College will accept the passing grade as awarded by the institution and this mark will be used in the calculation of the GPA. Students must initiate transfer of credit requests within 7 calendar days of the semester start date.

Industrial Trades Programs

Transfer of credit status is awarded for any course completed at any post-secondary institution that matches the course numbers in the Provincial Plan of Training. Students must initiate transfer of credit requests within 7 calendar days of the semester start date.

Exemption Status (Other than Industrial Trades)

Exemption status is granted for a course from a post-secondary institution if that course has a minimum of 70% equivalency in the course material required. When exemption status is awarded, no mark is reported on the transcript and GPA is not affected. The College will consider exemptions for courses if the student received a passing grade. Students must initiate exemption status requests within 7 calendar days of the semester start date.

Exemption status may be granted for Advanced Placement (AP) and International Baccalaureate (IB) courses. The mark must be equivalent to the required pass mark for the applicable program. When exemption status is awarded, no mark is reported on the transcript and the GPA is not affected.

The College will accept a credit course from a recognized public post-secondary institution as an exemption for an elective even if that course is not offered at the College. For example, a course in Linguistics from MUN would be considered to have equivalent value to any other "elective" and, on request, could be granted exemption as a general elective. In some programs, electives must be chosen from a designated group of courses, in which case a general elective cannot be used as a substitute.

Industrial Trades Programs

Exemption status is granted if the course has a minimum of 70% equivalency in the course material required. When exemption status is awarded, no mark is reported on the transcript. The College will consider exemptions for courses if the student received a passing grade in the course. Students must initiate exemption status requests within 7 calendar days of the semester start date.

The College will accept a course from a recognized post-secondary institution as an exemption if the course can match a minimum of 70% of the objectives in the current Provincial Plan of Training as outlined by the Department of Advanced Education and Skills.

Credit for Prior Learning

The College will give students every opportunity to receive credit for past learning experience through a comprehensive systematic process of evaluation referred to as Prior Learning Assessment and Recognition (PLAR). Students must initiate PLAR requests within 7 calendar days of the semester start date.

Credits awarded for PLAR will be recorded on the transcript as an exemption or as a mark.

There will be no charge for PLAR for students who are enrolled in a College program.

The maximum number of credits that can be awarded through the PLAR process is 75 percent (75%) of the number required to complete the certificate/diploma.

Block Transfer/Advanced Standing

The College will recognize course work completed in other programs/ courses that fulfill the requirements for a designated percentage of the program in which the student is now applying. When students are granted a block transfer, their academic grades will be calculated beginning at the point of entry to the program. Students must initiate block transfer requests within 7 calendar days of the semester start date.

Advanced Standing

All required courses for a semester must be completed to receive advanced standing. Students may receive advanced standing for up to 75% of the content of the program to which they have been admitted on the basis of successful completion of this content in the same or similar programs at another college and as assessed by the College.

Applicants who wish to be considered for advanced standing should submit an application with the following documents:

1. Proof of high school completion;
2. Official transcript(s);
3. Detailed calendar description of the courses claimed for credit.

Students seeking advanced standing will not be excused from any course until written authority has been received from the campus admissions/student services office.

Students seeking advanced standing may not receive credit for courses that were completed more than five (5) years prior to the date of submission. For some programs, students may have to complete a practical demonstration or other assessment of skills prior to receiving credit.

Credit System

Credit Programs (other than Industrial Trades)

A credit is a weighted value of a course based on the depth and breadth of the learning objectives.

For the purpose of assigning credit values, the measurement of learning objectives is usually accomplished by equating the value with the period of time scheduled to deliver the content in the conventional lecture methodology as follows:

Learning objectives scheduled for delivery in a one hour period per week per semester constitutes a one credit value; therefore a course that is scheduled for three hours per week per semester represents a three credit value. However, a recognized laboratory experience is usually measured in the following manner:

- 2 – 4 hours of lab/week/semester is equivalent to one credit
- 5 – 7 hours of lab/week/semester is equivalent to two credits
- 8 – 10 hours of lab/week/semester is equivalent to three credits
- 11 – 14 hours of lab/week/semester is equivalent to four credits

The actual process in achieving competency in specified learning objectives can be accomplished via a second equally legitimate and pedagogically sound methodology; i.e. individualized and student-centered. In this latter methodology which embraces distance delivery, time is a flexible factor, fixed schedules do not apply and the process is student-driven. This is in contrast to the conventional lecture mode which is teacher-directed with fixed learning times and schedules. The one constant for both modes is the set of learning objectives. Therefore, credit value is assigned by determining the equivalent time required if the learning objectives were delivered in the conventional mode and applying the formula as described under the definition of a credit.

Credit System – Industrial Trades

The credit system is not applicable to programs in the School of Industrial Trades. Courses adhere to the Provincial Apprenticeship Program Structure (Plan of Training).

Grade Point Marking System

Grade Point Marking System – Credit Programs (other than Industrial Trades)

The percentage mark in any course is converted to a grade point according to the following table:

80% and over	4
70%, 75%	3
60%, 65%	2
50%, 55%	1
Below 50%	0

The grade point average is obtained by multiplying the credit value of each course in the program by the grade point obtained in that course. The sum of all the products is then divided by the total number of credits.

When a course is repeated or a supplementary examination is written, the highest mark attained will be used in the calculation of the grade point average.

When students complete more than the minimum number of electives, students are able to select which electives will be used in the calculation of the G.P.A. by making application at the campus admissions office. Without such application for calculation purposes, the required number of electives as recorded chronologically on the transcript will be selected.

Grades for failed courses which have been waived under the “academic warning” policy will not be calculated in the cumulative grade point average.

Grade Point Marking System - Industrial Trades

The Grade Point Marking System is not applicable to programs in the School of Industrial Trades. Courses adhere to the Provincial Apprenticeship Program Structure (Plan of Training).

Academic Status

Clear Standing

Students are in clear standing when they have passed all courses and have attained a grade point average of at least 2.0, except in the following:

1. In Diagnostic Ultrasonography, Medical Laboratory Assistant, Medical Laboratory Technology II and III, Medical Radiography II and III, and Respiratory Therapy programs the pass mark is 60%, including a minimum of 60% on the final exam, in core courses.
2. In Industrial Trades programs the pass mark is 70% in the practical component and 70% in the theory component.
3. In Aircraft Maintenance Engineering Technician and Aircraft Structural Repair Technician, the pass mark is 70%.
4. In Primary Care Paramedicine and Advanced Care Paramedicine, the pass mark is 70%, including a minimum of 70% on the final exam, in core courses.
5. In Practical Nursing the pass mark is 65%.
6. In Personal Care Attendant, the pass mark is 65% including a minimum of 65% on the final exam.

Conditional Status Credit Programs (other than Industrial Trades)

Students are classified as conditional when: they have a cumulative grade point average between 1.00 and 1.99 in any semester, or when they must clear course deficiencies in order to graduate (e.g., students who must successfully complete a failed course through supplementary examinations or repetition).

Students are expected to attempt courses from previous semesters (if available), before registering for any new course, and must consult with a faculty advisor and/or counsellor on or before registration.

A part-time student is conditional, but if the GPA is less than 1.5 the student may be academically dismissed from their program.

Conditional Status Industrial Trades

Students are classified as conditional when they must clear course deficiencies in order to graduate. Students who are required to successfully complete a failed course must follow the regulations as outlined in Industrial Trades Rewrite Policy AC-117 / Procedure AC-117-PR.

Academic Warning

Students will receive an academic warning if their cumulative grade point average is less than 1.0 and/or they have not passed a minimum of 40% of the credits attempted (for Trades- courses attempted) in the semester.

Students, who, for the first time fail to achieve the minimum requirements to progress to the next semester will be given an academic warning and will be permitted to register for the next semester provided:

1. Those students will be referred to a counsellor and will participate in a review of their career/academic goals and will develop learning strategies that will lead to success.
2. In consultation with the academic advisor/counsellor, the student will determine an appropriate course load. The maximum course load will not exceed the normal semester workload for the program.

Students will be permitted to register only for those courses for which prerequisites have been successfully met.

Academic Dismissal

Students who have availed of the "academic warning" or "promotion denied" option and who fail to meet the academic requirements for a second occasion will be academically dismissed.

Applications from academically dismissed students will be received at any time, but students will not be accepted to return on a full-time basis in the program they were academically dismissed from until a period of six months has elapsed.

Students who have been academically dismissed on two or more occasions will not be eligible for re-admission in the program from which they were academically dismissed from a period of two years from the date of dismissal.

Academically Dismissed Students- Eligibility for Part- Time Courses

Pending availability of space, students who have been academically dismissed will be permitted to register for one (1) course for credit in the program from which they were dismissed.

Academically Dismissed Students- Eligibility for Supplementary Examinations

Academically dismissed students will not be eligible to write supplementary examinations.

Promotion Denied (General)

Students who do not achieve a pass in all courses and a G.P.A. of 2.0 or better may not be able to continue with their program but may return to the College to complete deficiencies.

Students who are required to withdraw from the College as a result of promotion denied must apply for re-admission and pay the applicable application fee. Re-admission will be considered pending seat availability.

Subsequent occurrences of promotion denied will result in Academic Dismissal.

Students in the Health Sciences programs will be required to withdraw from their program of study at the point in their program where it is determined that the one (1) additional year (maximum) will not be adequate for them to complete all the requirements of the program. (Refer to AC-102-PR, Section 1.4 for re-admission requirements.)

Promotion – Engineering Technology Programs from First Year

To qualify for the technical intersession at the end of the first two semesters, students must normally have successfully completed all prescribed courses and attained a minimum overall G.P.A. of 2.00. Students who have a G.P.A. between 1.00 and 1.99 at the end of the second and subsequent semesters may, with the permission of the College, be conditionally admitted to the next semester if there is a determination that the students are capable of attaining clear standing by the end of the subsequent semester.

Promotion – Health Sciences

Health Sciences programs include mandatory clinical training rotations. Students must successfully complete all previous courses and have a minimum G.P.A. of 2.00 to be promoted to the clinical training component of their program.

Promotion – Co-op Programs

Successful completion of work term requirements is a prerequisite for graduation. To be eligible for a work term, a student must have “clear standing” for all courses prescribed in the program to the point where the work term occurs; or be able to attain clear standing by writing one supplementary. Since work term arrangements are often made in advance of the commencement of the work term and before current academic assessments are available, eligibility will be based on the most recent transcript for marketing purposes. Students must maintain eligibility in the semester immediately preceding the work term semester.

Examinations and Tests

Dates for mid-term, final, and supplementary examinations will be set in advance. No more than two mid-term and final examinations will be scheduled for a student on any one day.

Student evaluation will be conducted on a continuous basis. The method of evaluation will be recommended in the official course description. Grades submitted to the campus admissions/student services office will be rounded in units of five, rounding up or down will be at the instructor’s discretion.

Instructors shall not be permitted to give quizzes worth more than 10% of the total final mark or assign new projects, assignments, etc., in the two (2) week period prior to the start of semester examinations. This regulation does not apply to:

1. Courses with no final semester examination.
2. Laboratory examinations.
3. Self-directed and modular courses.
4. Courses with block teaching.
5. Assignments given prior to this period which are due in the two weeks prior to examinations.
6. Courses offered in Intersession I and II (i.e. up to 8-week period). The time frame for these courses will be one (1) week prior to the start of examinations.

Supplementary Examinations**Supplementary Exams Credit Programs (other than Industrial Trades)**

Supplementary examinations provide an opportunity for students to improve their standing in a course in which they have attained a failing grade of 5 or 10 marks below the stated pass mark.

For upgrading purposes, in their last semester of studies, students may be given an opportunity to write a supplementary examination for a course in which they have attained the minimum pass mark or five marks above the minimum pass mark.

The grade attained in a supplementary examination will replace only the grade attained in the final examination for the course in question and will be combined with marks previously attained for term work.

The following conditions must be met in order to qualify for supplementary examinations:

1. Students may be eligible to write one supplementary per semester.
2. Supplementary exams will not apply to any course in which the final exam is worth less than 30%.

3. Supplementary examinations will be scheduled and should be written during the supplementary period following the regular examination period, but shall be no later than one (1) week into the subsequent semester.
4. Students must apply, in writing, for supplementary examinations. The established standard fee per supplementary examination must accompany the application form. Refunds of such fees will only be permitted if permission to write an examination is not granted.
5. If the mark obtained in the supplementary is lower than the original mark obtained on the regular examination, the original mark will be included in calculating the grade point average.
6. When circumstances warrant, supplementary examinations may be written off-campus. The campus admissions/student services office must be contacted for permission and guidelines prior to the examination period. All costs associated with the administration of off-campus supplementary examinations will be borne by the student.
7. Academically dismissed students are not eligible to write supplementary exams.
8. For purposes of transfer of credit, students must be aware that other post-secondary institutions may not accept grades attained through supplementary examinations.
9. Comprehensive Arts and Science (CAS) Transfer: College-University program students who write supplementary examinations are advised to consult with the counsellor at a campus where the Comprehensive Arts and Science (CAS) Transfer: College-University program is offered concerning their transferability of courses to Memorial University.
10. Before writing a supplementary examination in the Comprehensive Arts and Science (CAS) Transfer: College-University Program, a student must be informed in writing of #8. The written communication (i.e., form) must be signed/dated by the student, the instructor of the course and campus administration or designate. Copies should be kept by the instructor and campus administration, and a copy must be placed in the official student file.

DEFERRED EXAMS

Deferred Exams Credit Programs

Students who are prevented by illness, bereavement or other acceptable cause from writing a final examination, where one is scheduled, may apply for permission to write a deferred examination. The deferred examination is the final examination for the individual concerned.

Where possible, deferred exams should be completed by the last day of that semester, or as soon as possible thereafter, but shall be no later than one (1) week into the subsequent semester.

A request for deferred examinations must be submitted to the campus admissions/student services office within two (2) days after the date on which the regular examination was scheduled. The request for a deferred exam will be assessed by the campus administration or designate in consultation with faculty members. Students should note that permission to write deferred examinations is a privilege, not a right, granted solely on the basis of extenuating circumstances.

Incomplete Grades

Incomplete Grades Credit Programs (programs other than Industrial Trades)

Subject to the approval of the campus administration or designate, in extenuating circumstances, an incomplete grade may be assigned when the mandatory components of the course are not completed. Incomplete grades must be cleared by the end of the third week after the beginning of the subsequent semester. If incomplete grades are not cleared by this date, students will receive a failing grade.

Incomplete Grades - Industrial Trades

The incomplete grades regulation does not apply to Industrial Trades programs.

Reassessment of Grades

Students, who feel that they may not have been accurately assessed on any assignment, examination, term paper, or laboratory or shop exercise should, in the first instance, discuss the matter with the instructor teaching the course. This should be done within three (3) instructional days of the receipt of the assessment. If this does not result in a satisfactory resolution, students may request that the matter be reviewed by the campus administration. If this action is taken, it must be done within five (5) instructional days of receipt of the assessment. Unsatisfactory resolution of the dispute at this stage may enable students to request a review of the grade(s) by the Academic Appeals Committee. Such an appeal should be made within ten (10) days of receipt of the assessment.

Re-Read of Final Examinations

Students may apply to have a final examination paper re-read.

An application for re-read must be submitted to the campus admissions/student services office within one (1) week following the release of the marks. A re-read fee must be paid at the time of application. If the mark is changed after the re-read the fee is refunded; if the mark is unchanged the fee is forfeited.

The mark obtained in a re-read (even if lower) stands as the official mark in the course and is used in all calculations of the student's academic record.

Re-Writes - Industrial Trades

Students enrolled in Industrial Trades programs (excluding Aircraft Maintenance Engineering Technician and Aircraft Structural Repair Technician) will follow regulations as outlined in the College Industrial Trades Rewrite Policy AC-117 / Procedure AC-117-PR.

A rewrite of a final evaluation provides an opportunity for students to improve their standing in a course in which they have attained a failing grade. The grade attained in the rewrite will be used to determine the final grade.

The number of rewrites allowed is by semester, not by course. Students may be eligible for a maximum of two (2) rewrites during the fall semester, a maximum of two (2) rewrites during the winter semester and a maximum of one (1) rewrite during intersession.

The following condition must be met in order to qualify for a rewrite:

1. Attendance of at least 90%

Because of course pre-requisite requirements, and in the interest of not falling behind in the program, all interventions will take place as soon as possible and a re-write, if required, will be administered within five (5) business days after the date of the original final evaluation.

The mark obtained on the re-write will be used to determine the final grade.

For complete details please refer to the College Industrial Trades Rewrite Policy AC-117 and Procedure AC-117-PR.

Aegrotat Status

Students who, through exceptional circumstances, have been absent from a scheduled final examination, or who have been unable to complete all the required work in a course, may, submit a request to the Registrar's Office for Aegrotat Status. The Registrar's Office shall consult with the campus administration or designate, counselor and instructor to determine if credit can be given for the course, with a grade assigned for the portion of work completed.

Application for Aegrotat Standing, with full details duly authenticated, must be made to the campus admissions/student services office within 7 calendar days after the last day of examinations, indicating each course for which the application is being made.

Co-op Regulations

1. Work term learning is integral to co-operative education, and a co-op diploma will be awarded to students who successfully complete work terms as articulated in their program structure. Work terms provide unique learning experiences in a real work place setting. They are program relevant, full-time, 12 – 16 weeks in duration, and normally remunerated. Scheduling of work terms varies by program; however they alternate between academic semesters. Work term start and finish dates correspond with academic semesters; however specific dates are established with each employer.
2. To be eligible for a work term, a student must have "clear standing" for all courses prescribed in the program to the point where the work term occurs; or be able to attain clear standing by writing one supplementary.
Since work term arrangements are often made in advance of the commencement of the work term and before current academic assessments are available, eligibility will be based on the most recent transcript for marketing purposes. Students MUST maintain eligibility in the semester immediately preceding the work term semester.
3. The co-op term mark will result from both employer and institutional evaluation. Students must achieve a minimum of 50% in each of the work term performance evaluation and the work term report, and must achieve a combined grade of 60%. The work term mark will be recorded on the student transcript.
 - a. Work term performance is evaluated by the employer and monitored by the College.
 - b. The work term report is validated by the employer and graded by faculty/coordinators. A student receiving a 40% or 45% grade on the work term report will be eligible to re-submit the report. The report must be re-submitted no longer than four weeks after receipt of the work term evaluation.
4. Students are encouraged to obtain their own work terms. Such work terms must be confirmed by letter from the employer and approved by the coordinator on or before the first day on which the student commences work.
5. Students are required to sign a waiver giving permission to the College to supply students' resumes and transcripts to potential employers.

Qualifications for a Diploma, Advanced Diploma, Post Diploma or Certificate

Students must meet the following requirements:

1. Meet all the requirements as prescribed in the program of studies;
2. Obtain a mark of not less than 50% in every course in the program unless otherwise specified (Refer to Academic Status);
3. Attain a minimum grade point average of 2.0;
4. Obtain 25% or more of their credits from the College.

Students, other than Health Sciences students, who do not complete their certificate or diploma program in the prescribed time frame

from first day of classes, may complete the program by following the regulations in effect at the time of first registration provided the program is completed in not more than three (3) years beyond the regular date of completion. A student who does not complete a program within these prescribed time limits may be required to complete additional courses and/or repeat certain courses before being deemed eligible to receive the certificate or diploma.

Students who return to complete a diploma in any of the Business/Office programs, Information Technology programs, and/or Engineering Technology programs may not receive credit for courses that were completed more than five (5) years prior to the date of re-admission.

Students enrolled in accredited Health Sciences programs will be permitted a maximum of one (1) additional year to complete their program of studies.

Students who return to Industrial Trades programs will be required to complete all courses that are in the current Plan of Training to be eligible to receive a certificate.

Parchments

Upon the successful completion of a program of studies, students will be awarded one of six parchments:

1. A Certificate in (Program Title)
2. A Diploma in (Program Title)
3. A Post Diploma in (Program Title)
4. An Advanced Diploma in (Program Title)
5. A Certificate of Achievement in (Program/Course Title)
6. A Certificate of Participation in (Program/Course Title)

Academic Documentation

Transcripts

1. Official Transcripts may be obtained at any time from any campus admissions/student services office. Requests for transcripts must be made in writing and must contain the student's signature.
2. A transcript includes the student's academic record to date including academic decisions which may have been taken. Transcripts that are released will include the student's complete academic history.

Transcripts, diplomas, certificates, and access to view grades in self-service, will be withheld from a student who is in possession of College property such as books, equipment or supplies or who owes money to the College.

Grades

Students will be able to view their grades through student self-service after the end of each semester.

Replacement of Parchments (Diplomas or Certificates)

The College may, upon submission of the appropriate form (and fee), re-issue parchments which are lost or stolen or damaged.

1. **Requirements for a parchment to be re-issued:**
A request for replacement form must be signed and dated by the individual. The appropriate fee must accompany the application.
2. **Details of the re-issued parchment:**
Parchments shall be re-issued in the format and style of those being used at the time of replacement, and shall indicate the original institution name, original date of issue as well as the date of re-issue.

Student Appeals (Academic)

All registered students of the College have the right to appeal decisions or rulings which affect them and which pertain specifically to academic matters. Please refer to Policy SS-213 / Procedure SS-213-PR for further details.

Student Appeals (Non-Academic)

All students of the College have the right to appeal decisions or rulings that affect them and which pertain specifically to non-academic matters. Please refer to Policy SS-203 / Procedure SS-203-PR for further details.

AWARDS

The College offers opportunities to students in many programs to compete for a variety of achievement awards, scholarships, bursaries, distinction awards, prizes and graduation awards. An Awards Handbook outlining all awards available, as well as the specific criteria, is available on the College website www.cna.nl.ca/awards

Definition of Awards

Achievement Award

Monetary award given in recognition of academic excellence, leadership and community/college involvement.

Scholarship

Monetary award given in recognition of academic excellence.

Bursary

Monetary award given in recognition of academic merit and financial need.

Distinction Award

An award given in recognition of a variety of qualities. Some examples would be but are not limited to: passion for learning, demonstrated initiative, significant contribution to class, good work ethic, positive attitude, willingness to help others and/or a strong desire to succeed.

Prize

Award given in recognition of performance in a particular subject area or task.

Medal

President's Medals of Excellence, Governor General's Academic medals, and other medals presented upon graduation.

Honour Society

Students achieving academic excellence as prescribed by specific criteria will become members of the College of the North Atlantic Honour Society.

Graduated with Honours: Students achieving Honours status as prescribed by specific criteria will have "graduated with honours" on their official transcript.

Academic Excellence

For the purpose of achievement awards and scholarships, academic excellence refers to a candidate who has attained the minimum weighted/overall average of 75% or higher. Note: some programs are based on weighted average and others are based on overall average.

Academic Merit

For the purpose of bursaries and prizes, academic merit refers to a candidate who has attained the minimum weighted/overall average of 60% or higher except in cases where the grading basis is higher for their program. Note: some programs are based on weighted average and others are based on overall average.

Application Process

Application forms for awards administered by the College are available at the campus Student Services office and the College website.

Unless otherwise stated, applications are **not** required in order to be considered for medals, scholarships or prizes.

The deadline for receipt of applications for bursaries and other awards can be obtained at each campus Student Services office and College website but is generally mid-January. Please see application for exact date.

Criteria for Awards

- During a campus or provincial awards selection process no achievement award, scholarship, distinction award, bursary or prize administered by the college, within that process, shall be awarded to a candidate who holds an award of equal or greater value, unless specifically required by the terms of the award.
- To be eligible for any award, a student must be registered as a **full-time** student in a recognized College program.
- To be eligible for renewal of an achievement award, scholarship or bursary the student must maintain full time status in their recognized College program and continue to meet eligibility requirements of the award.

The eligibility criteria for awarding an achievement award or a scholarship:

- Candidates must be in clear academic standing with a minimum weighted/overall average of 75%.
- At least 80% of the credits accumulated at the point of consideration for awards must have been obtained at the College.
- Courses which are not included in the requirements for graduation will not be included in the calculation of the weighted/overall average.
- Candidates must have attained a passing grade in **ALL** courses being considered in establishing weighted/ overall average. Marks obtained in supplementary exams will be considered in the calculation of the weighted/overall average.
- In cases where the student repeats a course, the best earned grade will stand for calculation of the weighted/overall average.

The eligibility criteria for awarding a bursary, distinction award or a prize:

- Candidates must be in clear academic standing and have attained a minimum weighted/overall average of 60%, except in cases where the minimum grading basis is higher. The weighted average will be used except in cases where programs use an overall average.
- At least 80% of the credits accumulated at the point of consideration for awards must have been obtained at the College.
- Courses that are not included in the requirements for graduation will not be included in the calculation of the weighted/overall average.
- Candidates must have attained a passing grade in **ALL** courses being considered in establishing weighted/ overall average. Marks obtained in supplementary exams will be considered in the calculation of the weighted/overall average.
- In cases where the student repeats a course, the best earned grade will stand for calculation of the weighted/overall average.

The eligibility criteria for awarding the Governor General's Medal:

The Governor General's Medal is awarded to one full-time **graduate** who has achieved the highest weighted/overall average at each campus, where applicable. The student must be graduating from a **two** or **three-year diploma level** program.

The eligibility criteria for the President's Medal of Excellence:

The President's Medal of Excellence is awarded to one full-time **graduate** in each program who attains the highest weighted/overall average in his/her program. The student will also receive a certificate. The student must meet all college scholarship criteria. The medal is campus based and is available to both the certificate and diploma level programs.

Eligibility for Honour Society at Graduation

The College recognizes graduates who have attained an overall grade point average (GPA) of 4.0 and attained a minimum mark of 80% in each course of their certificate or diploma level program. Students who achieve this will be recognized during the graduation ceremony with an honour cord.

Eligibility criteria for Dean's Honour Roll:

The College has established Dean's Honour Roll to recognize full-time students in certificate or diploma level programs, where the passing grade of the courses is 50% to 65% who have a grade point average (GPA) of 4.0 and no mark less than 80%.

Documentation

Awards administered by the College shall be recorded on the recipient's academic record.

Transcripts for students who achieve Dean's Honour Roll (honour society status) will state, "Dean's Honour Roll" at the end of each semester that they achieve this.

Students who have achieved Dean's Honour Roll will have their names posted at their campuses and on the College website at the end of the semester. They will also receive a letter via their college e-mail which will be generated on Academic School letterhead and signed by the Dean of their respective School.

Transcripts for students who achieve honour society status at graduation, will state "Graduated with Honours" on their transcript.

College Awards Publications/Opt Out Form

Students who do not wish to have personal information (name, photo, video, program of study and community) published by the College must complete an Awards Publications "opt out" form available for download and printing on the College website at https://www.cna.nl.ca/student-support/pdfs/STD_FORMS/Awards%20Publication%20Opt%20Out%20Form.pdf, and must be submitted to the Student Services office at their campus.

Outstanding Fees

Award recipients who owe outstanding fees to the College will have their monetary award credited to their account.

Privacy Disclaimer

As part of the Scholarship/Awards process, your personal information (name, photo, video, program of study and community) may be shared with our donor to advise them of how their scholarship monies have been distributed. If you do not wish to have this information shared, please e-mail alumni@cna.nl.ca.

All students who are selected for an award/scholarship/bursary will be required to provide their Social Insurance Number so that a T4A may be issued for income tax purposes.

College of the North Atlantic recommends that students who are receiving funding and/or sponsorship contact their funding/ sponsoring agency for clarification of whether receiving an award may affect their funding/ sponsorship status.

College awards are subject to change or cancellation without prior notice.

For updates to the Student Awards policy and procedures please visit our website at <http://www.cna.nl.ca/About/Policies-and-Procedures.aspx>

FEES AND CHARGES

1.0 Regulations Governing Payment of Fees & Charges

- a. All student fees must be paid by the date specified in each term. The dates are listed in the Academic Dates. Students receiving Student Aid must present their notification of Student Aid form on the first day of classes. These students are permitted to have fees outstanding until receipt of the Student Aid, at which time these students must pay their accounts in full.
- b. Students who have not paid all fees within the time limits given in these regulations may have their registration cancelled by the College.
- c. Students with outstanding accounts will be ineligible for a subsequent term, will not be awarded a diploma or certificate, access to register, and will not be issued a certificate of standing (transcript), grade report, or access to on-line grades until the outstanding account has been paid in full. It is the student's responsibility to address outstanding balances and to work with their respective campus student services office on inquiries related to their account balance.
- d. Should the College cancel a program, all tuition and fees paid will be refunded.
- e. Out of sequence students, registering or withdrawing within a term, will pay a prorated tuition and equipment and materials fee per week.
- f. Whether a student's program is based on campus or online, the student will pay the required program fees which can include tuition and equipment/materials fees. The technology fee will be charged each semester.
- g. Students taking courses above their normal term load (requires application to extend normal course load per semester) will pay tuition for each additional course taken.
- h. Senior Citizens, 60 years and older, are required to pay 50% of confirmation fee, tuition and equipment/materials fees.
- i. Students wishing to audit a course will pay 50% of the tuition and 100% of the technology fee and equipment/materials fees (if applicable).

2.0 Fees and Charges

2.1 Fees

- a. Application Fee \$30.00 (non-refundable except as noted in 3.a)
Applicants must pay a non-refundable fee for each application to the College
- b. Confirmation Fee \$99.00 (non-refundable)
Student must pay a non-refundable fee on confirmation of acceptance to each program at the College. The fee covers registration and student association fees and is paid annually for the duration of the program.
- c. Supplementary Fee (per course) \$25.00
- d. Re-Read Fee (per evaluation) \$25.00
- e. NSF Cheques (per cheque) \$25.00
- f. Replacement I.D. cards (per ID) \$15.00
- g. DL/Online Deferred Evaluation fee (per request) \$65.00
- h. Replacement Parchment (per request) \$25.00
- i. Academic Audit fee (per program) \$50.00
- j. Resource Camp Fee (per day) \$60.00 (covers food & lodging - not tuition)
- k. Technology fee (per semester) \$75.00
- l. Work Term fee (Co-op and Non Co-op) \$458.00
- m. On the Job (OJT) fees or Work Terms (less than 7 weeks) \$59.00 (Per Week)
- n. Certifications within program of study:
 - First Aid fee \$131.00
 - Mask Fit fee \$37.00
- o. Transcript Fee \$8.00
- p. Day Care fees (contact applicable campus)
- q. International students should refer to "International Students" section of calendar for international student fees.

2.2 Full-Time Students

Fees are subject to change. Please refer to the College website for the most up-to-date fees.

Students enrolled in four (4) or more courses:

- a. Application fee per program \$30.00 (Non-refundable except as noted in 3.a.)
- b. Confirmation fee \$99.00 (Non-refundable)
Student must pay this fee on confirmation of acceptance to each program at the College. The fee covers registration and student association fees and is paid annually for the duration of the program.
- c. Tuition
 - a. Term based programs:
 - b. Regular Term (15-weeks) \$915.00
 - c. Intercession (up to 7-weeks) \$434.00
 - d. Trade programs (per week) \$62.00
 - e. Applied Degree programs:
 - Regular Term (15-weeks) \$1830.00
 - Intercession (up to 7-weeks) \$915.00
- d. Equipment/materials fee per term (intended to help offset material costs of program; excluding online students)
 - i. Term based programs:
 - Regular Term (15-weeks):
 - Academics/Applied Arts/Tourism \$170.00
 - Business/Information Technology \$82.00
 - Engineering Technology/Natural Resources \$265.00
 - Trades \$265.00
 - Health Sciences \$265.00
 - Heavy Equipment/Commercial Driver \$832.00
 - Intercession (up to 7-weeks):
 - Academics/Applied Arts/Tourism \$85.00
 - Business/Information Technology \$41.00
 - Engineering Technology/Natural Resources \$132.00
 - Trades \$132.00 (prorated based on weeks in attendance)
 - Health Sciences \$132.00
 - Heavy Equipment/Commercial Driver \$416.00 (prorated based on weeks in attendance)
 - ii. Out of sequence programs: Fees are pro-rated on the number of weeks in attendance.
- e. Student Health and Dental Plan Fees are based on an academic year. The Student Health and Dental Plan is applicable to all full time students. Please refer to Student Health/Dental Plan in the Student Services section of the calendar for coverage details and rates.

2.3 Part-Time Student Fees

Students enrolled in three (3) or less courses (including Regular Programs, Day-time General Studies, and Distributed Learning):

- a. Application fee for program \$30.00
- b. Tuition fee per course \$290.00
- c. Technology fee-per semester \$75.00

2.4 Continuing Education

Contact local campus for course fees.

2.5 Residence Fees

Students must pay a minimum of two weeks residence fees in advance, or upon arrival in residence. Students intending to move out of residence must give 30 days' notice or pay a penalty of \$100.00.

Students are responsible for providing their own bed linens and laundry service.

Meal plans are mandatory.

- a. Fees applicable to all campuses
 - Residence Application fee \$25.00
(This is an annual fee and is non-refundable)
 - Residence Registration fee – Single/Double Residence \$50.00
(This is an annual fee and is non-refundable)

Residence Registration fee – Family Residence (This is an annual fee and is non-refundable)	\$100.00
Damage Deposit – Family Residence (This is an annual fee and is non-refundable)	\$100.00

b. Room Charges

	Single	Double
Daily	\$15.00	\$10.00
Weekly	\$60.00	\$40.00

c. Rooms and Meals (combined)

	Single	Double
Bay St. George Campus		
Room and 10 meals weekly	\$156.00	\$136.00
Room and 14 meals weekly	\$195.00	\$175.00
Room and 19 meals weekly	\$243.00	\$223.00

Burin Campus

Room and 5 meals weekly	\$108.00	\$88.00
-------------------------	----------	---------

Happy Valley Campus

Room and 14 meals weekly	\$195.00	\$175.00
--------------------------	----------	----------

Family Residence (Monthly/No Meals)

One Bedroom Apartment	\$300.00
Two Bedroom Apartment	\$365.00
Three Bedroom Apartment	\$425.00

3.0 Refunds

- a. Application fees are only refundable if the program does not go ahead and the applicant does not want to transfer the application to another program.
- b. Confirmation fees will be refunded only to individuals who were conditionally accepted and upon receipt of High School marks do not meet the academic entrance requirement to the program.
- c. Refunds will be made to the same method of payment (e.g. refunded to the same credit card payment was issued from or refunded to bank account when method of payment was bank transfer). Refunds for international students will be made only through PayMyTuition.

d. Tuition and Equipment/ Materials Fees

i. **Term-based (15-weeks)**

- Day 1 – 28: 100% refund
- Day 29 – 42: Prorated refund
- Day 43 onwards: no refund

ii. **Intersession (up to 7 weeks)**

- Day 1 – 14: 100% refund
- Day 15-21: Prorated refund
- Day 22 onwards: no refund

iii. **Out of sequence programs**

A student who graduates or withdraws from the program will be liable for the actual number of weeks in class. Any over-payment will be refunded.

iv. **Trades programs**

A student who graduates or withdraws from the program will be liable for the actual number of weeks in class. Any over-payment will be refunded.

e. **Refunds for Customized and Continuous Learning**

- i. Customized training programs of 15 or more weeks duration:
Refer to Section c.i to c.iv.
- ii. Customized training programs of 6 to 14 weeks duration:
A student who withdraws/ cancels within one week of the start date of a training program will receive a full refund upon written request. A student who withdraws/cancels within two weeks of the start date of a training program will receive a 50% refund upon written request. No refund will be made after the second week of the program start date.
- iii. Customized training programs of 2 to 5 weeks duration:
A student who withdraws/ cancels after one day of a course/program start date will receive a full refund upon written request.

request. A student who withdraws/ cancels by the end of the second day of a course/program start date will receive a 50% refund upon written request. No refund will be made after two days of a course/program start date.

- iv. **Part-time Continuous Learning** (i.e. part-time hours/outside regular delivery hours):
Students must notify Continuous Learning of their intent to withdraw or cancel at least 5 days prior to the start date of a course to be entitled to a full refund. If the student notifies the office with the intent to withdraw or cancel less than 5 days prior to the course start date, the student will receive a 50% refund. A student who registers for a course, does not notify the College of their intent to withdraw, and does not attend any classes, will be deemed a "no show" and will forfeit their tuition fees. In the event the College cancels a course offering, students will receive a full refund. Special circumstances may apply to any of the above conditions, in which case supporting documentation is required.
- v. **Client Contracts**
The refund policy for client contracts is set out in the College's standard Contract Training Agreements.

f. **Textbooks**

Refunds may be given for returned textbooks if the following three conditions are met:

- i. Books are unmarked and in saleable condition
- ii. Books are returned within the first three weeks after the commencement of classes
- iii. Original receipts are presented before a refund is issued.

Students are responsible for initiating their own refunds and should contact the campus admissions/student services office. All refunds will be issued by Headquarters. Any refunds will be applied against outstanding accounts before any monies are returned to the student. If a student terminates or voluntarily withdraws from a program of studies, the refund from student loans will be forwarded to the National Student Loan Service Center.

4.0 Financial Credit

Deadline for payment of specified fees is provided in the Academic Dates. The College may grant credit to students to cover tuition and/or materials fees only (credit is not available to cover books or residence fees). The College may from time to time institute equipment lease/purchase programs for which credit may be granted. Students applying for financial credit must meet with a Student Services representative for assessment of their request. Credit will not be granted to students with outstanding fees from prior semesters.

Financial Contract

If financial credit is recommended, the student must complete a Financial Contract in consultation with a Student Services representative. The Financial Contract will specify what is covered and for what period of time – not to extend beyond the semester within which the contract is completed. The completed Financial Contract must be reviewed and signed by Campus Administration or an approved designate. The student is subject to collection action if the account is not paid.

Students Receiving Student Loans

Students with confirmed student loans are eligible for credit. When the student loan is issued, the amount owing will be deducted by the College as specified in the Financial Contract.

Students Receiving External Funding

Students with documentation confirming external funding will be granted credit and are expected to pay their fees once they are in possession of their funding as agreed to in the Financial Contract.

Students Not Receiving Student Loans or External Funding

Students seeking financial credit who do not meet the above criteria will only be granted financial credit in extenuating circumstances and upon written approval by Campus Administration or designate.

5.0 Financial Appeals

Appeals of a financial assessment should be made in writing to the Director of Finance at P.O. Box 5400, 432 Massachusetts Drive, Stephenville, NL A2N 2Z6.

The appeal should include, but not be limited to, the following information:

- Student number
- Program and campus;
- Rationale as to why the fee(s) should be reversed;
- Documents supporting appeal rationale.

Once this is received by the Director of Finance, the request will be reviewed with potential inquiries back to you or to the campus for clarification. A meeting will be held with a committee to review the request and a recommendation made to our Vice President, Finance and Administration. A communication regarding the decision will be provided.

Please note the College is collecting your personal information under the authority of the College Act, 1996, for the purpose of processing your appeal. It will be used by College staff in their work to complete the appeal process. The Director of Finance will summarize your appeal for the committee and limit the personal information shared to only that which is necessary. Questions about the collection and use of the information provided in this appeal can also be directed to the Director of Finance at kelly.hanlon@cna.nl.ca.

Receipts are issued for any financial transactions with the College. Students should ensure that they obtain and save these receipts for use in resolving any financial conflicts. In the absence of such documentation, the College financial records shall provide the basis for any decision.

STUDENT SERVICES

Introduction

Student Services is the division of the College that provides services to students to support and guide them in pursuit of their educational goals. Student Services complements and supports the student's academic experiences by establishing a College environment that fosters engagement, persistence, growth and development, and academic success.

Counselling Services

All students have access to a professional Counsellor to support their success and well-being. Counselling is a free and confidential service for all students, which may include personal, academic, career, financial, and mental health assistance. Counsellors may also administer standardized testing to support student recruitment and retention.

Accessibility Services

Students who identify as having a permanent or pervasive disability are encouraged to register with Accessibility Services. The Accessibility Services Team, which includes the Accessibility Services Coordinator and Resource Facilitator, can assist with accommodation planning support, referrals for assessment, tutoring and more. Please refer to Policy/Procedure SS-207 in the Student Services section of Policies and Procedures at <http://www.cna.nl.ca/About/Policies-and-Procedures.aspx> for further details.

Student Development Services

Student Development Officers (SDO) plan and implement various student engagement initiatives and provide guidance and assistance for student-led initiatives (campus-based and provincial). Student engagement initiatives contribute to positive and meaningful student experiences, build on student spirit, promote attachment to the institution and foster relationships within and outside the institution. These activities include, but are not limited to, orientation, spirit days, graduation ceremonies, scholarship and awards program, signature and special events, recreation/sports, health and wellness, student and graduate employment, social activities, and other extra-curricular activities. The SDO acts as the College liaison between the students and the College administration/staff and is an advisor to the campus CNASU. SDOs may also be involved in coordinating peer tutoring and assisting students with financial aid information. The SDO is also responsible for organizing and conducting recruitment liaison initiatives including participation in career fairs, school visits and trade shows.

Library Services

Campus library services are offered by a staff of library professionals who provide assistance to students wishing to make use of library resources. Every campus library/learning commons has a collection of materials intended to support and complement the program curriculum at that particular campus along with a variety of materials for personal development and lifelong learning. Students can access article databases and ebooks online (both on campus and from home) and can borrow materials through intercampus and interlibrary loan, from other College of the North Atlantic libraries and most lending libraries across Canada.

Library tours and individual or group instruction in the use of the library/learning commons and its resources may be arranged. Students are encouraged to visit the campus library/learning commons to see exactly what is available. You can also visit the Library Services website at: <https://www.cna.nl.ca/mycna/academic-support/libraries.aspx>.

Academic Advising

Academic advising is an interactive process designed to help students gain the maximum benefit from their College of the North Atlantic experience. It is primarily intended to support students in achieving academic success. Advising entails using both College and community resources to assist students in making informed decisions, directing students to other information sources when necessary, and making appropriate referrals. Each first year student is assigned an Academic Advisor (program instructor) who initially meets with his/her group of advisees to discuss the importance of academic advising and the advising schedule for the semester/year. The Advisor should meet with each student for a minimum of two formal sessions per semester.

Help Centres/Peer Tutoring

Help Centres, located online through MyCNA, and physically on some campuses, provide a location for students to receive assistance with course work in which they may be experiencing difficulties.

Individual and group tutoring may also be available. The College supports a peer tutoring program whereby students may access peer tutors and group tutorials or earn remuneration as a peer tutor. Please check with the campus Student Development Officer/Counsellor for further details.

Student Governance

College of the North Atlantic supports the activities of the student body provincially through the College of the North Atlantic Student Union (CNASU) and through the CNASU-campus and. Each of these student organizations is governed by Operating Guidelines which can be obtained from the Student Development Officer, Counsellor, CNASU-campus or online at www.cna.nl.ca.

CNASU-campus aims to address the issues of the students locally, provincially, and nationally. In September of each year, elections are held at each campus to elect members of the CNASU-campus, who may be involved in the organization and delivery of various extra-curricular activities on behalf of students:

- Winter Carnival
- Recreational and Athletic Activities
- Social Events and
- Student Newspaper

College of the North Atlantic Student Union (CNASU) provides a provincial forum for representatives from the various CNASU-campus to work cooperatively in advancing the interests of the students they represent. The CNASU promotes awareness and understanding of the needs and issues confronting students and advocates on their behalf. Students are encouraged to become involved with their CNASU-campus and have a voice in the events that influence their educational experience.

Students interested in the CNASU-campus or the College of the North Atlantic Student Union (CNASU) should contact the campus Student Development Officer.

Student Health/Dental Plan

Registered students at the College have access to drug, extended medical, and dental insurance coverage. The plan is **mandatory** unless documents demonstrating coverage under another plan (through employment/spouse/parent) is presented during the Health and Dental enrolment period. If a student does not opt out by the deadline, he/she will automatically be enrolled and his/her student account will be charged accordingly. Please check with the Student Services office for the opt out deadline for particular programs.

Beyond the coverage of Newfoundland and Labrador Medical Coverage Plan (MCP), the student plan will provide insurance for prescription drug costs (including oral contraceptives, anti-depressants, and acne medication), physiotherapy, massage therapy, speech therapy, chiropractic, and podiatry as well as accidental death and dismemberment insurance (\$10,000 coverage), and emergency travel insurance to protect students when they are away from school.

The dental coverage includes cleaning, oral exams, scaling, x-rays, fillings, inlays, and root canal therapy with a maximum yearly benefit of \$500.

For more information please contact the campus nearest you or visit our website at www.cna.nl.ca.

Please refer to the International Student section of this calendar for information regarding Health Insurance for International Students.

Accident Insurance

Student insurance coverage against accidents while going to and from the College, while in the college or participating in related College activities such as organized games is mandatory. The premium is included in the registration fee.

When an accident happens, minor or otherwise, students should report immediately to their instructor who will take the necessary action.

Student Handbook

The College will provide an on-line Student Handbook annually via the MyCNA webpage. This handbook provides a comprehensive overview of student supports and resources, in addition to important information and useful tips for students. The MyCNA webpage is also a point of entry to your Student Self-Service portal for registration, accessing webmail, and the Brightspace Pulse app. Please review the MyCNA link on the College website to access the on-line Student Handbook.

Student Code of Conduct (Rights and Responsibilities)

College Policy SS-201 respects the general rights of students and recognizes that students also have responsibilities. Please refer to this policy/procedure in the Student Services section of Policies and Procedures at <http://www.cna.nl.ca/About/Policies-and-Procedures.aspx> for further details.

Harassment Policy

All registered students have the right to pursue their studies and related activities free from personal harassment from College employees, fellow students, and agents of the College or others. Please refer to Policy/Procedure PO-005 in the President's Office section of Policies and Procedures at <http://www.cna.nl.ca/About/Policies-and-Procedures.aspx> for further details.

Threats and Acts of Violence

All students, staff and other persons visiting the College have the right to a healthy and safe environment free from threat and/or the act of physical or sexual injury, danger or violence. Please refer to Policy/Procedure SS-215 Threats and Acts of Violence in the Student Services section of Policies and Procedures at <http://www.cna.nl.ca/About/Policies-and-Procedures.aspx> for further details.

Appeals

All registered students of the College may appeal a decision or ruling that affects them as it pertains to academic matters, matters of student discipline and student rights and responsibilities. Please refer to Policy/Procedure SS-203 and SS-213 in the Student Services section of Policies and Procedures at <http://www.cna.nl.ca/About/Policies-and-Procedures.aspx> for further details.

Student Aid

Information and assistance regarding student aid and financial options is available to students at each campus. Contact the campus Student Development Officer or Counsellor. In addition to campus-based resources, students can also find information on the main College website.

Chaplaincy Services

Chaplaincy services may be made available to students at the College upon request.

Bookstore

Textbooks for all courses are available either at the College bookstore on each campus or via online ordering .

Childcare Centres

Childcare centres, located on the Corner Brook, Happy Valley-Goose Bay, and Prince Philip Drive Campuses can be utilized for children of students if space is available and set criteria met. These childcare centres are linked to the College's Early Childhood Education programs. Interested students can contact either of these campuses for further information.

Parking

Parking is limited at many campuses and is considered a privilege, not a right. Students, staff and visitors must park in designated parking areas. "No Parking" and "Restricted Parking" areas are designated either by a sign, road markings or both.

STUDENT HOUSING

Off-Campus Housing

The Student Services office at each campus maintains a list of boarding accommodations available. Students attending College of the North Atlantic in St. John's can apply to stay at Memorial University residence by calling 709-737-7590. Students attending College of the North Atlantic in Corner Brook can apply to stay at Grenfell residence by calling 709-637-6266.

College Residences

The College maintains residence facilities at the Bay St. George, Burin and Happy Valley-Goose Bay campuses. Students wishing to apply for residence should contact the campuses listed below to obtain an application and should apply directly to the Residence Office of the appropriate campus.

The Residence Office
Bay St. George Campus
P. O. Box 5400
Stephenville, NL A2N 2Z6
tel: (709) 643-7764

The Residence Office
Burin Campus
P. O. Box 370
Burin Bay Arm, NL A0E 1G0
tel: (709) 891-5618

The Residence Office
Happy Valley-Goose Bay Campus
P. O. Box 1720, Stn. B
Happy Valley-Goose Bay, NL A0P 1E0
tel: (709) 896-6349

Residence space is limited and therefore the College cannot guarantee a room to everyone who applies. All applications are processed on a first-come, first-served basis only after a student has been confirmed in a program at the College. For more information, please contact the campuses above or call 1-888-982-2268.

Online Learning (<http://dls.cna.nl.ca>)

College of the North Atlantic's Online Learning brings the classroom to you!

Complete college courses and full programs without having to attend a college campus. Our award-winning instructors guide you through our curriculum, which carries the same credentials and academic standards as their classroom equivalents.

Our approach to online learning supplies learners with the opportunity to complete course requirements from home, work, school, or any other location that has an Internet connection.

Online Asynchronous: Delivered fully online with no scheduled classes, and allows students to learn on their own schedule, in a flexible environment, within a certain time frame. This approach offers a dynamic environment that addresses the needs of different learning styles. Some courses and programs have synchronous (live) components, and some assessments may be required to be completed on-site (nearest campus or local testing centre), or online (and require a webcam & microphone).

Online Synchronous: Delivered fully online with live, scheduled videoconference classes. This approach provides students with scheduled classes that can be attended online throughout the day, Monday to Friday. Some courses and programs may have assessments that are required to be completed on-site (nearest campus or a local testing centre), or online (and require a webcam & microphone).

During the academic year, our Help Desk provides support five days a week for extended hours. We supply online chat and toll-free telephone services to ensure that you are supported throughout the duration of your course or program.

Information is exchanged between the instructor and the student primarily using a range of technologies within the online learning management system (Brightspace by Desire2Learn). Audio, video, web conferencing and virtual classroom tools are also used in some courses. This flexible approach allows you to balance the demands of work and family while reaching your learning goals.

Online Learning is technology-mediated – it's your digital classroom! You will need to be familiar with using computers that are Internet ready. Before registering for a course, learners should take responsibility for familiarization of the technology, and assure access to a computer that has all the software required to complete a course. The time and planning invested at the beginning will pay dividends with a satisfactory and rewarding learning experience! Visit the Online Learning webpage at <http://dls.cna.nl.ca>.

Available Programs

Online Learning provides credit courses from all academic schools. For further information about specific programs and courses offered online, please refer to the College of the North Atlantic website, under "What We Offer, Program Guide" at www.cna.nl.ca. Fully online (part-time or full-time) programs include the following:

- Art & Design Essentials Certificate
- Atlantic Trades Business Seal Certificate
- Accounting Diploma
- Business Administration (General) Diploma
- Human Resources Diploma
- Marketing Diploma
- Strategic Human Resource Management Diploma
- Comprehensive Arts & Science (CAS) Transition Certificate
- Bachelor of Applied Arts: Early Childhood Education Applied Degree
- Early Childhood Education Certificate
- Early Childhood Education Diploma
- Early Childhood Education Administrative Leadership Advanced Diploma
- Enterprise Web Development
- Information Management Post-Diploma
- Mental Health and Addiction Diploma
- Project Management Post Diploma
- Office Management
 - Executive Office Management Diploma
 - Medical Office Management Diploma
 - Records & Information Management Diploma
- Rehabilitation Assistant (OTA and PTA) Diploma
- Tourism & Hospitality Services Certificate
- Video Game Art & Design Diploma
- X-Ray Skills for MLT Post Diploma

INTERNATIONAL STUDENTS

College of the North Atlantic welcomes students from all parts of the world. International students are attracted by the College's high quality education, reasonable costs, safe and friendly living environment, student support services, and the acceptability and transferability of its certificates and diplomas. College of the North Atlantic places a high value on the contribution that international students make towards the development of intercultural communications and understanding throughout the College and the community.

Application Procedure

1. Submit an application and pay the non-refundable application fee.
2. Applicants cannot have an active application for more than two programs for the same academic year. If more than one program applied for, the primary and secondary choice must be indicated. If an applicant applies for more than two programs the applicant must advise which of the first two programs are to be withdrawn.
3. Forward required original documents (e.g. official transcripts, proof of English language proficiency, other documents required for admission). Applications are not complete until original documentation is received. All required documents must be received within three months of date of application or the application will be withdrawn, except for programs that have posted deadline dates in which instance documents must be submitted by the posted date. Transcripts issued directly from the originating institution can be e-mailed to the International Student Coordinator. Notarized certified copies will be accepted via e-mail from recognized agents of CNA. Applicants providing original documents must submit them to:

International Student Coordinator
Student Services Division
College of the North Atlantic
1 Prince Philip Drive
P. O. Box 1693
St. John's, NL Canada A1C 5P7

Applications can be submitted on-line or application forms can be obtained by contacting CNA by telephone, fax, e-mail, regular mail (see contact information below), from any Canadian Education Centre office or from any of our recognized agents.

Tel: +1 709 758-7290
Fax: +1 709 758-7304
Email: internationaladmissions@cna.nl.ca
Web: www.cna.nl.ca

4. Official transcripts or degree certificates issued in languages other than English must be translated into English and submitted to CNA along with the original official documents. An official translation is an exact English translation of academic documents that has been prepared by the issuing institution or a professional translator.
5. Applicants will be sent an acknowledgement upon receipt of their application. Communications will be via e-mail. Some notifications may be sent via SMS text (where applicants have consented to this).
6. The application will be reviewed for eligibility and, if accepted, a **Letter of Acceptance** will be issued to the student. Information regarding fees, enrolment, program of study and length of program will be contained in the Letter of Acceptance.
7. Upon receipt of the Letter of Acceptance, the confirmation fee and tuition for the first semester of the program of studies is due to CNA within two weeks of the date of the letter of acceptance. The confirmation fee is non-refundable and cannot be transferred to a different program.
8. If applicants fail to confirm within the time specified their application will be withdrawn and they will be required to re-apply for admission.
9. If an applicant has confirmed a seat in their primary program, the application for the secondary program will be withdrawn.
10. If an applicant has confirmed a seat in their secondary program, the application for the primary program will be kept active.
11. Applicants can only be confirmed in one seat. If applicants wish to change their confirmed seat, the confirmation fee must be paid for the alternate choice.
12. Applicants who confirm their seat and who do not register during the designated dates for online registration will have their application withdrawn and they will be required to re-apply for admission.
13. Applicants who confirm their seat, complete online registration, and subsequently withdraw their acceptance, do not show up, or discontinue from the program will have to re-apply.
14. International applicants who plan to study in Canada should take their letter of acceptance to the nearest Canadian Embassy, High Commission, or Consulate to apply for a **Student Study Permit**. An immigration officer will then provide the applicant with an information package about the documents that are necessary to process a student study permit. Further information about Application to Study in Canada, Study Permits can be found at <http://www.cic.gc.ca/english/information/applications/student.asp>.

Generally, applicants will need:

- a. Documentation verifying personal identification (such as a passport);
- b. An original **Letter of Acceptance**;
- c. Proof of funds available to cover tuition and living expenses; and
- d. Assurance that the student will return to their country of residence.

International applicants who plan to remain in their home country while completing their CNA programs delivered online for the full duration of the program are not required to obtain a Student Study Permit or travel to Canada.

15. Once an applicant has been issued a Student Study Permit from the Canadian Diplomatic Mission, they should advise CNA and make arrangements to travel to Canada to begin their program at CNA.
16. In the event that a student visa is not awarded by the Canadian Embassy, the tuition will be refunded in full except for the non-refundable application fee and confirmation fee.
17. Proof of approval of visa must be forwarded to International Admissions by:
August 15 for Fall intake,
December 15 for Winter intake, and
April 15 for Spring intake (if applicable).

Failure to provide proof of visa approval by the deadline dates noted above will result in the application being withdrawn, and the applicant having to submit another application (and pay the applicable fee).

18. **Application Deadline**

The deadlines for international applicants who are not already living in Canada and/or do not already have a visa are:

- June 30 for Fall
- October 30 for Winter (if applicable)
- February 28 for Spring (if applicable)

19. **Acceptance Deadline**

The deadlines for issuing Letters of Acceptance to international applicants who are not already living in Canada and/or do not already have a visa are:

- July 5 for Fall
- November 5 for Winter (if applicable)
- March 5 for Spring (if applicable)

English Proficiency

As per AC-102-PR, 5.2, all international applicants must meet the College's English language proficiency requirements for acceptance into regular programs.

CNA will accept these recognized tests of English language proficiency:

CAEL	60
TOEFL	paper based 550
TOEFL	Internet based 79
TOEFL	computer based 213 or equivalent
IELTS ACADEMIC	overall band score of 6.0
MELAB	minimum 78
MET	52
DUOLINGO	105-110
PEARSON PTE ACADEMIC	minimum 53

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

If an international applicant has resided and was continuously employed in an English language work environment in a country that is exempt from our English language requirements (as listed on our website) for a period of five years or more, the English language proficiency test may be waived. The applicant must provide a resume and a letter from a supervisor confirming the nature of their work was conducted in English.

Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the Academic Calendar.

The School of Health Sciences requires the following minimum English language proficiency scores for applicants whose first language is not English (IELTS Academic Test overall band score of 7.0, Speaking 7.0, Listening 7.5, Reading 6.5 and Writing 7.0).

Academic Prerequisites

As per AC-102-PR, 5.3, admission requirements for each program are set out in the program description. For most programs, the admission requirement is graduation from high school with overall high school average of 60% or better in the Canadian system. Certain programs require achievement in specific subject areas, such as English, Mathematics, Biology, Chemistry or Physics. Applicants from British-oriented educational systems should present the General Certificate in Secondary Education. All applicants should submit the most recent official high school transcript of marks which will be assessed on an individual basis. Those applicants who have completed advanced courses in Mathematics and Sciences may be eligible to receive exemption for those courses.

International Health Insurance Plan

Registered international students of College of the North Atlantic are required to have medical coverage as per our College policy. If a student wishes to opt out of the plan, he/she must provide proof of coverage of a similar health insurance plan to the International Student Coordinator on or before the first day of classes. Please refer to the Student Health/Dental section of the College Calendar for further details.

Health Insurance: Newfoundland and Labrador's Medical Care Plan

As per AC-102-PR, 5.4, international students undertaking full time post-secondary studies in Newfoundland and Labrador may be eligible for MCP coverage. A detailed explanation of MCP services can be found on the Provincial Government website at <http://www.health.gov.nl.ca/health/mcp/international.html>.

The Medical Care Plan (MCP) program applies to any foreign individual issued an official study permit by Citizenship and Immigration Canada before entering the country. The individual must be attending a recognized post-secondary educational institution in Newfoundland and Labrador for a period of at least 12 months. Dependents of the student will also be covered under MCP, provided they are living in the province and have relevant documentation to support their application.

In order to receive coverage, international students must apply for and receive a MCP card. The Medical Care Plan (MCP) application form can be found at <http://www.health.gov.nl.ca/health/forms/index.html#3>. Coverage becomes effective for eligible students and dependents on the later of the date of enrollment in a full time post-secondary program or arrival in the province. Eligible students must present a letter of enrollment from the educational institution at the time of registration. Coverage must be renewed annually at which time a current letter of enrollment must be provided. Coverage terminates upon completion of the study program; termination from the study program; or the date of permanent departure from the province, whichever is earlier. Students must be attending school and residing in the province in order to avail of coverage.

Coverage is available for services listed under the Medical Care Insured Services Regulations and the Hospital Insurance Plan Regulations. Health insurance for other services (i.e. coverage of prescription drugs) may be available for international students with MCP cards to purchase through the College or other health insurance companies. Proof of coverage equivalent to Canadian coverage must be received prior to the start of classes if a student is opting out of the College insurance plan.

Registered students of College of the North Atlantic are covered under an accident insurance plan. This DOES NOT provide routine medical coverage for students.

International students temporarily leaving the province for vacation or other purposes may qualify for out-of-province coverage for up to 182 days in any 365-day period. The residency requirement for international student beneficiaries must be satisfied in each subsequent 365 day period in order to receive future out-of-province coverage. In order to ensure out of province coverage, international students must apply for and receive an Out-of-Province Coverage Certificate prior to leaving the province, for which the application can be found at http://www.health.gov.nl.ca/health/mcp/forms/oop_rqst.pdf.

Proof of Status

International students must provide proof of status (i.e., study permit) in Canada to campus student services staff within 7 days of the semester start. Students who do not provide their study permit by this deadline will be withdrawn from the program. Refund rules will apply.

Student Services

Student Services, in cooperation with the International Office, will assist international students in such areas as: providing local accommodations listings; orientation and general information. The full range of student services as outlined in the Academic Calendar will be made available to international students.

Student Services / On-Campus Facilities

The Student Services division provides personal and academic counseling to all students of the College. Student tutoring and other learning resources are also available. The Student Council organizes various events/activities for students throughout the year. During the first week of classes, international students will be advised who the 'main point of contact' will be who will provide on-campus assistance to them. Below is a list of services that may be provided:

- Assistance on Accommodation Search
- Orientation
- Monthly international events

All students at College of the North Atlantic have free access to the internet and a variety of software, accessible through the College's many networked computers.

Fees and Costs

All amounts are in Canadian Dollars and all fees must be paid in Canadian Dollars. Fees are subject to change. Please refer to the College website for the most up-to-date fees.

Regular Academic Studies

Application Fee:

Non-refundable (must accompany application) CAD \$100.00

Tuition Fees:

Regular-Full-time programs

Fall or Winter Semester (15 week semester) CAD \$3985.00

Intercession (7 week semester) CAD \$1993.00

Out of sequence programs (per week) CAD \$266.00 (and prorated equipment/materials fees)

Trades (per week) CAD \$266.00 (and prorated equipment/materials fees)

In-class course - Part-time students (per course) CAD \$997.00

Online courses (per course) CAD \$997.00

Technology Fee CAD \$75.00 (per semester)

Co-op work term (per semester, 12-16 weeks) CAD \$1993.00

On the Job Training (per week) CAD \$266.00

Equipment/Materials CAD \$78.00 - \$792.00

(varies from program to program; some exceptions may apply)

In general, for most programs one academic year consists of two 15-week semesters and one 7-week semester. For some programs, an academic year consists of three 15-week semesters. See program description in the Academic Calendar for details.

Confirmation Fee:

All Programs (per academic year, September to August) CAD \$99.00 (non-refundable)

Other Costs (Note: these are estimates of expenses, not exact figures)

Textbooks (per semester) CAD \$ 500.00 – \$1500.00

Health Insurance (per year) CAD \$ 500.00 – \$550.00

Schedule of Payments

- **Application Fee** (\$100.00) must accompany application form
- **Confirmation Fee** (\$99.00) due within two (2) weeks of date of Letter of Acceptance
- **First semester tuition** (\$3985.00) due within two (2) weeks of date of Letter of Acceptance
- **Tuition and Equipment/Materials** are to be paid at the beginning of each semester
- **Health Insurance** must be purchased before or upon arrival in Canada

Acceptable Method of Payments

Payment for on-line applications is by credit card only (Visa or Mastercard).

Once an applicant is accepted into a program, payment of confirmation fee, tuition and/or any other fees can be made by credit card through student self-service or through PayMyTuition.

Refunds

The following outlines the international eligibility for tuition refund:

- **Application fee and Confirmation fee are non-refundable.**
- In the event a student has paid tuition fees in advance and he/she is not granted a visa by the Canadian Embassy and cannot attend the College as a result, any tuition paid will be fully refunded. If the student has registered and attended classes prior to this notification, the student will be liable for a pro-rated tuition and equipment and materials fee for the weeks attended
- Please refer to Section 3.0 (i. to iv) in the Fees & Charges section for information regarding refunds. Please note that refunds for international students will be made only through PayMyTuition.

Scholarships

The College does not offer scholarships or bursaries to international students upon admission. Once a student is enrolled at the College, he or she may be eligible to apply for a scholarship or bursary. Eligibility for the College's scholarships and bursaries is usually determined by the student's academic performance.

Living Expenses

An average monthly estimate of living expenses (not exact figure):

Housing:	\$900.00 – \$1200.00
Meals:	\$250.00 – \$300.00
Transportation:	\$70.00 – \$100.00
Total Estimate	\$1500.00

Residence

The College maintains residence facilities at the Bay St. George, Burin and Happy Valley-Goose Bay campuses. Fees for room and board at the residences range between \$350.00 and \$650.00 per month with meal plans being mandatory. Please refer to Fees & Charges section of the Calendar for rates. Students wishing to apply for residence should apply directly to the Residence Office of the appropriate campus.

Off-Campus Housing

Newfoundland and Labrador also has many off-campus housing options including renting a single room in an apartment or house, rental apartments, rental houses, and boarding houses (which often include meals). There may be apartments within walking distance of the College and a public bus service is available only in the greater St. John's region and the Corner Brook region. Students who would like to live off-campus can contact the campus International Student Contact for information regarding off-campus housing options. Depending on the type of accommodation and location, the cost of off-campus housing can range from \$900.00 - \$1200.00 and up each month.

Students attending College of the North Atlantic in St. John's can apply to stay at Memorial University residence by calling +1-709-737-7590. Students attending College of the North Atlantic in Corner Brook can apply to stay at Grenfell residence by calling +1-709-637-6266.

INTERNATIONAL CONTRACTS

Economic development is strongly linked to the presence of an effective and responsive education system and the establishment of an educated and trained workforce. College of the North Atlantic embodies the concept of education-industry interface through the development of partnerships, tailor-made training, technical assistance and consultancies around the world to promote labour market renewal and develop relevant professional and skills training programs.

International Contract Training

College of the North Atlantic develops tailor-made training programs to meet the needs of businesses and organizations worldwide. Customized training can vary in duration from a one-day session to programs of several months. We pride ourselves in responding quickly and accurately to clients' needs.

College of the North Atlantic's instructional and support staff have the expertise to ensure quality programs and services. Training expertise at College of the North Atlantic exists in a wide range of sectors:

- Petroleum/Oil & Gas
- Safety & Construction
- Tourism & Hospitality
- Health Sciences
- Engineering Technology
- Industrial Trades
- TVET reform
- Business
- Information Technology
- Management & Leadership
- Distance Learning Systems
- Natural Resources
- Curriculum Development

International Partnerships

College of the North Atlantic works in partnership with educational institutions in joint delivery of programs, training needs assessment, curriculum and program development, teacher training, and other areas of educational cooperation. We have an excellent track record in working with partner institutes and organizations.

International Consultancies and Technical Assistance

The College has extensive experience and proven success in sharing best practices and processes in both the administrative and pedagogical aspects of technical/vocational education. College of the North Atlantic has provided technical support and consultancy services to projects operated by private companies, governments, non-government organizations and development agencies such as the World Bank, the International Development Research Centre, Global Affairs Canada and Colleges and Institutes Canada.

Geographic Experience

The College of the North Atlantic has worked with clients in Libya, Lebanon, Yemen, Qatar, West Bank/Gaza, Jordan, Egypt, Peru, Argentina, Chile, Jamaica, Barbados, the Caribbean, Tanzania, Vietnam, Malaysia, Latvia, Lithuania, Russia, India, Pakistan, Thailand, Guyana, Antigua, China and Kenya.

PARTNERSHIPS & INNOVATION

The Division of Partnerships & Innovation (PI) encompasses the effective development, management and delivery of local, provincial, and national projects. This line of business is inclusive of community and business partnership development, community and industry workforce training delivery, college philanthropic activities, alumni relations and applied research and innovation. Clients are individual students, industry and community partners, and government departments and agencies.

The Office of Partnerships, Entrepreneurship and Community Engagement (PECE) works in tandem with various college departments to forge strategies and initiatives in partnership with municipalities, Indigenous groups, educational institutions, and entrepreneurial associations to deliver enhanced services to our students, business and communities.

The Office of Applied Research and Innovation (OARI) is CNA's link to innovation support for industry, businesses, the community sector and other key partners throughout Newfoundland and Labrador. The OARI has worked with hundreds of industry and community partners in the province, ranging from early stage start-ups and non-profit organizations to multi-national corporations.

OARI's focus is on collaboration with our partners to explore problems, opportunities and ideas, and to develop innovative solutions. OARI provides a range of services to our partners from problem exploration and scoping, proposal development and team member identification to project administration, human resource funding, report writing and closeout.

The office oversees the administration of externally funded projects, including CNA's **College Innovation Network (CIN)**, which links the College's technical and subject matter experts to industry and community partners to support their innovation needs. By leveraging the College's faculty expertise and subject matter experts and extensive labs, shops and equipment, OARI creates innovative applied solutions for businesses in the province and creates unique Work-Integrated Learning (WIL) opportunities for our students across all program areas.

Customized and Continuous Learning (CCL) facilitates life-long learning for its many audiences and partners, including government, communities, industry associations, private businesses, and individuals. CCL delivers credit and non-credit programming, through customized and flexible content, delivery methods and locations.

CCL's team of Business Development Officers and Coordinators proactively identifies gaps in the labour supply for emerging and changing economic sectors and develops and delivers relevant training to link individuals to employment. Active in community growth, and in collaboration with local development associations, CCL brings short-term courses and longer-term programming to rural and Indigenous communities.

Another core function of the office is to provide service to individuals who may have barriers to education and employment. CCL works with the College's five schools of study and government partners who are committed to creating new pathways to education and meaningful employment by developing innovative academic solutions for under-represented groups.

CCL's team responds to specific industry requests by working with businesses to identify and address training and development opportunities for staff, leading to increased staff morale, productivity, and ultimately, a healthier bottom line.

Through its Continuing Education activity, CCL also offers opportunities for personal and professional development, along with a variety of general interest programming. Personal development programming offers opportunities for learners to engage in a selection of training that develops skills and confidence, leading to increased opportunities for new challenges and increased responsibilities in the workplace. Professional development also includes safety, regulatory and sector-specific certifications.

The NL Workforce Innovation Centre (NLWIC), administered by CNA has a provincial mandate to provide a coordinated, central point of access to engage all labour market stakeholders about challenges, opportunities and best practices in workforce development. The Centre's goal is to promote and support the research, testing and sharing of ideas and models of innovation in workforce development that will positively impact employability, employment, and entrepreneurship within the province's labour market and particularly under-represented groups. Funding is provided by the Department of Immigration, Population Growth and Skills under the Canada-Newfoundland and Labrador Labour Market Development Agreement.

CNA's **Alumni and Advancement Office** has a dual mandate to create and nurture partnerships to connect alumni and the college with opportunities.

The office works to create an enduring connected community of graduates while building awareness, pride, opportunities for engagement, and volunteerism.

Through our advancement role we strive to upon the philanthropic pledges of our vast alumni network while working closely with industry and community stakeholders. The result is the creation of benefits to our students through scholarships and awards as well as various other giving programs that carry over to alumni.

CUSTOMIZED AND CONTINUOUS LEARNING

Customized Training – On-Site, On-Campus, Anytime

Customized training is developed and/or delivered to meet the needs of today's workforce. College of the North Atlantic's Customized and Continuous Learning division develops training solutions for business, corporations, governments, individuals and communities from an extensive list of more than 100 full-time diploma and certificate programs and a comprehensive range of over 300 part-time courses. Its services are distributed throughout the province, with a Business Development team available to meet your training needs.

Curriculum is custom designed to meet your specific training goals with a delivery timetable suited to your needs. From a one-day session to programs of several weeks, we deliver anytime, on-site or off-site with the appropriate training infrastructure and resources. Call 1.888.982.2268 or visit <https://www.cna.nl.ca/business-and-industry/Corporate-Training.aspx> for more information or to speak directly with one of our Customized and Continuous Learning professionals.

Other Services to Help You Succeed

- Custom design curriculum / program development
- Training needs analysis
- Workplace essential skills assessments

Training for Industry Sectors

Organizations in all industry sectors throughout the province need access to training programs so they can remain competitive, recruit and retain employees, diversify, and sustainably develop their long-term potential in Newfoundland and Labrador.

Business & Information Technology

Information technology has significantly changed business models, operations, products and services, and the competitive environment of small and medium-sized businesses in all industry sectors as well as the public and community sectors. In order to remain competitive, employers and employees need access to quality training. CNA provides comprehensive support to the business & information technology sector.

Construction Sector

According to the Construction Sector Council (CSC), our future depends on the construction and manufacturing sectors to build, repair, and maintain our homes and buildings, our roads and bridges, and the oil refineries and other infrastructure that fuel community progress. CNA provides comprehensive support to the construction and manufacturing sectors. Training addresses the needs of a variety of employers – general contractors, builders, construction managers and specialty trade contractors – in new home building and renovation, heavy industrial, institutional and commercial, and civil engineering subsectors.

Energy

New technologies and the changing demands of consumers, government and other stakeholders have significantly transformed the energy sector. Regulations have evolved. Exploration, development and production methods are more advanced. CNA provides comprehensive support to the oil and gas, hydroelectric and renewable energy industries. We are committed to providing the same support to renewable energy including wind and geothermal sources.

Health

Health care providers-business, government, professionals, researchers, and community organizations-along with the clients and communities they serve are challenged to meet or exceed the standards services for institutional health care management, decision making, quality, innovation, program delivery, and accountability set by government's vision that "... all Newfoundlanders and Labradoreans will enjoy optimal health." College of the North Atlantic provides comprehensive support to health sector professional staff/technicians and management.

Mining

College of the North Atlantic is committed to providing comprehensive support to the mining sector in both surface and underground mining. Training addresses the unique needs of the sector during the exploration, development, production, processing and distribution stages. CNA's training capabilities include training for occupations related to: prospecting, leadership, management and supervisory development, automation, environment, health and safety certifications, installation, maintenance and repair; construction and extraction; production; and transportation and material moving.

Safety Training

Businesses are required by law to meet the Occupational Health and Safety standards of the workplace. Safety training and certification is essential to ensure a healthy and productive workplace. In order to remain competitive, employers and employees need access to quality training. CNA is committed to providing comprehensive support to all the provinces' sectors with quality safety training. CNA is an approved Workplace-NL provider of Fall Protection, Fall Protection Recertification, Occupational Health and Safety, Traffic Control Person, Powerline Hazards and Confined Space Entry training.

Training for Government

College of the North Atlantic is pleased to provide a range of training courses and programs to provincial, federal, and municipal government departments to support changing technologies, client and service needs and professional development from any of our 17 campuses.

Training for Individuals and Community Organizations

Individuals and community organizations in towns and communities across the province comprise a significant number of student registrations for customized training and continuous learning. These students are seeking to upgrade skills for current employment, explore new careers, and complete a range of programs to compete for jobs in Newfoundland and Labrador's industry and other sectors.

Please refer to the Fees and Charges section of the Calendar for refund information pertaining to Customized and Continuous Learning.

CONTINUOUS EDUCATION

Professional and Personal Development Opportunities

For those who want to increase their chances of getting a job, upgrade their skills to advance in their present career, maintain their certification, or are interested in pursuing a personal interest, College of the North Atlantic offers a vast array of continuous learning courses and certificate programs in many campus locations throughout the province.

Certificate Programs

Continuous Learning certificate programs are offered on a part-time basis through evening, daytime, online, or a blend of online and face to face instruction. Students enrolling in a certificate program have the convenience of studying part-time while maintaining current employment.

Customized Workforce Development programs

The College is equipped to design and deliver shorter term non-credit programs that are customized to address unique regional training needs and skills shortages for jobs in growing fields.

Leadership, Management and Supervisory Skills Training

Major demographic shifts in population are occurring in our province and in the rest of Canada, resulting in labour shortages, including administration and management positions. We must plan for that shortage now by training our existing workforce in leadership, management and supervisory skills.

Personal Interest Courses

Whether you want to learn a foreign language, or you want to make a gourmet dish, Customized and Continuous Learning offers many personal interest courses to suit your needs:

- Arts and Crafts
- Cooking / Baking
- Firearms Safety Courses
- Language Training
- Matting and Framing
- Photography
- Welder Testing (CWB)
- Welding Courses
- Yoga

For a list of course descriptions and schedule information, visit our Customized and Continuous Learning website at <https://www.cna.nl.ca/programs-courses/Continuing-Education.aspx> and check out a campus near you. If our schedule of courses does not meet your timeframe, we can work with your business to schedule timeslots that are convenient through our customized training options.

Please refer to the Fees and Charges section of the Calendar for refund information pertaining to Customized and Continuous Learning.

ALUMNI & ADVANCEMENT

The Alumni and Advancement strives to make life-long connections with our 100,000+ Alumni and our philanthropic partners, building careers and strengthening the communities where you live and work every day. Our reach is global and our graduates lead and change the world one job, one community, one connection at a time.

The office fulfills two core functions in driving and promoting CNA's interests with graduates, students, staff, faculty, industry, and community. The Advancement arm serves as the philanthropic touch point for CNA managing all giving programs, donations, and partnerships for philanthropy at CNA. The Alumni arm seeks to create a lifelong connected community of graduates through increased opportunities for engagement, mentorship, recognition, employment services, service and benefits and giving back to CNA. The Office seeks to carry out this function with continuous activity and initiatives to build awareness, pride, participation, and volunteer involvement.

It's a life-long story... *Students for a short time, Alumni for a lifetime...*

Alumni & Advancement Goals

CNA seeks to continuously build upon its philanthropic commitments and partnerships, capitalizing on a 60-year history of serving the province. In so doing the Alumni and Advancement Office supports student training, mentorship, networking, recognition and reward, assistance with student debt, student well-being, as well as College infrastructure and employment initiatives.

The Alumni and Advancement Office seeks to promote and connect alumni with industry, provide meaningful mentorship opportunities, entrench the culture of giving and mentoring with employers, and provide enhance services and benefits to support new and existing Alumni as they build careers and grow their own networks.

Services and Benefits for Registered Alumni

- Discounts from our select partners such as TD Insurance, SoftMoc and Perkopolis
- Opportunities to stay connected or to re-connect with the College, former teachers, classmates and friends through social media outlets and local events
- Continuous Learning opportunities
- Free access to campus libraries
- Career employment services
- Alumni at Work program
- Entrepreneurship opportunities
- Contests and monthly newsletter
- Alumni Spotlight
- Mentoring Opportunities (10K Coffees platform)
- Graduation Services such as photography, diploma/certificate frames, flowers and alumni pins
- CNA Giving Programs
- Sessions and webinars
- Community events

Benefits for Students

- Student Awards are a key part of our office's activities. By securing corporate and community support, we encourage and support the development of our students.
- We build connections between students and alumni which facilitates career guidance or mentorships between these two groups.
- Students can be confident in knowing that the relationships they are forming as students will continue beyond graduation.
- Giving programs to support student need: Pantry Program, Tampon Tuesday, Student Emergency Fund and Areas of Greatest Need.
- Orientation and event support and sponsorship.

Tourism*

College Bridging

Start Date: September

Credential: Certificate

Program Length: One Year

School: Academics, Applied Arts, and Tourism

Locations & Delivery Modes:

- Happy Valley-Goose Bay - On Campus Delivery

PROGRAM DESCRIPTION

The College Bridging program is designed to provide a basis for subsequent college programs of study so you can pursue rewarding work and gain personal growth. Specifically, the program is a preparatory certificate that can serve as a refresher if you have been out of school for some time, or it can be a way to improve your competencies and proficiency in reading comprehension, writing, math, research, scientific experimentation, study skills, time management, and critical thinking. Necessary components for your student success are incorporated within the program and include cultural supports, relevant materials, and community participation. Along with career and computer courses, you will be offered personal development instruction in areas such as health and wellness, nutrition, stress management, healthy relationships, self-determination, and active lifestyle. This shared focus – academic and personal skills development – forms a solid foundation year and a pathway to enrolling in other college programs.

In fact, on completion of the College Bridging certificate, you may receive credit for several courses that are transferable to the Comprehensive Arts & Science (CAS) Transition program. These include:

- Computer Applications I
- Career Exploration
- Indigenous History of Newfoundland & Labrador
- Indigenous Arts & Culture

It's a time full of awesome opportunities – it's your time!

OBJECTIVES

1. Apply the necessary academic skills and foundational knowledge to succeed in college-level coursework, including critical thinking, writing, and study skills.
2. Develop self-confidence through positive feedback, support, and encouragement.
3. Adjust to college culture, including norms, expectations, and resources available.
4. Create opportunities for personal growth, including leadership development, goal setting, and self-reflection.
5. Connect with peers, faculty, and staff, building a supportive community that can aid in their academic success.
6. Set and achieve academic and personal goals, ensuring that they are well-prepared for their college experience.
7. Improve fundamental employability skills to enhance employment opportunities.

ENTRANCE REQUIREMENTS

Eligibility for admission requires the applicant to meet the following criteria:

1. Apply the necessary academic skills and foundational knowledge to succeed in college-level coursework, including critical thinking, writing, and study skills.
2. Students must be at least 19 years of age at the commencement date of the program, and have a minimum of Grade 9 completion, or equivalent.

Applicants who do not meet the education prerequisites for this program, are 19 years at the time of application, and out of school for at least one year may be considered on an individual basis under the Mature Student requirements; for more information regarding Mature Student Requirements please refer to Procedure AC-102-PR Admission.

Comprehensive Arts and Science (CAS) Transfer: College-University

Start Date: September

Credential: Certificate

Program Length: One Year

School: Academics, Applied Arts, and Tourism

Locations & Delivery Modes:

- Burin - Blended delivery
- Carbonear - Blended delivery
- Grand Falls-Windsor - Blended delivery
- Happy Valley-Goose Bay - Blended delivery
- Labrador West - Blended delivery

PROGRAM DESCRIPTION

Comprehensive Arts and Science (CAS) Transfer: College-University program provides students with the opportunity to complete a suite of courses for which they will gain credit from College of the North Atlantic as well as from Memorial University of Newfoundland. It has been developed through an agreement with Memorial; courses identified in this section are developed in collaboration with Memorial's respective departments. In the areas of curriculum content and testing methodologies, these courses are identical to Memorial's courses.

NOTE

- Please check the course offerings available at the campus you plan to attend.
- Please check course prerequisites and co-requisites during advising/confirmation of enrolment. Course prerequisites and co-requisites must be met in order to confirm registration in the course.

These introductory courses are designed for students intending to transfer to university after completion of their first year at College of the North Atlantic.

OBJECTIVES

Upon successful completion of this program graduates will be able to:

1. To enhance student access to courses that earn both University and College credits.
2. To provide an opportunity for students to gain University course credit at locations close to their home communities.
3. To allow students to choose career paths with maximum recognition of credit for work completed.

ENTRANCE REQUIREMENTS

1. High School

Provincial High School Graduation with 60% overall average in the following courses (or equivalents):

- English 3201 or English 3202
- Mathematics (2 credits) chosen from
 - Advanced: 3200
 - Academic: 3201

And

2 credits chosen from

- Advanced: 2200
- Academic: 2201

- Science (4 credits) two of which must be selected from the following:

Biology 3201
Chemistry 3202
Physics 3204
Earth Systems 3209

The remaining two credits may be selected from 2000 level courses in the above noted subject areas or from Science 1206.

iv. Two credits at the 3000 level in a Social Science or a Modern/Classical Language. This category includes the following subject areas: History, Geography, Religious Studies, French, Spanish, and other Modern/Classical Languages.

v. Electives

Two credits at the 3000 level in elective courses chosen from the subjects above or from additional courses approved by the Department of Education for offering at the 3000 level for certificate purposes.

2. Comprehensive Arts and Science (CAS) Transition

Note: It is important that CAS Transition students who intend to enroll in the CAS Transfer program check course requirements for their intended post-secondary plans. It is strongly recommended that CAS Transition Certificate students complete:

i. Math Fundamentals MA1040 and MA1041

ii. Two Science courses chosen from one of the following three combinations:

a. Introductory Biology BL1020 and BL1021

b. Introductory Chemistry CH1030 and CH1031

c. Introductory Physics PH1050 and PH1051

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with Degree and Technical Profile including the following courses:

i. English 3101A, 3101B, 3101C or 3102A, 3102B, 3102C

ii. Mathematics 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C

iii. Science from one of the following sections:

a. Biology 1101, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C

b. Chemistry 1102, 2102A, 2102B, 2102C, 3102A, 3102B, 3102C

c. Physics 1104, 2104A, 2104B, 2104C, 3104A, 3104B, 3104C

Applicants with Adult Basic Education (Level III) Graduation with a different Profile may be eligible for admission to the program provided the appropriate selection of courses including those outlined above has been completed.

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, are 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

REQUIREMENTS TO REGISTER FOR CAS TRANSFER MATHEMATICS COURSES

Students who have completed Math 3200 (Advanced Mathematics) or Math 3201 (Academic Mathematics) in high school and are enrolling in CAS Transfer math courses will need to write the math placement test (MPT) as outlined in the chart below. Students who have completed MA1041 in CAS Transition do not need to write the MPT.

These requirements are effective commencing Fall 2023.

CAS Transfer Courses

Requirements to Register

MA1120/1121
(Finite Mathematics)

A grade of 50% or greater in Math 3201 or Math 3200, and at least 50% on the MPT1 **OR**
A grade of 50% or greater in MA10412

MA1104
(Pre-Calculus)

A grade of 50% or greater in Math 3201 or Math 3200, and at least 55% on the MPT1 **OR**
A grade of 50% or greater in MA10412

MA1130
(Calculus I)

A grade of 50% or greater in Math 3200 and at least 75% on the MPT1 **OR**
A grade of 50% or greater in MA1104

MA1131
(Calculus II)

A grade of 50% or greater in MA1130 or an acceptable score on the Calculus Placement Test (CPT)

- Students who score below 40% on the MPT must successfully complete both MA1040² and MA1041² before being permitted to register for a CAS Transfer mathematics course.
- Students who obtain a mark between 40% and 49% on the MPT must satisfactorily complete MA1041² before registering for MA1120 or MA1121.
- Students who obtain a mark between 40% and 54% on the MPT must satisfactorily complete MA1041² before registering for MA1104.
- Students who obtain a mark below 74% on the MPT and wish to register for MA1130 must satisfactorily complete MA1104 before registering for MA1130. They must meet the entrance requirements for MA1104.

For a list of locations and times to write the MPT, please visit <https://www.mun.ca/math/mathematics-placement-test-mpt/>

The MPT (Mathematics Placement Test) is a diagnostic test of basic skills in mathematics consisting of 100 multiple choice questions. It can only be written once, and the use of a calculator is not permitted.

MA1040 and MA1041 are courses in the College's CAS Transition program designed to strengthen students' mathematical knowledge and skills. Students obtain credit in the College system, but the courses are not transferable to MUN.

REQUIREMENTS FOR COMPLETION

In order to complete the requirements of the Comprehensive Arts and Science Transfer: College-University Certificate program, students must complete 10 courses from the CAS Transfer: College-University suite of courses with a minimum Grade Point Average of 2.00.

Note: For purposes of completion of the Certificate, MA1670 Statistics and EP1110 Introduction to Business may also be included in the CAS Transfer: College-University suite of courses. Students must also meet all qualification requirements for the awarding of a Certificate from the college.

Maximum number of CAS Transfer: College-University courses per semester (i.e. Fall; Winter) is five.

Comprehensive Arts and Science (CAS) Transition

Start Date: September

Credential: Certificate

Program Length: One Year

School: Academics, Applied Arts, and Tourism

Locations & Delivery Modes:

- Bay St. George - On Campus delivery
- Carbonear - On Campus delivery
- Clarenville - Blended delivery
- Corner Brook - On Campus delivery
- Gander - Blended delivery
- Grand Falls-Windsor - On Campus delivery
- Happy Valley-Goose Bay - On Campus delivery
- Labrador West - On Campus delivery
- Prince Philip Drive - On Campus delivery
- Online - Asynchronous delivery

PROGRAM DESCRIPTION

Comprehensive Arts and Science (CAS) Transition is designed for high school and Adult Basic Education graduates who would like to improve their general employability skills or who are lacking either the academic courses or the required grades to meet the entrance requirements of the college program they would like to enter. The Transition program also provides a valuable “refresher” for mature students who have been away from education, training and/or the workforce for some time.

Students in the CAS Transition program will be provided the opportunity to gain a wide range of knowledge and skills in preparation for further post-secondary training and/or employment. In addition to courses in English, Mathematics and Sciences, students will be able to select courses from a range of General Education and Social Science courses as well as Exploration and Student Success courses. Transition courses such as Critical Thinking and Effective Learning provide students with the opportunity to develop the essential skills and strategies for successful learning in any college program. The completion of elective courses from other program areas will enable students to gain credits which may be used in a subsequent college program. (**Note:** The range of course offerings may vary between campuses. Prospective students are advised to check with the campus they will be attending to confirm available courses as well as mode of delivery.)

OBJECTIVES

Upon successful completion of this program graduates will be able to:

1. To provide the opportunity for secondary-level graduates to meet entrance requirements for other college programs.
2. To provide secondary-level graduates and mature students with the opportunity to strengthen academic skills and/or learning habits and strategies needed to succeed in post-secondary programs.
3. To enhance the employment opportunities of secondary-level graduates and mature students through improving fundamental employability skills.
4. To provide the opportunity for secondary-level graduates to clarify training and career goals.
5. To provide a refresher for mature students who have been away from education, training and/or the workforce for an extended period of time.

ENTRANCE REQUIREMENTS

1. High School

Provincial High School Graduation Certificate, or equivalent

2. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with General College Profile (or Business-Related College Profile or Degree and Technical Profile)

3. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, are 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

4. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment. If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

FUTURE OPPORTUNITIES

One objective of the CAS Transition program is to increase opportunities for individuals of this province to gain post-secondary qualifications, and thus improve their lifetime employment and earnings potential. A number of government reports have documented the declining significance of high school graduation alone as a predictor of employability/employment status.

CAS Transition has the potential to significantly affect the employment and earnings potential of many adults in this province. For those who successfully make the transition to other college programs, the prospects for employment and increased lifetime earnings potential would be greatly enhanced. The Transition program also provides students with a post-secondary credential which could be of immediate benefit to them in the labour market, both in securing part-time work during their college studies and in attaining full-time work if they choose to postpone or suspend their studies for any reason.

Graduates of the CAS Transition program who have successfully completed the appropriate courses may qualify for admission to other college programs or other post-secondary programs or they may elect to enter the workforce directly. Students are advised to speak to an academic advisor regarding course selection. Students who complete the full certificate program may seek to meet admission criteria of Memorial University.

REQUIREMENTS FOR COMPLETION

In order to complete the requirements of the Comprehensive Arts and Science Transition Certificate program, students must attain 40 credits with a minimum Grade Point Average of 2.00. Credits must include completion of Essential English I and II, a minimum of 20 credits from Core Program courses, and a minimum of 6 credits from Electives. Students must also meet all qualification requirements for the awarding of a Certificate from the college. **(Note:** Students may qualify for exemption and attain credit for graduation for Essential English I or II and/or Math Fundamentals I or II *provided the necessary requirements are met. Only Essential English I and Math Fundamentals I can be considered for exemption within the CAS Transition program using the program specific exemption form. Factors affecting the decision for exemption include previous high school course(s) completed and grade attained, subsequent program choice and advisor recommendation.*)

Courses

Semester 1

Code	Title	Cr	Le	La
CM1060	Essential English I	5	5	0

Minimum of 10 Credits from Core Program courses:

- Program Access Courses
- General Education and Social Science Courses
- Exploration and Student Success Courses

Minimum of 3 Credits from Electives

Semester 2

Code	Title	Cr	Le	La
CM1061	Essential English II	5	5	0

Minimum of 10 Credits from Core Program courses:

- Program Access Courses
- General Education and Social Science Courses
- Exploration and Student Success Courses

Minimum of 3 Credits from Electives

Additional Credits as needed to attain 40 Credits

Note: While it is possible to complete the required 40 credits by doing 5 courses per Fall/Winter Semesters, students who select courses with a credit value of 3 or less may have to complete more than 5 courses per Fall/Winter Semesters to graduate in two semesters. The maximum number of courses a student may complete per Fall/Winter Semesters is 7 and it is highly recommended to stay within 5 courses per Fall/Winter Semester.

Electives:

Students in the CAS Transition program may select electives from the College Calendar provided the course is offered and available to the CAS Transition Student. The student must meet the stated prerequisites/co-requisites of the course, the student's schedule must be able to accommodate the course and the student must meet any other regulations that may apply. Courses over and above the minimum credit requirements in the Core program courses may also be counted as Electives.

Applied Music

Start Date: September

Credential: Diploma

Program Length: Two Years

School: Academics, Applied Arts, and Tourism

Locations & Delivery Modes:

- Prince Philip Drive - On Campus delivery

PROGRAM DESCRIPTION

Amplify your opportunities.

Music can be a powerful force – it can boost motivation, ease anxiety, inspire a mood and empower a generation.

In recent years we have witnessed a remarkable transformation in the music industry; new digital platforms are reshaping the ways artists are connecting with their audiences on a global stage. Accessible technologies such as audio production software, video recording and editing platforms, and digital distribution methods are providing access for everyone to share their talents with the world. As the music industry grows more exciting and complex, there is intense competition for listener and fan attention.

How do you plan to be heard above the rest? We suggest turning up the AMP.

The Applied Music Program (AMP) at CNA provides guided training to give you a competitive edge in fine-tuning your skills and building your brand. Your talent is the foundation, and with our training you'll be able to raise the roof on your career.

Key research shows that the three barriers to artists' success are lack of business training, lack of entrepreneurial skills and gaps in technical understanding of music sector. AMP has what you need to succeed. This thorough exposure to the many exciting aspects of the music business will enable you to realistically assess your prospects for success in this highly competitive industry.

Gain a powerful skill-set, build a professional portfolio and be fully prepared to enter the music industry at a professional level.

Program Highlights:

- Mentorship with faculty who are multi-award-winning musicians, artist managers and audio engineers
- Extensive training in live performance, studio performance, songwriting, music theory and history, music software applications, music and media, and much more
- Essential training in live sound production and stage lighting
- Studies in music business, e-marketing, tourism, public relations and event management
- Cultural career strategies and business planning and entrepreneurialism
- Exposure to associated career options such as booking agents, artist managers, publicists and other integral roles of the industry
- Collaborative projects with other arts programs such as Sound Recording & Production, Journalism and Graphic Design

Did You Know?

- AMP graduates have had their original music featured in major animated films and such international events as the Olympics.
- AMP instructor and graduates are part of the band for the first Canadian Country artist to be showcased on Grammy.com
- AMP graduates have toured Europe, US and across Canada.
- AMP instructors are multi-award-winning experts and remain active and tapped into the music industry.

- Students and graduates have been recognized with a multitude of provincial and regional music awards.
- Students have provided music for large-scale events, conferences and awards shows with various local, regional and national partners across several industries.
- International students enroll in the program and provide exceptional cultural and musical exchange for all students.
- Canada's music marketplace has reached a new major milestone – for the first time, Canadians are streaming more than two billion songs a week.[1]
- The global revenue of the recorded music industry reached over US\$23 billion in 2020.[2]

If you have an aptitude for amplitude, you're in the right place.

[1] [Music Canada](#)

[2] [Recorded music industry - global revenue 2020 | Statista](#)

FUTURE OPPORTUNITIES

Graduates of the Applied Music program will have opportunities for employment as music professionals within a range of areas such as the following: Independent Solo Performers, Independent Group Performers, Independent Recording Artists, Independent Music Studio Educators, Commercial Music School Educators, Arts and Culture Centre Employees, Musical Directors, Pit Orchestra Musicians, Music Industry Association Employees, Artist Managers, Artist Promoters, Film Score Composers, Songwriters, Music Retail Company Employees, Distribution Company Employees, Music Manufacturing Company Employees, Musical Theatre Company Employees, Instrument Design and Manufacturing Company Employees, Tourism Festival/Events Employees and Music Video Producers.

OBJECTIVES

Upon successful completion of this program, graduates will be able to:

1. Demonstrate knowledge and skills in the musical, technical and business aspects of the music industry.
2. Demonstrate refined musical skills by showcasing their artistic works through recordings, media projects and live public performances.
3. Communicate effectively, creatively and with confidence when writing, presenting, performing and speaking.
4. Use the latest music industry technology to create new artistic works, self-promote and engage with industry at a professional level.
5. Collaborate as effective team members in projects with other artistic disciplines.
6. Demonstrate the social and intellectual development required to meet the challenges of the exciting and demanding music industry.
7. Create a career plan for employment in the cultural industries which will include a self-developed professional portfolio.

ENTRANCE REQUIREMENTS

1. High School

Provincial High School Graduation Diploma with a 60% average in eight level 3000 credits or equivalent

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (CAS) Transition Certificate

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with General College Profile (or Business-Related College Profile or Degree and Technical Profile) with an average pass mark of 60%

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, are 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

PORTFOLIO

Applicants to the Applied Music program are required to submit a portfolio that outlines their musical experiences and training, if applicable. It should include several contrasting pieces that best demonstrate the applicant's musical talent and ability. The objective of this portfolio is for the applicant to clearly demonstrate a reasonable chance for success in the program. It will be evaluated in the following areas:

- Musical talent and ability
- Organizational skills
- Overall quality of the portfolio submission

The portfolio and musical examples may be submitted in any of the following formats or a combination of these formats:

- Hard copy printed version;
- Electronic Press Kit (EPK) with link(s) to URLs;
- CD/DVD/Digital Video Files;
- Media Storage Devices

Program Length: Two Years, Part-Time

School: Academics, Applied Arts, and Tourism

Locations & Delivery Modes:

- Prince Philip Drive - On Campus delivery
- Online - Asynchronous delivery

PROGRAM DESCRIPTION

Woven through its rich and vibrant history, the arts in Newfoundland and Labrador are an integral part of its culture. Performance, media, literary, visual and other arts enrich this province's cultural heritage and contribute significantly to the economy. Studies in art and design promote creativity, flexibility, problem-solving, innovation, critical thinking and other invaluable skills needed in the world today. The Status of the Artist Act recognizes the important contribution professional artists make to the economic and social well-being of our province. Art also contributes to personal well-being. Studies show that art-making and design improve the health and well-being of an individual, and these areas are recognized for their tremendous benefits to individuals and society as a whole.

To remain on the leading edge of offering programs that are current and in demand, College of the North Atlantic is pleased to offer Art & Design Essentials, available both on campus and online through its Distributed Learning Services. Courses in this program will be accessible to students over a two-year period (2021-2022; 2022-2023). Students can choose to complete all 16 courses and receive the post-secondary educational credential of a Certificate in Art & Design Essentials or select courses that are of interest to them. For further information on Distributed Learning Service, please visit dls.cna.nl.ca.

Art & Design Essentials, developed in consultation with industry professions, provides an opportunity to explore a variety of disciplines in the arts. Courses include traditional practices in drawing, two and three-dimensional design, photography, color theory, art history, and the use of contemporary technologies for digital imaging, time-based media and webpage development. The study of portfolios and their design/function will assist with future application processes related to subsequent post-secondary programs, employment, awards, competitions and professional development within the arts.

OBJECTIVES

Upon successful completion of the program, graduates will be able to:

1. Apply design skills using traditional and digital technologies in art.
2. Create a thematic series of artworks demonstrating sustained exploration of concepts and technical processes.
3. Create a portfolio of artwork for application to specialized studies in art, media and design programs at the post-secondary level.
4. Represent themselves and their artwork using effective oral and written communication skills.
5. Utilize portfolio development as a continuous process of personal growth, reflection and self-assessment.
6. Demonstrate knowledge of art history concepts and the development of contemporary art.
7. Demonstrate professional practices that exhibit the entry-level entrepreneurial, innovative and collaborative skill sets that are not only necessary within either an independent or team-based environment but are also required for further study within post-secondary art, media and design programs.
8. Develop effective networking and critical thinking skills necessary for working with professional affiliations within creative industries.

EMPLOYMENT AND OTHER OPPORTUNITIES

The Art & Design Essentials program prepares students for entry-level employment opportunities. For example, the following relates to the employment potential and possible opportunities available for students who complete the program:

Self-Employed Artist: All courses in the program help develop the creative, technical, communication and critical thinking skills required for the production of artwork as a self-employed artist.

Gallery Assistant: Through completing the Portfolio Development I and Portfolio Development II courses, students will develop skills for the evaluation and selection of artists' proposals for exhibition. The Photography course will help students develop skills for the photo documentation of exhibitions in artist-run and commercial galleries.

Freelance Writing: Academic courses such as Writing Fundamentals and Writing for the Arts will help develop writing skills required for review of exhibitions. The Art History courses, Prehistory to Renaissance and Renaissance to 20th Century, will enable students to assess and critique artwork as it relates to contemporary art practices. The E-Portfolio course will develop skills for webpage development and the use of blogs as a platform for writing art reviews.

Assistant for Community Festivals: Community festivals often incorporate an art and cultural component. Writing for the Arts develops skills for writing grant proposals for community-based festivals. Art History courses develop an understanding of the value of contemporary visual culture and the significance of art and craft as cultural artifacts of a community. The E-Portfolio course develops web page design skills for the promotion of community festivals.

Other Opportunities: The program also prepares students for future post-secondary studies in the areas of Arts/Applied Arts, Media and Design.

ENTRANCE REQUIREMENTS

1. High School

Provincial High School Graduation Certificate with a 60% average in eight level 3000 credits or equivalent.

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (CAS) Transition Certificate.

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with General College Profile (or Business-Related College Profile or Degree and Technical Profile) with an average pass mark of 60%.

4. Mature Student Requirement

Applicants who do not meet the education prerequisites for this program, are 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements. For more information regarding the Mature Student Requirements, please refer to Procedure AC-102-PR: Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

Bachelor of Applied Arts: Early Childhood Education

Start Date: September

Credential: Applied Degree

Program Length: Four Years

School: Academics, Applied Arts, and Tourism

Locations & Delivery Modes:

- Online - Asynchronous delivery

Note:

Applicants who have an Early Childhood Education diploma & ECE Administrative Leadership advanced diploma from CNA or equivalent programs, may apply directly to year 4; applicants who do not must apply to year 1 of Early Childhood Education.

PROGRAM DESCRIPTION

The legacy of learning.

Studies show that children who participate in early learning and child care programs grow to build positive work habits, develop strong social skills and make gains in all areas of learning that benefit them throughout their lives. Early childhood educators contribute to this legacy of learning, as they lead children in activities to stimulate and develop their intellectual, physical, and emotional growth and ensure their security and well-being. Driven by multidisciplinary research-based practices, early childhood educators not only support children's learning and growth, but also the dynamic and diverse needs of families and communities.

This continuously expanding and rapidly developing field plays an integral and essential role in the health and well-being of societies. And quality early learning and child care depends on qualified and resourced early childhood educators.

Building on the established Certificate, Diploma, and Advanced Diploma programs, the Bachelor of Applied Arts: Early Childhood Education can be completed in two semesters for any ECE Advanced Diploma graduates meeting all entrance requirements.

Throughout this applied degree, you will gain practical knowledge and vital hands-on experience in child development, as well as planning, developing, and evaluating responsive early learning and child care programs. As you advance through the degree, you have the opportunity to further deepen your understanding and develop competencies in program and curriculum design, supporting equity and inclusion, relationship-building, mentorship, leadership, and advocacy.

Through a sequence of educational experiences integrating theory and practice, this applied degree is designed to prepare you for work in a variety of early learning and child care programs.

As you build your own skills, you gain the knowledge to empower future generations.

Students may complete this program on a full-time or part-time basis and have a maximum of 12 semesters to complete the program. A Learner Course Plan for course completion is developed with each student, based on an assessment of any previous ECE or related training they may already have, and any PLAR credits received.

Program Highlights

- Complete Year 4 in two semesters as per admissions requirements
- Benefit from a flexible, online program allowing you to complete courses while working in the field
- Engage in reflective practice, while working with children, families and the community
- Focus on policy, ethics, advocacy and social justice

- In depth knowledge of child development from birth to aged 12
- Investment in early education and child care by provinces and territories rose by over \$3 billion between 2017 and 2020. Newfoundland and Labrador has almost tripled funding since 2011
- Over the period 2019-2028, the number of job openings (arising from expansion demand and replacement demand) for early childhood educators and assistants are expected to total 81,700

Did you know?

- Canadian economic evaluations have demonstrated that early learning and child care has one of the highest returns on investments, with \$2 to \$7 returned on every dollar spent.
- Investment in early education and child care by provinces and territories rose by over \$3 billion between 2017 and 2020. Newfoundland and Labrador has almost tripled funding since 2011.
- Over the period 2019-2028, the number of job openings (arising from expansion demand and replacement demand) for Early childhood educators and assistants are expected to total 81,700
- Newfoundland and Labrador has increased training requirements and expanded graduate bursary programs.

OBJECTIVES

Upon successful completion of this program, graduates will be able to:

1. Analyze research, standards, and trends related to early learning and development to inform curriculum, program decision-making, and early learning practice.
2. Use pedagogical tools to observe, document, and assess child learning and development, adult-child interactions, and the indoor/outdoor environment
3. Evaluate significant Canadian and Provincial social and public policies as they relate to children, families, early childhood educator practice, the sector, and the broader community.
4. Apply trauma-informed, anti-bias, and culturally relevant practices to developing relationships and environments that foster social justice and equity in early learning.
5. Develop professional relationships with families using family-centered principles that respect family diversity, goals, and values.
6. Demonstrate ethical practice with children, colleagues, and families based on a critical evaluation of individual rights, equity, diversity, and inclusion.
7. Use critical thinking, reflective practice, and problem-solving skills to form professional and collaborative relationships with colleagues, families, and other professionals.
8. Develop advocacy strategies with children, colleagues, families, and the community for quality early learning and care programs and services.
9. Identify qualitative and quantitative research methodologies, steps of the research process, and carry out a research project related to the field of Early Childhood Education.

ENTRANCE REQUIREMENTS

Eligibility for direct admission to Year 4 of the Bachelor of Applied Arts: Early Childhood Education program requires the applicant to meet the following academic criteria:

1. Have already graduated from the Early Childhood Education Diploma program at College of the North Atlantic (or equivalent*) within the last five (5) academic years from date of application or have graduated prior to the last five (5) academic years and hold minimally a current Level II Child Care Services (CCS) Certification through the Association of Early Childhood Educators of Newfoundland and Labrador (AECENL) for infant, preschool and school-age children.

AND

2. Have already graduated from the current Early Childhood Education Administrative Leadership Advanced Diploma program at College of the North Atlantic (or equivalent) within the last five (5) academic years from date of application or have graduated prior to the last five (5) academic years and holds minimally a current Level III Child Care Services (CCS) Certification through the Association of Early Childhood Educators of Newfoundland and

Labrador (AECENL) for infant, preschool and school-age children.

**Graduation from a recognized College or University with a diploma or degree in the area of Early Childhood Education. A combination of other post-secondary and industry experience acceptable to the college as an entrance requirement will be considered on a case-by-case basis.*

International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment. If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

To be employed in the field of early childhood education students must be able to lift and move children, materials and equipment (up to 50 pounds) on a consistent basis. As well, physical effort, strength and endurance is required in the supervision and care of children, e.g., maintaining balance, kneeling and bending, pushing and pulling strollers and carts, and moving quickly to assist children in emergency situations.

PRIOR LEARNING ASSESSMENT AND RECOGNITION (PLAR)

Students will be given every opportunity to receive credit for past learning experience (except for EE4010, EE4030 and EE4045) through a comprehensive systematic process of evaluation. Once enrolled and active in the program, students will be permitted to submit PLAR applications for any courses in the program for which they believe they have already acquired the appropriate level of knowledge and skills.

EMPLOYMENT OPPORTUNITIES

Upon successful completion of the program, combined with relevant industry experience, graduates will be prepared for employment in a variety of early learning and child care settings. These could include but are not limited to the following:

- Early Childhood Educator
- Administrator of a regulated Child Care Service
- Instructor of ECE
- Program Consultant
- Inclusion Consultant
- Capacity Consultant
- Family Child Care Home Monitor
- Employee of an ECE Professional Association
- Independent Consultant
- Industry Policy Analysis

CERTIFICATION

Upon completion of the Bachelor of Applied Arts: Early Childhood Education, individuals may apply for a provincial Level IV Child Care Services (CCS) Certification through the Association of Early Childhood Educators of Newfoundland and Labrador (AECENL). For information on certification, please visit Association of Early Childhood Educators of Newfoundland and Labrador (AECENL).

Community and Therapeutic Recreation

Start Date: September

Credential: Diploma

Program Length: Two Years

School: Academics, Applied Arts, and Tourism

Locations & Delivery Modes:

- Bay St. George - On Campus delivery

PROGRAM DESCRIPTION

An exercise in living fully

Today we are seeing an increased focus on personal wellness and the compelling recognition that it is paramount to leading full, satisfying and productive lives. This proactive movement is generating an increased demand for trained professionals in community and therapeutic recreation. These leaders create programs that embrace the diversity of communities, emphasize the importance of cultural connections and bring awareness to the benefits of balanced living.

If you are interested in pursuing a rewarding career in community and therapeutic recreation, this program not only delivers engaging coursework for a strong academic foundation, it also provides opportunities for practical experience and field placements in hospitals, rehabilitation centres, nursing homes, long-term care facilities, and community and municipal centres. Through this strategic combination you will develop the leadership, communication and problem-solving skills needed to be successful in this dynamic field.

Discover the importance of physical literacy and recreation, and how they promote independence, self-esteem, and satisfaction in a person's life. Learn to apply the recreation and therapeutic processes of planning, implementation, evaluation, and assessment to empower others and support their leisure and recreation, assisting them in mastering their own fitness, health and wellness goals.

In this career, you will contribute to the enhancement of the quality of life that shapes a community. You will have the opportunity to foster the growth for individuals' social, emotional, and physical well-being that contributes to a thriving society encompassing all ages, genders, cultural needs and abilities. Equipped with this program's exciting coursework, practical experience, and field placements, complemented with several health and wellness certifications, you will be ready to dive into this ocean of opportunity and potential.

Take that leap – apply today!

Program Highlights

- Access to a wide range of recreational pursuits including therapeutic recreation, outdoor recreation, and community-based programming appropriate to the various sectors of the industry
- Practical skill development
- Field placements
- Exposure to health and wellness, therapeutic and community recreation initiatives

Did You Know?

- Research shows that play is beneficial for social and emotional development. It helps children to learn self-control, emotion-regulation, communication, conflict resolution, and much more.[\[1\]](#)
- Taking part in leisure activities as a family is beneficial for children because adults are modeling healthy ways to handle stress and emotions.
- When you feel good physically, you are more likely to feel better emotionally.
- Therapeutic recreation improves an individual's mood and overall wellbeing.
- Regular exercise reduces both anxiety and depression – both conditions improve after nine to 10 weeks of regular aerobic activity.[\[2\]](#)

- Community recreation creates social connections and bonds that lead to strong health and inclusive communities.

OBJECTIVES

Upon successful completion of this program, graduates will be able to:

1. Identify recreational needs for diverse community groups including those with special needs and challenges.
2. Plan and design community and therapeutic recreation programming.
3. Engage in recreational and therapeutic community-based programming.
4. Implement and administer programming in both recreational and therapeutic settings.
5. Manage recreation environments for organizations and community groups.
6. Apply recreation and leisure interventions to help improve physical, social, cognitive and emotional health.

FUTURE OPPORTUNITIES

Upon successful completion of the program, graduates will be prepared for employment in a variety of roles, including, but not limited to:

- Community Events Coordinator
- Community Outreach Worker
- Disability Camp Coordinator
- Facility Supervisor
- Manager of Community Services
- Program Director and Supervisor
- Recreation Assistant
- Recreation Attendant
- Recreation Coordinator
- Recreation Counsellor
- Recreation Therapy Worker
- Recreation Worker
- Seniors Outreach Supervisor
- Seniors Outreach Worker
- Workplace Wellness Coordinator
- Youth Coordinator

ENTRANCE REQUIREMENTS

Eligibility for admission requires the applicant to meet one of the following academic criteria:

1. High School

Provincial High School Graduation Certificate with a minimum 60% overall average in eight level 3000 credits or equivalent

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science Transition Certificate

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with General College Profile (or Business-Related College Profile or Degree and Technical Profile) with an average pass mark of 60%

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, are 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based

550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore, international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

ADDITIONAL ENTRANCE REQUIREMENTS

The **Entrance Requirements - Additional Documentation Package** identifies specific documentation that students are required to provide for the Community and Therapeutic Recreation Program. You will receive this package as part of your letter of acceptance and these documents must be completed, signed, and returned prior to online registration.

1. Section A: A clear Criminal Record Screening Certificate (Certificate of Conduct) with applications obtainable through the RNC, or a clear Criminal Record Check with applications obtainable through the RCMP. A Vulnerable Sector Check is also required.

These documents must be dated no more than two months prior to the first scheduled day of classes for the program. Applicants with a criminal offense listed on their Certificate of Conduct may be denied access to field placements and will be unable to complete the program. Please note that after enrollment, additional documentation may be required by organizations for field placements and volunteer activities.

2. Section B: First Aid and Basic Cardiopulmonary Resuscitation Certificate (CPR)

Students must possess a valid First Aid Certificate and basic Cardiopulmonary Resuscitation Certificate (CPR), valid until the end of each semester.

3. Section C: Immunization Record and Immunization-Communicable Diseases Screening Package

Students must complete and submit the Student Pre-Placement Immunizations and Communicable Diseases Screening Package prior to online registration.

Please Note:

- i. Copies of the required Criminal Record Screening Certificate (Certificate of Conduct) or the Criminal Record Check, along with the Vulnerable Sector Check, First Aid, CPR, Student Pre-Placement Immunizations and Communicable Diseases Screening Package are to be submitted prior to online registration; otherwise, students will not be able to attend class.
- ii. After enrolment, additional documentation may be required by organizations for field placements and volunteer activities.
- iii. Due to the physical nature of many of the courses offered throughout the two-year program, students are expected to be in good physical condition and demonstrate the ability to take part in intense physical activities in an indoor and outdoor setting.

Due to the outdoor components in the **RS1255** and **RS1370** courses, students are required to have appropriate equipment and the clothing necessary to successfully complete these courses (e.g. sleeping bag, back pack, rain gear - pants and jacket, winter clothing - jacket/pants/gloves/hat/boots, and other clothing/equipment appropriate for outdoor recreation activities and overnight camping).

Community Leadership Development

Start Date: September

Credential: Diploma

Program Length: Two Years

School: Academics, Applied Arts, and Tourism

Locations & Delivery Modes:

- Bay St. George - On Campus delivery

PROGRAM DESCRIPTION

Community Leadership Development is an exciting two-year diploma program designed to develop leadership competencies for working effectively to reach targeted goals with individuals, groups and organizations within communities. Students engage in the process of learning designed to develop individual leadership capacity while exploring and researching social and economic situations in a community. Areas of skill development include communication skills, leadership development and problem-solving with a goal of becoming an agent for change and empowerment. Recent and relevant certifications built into the program make graduates employment-ready and set apart for immediate entry-level community leadership development work.

Community leadership development involves working with community agencies, non-profit organizations, and both the public and private sectors, along with the people they represent. Effectiveness in community leadership requires specific core competencies such as communication and listening skills, public relations and marketing, cultural intelligence, financial and project management, board governance and ongoing personal and professional development. Students will explore different leadership styles, best practices and models used when coordinating service delivery, managing projects, and evaluating services while responding to a variety of community needs, including working with diverse populations.

The focus of the program includes communications, psychology, sociology, human relations, leadership development, community development and social research. Features may consist of topics such as family studies, working with an aging population, child and youth justice, disability studies, mental health and addictions.

Fundamental to the program is engaging students during experiential learning opportunities. Along with on-going group activities and community initiatives, students will participate in two field placements working on real activities and projects with an employer under the direction of a field placement supervisor. A requirement leading up to the field placement experience includes a current Certificate of Conduct and Vulnerable Sector Check. This is also required for volunteer opportunities within the program and by the field placement employers.

OBJECTIVES

Upon completion of this program, graduates will be able to:

1. Work effectively and professionally with communities to address current needs and issues (e.g. working with diverse populations, child and youth care, seniors and age-friendly communities, immigration, disabilities and inclusion, mental health and well-being, violence, addictions).
2. Demonstrate leadership competencies with innovative approaches to problem-solving, decision-making and managing projects and/or community programs/services.
3. Work effectively with individuals, families, groups and organizations, by having a foundational knowledge of the stages of human development and recognizing the value of social and cultural diversity.
4. Participate during a non-profit organization's strategic planning, board governance, volunteer recruitment and advocacy.
5. Utilize social media and technology for professional purposes, particularly with non-profit community-based organizations and their networking/stakeholder engagement activities.
6. Research, organize, facilitate and manage community projects and initiatives.
7. Demonstrate a capacity to act as change agents to amend conditions within communities.

8. Communicate with proficiency, clarity, accuracy and confidence among groups and stakeholders.
9. Write professional proposals, complete grant applications and fundraise secure funds and sustain existing initiatives and projects.
10. Demonstrate by example the importance of self-care and healthy living while also exploring proactive measures towards mental health, well-being and healthy aging by lifelong learning and collaboration with others.
11. Cultivate community partnerships, build relationships and raise awareness of common issues and goals among partners and stakeholders (e.g. non-profit organizations, government agencies and the private sector).

ENTRANCE REQUIREMENTS

1. High School

Provincial High School Graduation Certificate with a 60% average in eight level 3000 credits or equivalent

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science Transition Certificate

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with General College Profile (or Business-Related College Profile or Degree and Technical Profile) with an average pass mark of 60%

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, are at least 19 years of age at the time of application and have been out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

REQUIRED DOCUMENTATION

Certificate of Conduct

A Certificate of Conduct, including a vulnerable sector category, will be required. This Certificate can be obtained from the Royal Newfoundland Constabulary (RNC) or the Royal Canadian Mounted Police (RCMP) and must be dated no more than three months prior to the first scheduled day of classes for the program. Please note that this documentation is required in order to be accepted into the program.

NOTE

1. Factors contributing to student success within this program include the following: good writing skills, volunteer work and the enjoyment of helping others.
2. Additional documentation may be required by organizations for field placements and volunteer activities.
3. Students should be aware that additional fees apply for certifications.

FUTURE OPPORTUNITIES

Working within the human services field offers profoundly rewarding opportunities and work experiences. Graduates of the Community Leadership Development Diploma program may find employment with diverse populations among a myriad of organizations and agencies within community, private and public sectors.

This may include, but is not limited to, employment in the following areas:

Addiction Services
 Child and Youth Care
 Community Education
 Disability Services
 Family Services
 Mental Health & Wellness
 Residential Support
 Senior Wellness
 Violence Prevention
 Youth Justice

Community Leadership Development (CLD) Electives

Semester 4 Community Leadership Development Electives

Code	Title
CY1011	Intro to Child & Youth Care
CY1041	Mental Health & Addictions
DB2100	Intro to Disability Studies

Semester 5 Community Leadership Development Electives

Code	Title
CJ2210	Youth Justice in Canada
DB2110	Disability Studies
PS1240	Understanding Addictions

Note: Each CLD elective has a credit value of 3 (3 Le/0 La). One CLD elective is taken in Semester 4 and one in Semester 5. Please check the CLD elective offering/s at the campus you plan to attend and seek academic advice (e.g. course prerequisites) before registration.

General Elective Courses

A list of general elective courses to be offered in the fourth semester will be made available prior to registration. Please check the general elective offering/s at the campus you plan to attend and seek academic advice (e.g. course prerequisites) before registration. Other courses may be chosen provided that:

1. All prerequisites have been met,
2. The course is offered during the semester,
3. The maximum enrolment for the course is not exceeded,
4. The student's schedule can accommodate all scheduled classes for that course.

Digital Animation

Start Date: September

Credential: Diploma

Program Length: Two Years

School: Academics, Applied Arts, and Tourism

Locations & Delivery Modes:

- Bay St. George - On Campus Delivery

PROGRAM DESCRIPTION:

Set your career in motion.

Animation brings imagination to life. More than enchanted drawings and toy stories, digital animation has grown into a multibillion-dollar industry. Technological advancements in 3D animation and the wide usage of animated videos in manufacturing, medical, engineering, entertainment and other sectors are driving this rapidly expanding market. That means digital animators are in high demand.

Canada is recognized as a world leader in animation, video game development and visual effects. According to the Canada Media Fund, digital media is a \$22 billion industry in Canada that supports more than 120,000 creative jobs, making Canada one of the foremost investment destinations for global digital media companies.

CNA's Digital Animation program provides a pathway to success if you want to be a main player in this exciting industry. With design fundamentals, animation software tools and production techniques, you'll learn to perform your best individually and collaboratively, creating animated films and video productions from concept to completion.

Study with us and build a professional creative portfolio that will get you a job you love.

If you can imagine it, you can create it. And we can help.

Program Highlights

- Create a final demo reel, portfolio to accompany your professional resume.
- Train in the fundamentals of drawing, design, 2D digital graphics and 2D animation.
- Explore 3D modelling, texturing, painting, lighting and animation.
- Delve into all aspects of a digital animation pipeline, including rendering and post-processing.

Did You Know?

- Canadian-based companies have created animation and effects for many box-office hits and award-nominated feature films such as *Marmaduke (2022)*, *Hotel Transylvania 2 (2015)*, *The Adams Family (2019)*, and popular television series such as *Trailer Park Boys: The Animated Series*, and *DC Superhero Girls*.
- The 20 top-grossing films of all time featured high-end visual effects or computer-generated animation, and today visual effects often represent over 30 percent of a film's production budget.¹
- Digital animation professionals find work at advertising agencies and video game companies, with movies and television, in digital marketing and more.
- Graduates have showcased their work internationally at events such as the Nickel Film Festival in NL; the National Film Festival for Talented Youth in Seattle, Washington; the Kerry International Film Festival in Ireland; the Upstate NY Horror Film Festival, and the TOFUZI International Festival of Animated Arts in Georgia, among many others.

FUTURE OPPORTUNITIES

Graduates will be prepared for employment in the global communications and entertainment industry, film, broadcasting, gaming and design, as well as visualization services for the medical, engineering, simulation training, architectural and publishing fields.

OBJECTIVES

Upon successful completion of the program, graduates will be able to:

1. Apply the concept of “Design” as a professional discipline and historical practice.
2. Use technical skills in areas such as narrative, design, storyboarding, modeling and animation to create digital animation.
3. Demonstrate appropriate work habits, attitudes and behaviors required for employment.
4. Apply entrepreneurial skills to budget, resource, schedule and market animated projects.
5. Create a final portfolio demonstrating industry applicable skills.

ENTRANCE REQUIREMENTS

1. High School

Provincial High School Graduation Certificate with a 60% average in eight level 3000 credits or equivalent

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science Transition Certificate

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with General College Profile (or Business-Related College Profile or Degree and Technical Profile) with an average pass mark of 60%

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, are 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

Note: Basic computer skills along with an ability to draw are important and considered definite assets for success in this program.

Digital Filmmaking

Start Date: September

Credential: Diploma

Program Length: Two Years

School: Academics, Applied Arts, and Tourism

Locations & Delivery Modes:

- Bay St. George - On Campus delivery

PROGRAM DESCRIPTION

As a two-year, six-semester program, Digital Filmmaking responds to the increasing demand for filmmakers and technicians in the Canadian filmmaking industry. The primary objective is to prepare students for an exciting career in the filmmaking industry by providing each student with an abundance of fundamental knowledge and skill development in narrative, documentary, music videos, factual entertainment and other genres of filmmaking.

While learning the skills required for visual storytelling, students will also learn the art of filmmaking by actually making films. The program centers on meticulous hands-on training whereby students work with industry standard equipment to learn professional techniques in various aspects of the filmmaking process. Each semester, students will engage in progressive learning as it relates to producing, directing and editing during both individually-based and team-oriented projects.

During both Intersession semesters, first and second-year students, together with their instructors, will work on developing and producing a short film which will then be screened by a public audience. Added to the practical experience Digital Filmmaking students will acquire, students will graduate with a number of certifications necessary to work in the rapidly growing and complex filmmaking industry.

While merging creative and technical aspects of filmmaking, the program will prepare and qualify students for entry-level technical positions associated with filmmaking. Graduates from this program will have a well-rounded knowledge of the filmmaking industry and gain an understanding of the many unique and rewarding career paths available within that industry.

OBJECTIVES

Upon completion of this program, graduates will be able to:

1. Identify the complex components of the provincial, national and international film industry.
2. Demonstrate proper etiquette and safety practices on a film set.
3. Communicate with proficiency, clarity and confidence within a team-based and hierarchical workplace structure.
4. Apply technical proficiency with industry standard equipment (digital cinema cameras, lighting fixtures and grip equipment, field sound recording equipment, picture and sound editing).
5. Practice creative visual storytelling through the art of previsualization, scriptwriting, production scheduling, location filming and editing.
6. Demonstrate an understanding of live television production, webcasting, art direction, post colour and sound production, proposal writing and entrepreneurial practices.
7. Apply team-working and applicable problem-solving skills unique to the film industry.
8. Demonstrate visual, oral and written communication skills to create compelling stories.
9. Identify and seek/renew industry-relevant certifications.
10. Create engaging independent narrative and documentary films.
11. Plan a career path within the filmmaking industry.

FUTURE OPPORTUNITIES

The Filmmaking industry is an exciting, dynamic and complex field with diverse opportunities for employment as film productions and filmmaking activities within the province, nationally, as well as internationally continue to increase. Graduates of the Digital Filmmaking program have opportunities to work at entry-level positions on filmmaking crews which are in demand. They can seek employment in areas such as, but not limited to, a Grip, Lighting Technician, Sound Personnel (Boom Operator), Trainee - Assistant Director, Editor's Assistant or Camera Trainee.

ENTRANCE REQUIREMENTS

1. High School

Provincial High School Graduation Certificate with a 60% average in eight level 3000 credits or equivalent

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science Transition Certificate

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with General College Profile (or Business-Related College Profile or Degree and Technical Profile) with an average pass mark of 60%

4. Mature Student Requirements

Applicants who do not meet the educational prerequisites for this program, are 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

Please Note:

There are physical requirements (e.g. lifting) in this program as a result of the physical requirements of working in the Digital Filmmaking industry (e.g. individuals must be able to work long hours in different environmental conditions, be comfortable working at heights and be aware of lifting requirements of at least 30 pounds).

Elective Courses:

Elective/s to be offered in the second semester will be made available prior to registration. Other courses may be chosen provided that:

1. All prerequisites have been met,
2. The course is offered during the semester,
3. The maximum enrolment for the course is not exceeded,
4. The student's schedule can accommodate all scheduled classes for that course.

Early Childhood Education

Start Date: September

Credential: Certificate/Diploma

Program Length: One Year/Two Years

School: Academics, Applied Arts, and Tourism

Locations & Delivery Modes:

- Carbonear - On Campus delivery
- Corner Brook - On Campus delivery
- Gander - On Campus delivery
- Placentia - On Campus delivery
- Port aux Basques - On Campus delivery
- Prince Philip Drive - On Campus delivery
- Online - Synchronous delivery

PROGRAM DESCRIPTION

Early Childhood Educators (ECEs) have a lasting, positive impact on the development of children, and provide an essential support for families, communities, and society. Early literacy and numeracy, socialization, indoor and outdoor physical activities, and creative experience in art, music, movement, and dramatic play, are some of the areas in which students will acquire knowledge and skills to support and encourage children's development. Students will have the opportunity to apply their learning on field placements, with different age groups, in the College's demonstration child care centres and a variety of child care settings.

The usual work environment for ECEs involves daily indoor and outdoor activity. Being in good health and having, energy, patience, physical stamina, good communication and interpersonal skills are assets that will help students in this profession.

ENTRANCE REQUIREMENTS

1. High School

Provincial High School Graduation Certificate with a 60% average in eight level 3000 credits or equivalent

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science Transition Certificate

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with General College Profile (or Business-Related College Profile or Degree and Technical Profile) with an average pass mark of 60%

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, are 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

AND

Early Childhood Education (ECE)

Documentation Required:

1. Clear certified criminal records check (issued by RCMP) or clear criminal records screening certificate (issued by RNC)
2. Clear vulnerable sector records check (issued by RCMP/RNC)
3. Record of Immunization or [Statement of Immunization](#)

*Please note: The certified criminal records check (issued by RCMP) or clear criminal records screening certificate (issued by RNC), vulnerable sector records check (issued by RCMP/RNC), and the Record of Immunization or Statement of Immunization **must be submitted to the College prior to online registration**. Further information on obtaining ECE program documentation may be found [HERE](#).

The certified criminal records check or criminal records screening certificate and the vulnerable sector records check:

- Must be dated no more than three months prior to the first scheduled day of classes for the program;
- Is valid for a period of three years, unless the student is absent from the program for six months or more.

To be employed in the field of early childhood education and to successfully fulfill field placement requirements, students must be able to lift and move children, materials and equipment (up to 50 pounds) on a consistent basis. As well, physical effort, strength and endurance is required in the supervision and care of children, e.g., maintaining balance, kneeling and bending, pushing and pulling strollers and carts, and moving quickly to assist children in emergency situations.

EARLY CHILDHOOD EDUCATION - DIPLOMA

Students in the two-year Diploma program support children's learning, and their development in all areas: physical, social, emotional, cognitive, and language development. In addition, students learn how to develop, maintain, and evaluate a child care program based on best practices, and support the inclusion of all children, in programming. Students are introduced to the administrative skills necessary to manage a child care service. With relevant work experience, a Diploma graduate will be qualified to become the Administrator of a licensed child care centre.

There is a direct link between the level of education an ECE has and the quality of education and care that is provided to children. The Early Childhood Education Diploma program is an important step on the career ladder (certificate, diploma, degree) to increasing qualifications as an ECE. Diploma graduates are eligible for Level II Child Care Services Certification in infant, preschool and school-age care, working with children ages 0-12.

OBJECTIVES

Upon successful completion of the Diploma program, graduates will be able to:

1. Support and promote the overall development of children aged birth to 12 years.
2. Develop and maintain developmentally appropriate programs, and indoor and outdoor environments that reflect best practices.
3. Explain variations in the developmental abilities of children aged birth to 12 years.
4. Maintain caring and responsive relationships with the children in their care.
5. Carry out effective and positive behaviour guidance, and discuss challenging behaviour.
6. Create and implement a philosophy statement, and develop programs and policies based on the philosophy.
7. Support staff in the delivery of programs, policies and guidelines.
8. Set up and maintain an environment that supports diversity and inclusion.
9. Observe, document and evaluate program delivery, child development, and adult/child interactions.
10. Discuss and illustrate the principles of early learning.
11. Demonstrate professional behaviour, reflective practice, and effective relationships with children, families, staff, and the community.
12. Apply provincial child care legislation, standards and policies, and all other applicable legislative and regulatory requirements.

FIELD PLACEMENT

Students complete four Field Placements during the Diploma program, two in year 1 and two in year 2. All students have the opportunity to apply their learning with different age groups in a variety of approved early learning and child care settings. For those students attending the Corner Brook and Prince Phillip Drive campuses, Field Placements include time spent in the College's onsite demonstration child care centre. **Please Note: Students work with the ECE faculty to determine approved field placement sites.**

Prior to the start of a field placement, students must submit to Student Services a current copy of at least an emergency level (one day) diploma/certificate in first aid and CPR dealing with children. A list of approved first aid training providers can be found on the Workplace NL website.

FUTURE OPPORTUNITIES

Graduates of the Diploma program will be prepared for employment with organizations providing early learning & child care, or self-employment in the child care field. With relevant work experience, graduates will be able to develop programs for and/or supervise in child care services in communities throughout the province.

CERTIFICATION

The graduate is awarded a Diploma of Applied Arts in Early Childhood Education from the College. This parchment indicates successful completion of two years of post-secondary education, combining theory and practical experience in the care, education, and guidance of children, as well as best practices in developmentally appropriate programming and environments. Completion of this program is one of the steps towards provincial Child Care Services (CCS) Certification granted through the Association of Early Childhood Educators of Newfoundland and Labrador (AECENL). Currently, the Early Childhood Education Diploma is equivalent to Level II CCS Certification for infant, preschool and school-age children.

Please note: Students who successfully complete EE2040 - Family Child Care will also receive a provincial CCS Certification in the family home.

EARLY CHILDHOOD EDUCATION – CERTIFICATE

Students in the one-year Certificate program support children's learning, and their development in all areas: physical, social, emotional, cognitive, and language development. The Early Childhood Education Certificate program is the first step in becoming a qualified ECE. Certificate graduates will be eligible for Level I Child Care Services Certification in preschool and school-age care (working with children ages 18 months-12 years). The one-year Certificate is also the same as the first year of the Early Childhood Education Diploma program.

OBJECTIVES

Upon successful completion of the Certificate program, graduates will be able to:

1. Support and promote the overall development of children aged 18 months to 12 years.
2. Develop and maintain developmentally appropriate programs, and indoor and outdoor environments that reflect best practices.
3. Explain variations in the developmental abilities of children aged 18 months to 12 years.
4. Maintain caring and responsive relationships with the children in their care.
5. Carry out effective and positive behaviour guidance, and discuss challenging behaviour.
6. Demonstrate professional behaviour and reflective practice in interactions with children, families and the community.
7. Identify and outline provincial child care legislation, standards and policies.

FIELD PLACEMENT

Students complete two Field Placements during the Certificate program, one in Semester 1 and one in Semester 2. All students have the opportunity to apply their learning with different age groups in a variety of approved early learning and child care settings. For those students attending the Corner Brook and Prince Phillip Drive campuses, Field Placements include time spent in the College's demonstration child care centre. **Please Note: Students work with**

the ECE faculty to determine approved field placement sites.

Prior to the start of a field placement, students must submit to Student Services, a current copy of at least an emergency level (one day) diploma/certificate in first aid and CPR dealing with children. A list of approved first aid training providers can be found on the Workplace NL website.

FUTURE OPPORTUNITIES

Graduates of the Certificate program will be prepared for employment with organizations providing early learning & child care, or self-employment in the child care field.

CERTIFICATION

The graduate is awarded a Certificate of Applied Arts in Early Childhood Education from the College. This parchment indicates successful completion of one year of post-secondary education, combining theory and practical experience in the care, education, and guidance of children. This program is one of the steps towards provincial Child Care Services (CCS) Certification granted through the Association of Early Childhood Educators of Newfoundland and Labrador (AECENL). Currently, the Early Childhood Education Certificate is equivalent to Level I CCS Certification for preschool and school-age children.

Courses

Semester 1

Code	Title	Cr	Le	La
EE1180	Curriculum I	3	3	0
EE1340	Child Development I	2	2	0
EE1290	Positive Behaviour Guidance	4	4	0
EE1420	Creative Experiences I	3	2	2
FH1340	Health & Safety	3	3	0
FW1600	Field Placement I	6	1	5 wks

Five weeks of Field Placement during the semester; Field Placement lecture in the other 10 weeks. Hours of other courses will be adjusted to reflect 10 weeks of the semester.

Semester 2

Code	Title	Cr	Le	La
EE1181	Curriculum II	3	3	0
EE1341	Child Development II	3	3	1

EE2470	Infant Development & Care	3	3	1
EE1481	Inclusion II	4	4	0
FW2601	Field Placement IV	5	1	4 wks

Four weeks of Field Placement during the semester; Field Placement lecture in the other 11 weeks. Hours of other courses will be adjusted to reflect 11 weeks of the semester.

ECE Certificate courses are those listed in Semesters 1, 2, and 3 above.

Early Childhood Education - Online Asynchronous

Start Date: September

Credential: Certificate/Diploma

Program Length: Varies

School: Academics, Applied Arts, and Tourism

Locations & Delivery Modes:

- Online - Asynchronous delivery

PROGRAM DESCRIPTION

Early Childhood Education (ECE) is also available by distance education, online through the College's Office of Distributed Learning (DL). Program descriptions, objectives, graduation requirements and the list of courses may be found on the **Early Childhood Education** full-time program pages.

A Learner Course Plan for ECE course completion is developed with each student, based on an assessment of any previous ECE or related training they may already have, and any PLAR credits received. Learner Course Plans are posted on the Early Childhood Education – Distributed Learning program pages.

Distance students register each semester from a list of course offerings. These offerings, and other important information about ECE by Distance, are posted on the Early Childhood Education – Distributed Learning program pages. Students may enroll on a part-time basis. Students who go beyond the time frame for completion by distance may be required to complete additional or revised courses before being deemed eligible to graduate.

ENTRANCE REQUIREMENTS

All entrance requirements listed on the Early Childhood Education full-time program pages must be met including: both the academic requirements and the ECE program documentation requirements. Further information on obtaining ECE program documentation may be found [HERE](#).

To participate in courses, students must have an internet-ready computer system. General internet/computer knowledge (e.g. e-mail, ability to save files, install programs, and related applications) would be a valuable asset.

To be employed in the field of early childhood education and to successfully fulfill field placement requirements, students must be able to lift and move children, materials and equipment (up to 50 pounds) on a consistent basis. As well, physical effort, strength and endurance is required in the supervision and care of children, e.g., maintaining balance, kneeling and bending, pushing and pulling strollers and carts, and moving quickly to assist children in emergency situations.

Applicants currently working in a regulated child care service:

Applicants must submit a current copy of the following program documentation:

1. Clear certified criminal records check (issued by RCMP) or clear criminal records screening certificate (issued by RNC)
2. Clear vulnerable sector records check (issued by RCMP/RNC) and
3. Record of Immunization or **Statement of Immunization**

*Please note: The certified criminal records check (issued by RCMP) or clear criminal records screening certificate (issued by RNC), vulnerable sector records check (issued by RCMP/RNC), and the Record of Immunization or Statement of Immunization **must be submitted to the College prior to online registration.**

Prior to the start of a field placement, students must submit to Student Services a current copy of at least an emergency level (one day) diploma/certificate in first aid and CPR dealing with children. A list of approved first aid training providers can be found on the Workplace NL website.

Once admitted into the program, a student who does not enroll in courses for six months or more must re-submit a current copy of all of the above required ECE program documentation.

Applicants not working in a regulated child care service:

Applicants must submit a current copy of the following program documentation which must be dated **no more than three months** prior to the first scheduled day of classes:

1. Clear certified criminal records check (issued by RCMP) or clear criminal records screening certificate (issued by RNC)
2. Clear vulnerable sector records check (issued by RCMP/RNC) and
3. Record of Immunization or **Statement of Immunization**

*Please note: The certified criminal records check (issued by RCMP) or clear criminal records screening certificate (issued by RNC), vulnerable sector records check (issued by RCMP/RNC), and the Record of Immunization or Statement of Immunization **must be submitted to the College prior to online registration.**

Prior to the start of a field placement, students must submit to Student Services a current copy of at least an emergency level (one day) diploma/certificate in first aid and CPR dealing with children. A list of approved first aid training providers can be found on the Workplace NL website.

Once admitted into the program, a student who does not enroll in courses for six months or more must re-submit a current copy of all of the above required ECE program documentation.

FIELD PLACEMENT

Students in the ECE Online Diploma program are required to complete four Field Placements: FW1600 (5 weeks); FW1601 (5 weeks); FW2600 (4 weeks) and FW2601 (4 weeks). Provincial program standards require that learners must complete a majority of their placements in a regulated child care centre. For the Diploma program, a minimum of 500 hours must be completed in a regulated child care centre, while the remaining hours may be in a regulated family child care home, child care centre, a family child care agency, a kindergarten classroom or a family resource centre.

For those online students currently working in regulated child care (i.e., for a minimum of 12 consecutive months), a minimum of 2 weeks must be completed at a College of the North Atlantic (CNA) demonstration child care centre. An additional week at a CNA demonstration child care centre (for a total of 3 weeks out of the required 18 weeks) will be mandatory for the following:

- (i.) students working in regulated child care for less than 12 consecutive months;
- (ii.) students not working in regulated child care.

Students in the ECE Online Certificate program are required to complete two Field Placements: FW1600 (5 weeks) and FW1601 (5 weeks). Provincial program standards require that learners must complete a majority of their placements in a regulated child care centre. For the Certificate program, a minimum of 260 hours must be completed in a regulated child care centre, while the remaining hours may be in a regulated family child care home, child care centre, a family child care agency, a kindergarten classroom or a family resource centre.

For those online students currently working in regulated child care (i.e., for a minimum of 12 consecutive months), a minimum of 1 week must be completed at a College of the North Atlantic (CNA) demonstration child care centre. An additional week at a CNA demonstration child care centre (for a total of 2 weeks out of the required 10 weeks) will be mandatory for the following:

- (i.) students working in regulated child care for less than 12 consecutive months;
- (ii.) students not working in regulated child care.

Students will be assigned a CNA demonstration child care centre based on geographical location. Our centres are located in St. John's, Corner Brook and Happy Valley - Goose Bay. Please note: For new students accepted into the ECE Online Certificate program starting in Academic Year 2020-2021, the ECE Manager will be allocating which field placement course (FW1600 or FW1601) and the dates in which a student will complete the mandatory week(s).

Prior to the start of a field placement, students must submit to Student Services, a current copy of at least an emergency level (one day) diploma/certificate in first aid and CPR dealing with children. A list of approved first aid training providers can be found on the Workplace NL website.

PRIOR LEARNING ASSESSMENT AND RECOGNITION (PLAR)

Students will be given every opportunity to receive credit for past learning experience through a comprehensive systematic process of evaluation. Once enrolled and active in the program, students will be permitted to submit PLAR applications for any courses in the program for which they believe they have already acquired the appropriate level of knowledge and skills, except Field Placements II, III and IV. For further information, please refer to the Early Childhood Education – Distributed Learning program pages.

FUTURE OPPORTUNITIES

Graduates of the Diploma program will be prepared for employment with organizations providing early learning & child care, or self-employment in the child care field. With relevant work experience, they will be able to develop programs for and/or supervise in child care services in communities throughout the province.

Graduates of the Certificate program will be prepared for employment with organizations providing early learning & child care, or self-employment in the child care field in communities throughout the province.

CERTIFICATION

The Diploma program graduate is awarded a Diploma of Applied Arts in Early Childhood Education from the College. This parchment indicates successful completion of two years of post-secondary education, combining theory and practical experience in the care, education, and guidance of children, as well as best practices in developmentally appropriate programming and environments. Completion of this program is one of the steps towards provincial Child Care Services (CCS) Certification through the Association of Early Childhood Educators of Newfoundland and Labrador (AECENL). Currently, the Early Childhood Education Diploma is eligible for Level II CCS Certification for infant, preschool and school-age classifications.

The Certificate program graduate is awarded a Certificate of Applied Arts in Early Childhood Education from the College. This parchment indicates successful completion of one year of post-secondary education, combining theory and practical experience in the care, education, and guidance of children. Completion of this program is one of the steps towards provincial CCS Certification through AECENL. Currently, the Early Childhood Education Certificate is eligible for Level I CCS Certification for preschool and school-age classifications.

LOCATION

Early Childhood Education – Distributed Learning is available province-wide with on-campus Field Placements currently held at the Prince Philip Drive, Corner Brook, and Happy Valley-Goose Bay campuses.

For the complete listing of courses required for the Diploma and Certificate programs, please see the Early Childhood Education full-time program pages.

Early Childhood Education Administrative Leadership

Start Date: September

Credential: Advanced Diploma

Program Length: One Year

School: Academics, Applied Arts, and Tourism

Locations & Delivery Modes:

- Online - Asynchronous delivery

PROGRAM DESCRIPTION

The Early Childhood Education (ECE) Administrative Leadership program provides an exciting opportunity for further education and specialized training for early childhood educators, with a focus on increasing knowledge and skills in the area of administrative leadership. Students completing the ECE Administrative Leadership program will gain invaluable knowledge to enhance confidence and support career advancement. This knowledge will be utilized to increase educational qualifications as well as provide an incredible opportunity to advance professional certification within the ECE field. Graduates of the advanced diploma (with an ECE Diploma) are eligible for Level III Child Care Services Certification* from the Association of Early Childhood Educators of Newfoundland and Labrador (AECENL). Throughout this program, students will develop leadership skills, particularly those required of a child care administrator for regulated early learning and child care settings. Courses in this program will spark interest in early childhood educators as specific applications of leadership, mentorship, relationship building, human resources, and reflective practice are included. In addition, students will learn about provincial legislative requirements, as well as current and emerging trends within the field of early childhood education.

The advanced diploma in ECE Administrative Leadership program is designed for graduates of a recognized ECE diploma program. It builds upon the education and practical experiences of the student, resulting in graduates who will be leaders and mentors in the field of early childhood education.

Students may complete this program on a full-time or part-time basis and have a maximum of 12 semesters to complete the program. A Learner Course Plan for course completion is developed with each student, based on an assessment of any previous ECE or related training they may already have, and any PLAR credits received. The Learner Course Plan specific to this program can be found [HERE](#).

Online students register each semester from a list of course offerings. These offerings, and other important information about the ECE Administrative Leadership program, are posted on the Early Childhood Education Administrative Leadership program pages. *To participate in courses, students must have an internet-ready computer system. General internet/computer knowledge (e.g. e-mail, ability to save files, install programs, and related applications) would be a valuable asset.*

OBJECTIVES

Upon successful completion of this program, graduates will be able to:

1. Effectively administer the day-to-day operations of an early learning and child care program, particularly in the regulated sector.
2. Create informed and professional documents that will assist with quality child care operations.
3. Apply knowledge of provincial legislative documents to ensure safe, high-quality, healthy, and compliant early learning and child care environments.
4. Supervise, mentor, direct, and provide professional support to employees, students, and volunteers within early learning and child care settings.
5. Lead, inspire, and be an informed advocate within the early learning and child care sector.
6. Embrace diversity and build professional relationships with children/families, and their communities as well as other stakeholders.

7. Demonstrate confidence, critical thinking, and reflective practice, as well as ethical and professional behaviour at all times.
8. Maintain currency within the ECE field by actively seeking professional learning resources and opportunities.

ENTRANCE REQUIREMENTS

Eligibility for admission into the Early Childhood Education Administrative Leadership program requires the applicant to meet one of the following criteria:

1. Have graduated from the Early Childhood Education diploma program at College of the North Atlantic;
OR
2. Have graduated from a recognized post-secondary Early Childhood Education diploma (or equivalent) program (or have a combination of other post-secondary education and industry experience acceptable to the College as an entrance requirement).

International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

PRIOR LEARNING ASSESSMENT AND RECOGNITION (PLAR)

Students will be given every opportunity to receive credit for past learning experience (with the exception of EE3050 and EE3055) through a comprehensive systematic process of evaluation. Once enrolled and active in the program, students will be permitted to submit PLAR applications for any courses in the program for which they believe they have already acquired the appropriate level of knowledge and skills. For further information, please refer to the Early Childhood Education Administrative Leadership program pages.

FUTURE OPPORTUNITIES

Upon successful completion of the program, graduates will be prepared for employment in administrative leadership roles in a variety of early learning and child care settings. These could include but are not limited to the following:

- Child care centres
- Family homes
- Family agencies
- Family resource centres
- Drop-in playgroups
- Head Start programs

CERTIFICATION

Upon completion of this program, individuals may apply for provincial Child Care Services (CCS) Certification through the Association of Early Childhood Educators of Newfoundland and Labrador (AECENL). The Early Childhood Education Administrative Leadership advanced diploma (with an ECE Diploma) is eligible for Level III CCS Certification in classifications the individual already holds. For information on certification, please visit Association of Early Childhood Educators of Newfoundland and Labrador (AECENL).

Graphic Communications

Start Date: September

Credential: Diploma

Program Length: Two Years

School: Academics, Applied Arts, and Tourism

Locations & Delivery Modes:

- Prince Philip Drive - On Campus delivery

Note:

Alternate Year Intake.

PROGRAM DESCRIPTION

Graphic Communications is a technology-based, two-year diploma program designed to provide training in modern principles and practices used in the printing and graphic industry. A comprehensive hands-on approach ensures that students receive a marketable set of skills within a positive learning environment.

The goal of this program is to help the student develop personal and professional competencies in communications, problem solving, teamwork, electronic pre-press, production technologies, and finishing & bindery operations that will help lead to successful employment.

Program topics include: problem solving, basic layout & design, electronic pre-press, wide format printing, finishing & bindery operation skills, screen printing, dye sublimation, and 3D printing. Students are exposed to the computer software applications commonly used in this industry, such as page layout, design, image manipulation, and computer graphics. Other topics include: digital scanning, colour proofing, digital photography, digital printing (colour and black & white), embroidery graphics, and laser cutting & engraving.

Our equipment is constantly being modernized to offer an expanded range of technical skills. Some of our equipment include:

- Wide format inkjet printer used for display graphics and assembly
- Vinyl cutter for signage, graphics, and packaging
- Xerox colour digital press
- Screen printing equipment
- Heidelberg presses
- Fine Art Archival Printing
- Embroidery machine
- Laser engraving machine
- Dye sublimation printer
- 3D printer

A program resembling a real-world work environment reinforces the learning process for the students.

OBJECTIVES

Upon successful completion of the program, graduates will be able to:

1. Demonstrate professional and personal competencies required for the printing and graphic industry.
2. Demonstrate clear verbal and written communication skills.
3. Apply a teamwork approach to problem-solving techniques.
4. Demonstrate a hands-on knowledge of electronic pre-press methods and equipment.
5. Operate traditional and digital printing equipment.
6. Demonstrate strong technical skills for computer programs used in the printing and graphic industry.

7. Demonstrate safe operation of bindery and finishing equipment.
8. Operate graphic printing equipment such as: wide-format printer, embroidery machine, screen printing machine, laser cutter & engraver, fine-art printer, dye sublimation printer, and 3D printer.

FUTURE OPPORTUNITIES

Graduates of the program may be employed in many areas of the printing and graphic industry. Some of the entry-level positions include: design & layout agencies, commercial printers, in-plant printers, government agencies, digital copy centres, sign printers, and corporate promotional suppliers.

ENTRANCE REQUIREMENTS

1. High School

Provincial High School Graduation Certificate with a 60% average in eight level 3000 credits or equivalent

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science Transition Certificate

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with General College Profile (or Business-Related College Profile or Degree and Technical Profile) with an average pass mark of 60%

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, are 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

Note:

Basic computer literacy skills as well as strong core skills in English and Mathematics are definite assets for this program. These skills are important for success in the program.

Graphic Design

Start Date: September

Credential: Diploma

Program Length: Two Years

School: Academics, Applied Arts, and Tourism

Locations & Delivery Modes:

- Prince Philip Drive - On Campus delivery

PROGRAM DESCRIPTION

Form follows function.

Design is everywhere from the moment we wake up until we close our eyes at night. Not just beautiful art, graphic design has purpose – to communicate a message and engage those who read it and evoke feeling or action. *Great* design tells a story.

Graphic Designers use highly developed technical skills and a mastery of digital technology to capture the imagination through original design in a variety of media from print to screen. They develop solutions for businesses, building corporate branding, designing websites and creating inspiring visuals that send a powerful message. Graphic design has a proven return on investment and has become essential to the success of all business, putting designers in high demand.

Traditionally graphic designers created for print. There is still a great need for design and printing of environmental graphics for retail store interiors, conferences, wayfinding and events, as well as swag, product packaging and much more. But now through digital space, graphic designers are also working in fields like user interface design, online marketing and advertising, motion graphics and more. The opportunities are limitless!

In our state-of-the-art facilities, you'll gain traditional and cutting-edge skills through problem-solving and creative exploration with typography, colour, space and placement. You'll train in digital photography, package design, traditional and digital printing and more, and you'll leave here with a professional portfolio of your work to take out into the world with you.

It's your future by design.

Program Highlights

- Extensive training that combines natural creativity with strategic design techniques
- Experiential, hands-on learning with industry associations and companies
- Collaborative projects with other CNA arts programs such as Sound Recording & Production, Journalism and Applied Music, Textile & Apparel Design, and the suite of Television & Film programs
- High job placement success rate

Did You Know?

- Graduates are working at exciting careers throughout Canada and around the world.
- Students have won dozens of regional, provincial and national awards over the past decade.
- The unique skills of graphic designers have been globally recognized with the term, "design thinking," which applies the thought process designers use for just about any field or discipline.
- A designer's primary concern is ultimately communication.
- It takes two-tenths of a second for people looking at a website for the first time to form an impression.[1]

[1] [What Role Does Design Play In Business Success? \(forbes.com\)](https://www.forbes.com/sites/forbes/2015/05/27/what-role-does-design-play-in-business-success/)

OBJECTIVES

Upon successful completion of the program, graduates will be able to:

1. Demonstrate strong technical and conceptual design skills for print and screen.
2. Demonstrate hands-on knowledge of, and experience with, industry-standard design and production tools and equipment.
3. Demonstrate the business, communication, teamwork and time-management skills necessary for this industry.
4. Apply an approach to the design process that focuses on creativity while meeting clients' needs.
5. Successfully compete for entry-level employment in the Graphic Design industry.

FUTURE OPPORTUNITIES

Past graduates have a strong record of success in the Graphic Design industry, both within Newfoundland and Labrador and beyond. Graduates can choose from a variety of employment options such as advertising agencies, design companies and in-house art departments, as well as freelance work or self-employment with clients located anywhere in the world.

ENTRANCE REQUIREMENTS

1. High School

Provincial High School Graduation Certificate with a 60% average in eight level 3000 credits or equivalent

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science Transition Certificate

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with General College Profile (or Business-Related College Profile or Degree and Technical Profile) with an average pass mark of 60%

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, are 19 years at the time of application out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

Note:

Basic computer skills as well as strong core skills in English and Mathematics are definite assets for this program. These core skills are important for success in the program.

Applicant Portfolio Requirements

All applicants to the Graphic Design program must submit a portfolio as part of the admission requirements. A portfolio is a personal selection of the applicant's work that shows the potential to build on demonstrated skills and aptitudes when in the program.

The applicant portfolio should consist of:

1. A written personal statement explaining your reasons for wanting to be a graphic designer and your interest in the program at College of the North Atlantic. This should be no longer than 500 words or a single typed page.
2. One project, that relates to the College's Graphic Design program, chosen from the following three options:
 A magazine ad promoting the program. The ad should focus on at least one positive attribute of the program, and should be produced in colour. The College's website address should be included as well. The size of the ad should be no larger than 20 cm in any dimension.

 A poster promoting the Graphic Design program. The poster should focus on one positive message about the program, and should include the program name, the College's name and the College's website address. The size of the poster should be 28 cm x 43 cm (11 x 17 inches).

 A logo for the Graphic Design program. The logo should be produced in no more than two (2) colours, not including white. The program title (Graphic Design) and the College's initials (CNA) should be part of the logo. Applicants should ensure that the logo suggests one or more of the positive attributes of the program.
3. A minimum of five (5) personal portfolio pieces, which could include (but are not limited to) drawings and sketches, photographs, paintings, websites, computer-generated images, or motion-based work. It is preferable to submit works in more than one category but it is not required.

Other Requirements

1. Applicants should submit only copies of their work. No originals should be submitted.
2. Do not submit any framed, fragile or 3-dimensional work.
3. If applicants submit digital files, please burn them onto a CD or DVD, and ensure they are readable by a computer other than the one used to burn it. Digital submissions that cannot be opened will not be considered.
4. The applicant's work should be submitted in a case, binder or folio, with measurements not exceeding 61 cm x 92 cm (24 x 36 inches).
5. Work included in the portfolio should be identified on a separate sheet with the title (if any), the completion date and the materials used. A brief explanation of each piece would be welcome.

Journalism

Start Date: September

Credential: Diploma

Program Length: Two Years

School: Academics, Applied Arts, and Tourism

Locations & Delivery Modes:

- Prince Philip Drive - On Campus delivery

PROGRAM DESCRIPTION

Your story. Your career.

If you are a born storyteller with a strong command of the English language, an insatiable sense of curiosity, a drive to get to the truth and a desire to witness history, you may have the makings of a journalist.

Journalists weave words into stories and capture images that matter. Those words and images become part of history's first draft. Journalists have opportunities to travel, cover exciting events and projects, and meet interesting, diverse people. Journalists can be the voice of a generation.

CNA's Journalism program is a learning ground for the deadline-driven, adaptable and observant. Here, you'll train to deliver the news in a variety of media and gain the skills employers want. You'll learn how to dig for the story, interview people, shoot video and still images, and describe happenings. You'll work on radio, television and web productions. Training both behind and in front of the camera, you'll be immersed in history, politics and current affairs. And you'll master research and context to understand the impact of media on the world today.

This program will prepare you for one of the most fascinating, multifaceted and satisfying careers in the world.

Join the courageous and dedicated people who bring us the world every day!

Program Highlights

- Hands-on training in reporting the news
- Drone journalism and mobile journalism
- Training in broadcast, print, and still and news photography by award-winning instructors
- Industry-standard video and audio equipment
- Radio and video studios
- A new TV studio in the heart of the campus
- An expanded and enhanced newsroom
- Internships with professional news organizations
- Training in how to use social media, analytics and search-engine optimization
- Experience in covering a criminal trial
- Coverage of Indigenous communities
- News photography and broadcast quality-camera skills
- Podcast training and how to attract a following
- Business plan for a Journalism start-up
- Freelance career skills

Did You Know?

- Graduates from our program are working at every major media outlet in Newfoundland and Labrador.
- Students have interned with such outlets and organizations as the Globe and Mail and the United Nations, and they have taken part in student projects in the Middle East.
- A partnership with the Newfoundland Rogues is seeing students staffing the cameras and doing play-by-play for professional basketball games.

- Almost 80 per cent of Canadians get news online. That's one reason we place a lot of emphasis on teaching students how to promote their own journalism via social media.
- In recent years, court rulings and legislation have given journalists more ability to protect their anonymous sources. We teach student journalists these and other important points of law that enhance freedom of expression.
- A kicker is a journalism term for a strong ending to a story. It is also the name of our students' news website.

OBJECTIVES

Upon successful completion of the program, graduates will be able to:

1. Discern newsworthy happenings in their communities and develop them into stories.
2. Tell stories across several platforms – text, video, audio, photography, websites, social media and mobile applications.
3. Perform the writing, research, video, audio and photography skills expected of modern multiplatform journalists.
4. Apply a discipline of verification in seeking and reporting the truth.
5. Provide the context of the news to their audiences.
6. Reflect in their work a deep understanding of the news media, its influence and their own responsibilities as journalists.
7. Reflect in their work a broad understanding of politics, history, economics and current affairs.
8. Apply high ethical standards to their work.
9. Demonstrate a strong understanding of media law in their work.
10. Deliver high-quality journalism on deadline via different platforms within the 24-hour news cycle.
11. Apply strategies to reach and engage a digital audience.
12. Use mobile devices as reporting tools.

FUTURE OPPORTUNITIES

Upon successful completion of the program, graduates will be prepared for employment in a variety of roles including, but not limited to:

- Freelance journalism
- Radio and television stations
- Information services
- Communications departments
- Public relations firms
- Newspapers
- Podcasting

ENTRANCE REQUIREMENTS

1. High School

Provincial High School Graduation Certificate with a 60% average in eight level 3000 credits or equivalent including a minimum of 65% in level 3000 English

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science Transition Certificate

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with General College Profile (or Business-Related College Profile or Degree and Technical Profile) with an average pass mark of 60%

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, are 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into

regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

Mental Health and Addictions

Start Date: September

Credential: Diploma

Program Length: Two Years

School: Academics, Applied Arts, and Tourism

Locations & Delivery Modes:

- Grand Falls-Windsor - On Campus delivery
- Happy Valley-Goose Bay - On Campus delivery
- Online - Asynchronous delivery

PROGRAM DESCRIPTION

Helping others is your passion.

Our mental health is important at every stage of life, from childhood and adolescence through to adulthood. It includes our emotional, psychological, and social well-being and affects how we handle stress and make choices. If you are patient, compassionate, and keen to help others and are interested in a career in the mental health and addictions field, this is what you need to know.

The need for trained practitioners in the mental health and addictions field is critical. In this program you will learn how to assess clients' emotional or health-related needs and develop action plans to support those clients. Through in-depth lectures and developing and honing practical skills, you will be prepared to enter the mental health and addictions field.

The Mental Health and Addictions program covers a wide range of topics, such as pharmacology and dependency, addictions, mental health services, interviewing & helping skills, assessment and case management, psychology, health promotion and prevention, recovery skills and prevention, and trauma-informed practices.

In this rewarding career, you will help guide others as they navigate their healing journey.

Program Highlights

- Choose to learn either in-class or via online asynchronous delivery.
- Gain knowledge, skills, and attitudes to address two of Canada's leading health care issues – mental health and addictive behaviours.
- Learn how to examine and address service quality at the practice, program and system levels.
- Learn trauma-informed care practices.
- Develop motivational interviewing skills to support families, individuals and community-level programs that are affected by mental health and addictions issues.
- Advocate for individuals living with mental health issues and addictions, ensuring they are provided with care in a non-judgmental environment.

Did You Know?

- One in five Canadians will experience a mental illness or substance abuse problem during their lifetime.
- Recent polling found that one in three people living in Canada reported moderate to severe mental health symptoms during the pandemic. Financial concerns, pandemic stress, isolation, and struggles with our health-care system are leading concerns among people living with a mental illness.
- Age, gender, 2SLGBTQ+, income, and employment status were the strongest predictors of mental health and substance use concerns. Some 60 per cent of 2SLGBTQ+ youth report moderate-to-severe anxiety symptoms and about 40 per cent report symptoms of depression. Although connecting with statistics can be difficult, it is important that we remember the people behind the numbers.
- Resulting from the 2017 report Towards Recovery: The Mental Health and Addictions Action Plan for Newfoundland and Labrador, a new 240,000 square foot, 6-story, 102-bed adult mental health and addictions

facility is under construction, which will replace the existing Waterford Hospital

- In 2022 the NL government launched the Our Path of Resilience action plan and committed \$2.5 million for mental health and addictions services and facilities, with an additional \$4.5 million over the next four years.

[1] https://ontario.cmha.ca/wp-content/uploads/2008/11/mental_health_promotion_in_ontario_2008.pdf

OBJECTIVES

Upon successful completion of this program, graduates will be able to:

1. Advocate for those seeking mental health services or support.
2. Promote mental health and addictions awareness in communities and diverse populations.
3. Practice professionalism and ethical decision-making.
4. Enhance resiliency with knowledge of addictions and wellness.
5. Respond to urgent mental health and addictions matters.
6. Identify community services and supports for the needs and issues of individuals and groups.
7. Implement effective approaches to problem solving and decision making.
8. Work effectively with individuals, families, groups, interprofessional teams and organizations.
9. Recognize the value of human and cultural diversity.
10. Communicate with proficiency, clarity, accuracy, and confidence among clients and groups.
11. Promote self-care, wellness and healthy living.

FUTURE OPPORTUNITIES

Upon successful completion of the program, graduates will be prepared for employment in a variety of roles including, but not limited to:

- Addictions Worker
- Community Health Worker
- Crisis Intervention Worker
- Emergency Shelter Worker
- Mental Health Crisis Intervener
- Mental Health Support Worker
- Peer Supporter
- Shelter Support Worker
- Supportive Housing Worker
- Youth Outreach Worker

CERTIFICATIONS

Throughout the program, students will acquire the following industry certifications:

- Applied Suicide Intervention Skills (ASIST)
- CPI Nonviolent Crisis Intervention
- Mental Health First Aid
- Standard First Aid

ENTRANCE REQUIREMENTS

Eligibility for admission requires the applicant to meet one of the following academic criteria:

1. High School

Provincial High School Graduation Certificate with a 60% average in eight level 3000 credits or equivalent

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science Transition Certificate

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with General College Profile (or Business-Related College Profile or Degree and Technical Profile) with an average pass mark of 60%

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, are 19 years at the time of application

and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

AND

Please note that the following is required in order to be permitted into a field placement:

- Students require a clear Certificate of Conduct (Criminal Record Check and Vulnerability Sector Check). Students with an unclear Certificate of Conduct are advised to speak with program faculty at the beginning of the program. This Certificate can be obtained from the Royal Newfoundland Constabulary (RNC) or the Royal Canadian Mounted Police (RCMP).
- Students will need to complete a Student Pre-Placement Immunizations and Communicable Diseases Screening with their Health Care Provider. Completing the immunization record will require physician's visits, blood tests, and a TB screening test; detailed instructions are included on the Student Pre-Placement Immunizations and Communicable Diseases Screening. The student is responsible for ensuring that all medical requirements are fulfilled, and the screening form complete before submission. Certain vaccinations require a series of immunizations over a period; therefore, it is essential to start the process as early as possible. The student is also responsible for all associated costs (vaccinations, laboratory testing, physician fees, certificate of conduct fees, etc.).

Sound Recording and Production

Start Date: September

Credential: Diploma

Program Length: Two Years

School: Academics, Applied Arts, and Tourism

Locations & Delivery Modes:

- Prince Philip Drive - On Campus delivery

PROGRAM DESCRIPTION

Channel a world of sound.

Sound resonates through every aspect of our lives – at home and at work, in the streets and in our cars, on our media devices and with each other. It can make us dance, smile, cry and remember. So many human experiences that stimulate us have a sonic aspect that enhances the drama and emotion of that event. In some situations, sound cues can literally save a life.

The Sound Recording & Production (SRP) program at CNA offers you the skills to harness and capture those waves of sound that dance around us (musical and otherwise). With us, you learn how to shape and transform audio signals with mixing consoles and use audio production software (DAWs) and processing tools to weave beautiful sonic tapestries. We teach you to explore the various environments and delivery methods for telling a story across a variety of live and virtual media (music, web, TV/video, broadcast, animations, gaming, live sound production and more).

Whether you want to work at the world's top recording studios and broadcast facilities or tour with successful artists, the SRP program will help you master the mix of skills you need to start on that journey. If you simply want to learn these tools and techniques to improve your own projects, or if you want to run your own business, we'll provide the training and sound advice for success!

Program Highlights:

- Mentorship with faculty who are multi-award-winning musicians, artist managers and audio engineers.
- Extensive practical training in studio recording, live sound reinforcement, digital audio workstations, processing tools, mixing, mastering, sound for visual media and much more.
- Essential training in stage lighting, electronics, and acoustics.
- Studies in music business, entrepreneurialism, and career management.
- Engagement with industry experts and professional organizations.
- Collaborative projects with other arts programs such as Applied Music, Video Game Art & Design, Journalism, Digital Animation and Digital Video Production, among others.
- Collaborative projects with community businesses, non-profits, and individuals, providing real-world, hands-on experience.
- A plethora of up-to-date hardware and software to ensure you can use modern tools upon program completion.

Did You Know?

- SRP graduates have toured the globe with international touring acts.
- SRP instructors are industry experts who remain active and tapped into the music and recording industry.
- Students and graduates have been recognized with a multitude of provincial and regional music awards.
- SRP students have provided sound for many live events, conferences and awards shows with various local, regional, and national partners, including the ECMA and JUNO awards.
- Canada's recording and music marketplace has reached a new major milestone – for the first time, Canadians are streaming more than two billion songs a week.[1]
- The global revenue of the recorded music industry reached over US\$23 billion in 2020.[2]

Don't delay, apply today!

[1] [Music Canada](#)

[2] [Recorded music industry - global revenue 2020 | Statista](#)

OBJECTIVES

Upon successful completion of the program, graduates will be able to:

1. Explain the concept of sound, including its generation, transmission and effects, and apply that knowledge to select appropriate tools for its capture in a myriad of situations.
2. Analyze sound and lighting equipment requirements for live sound events, prep and connect all required equipment and use the equipment successfully in running the event from a technical perspective.
3. Intelligently speak the language of music when interacting with musicians in live sound and recording environments.
4. Demonstrate proficiency in Digital Audio Workstation applications, including editing and signal processing.
5. Apply logic and deductive reasoning to fix problems.
6. Demonstrate proficiency in analog signal processing required by clients in any field of music, video production, video game design, feature film and live sound industries.
7. Demonstrate safe working practices in lighting and various sound production environments.
8. Use entrepreneurial and personal finance skills to help establish recording studios and live sound companies, and run these operations successfully.
9. Negotiate standard working contracts.
10. Demonstrate competencies in writing technical documents.

FUTURE OPPORTUNITIES

Graduates of the Sound Recording & Production program can find work as the following in their appropriate venues: Production Mixer, Boom Operator, Production Sound Assistant, Sound Transfer Operator, Dialogue Editor, Sound Effects Editor, Music Editor, Assistant Sound Editor, ADR/Sound Effects Mixer, Music Mixer, Re-recording Mixer (Film Mixer), Sound Designer, Front of House Mixer, Monitor Mixer, System Technician, Mixing Engineer, Mastering Engineer, Tracking Engineer, Music Producer, Foley Artist and On-Air Production (Radio).

ENTRANCE REQUIREMENTS

1. High School

Provincial High School Graduation Certificate with a 60% average in eight level 3000 credits or equivalent including:

i. Mathematics (4 credits) chosen from:

Advanced: 2200, 3200 (50% in each course)

Academic: 2201 (50% minimum), 3201 (60% minimum)

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science Transition Certificate with the following courses:

Math Fundamentals MA1040 and MA1041

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with General College Profile (or Business-Related College Profile or Degree and Technical Profile) including the following courses:

Mathematics 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, are 19 years at the time of application out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment. If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

Please Note:

1) Students who do not meet the entrance requirements as a result of their Mathematics courses and grades should explore options that may be available to them through the Comprehensive Arts & Science (CAS) Transition – Mathematics courses.

2) Within the program, particularly for MM2340, as well as for moving forward in this career, students will need a pair of professional, closed back headphones with a 1/4" connector.

Courses

Elective	Minimum credit value of 3	3	3	0

Note:

Electives to be offered in each semester will be made available prior to registration. Other courses may be chosen provided that:

1. All prerequisites have been met,
2. The course is offered during the semester,
3. The maximum enrolment of the course is not exceeded,
4. The student's schedule can accommodate all scheduled classes for that course.

Television and Film Creation

Start Date: September

Credential: Diploma

Program Length: Two Years

School: Academics, Applied Arts, and Tourism

Locations & Delivery Modes:

- Prince Philip Drive - On Campus delivery

PROGRAM DESCRIPTION

From your dreams to the screen

With major film production companies like Warner Bros., Miramax, and Disney flocking to Newfoundland and Labrador (NL) for their major motion picture filming, your dreams of movie making can become reality right here at home. The province's wildly successful television shows, such as Hudson & Rex and Son of a Critch, have opened the doors for more home-grown productions.

There will be a call for many more trained professionals in the field. This new program is for emerging directors, writers, actors, and producers to learn their trade alongside experts in the field as instructors and mentors. Known as the "above the line" roles in television and film production, these are the visionaries who bring a story to life.

Touching on each of these diverse and connected roles, you'll have a chance to explore where your talents lie, while getting to know the ins and outs of pre-production, production, and post-production, both behind and in front of the camera.

You'll be immersed in the collaborative environment with the "below the line" crew, working together to make a production successful. You'll acquire the necessary skills for effective screenwriting and development, telling a story cinematically, and applying the aspects of production to television and film projects.

All the world's a stage... and you're on!

Program Highlights

- Professional mentorship opportunities in all program areas
- Team meetings, workshops, and seminars with Producers, Directors, Writers, and Actors
- Contact with professional Directors and Artistic Directors
- Experiential work scenarios and opportunities in all areas of the program
- Use of various methodologies for program delivery
- Capstone project to encompass holistic assessment including year one and two of the program

Did You Know?

- Canada is known as Hollywood North and is home to many large studio films and TV productions.
- In 2021, a cast and crew of approximately 150, including many local film workers, technicians, and artists, worked on the Walt Disney live-action adventure-fantasy, *Peter Pan & Wendy*, which was filmed on the Bonavista Peninsula.
- The filming of television show *Frontier* in NL (from 2016-2018) starring Jason Momoa, generated an economic output of more than \$63 million, and created 539 full-time equivalent positions in NL. It also later led to Momoa's major motion picture, *Aquaman*, being partially filmed in NL.
- Canadian content (television and film) production volume reached an all-time high in 2019-2020 of \$9.3 billion and demand for content continues to rise.
- The industry in Newfoundland and Labrador is growing rapidly, as national and international production companies are seeking out exotic locations that add to production value.

- Canadian television and film productions account for \$5 billion in revenue, and employ more than 244,500 people on a full-time basis.
- The Newfoundland and Labrador Film Development Corporation was created in 1997 with a mandate to grow and develop the provincial film and television industry, and has since generated over \$570 million in total production activity and more than 8,000 full time equivalent jobs.

OBJECTIVES

Upon successful completion of this program, graduates will be able to:

1. Communicate effectively as part of a production crew
2. Work cooperatively with other professionals, such as technical production crews, designers, directors, and stage management
3. Write scripts and stories for production
4. Break down a script for development, production, and post-production
5. Apply acting skills such as voice, speech, and movement to television and film productions
6. Clearly express, through a director's notebook, narratives and visual ideas to key crew members including the writers, actors, designers, and cinematographers
7. Referencing production documentation, confirm production requirements for scenes
8. Communicate approved changes to cast and crew according to production requirements
9. Maintain a recording system for all information relating to production schedule

CERTIFICATIONS

In addition to the formal courses listed in the program of studies, students will acquire the following industry certifications throughout the program:

- WHMIS
- Mental Health First Aid
- Occupational Health and Safety (OHS)
- Standard First Aid & CPR

*Students should be aware that additional fees may apply to external certifications.

FUTURE OPPORTUNITIES

This program focuses upon nurturing creative voices and visions. Upon successful completion of the program, graduates will have a portfolio of work which will be an essential tool in the advancement of their career. Graduates will be prepared for employment in the television and film industry in a variety of roles, including, but not limited to:

- Background performer
- Stand In
- Actor
- Casting Assistant
- Casting Associate
- Background Performer Casting Associate
- Background Performer Casting Assistant
- Script Supervisor
- Assistant Script Coordinator
- Script Coordinator
- Assistant Story Editor
- Production Assistant
- Director's Assistant
- Producer's Assistant
- Content Creator

ENTRANCE REQUIREMENTS

Eligibility for admission to the Television and Film Creation program requires the applicant to meet one of the following academic criteria:

1. High School

Provincial High School Graduation Diploma with a 60% average in eight level 3000 credits or equivalent

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (CAS) Transition Certificate

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with General College Profile (or Business-Related College Profile or Degree and Technical Profile) with an average pass mark of 60%

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, are 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore, international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

Applicant Portfolio Requirements

All applicants to the Television and Film Technical Production Certificate Program, the Television and Film Production Management Certificate Program, the Television and Film Post Production Certificate Program, and the Film and Television Creation Diploma Program must submit a **visual portfolio** and a **written statement** as part of the admission requirements.

A **visual portfolio** is a personal selection of the applicant's work that shows the potential to build on demonstrated skills and aptitudes when in the program.

A **written statement** is an opportunity for applicants to introduce themselves and communicate their interest, aptitude, relevant experience, and understanding of the program to which they are applying.

You will be notified how to submit your visual portfolio and written statement from the Register's Office upon processing of your application.

The Visual Portfolio

The visual portfolio should consist of:

A sample of relevant work that relates to the stream to which you are applying in the College's Film and TV programs.

The work sample may be one selection chosen from the following four options:

1. a short film
2. an excerpt of a short film
3. a selection of excerpts comprising a reel
4. a selection of 24 photographs

In the case of the first three options, your work sample should not exceed three (3) minutes' maximum and not be less than sixty (60) seconds minimum. It should be submitted in one of the following file formats:

- MP4

- MOV
- MKV
- QuickTime
- Mpeg
- PDF

In the case of the fourth option, please use:

- JPEG
- Tiff

You will include a signed and witnessed declaration that you are the author of your submitted work. In the case where there are collaborators, you will state your role and likewise include a signed and witnessed declaration that the credit you are claiming is yours.

How to submit your Visual Portfolio

Video Link

The preferred methodology is to provide our Admissions team with a video link to your portfolio. This can be achieved at vimeo.com, youtube.com, google docs, or any video sharing platform of your choice.

This link should be included at the end of your Written Statement.

If you are unable to provide a link, please contact Admissions and we will provide you with further direction.

Photos Link

The preferred methodology is to provide our Admissions team with a photo link to your portfolio. This can be achieved at google docs, one drive, or any video sharing platform of your choice.

This link should be included at the end of your Written Statement.

If you are unable to provide a link, please contact Admissions and we will provide you with further direction.

The Written Statement

It is not necessary to have prior experience in film and TV to be suitable candidate for this program. With that in mind, please write a statement between 250 and 500 words in your own voice giving us a brief introduction to yourself and your interests.

Outline your current goals within the film and tv industry. This is an opportunity for you to present your unique life experience and personality as well as your value to the program. It is not a business letter. The document must be submitted as a PDF. [View the Application Portfolio Rubric for this program](#)

Television and Film Post-Production

Start Date: September

Credential: Certificate

Program Length: One Year

School: Academics, Applied Arts, and Tourism

Locations & Delivery Modes:

- Prince Philip Drive - On Campus delivery

PROGRAM DESCRIPTION

That's a wrap!

When you hear those words from the director, now it's time for the final phase of movie magic: post-production. Creative editing of footage at this stage propels the story and engages the audience. These finishing touches can include various elements of visual modifications and enhancement of the audio experience through foley sound and music. Doors slamming, glass breaking, and spine-tingling, suspenseful music that keeps us on the edge of our seats – that's post-production alchemy.

For film and television, this is where a story completes its journey from script to screen. Skillful editing creates a compelling, cohesive multisensory experience and brings the story to life. Without post-production, there is no finished product.

This exciting program is your full access pass to the post-production world of film and television. Through in-depth instruction and project-based delivery, you'll have the opportunity to apply and practice sound and picture editing, colour grading, compositing and effects, sound design and mixing, and sound effects creation.

Teamwork is essential for this work, and you'll have a chance to build on that through collaboration with our other departments in film/television production. You will be immersed in the production chain and apply techniques to fully realize a professional quality film edit.

Your future, in frame.

Program Highlights

- The opportunity to learn across multiple post-production skills then specialize in one
- The most current program in its field designed and delivered by industry experts
- Opportunities to collaborate across programs in a television and film project
- Program focuses on the practical application ensuring you have job-ready skills
- Equipment mimics what you will be using in the real-world
- Students will participate in realistic studio and outside shoots

Did You Know?

- Canada is known as Hollywood North and is home to many large studio films and TV productions.
- In 2021, a cast and crew of approximately 150, including many local film workers, technicians, and artists, worked on the Walt Disney live-action adventure-fantasy, *Peter Pan & Wendy*, which was filmed on the Bonavista Peninsula.
- The filming of television show *Frontier* in NL (from 2016-2018) starring Jason Momoa, generated an economic output of more than \$63 million, and created 539 full-time equivalent positions in NL. It also later led to Momoa's major motion picture, *Aquaman*, being partially filmed in NL.
- Canadian content (film and television) production volume reached an all-time high in 2019-2020 of \$9.3 billion and demand for content continues to rise.
- The industry in Newfoundland and Labrador is growing rapidly, as national and international production

companies are seeking out exotic locations that add to production value.

- Canadian TV and film productions account for \$5 billion in revenue and employ more than 244,500 people on a full-time basis.
- The Newfoundland and Labrador Film Development Corporation was created in 1997 with a mandate to grow and develop the provincial film and television industry and has since generated over \$570 million in total production activity and more than 8,000 full time equivalent jobs.

OBJECTIVES

Upon successful completion of this program, graduates will be able to:

1. Communicate a knowledge of post-production for television and film productions
2. Work collaboratively in a team environment on a post-production project
3. Manage post-production teams while facilitating a project to ensure successful completion
4. Prepare dailies for review and discussion
5. Edit picture and sound using industry standard techniques and processes
6. Create titles and credits
7. Design sound for a post-production project
8. Edit audio for a post-production project
9. Create sound effects for a post-production project
10. Finalize a picture and sound edit according to industry standards

CERTIFICATIONS

In addition to the formal courses listed in the program of studies, students will acquire the following industry certifications throughout the program:

- WHMIS
- Mental Health First Aid Training
- Standard First Aid & CPR
- Occupational Health & Safety Committee

*Students should be aware that additional fees may apply to external certifications.

FUTURE OPPORTUNITIES

Upon successful completion of the program, graduates will be prepared for employment in a variety of entry level positions in Post-Production in television and film, including, but not limited to:

- Assistant ADR Technician
- Assistant Colour Correction
- Assistant Dialogue Editor
- Assistant Editor
- Assistant Foley Artist
- Assistant Mixer
- Assistant Sound Designer
- Assistant Sound Editor
- Assistant Sound Effects Editor
- Digital Imaging Technician

ENTRANCE REQUIREMENTS

Eligibility for admission to the Television and Film Post-Production program requires the applicant to meet one of the following academic criteria:

1. High School

Provincial High School Graduation Diploma with a 60% average in eight level 3000 credits or equivalent

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (CAS) Transition Certificate

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with General College Profile (or Business-Related College Profile or Degree and Technical Profile) with an average pass mark of 60%

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, are 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore, international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

Applicant Portfolio Requirements

All applicants to the Television and Film Technical Production Certificate Program, the Television and Film Production Management Certificate Program, the Television and Film Post Production Certificate Program, and the Film and Television Creation Diploma Program must submit a **visual portfolio** and a **written statement** as part of the admission requirements.

A **visual portfolio** is a personal selection of the applicant's work that shows the potential to build on demonstrated skills and aptitudes when in the program.

A **written statement** is an opportunity for applicants to introduce themselves and communicate their interest, aptitude, relevant experience, and understanding of the program to which they are applying.

You will be notified how to submit your visual portfolio and written statement from the Register's Office upon processing of your application.

The Visual Portfolio

The visual portfolio should consist of:

A sample of relevant work that relates to the stream to which you are applying in the College's Film and TV programs.

The work sample may be one selection chosen from the following four options:

1. a short film
2. an excerpt of a short film
3. a selection of excerpts comprising a reel
4. a selection of 24 photographs

In the case of the first three options, your work sample should not exceed three (3) minutes' maximum and not be less than sixty (60) seconds minimum. It should be submitted in one of the following file formats:

- MP4
- MOV
- MKV
- QuickTime
- Mpeg
- PDF

In the case of the fourth option, please use:

- JPEG
- Tiff

You will include a signed and witnessed declaration that you are the author of your submitted work. In the case where there are collaborators, you will state your role and likewise include a signed and witnessed declaration that the credit you are claiming is yours.

How to submit your Visual Portfolio

Video Link

The preferred methodology is to provide our Admissions team with a video link to your portfolio. This can be achieved at vimeo.com, youtube.com, google docs, or any video sharing platform of your choice.

This link should be included at the end of your Written Statement.

If you are unable to provide a link, please contact Admissions and we will provide you with further direction.

Photos Link

Television and Film Production Management

Start Date: September

Credential: Certificate

Program Length: One Year

School: Academics, Applied Arts, and Tourism

Locations & Delivery Modes:

- Prince Philip Drive - On Campus Delivery

PROGRAM DESCRIPTION

Expect the unexpected

There's not much behind the scenes that the production team doesn't manage, and with the whirlwind of activity on a film or television production – whether on set or on location – you can never be quite sure what may come your way. You could be filming on a windy beach, working with an animal wrangler and furry star, or rewriting the day's schedule after your talent has been delayed.

The television and film production management team is vital to the success of the project. This type of management requires skilled individuals to help ensure all the moving pieces are in the right place at the right time and the production gets made on budget and on schedule.

The script is your guide as you plan pre-production tasks such as developing schedules and budget. The production team keeps everyone connected and serves as the liaison between local authorities, director, and crew. During filming, the production unit generally splits its time between the production office and the set. They ensure all permits are in place for each respective location, that all safety ordinances are being followed, and that transportation, accommodations, and suppliers are in place. They make sure that everything comes together, and they know who to call if it doesn't.

If you are fascinated by the workings of live production, have exceptional organizational, communication and planning skills, and have a desire for new challenges every day, this program is your training ground. You'll be introduced to the process of coordinating a film or television series, and use resources innovatively to develop budgets, shooting schedules, locations criteria, and the day-to-day business of a production. You'll work collaboratively with all departments and have opportunities to explore each role within a production unit team.

That's your call.

Program Highlights

- The most current program in its field designed and delivered by industry experts
- Participation in a multi-discipline television and film project
- Program focuses on the practical application ensuring you have job-ready skills
- Use of state-of-the-art industry equipment
- From the first semester, students will participate in realistic studio and outside shoots
- Completion of a field placement with industry

Did You Know?

- Canada is home to many large studio films and TV productions.
- In 2021, a cast and crew of approximately 150 - including many local film workers, technicians, and artists - worked on the Walt Disney live-action adventure-fantasy film *Peter Pan & Wendy*, located on the Bonavista Peninsula.
- The filming of television show *Frontier* in NL (from 2016-2018) starring Jason Momoa, generated an economic

output of more than \$63 million, and created 539 full-time equivalent positions in NL. It also later led to Momoa's major motion picture, *Aquaman*, being partially filmed in NL.

- Canadian content (film and television) production volume reached an all-time high in 2019-2020 of \$9.3 billion and demand for content continues to rise.
- The industry in Newfoundland and Labrador is growing rapidly, as national and international production companies are seeking out exotic locations that add to production value.

- The Newfoundland and Labrador Film Development Corporation was created in 1997 with a mandate to grow and develop the provincial film and television industry and has since generated over \$570 million in total production activity and more than 8,000 full time equivalent jobs.

OBJECTIVES

Upon successful completion of the program, graduates will be able to:

1. Communicate collaboratively in a team
2. Design appropriate occupational health and safety checks
3. Demonstrate skills required for pre-production, production, and post-production of television and film projects
4. Break down a script according to the various needs of key departments
5. Create industry-standard documents, such as schedules, budgets, cash flow projections and cost reports that are required for production, funders, and financiers
6. Source locations, equipment, and resources
7. Implement projects in compliance with applicable laws, statutory obligations, regulations, and industry principles and practices
8. Meet financial, technical and organizational targets, and deadlines of projects

CERTIFICATIONS

In addition to the formal courses listed in the program of studies, students will acquire the following industry certifications throughout the program:

- WHMIS
- Mental Health First Aid Training
- Standard First Aid & CPR
- Occupational Health & Safety Committee

*Students should be aware that additional fees may apply to external certifications.

FUTURE OPPORTUNITIES

Upon successful completion of the program, graduates will be prepared for employment in television and film in a variety of roles, including, but not limited to:

- 2nd Assistant Director
- 2nd Script Supervisor
- 3rd Assistant Director
- Assistant Locations Manager
- Assistant Production Coordinator (APC)
- Assistant Production Manager (APM)
- Assistant Unit Manager
- Key Office Production Assistant
- Locations Scout
- Office Production Assistant
- Production Assistant
- Production Secretary
- Script Supervisor
- Trainee Assistant director (TAD)

ENTRANCE REQUIREMENTS

Eligibility for admission to the Television and Film Production Management program requires the applicant to meet one of the following academic criteria:

1. High School

Provincial High School Graduation Diploma with a 60% average in eight level 3000 credits or equivalent

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (CAS) Transition Certificate

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with General College Profile (or Business-Related College Profile or Degree and Technical Profile) with an average pass mark of 60%

4. Mature Student Requirements

Television and Film Technical Production

Start Date: September

Credential: Certificate

Program Length: One Year

School: Academics, Applied Arts, and Tourism

Locations & Delivery Modes:

- Prince Philip Drive - On Campus delivery

PROGRAM DESCRIPTION

Lights... Camera... Action!

This is the call for everyone on set to spring into action. In live production, there are as many moving parts (or more!) happening behind the camera as in front of it. Without lighting, grip, camera, and set decoration, a film, video, or television production simply won't see the light of day.

The technical production crew works like a well-oiled machine behind the scenes to ensure seamless takes that bring the director's vision to life. Masters of integration, these technicians can often fill a number of roles on a live set, bringing together their knowledge of several disciplines to make good decisions that contribute to a project's success.

Our Television and Film Technical Production Certificate will help you gain that knowledge, as you learn the technical aspects of television and film, including camera operation, lighting, rigging, props, set decoration, and sound work. This is a hands-on program designed to provide you with the knowledge, skills and attitudes needed to effectively perform in this exciting industry.

Newfoundland and Labrador's pristine and rugged landscape has made the province a sought-after location in the television and film industry, attracting productions big and small. Currently, the province has a reputation of producing high quality productions with a dedicated work force. National and international productions such as *Hudson & Rex*, *Son of a Critch*, *Astrid and Lily Save the World*, *Frontier*, *Aquaman*, and *Peter Pan & Wendy* have put the spotlight on our province, establishing that we have the capability and capacity to fully embrace and advance this industry.

After first completing a common semester, you will have the opportunity to specialize in one of the technical areas. During the Spring semester, you'll participate in a cross-discipline film project, and a six-week field placement.

Technical production crews can work on any kind of live production project such as feature films, wildlife documentaries, sporting events or even game shows! Those who pursue this career path are able to fuse their creativity with expert technical skills to make sure what we see and hear on the screen is as colorful, lavish and powerful as possible.

Along with this certificate, all you'll need is the aptitude to make quick decisions and the ability to move between tasks in dynamic, fast-paced environments.

You'll also need a comfortable pair of shoes.

Program Highlights

- The most current program in its field designed and delivered by industry experts using real-world equipment and technology
- The opportunity to be introduced to a broad range of technical roles and then specialize in one
- Collaboration across programs in television and film projects
- Focuses on the practical application for job-ready skills
- Access to state-of-the-art equipment, tools and facilities

- Participate in realistic studio and outside shoots
- Completion of a field placement with industry

Did You Know?

- Canada is known as Hollywood North and is home to many large studio films and TV productions.
- In 2021, a cast and crew of approximately 150, including many local film workers, technicians, and artists, worked on the Walt Disney live-action adventure-fantasy, *Peter Pan & Wendy*, which was filmed on the Bonavista Peninsula.

- The Newfoundland and Labrador Film Development Corporation was created in 1997 with a mandate to grow and develop the provincial film and television industry and has since generated over \$570 million in total production activity and more than 8,000 full time equivalent jobs.

OBJECTIVES

Upon successful completion of this program, graduates will be able to:

1. Communicate effectively as part of a technical production team
2. Model safe practices while operating tools and equipment
3. Utilize appropriate methods and materials to perform tasks within their technical disciplines
4. Collaborate with members of a production team to enable the creative expression of diverse ideas and concepts
5. Demonstrate proper protocols and acceptable conduct on a set
6. Break down a script according to the various needs of key departments
7. Interpret call sheets and other industry specific documentation
8. Adhere to legal principles, government legislation and regulations, copyright and contract requirements and professional and industry codes of conduct
9. Establish professional networking and business relationships in the television and film community

CERTIFICATIONS

In addition to the formal courses listed in the program of studies, students will acquire the following industry certifications throughout the program:

- WHMIS
- Mental Health First Aid Training
- Fall Protection Training (16 hrs)
- Aerial Work Platform Training (8 hrs)
- Standard First Aid & CPR
- Occupational Health & Safety Committee

*Students should be aware that additional fees may apply to external certifications.

FUTURE OPPORTUNITIES

Upon successful completion of the program, graduates will be prepared for employment in television and film in a variety of roles, including, but not limited to:

Lighting & Grip

- Daily Grip / Electric
- Rigging Grip / Rigging Electric
- Best Grip / Best Electric
- Dolly Grip
- Concert and conference Rigging

Set Design

- Production Assistant
- Props buyer
- Assistant Props
- Assistant Props maker
- On set Props
- Set Decoration buyer
- Set decorators
- On set dresser
- Set construction
- Scenic painter
- Assistant Greensperson

Camera

- Camera trainee
- 2nd Assistant Camera
- 1st Assistant Camera
- Video Assistant Operator
- Data Management Technician
- Digital Imaging Technician
- Camera Operator

ENTRANCE REQUIREMENTS

Eligibility for admission to the Television and Film Technical Production program requires the applicant to meet one of the following academic criteria:

1. High School

Provincial High School Graduation Diploma with a 60% average in eight level 3000 credits or equivalent

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (CAS) Transition Certificate

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with General College Profile (or Business-Related College Profile or Degree and Technical Profile) with an average pass mark of 60%

Applicant Portfolio Requirements

All applicants to the Television and Film Technical Production Certificate Program, the Television and Film Production

Management Certificate Program, the Television and Film Post Production Certificate Program, and the Film and Television Creation Diploma Program must submit a **visual portfolio** and a **written statement** as part of the admission requirements.

A **visual portfolio** is a personal selection of the applicant's work that shows the potential to build on demonstrated skills and aptitudes when in the program.

A **written statement** is an opportunity for applicants to introduce themselves and communicate their interest, aptitude, relevant experience, and understanding of the program to which they are applying.

You will be notified how to submit your visual portfolio and written statement from the Register's Office upon processing of your application.

The Visual Portfolio

The visual portfolio should consist of:

A sample of relevant work that relates to the stream to which you are applying in the College's Film and TV programs.

The work sample may be one selection chosen from the following four options:

1. a short film
2. an excerpt of a short film
3. a selection of excerpts comprising a reel
4. a selection of 24 photographs

In the case of the first three options, your work sample should not exceed three (3) minutes' maximum and not be less than sixty (60) seconds minimum. It should be submitted in one of the following file formats:

- MP4
- MOV
- MKV
- QuickTime
- Mpeg
- PDF

In the case of the fourth option, please use:

- JPEG
- Tiff

You will include a signed and witnessed declaration that you are the author of your submitted work. In the case where there are collaborators, you will state your role and likewise include a signed and witnessed declaration that the credit you are claiming is yours.

How to submit your Visual Portfolio

Video Link

The preferred methodology is to provide our Admissions team with a video link to your portfolio. This can be achieved at vimeo.com, youtube.com, google docs, or any video sharing platform of your choice.

This link should be included at the end of your Written Statement.

If you are unable to provide a link, please contact Admissions and we will provide you with further direction.

Photos Link

The preferred methodology is to provide our Admissions team with a photo link to your portfolio. This can be achieved at google docs, one drive, or any video sharing platform of your choice.

This link should be included at the end of your Written Statement.

If you are unable to provide a link, please contact Admissions and we will provide you with further direction.

The Written Statement

It is not necessary to have prior experience in film and TV to be suitable candidate for this program. With that in mind,

please write a statement between 250 and 500 words in your own voice giving us a brief introduction to yourself and your interests.

Outline your current goals within the film and tv industry. This is an opportunity for you to present your unique life experience and personality as well as your value to the program. It is not a business letter. The document must be submitted as a PDF.

Note: TF3110 Film Project - Technical Production and TF3115 Field Placement Preparation will be completed in the first nine (9) weeks of the semester. TF3210 Field Placement will take place during the last six (6) weeks of the semester.

Textile and Apparel Design

Start Date: September

Credential: Diploma

Program Length: Two Years

School: Academics, Applied Arts, and Tourism

Locations & Delivery Modes:

- Prince Philip Drive - On Campus Delivery

PROGRAM DESCRIPTION

Textile & Apparel Design provides students with an opportunity to learn and create one-of-a-kind textile and apparel products through drawing, design, textile and apparel practices. Individuals with creative and artistic interests in fashion and design will gain important technical design skills and knowledge of the integral relationships among fabric, surface and apparel design.

In the program, students will nurture an appreciation for the handcrafted product with the use of natural and sustainable materials. In fabric design, students will create fabric through knit, weave and felt. In surface design, they will explore hand sewing, embroidery, quilt, print, dye, and rug hooking. In apparel design, they will design and create clothing and accessories using hand-sewing skills, machine sewing and garment construction techniques, while exploring the exciting world of fashion and apparel.

Different media and techniques are introduced in the first year of the program. Innovation and creativity are encouraged through contemporary application of traditional skills and the incorporation of innovative materials into project ideas. The relationship between a maker's intent and content will form, through discourse in contemporary and traditional practice. Technical and critical skill development will occur in progression throughout the program.

The program is designed to offer innovative training that reaches beyond the classroom with an emphasis on experiential learning during fine craft and design fairs, wholesale trade shows, gallery exhibitions, and a fashion show. The program is supported by courses in colour theory, digital design, art and craft history, communications, entrepreneurial studies, art marketing development and proposal writing. The second year is an opportunity to focus studies and further develop design and technical skills when students choose two out of the three studio areas: fabric design, surface design or apparel design. Second-year students will also enrich their learning through courses in project coordination and implementation.

Graduates of the Textile & Apparel Design program will gain the solid foundation necessary to begin building a career as an independent artist, a production craftsperson, or as an employee in the craft and apparel industry. The program also offers graduates a solid foundation for exploring higher learning opportunities.

OBJECTIVES

Upon completion of this program, graduates will be able to:

1. Create aesthetic, functional, and innovative designs and products in the textile and apparel industry.
2. Integrate learned skills and techniques in fabric, surface and apparel design towards building a career as a professional artist.
3. Solve textile and apparel design issues through research and critical analysis.
4. Apply personal style and media choices in the creation of drawings, which support conceptual and technical design work.
5. Contribute to and enrich the quality, standards and professionalism of the textile and apparel industry.
6. Utilize effective communication techniques while promoting oneself in a professional manner as an emerging artist or designer.
7. Write professional proposals, grant applications, work reviews, and critiques.
8. Employ entrepreneurial skills, art marketing and self-promotion during events such as gallery exhibitions,

fashion shows, craft fairs, wholesale trade shows, workshops and conferences.

9. Plan, develop, monitor and implement a successful textile and/or apparel-based event.

10. Express the importance of the relationship between traditional and contemporary craft and art within individual studio practice.

ENTRANCE REQUIREMENTS

1. High School

Provincial High School Graduation Certificate with a 60% average in eight level 3000 credits or equivalent

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science Transition Certificate

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with General College Profile (or Business-Related College Profile or Degree and Technical Profile) with an average pass mark of 60%

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program must be at least 19 years of age at the time of application and out of school for at least one year to be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

Note: This program is not suitable for applicants with respiratory problems or colour blindness.

FUTURE OPPORTUNITIES

Working within the field of textile and apparel design offers rewarding opportunities and work experiences. Graduates of the Textile & Apparel Design program may become employed within the craft and fashion industry, which is inclusive of textile and apparel. Not only are graduates employed in their immediate area of skill and with various employers in full-time, part-time and contractual employment, but they also may become self-employed. Graduates of this program may find gainful employment working with art galleries, and during film/theatre productions. Visit the Craft Council of Newfoundland and Labrador exhibition, showcasing graduates individual interests, unique visions, style, creative process and practiced skills.

Video Game Art and Design

Start Date: September

Credential: Diploma

Program Length: Three Years

School: Academics, Applied Arts, and Tourism

Locations & Delivery Modes:

- Online - Asynchronous delivery

PROGRAM DESCRIPTION

Level Up!

Game designers and artists inspire through innovation and imagination. They merge storytelling, art, and technology to bring interactive experiences to life.

The video game industry has grown into one of the largest and most successful on the globe, generating revenue of over \$4 billion in Canada in 2021 alone.[1] With upwards of 1,000 active video game companies nation-wide (a 35 per cent increase since 2019)[2], video game artists and designers are in demand.

Our Video Game Art & Design (VGAD) program taps into this growth, providing training in the creative approaches involved in making engaging interactive experiences. In this rapidly evolving field, we prepare you for exciting work through the exploration of creative foundations and the application of game design theory, technical practices and aesthetic skills for a credential that is sought after world-wide.

Not just about providing entertainment, game designers and products are embraced by numerous industries today to improve our ability to solve the world's problems, train the workforce of tomorrow, and fuel innovative discovery through digital interactions and simulation. This innovative field is also building skills for today's technology-driven labour market through creative vision and the desire to influence the possibilities of tomorrow.

Apply now and take your career to an exciting new level!

Program Highlights

- Mentorship with faculty who have decades worth of industry experience and credits
- Extensive training in game theory and design, 2D and 3D art, game mechanics and visual scripting, narrative and level design
- Studies in art fundamentals, serious games, design documentation, creative writing, art history, sound design, interactive and visual storytelling, virtual reality experiences, game industry business and portfolio development
- Career opportunities in games, simulation and related media can include: quality assurance game tester, game producer, game designer (entertainment, education, training and simulation, etc.), level designer, writer, 2D and 3D asset artist, texture artist, character modelling, graphic interface designer, user interface designer, animator, sound designer, cinematographer, entrepreneur for media design

Did You Know?

- There are over 900 active video game studios in Canada (a 35% increase since 2019).
- In 2021, the gaming industry contributed \$5.5 billion to Canada's GDP (an increase of 29% since 2019).
- VGAD graduates have worked at companies and projects including Epic Games, Other Ocean Interactive, Ubisoft Halifax, Sculpin, Zorbit's Math by Carnegie Learning, Stormy Shore Studio, SMSM Mummer's Journey Gams and Kraken Robotics.
- Students have competed at Skills Canada competitions, winning gold and bronze medals on the national level, and competed internationally in the WorldSkills Competition.

- The global games market will continue to grow, expecting to exceed \$200 billion by 2023 (newzoo.com).

[1] [Entertainment Software Association of Canada \(theesa.ca\)](http://theesa.ca)

[2] [Canada's Video Game Industry – A National Champion Making a Global Impact \(canadasvideogameindustry.ca\)](http://canadasvideogameindustry.ca)

OBJECTIVES

Upon successful completion of the program, graduates will be able to:

1. Understand and utilize the theory, practices, computer software, and hardware resources needed to create video game art and design.
2. Demonstrate appropriate attitudes, behaviours, and work practices for employment in the game industry and other areas of media development.
3. Utilize effective visual, oral and written communication skills, and continue to grow personally in one-on-one communications.
4. Promote their work through portfolio development.
5. Work productively in a collaborative team environment.
6. Appreciate the role of history and art history as game art and design references.
7. Cultivate a desire for life-long learning.
8. Design original video games, art, and narrative for games.

FUTURE OPPORTUNITIES

There are many diverse opportunities for graduates of the Video Game Art & Design program. **Graduates may choose from an array of different exciting careers, including, but not limited to:** Quality Assurance Game Tester, Game Producer, Game Designer (entertainment, education, training and simulation, etc.), Level Designer, Writer for games and related media, Concept Artist for games and related media, 2D and 3D Asset Artist for games and related media, 3D Modeller for simulation, Texture Artist for games and related media, Character Modelling for games and related media, Graphic Interface Designer, Animator for games and related media, Sound Designer for games and related media, Cinematographer for games and related media*, Entrepreneur for media design, Marketing and Promotions for games and related media.

*Related media includes film, digital animation, visual arts, graphic arts, simulation, music and audio production, etc.

ENTRANCE REQUIREMENTS

Eligibility for admission to the Video Game Art & Design program requires the applicant to meet one of the following four academic criteria:

1. High School

Provincial High School Graduation Certificate with a 60% average in eight level 3000 credits or equivalent

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (CAS) Transition Certificate

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with General College Profile (or Business-Related College Profile or Degree and Technical Profile) with an average pass mark of 60%

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, are 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

Note: It is highly recommended that those applying for the Video Game Art & Design program have an appreciation for drawing and creating art, basic computer skills as well as strong core skills in English and writing.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of

6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment. If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

PORTFOLIO REQUIREMENTS

All applicants to the Video Game Art & Design program must submit a portfolio as part of the admission requirements. A portfolio is a collection of the applicant's work, based on detailed guidelines as described below, that shows the potential to build on demonstrated skills and aptitudes when in the program.

The applicant portfolio should consist of:

1. An essay which consists of a written personal statement explaining your reasons for wanting to be a video game artist and/or designer, your goals, and your interest in the program at College of the North Atlantic. This should be approximately 300 to 400 words.
2. A written work of creative fiction using the provided content guidelines described below. The story must be written within 600 to 1000 words (no more, no less). Be sure the story has a beginning, a climactic middle, and an ending.
3. Two pieces of art as described below by the College's Video Game Art & Design program portfolio entry detailed guidelines.

Portfolio Entry – Detailed Guidelines

All applicants to the Video Game Art & Design program must submit the specific, assigned writing and art samples to fulfil additional program entry requirements. The additional entry requirements should consist of:

- 1. An essay** which consists of a written personal statement explaining your reasons for wanting to be a video game artist and/or designer, your goals, and your interest in the program at College of the North Atlantic. This should be approximately 300 to 400 words.

Present your document as follows:

- The document must be delivered in a digital format or printed on paper from a digital format (not hand written).
- Write it in a font of Times New Roman at a font size of 12, double spaced
- Title the document: **VGAD Essay by "your name"**
- Set only the title in a bold font, no cover page
- Proper articulation of content and writing mechanics are expected and presented in paragraph form (grammar, spelling, syntax, structure, etc.)
- Save the document as a common digital file type (docx, doc, rtf) with your last name in the file name, for example: Smith_Essay.rtf
- If word processing software is unavailable, providing the content within the body of an email is acceptable. Additionally a physical, typed print-out can be mailed.

- 2. A fictional, creative story writing assignment** using the provided content guidelines. The story must be written within 600 to 1000 words (no more, no less). Be sure the story has a beginning, a climactic middle, and an ending.

Content to be included:

Main Protagonist Character: A scientific investigator.

Main Setting: The distant future on another planet at a ruined human outpost.

Main Antagonist: An alien entity.

Main Plot: Humans have been exploring the cosmos for planets to call home. Contact with some planetary outposts have either ceased or are very strange. A small team of humans, led by the protagonist, investigate one of the sites to find it devastated and in the process uncover a formidable alien presence that appears to be cause. The protagonist leads the charge to identify the real problem and solve the situation.

Character Dialogue: Include some sections of character dialogue within the story.

There is much room to present original creativity within the given guideline of content such as who the characters are, what they look like, describing the setting, the action, introducing more characters, and ultimately which direction the story goes. This prompt can be interpreted in many ways and can produce several different outcomes from one writer to the next. For example, why are humans looking for a new home? What really happened at the outpost? Is the alien presence good or bad? Your goal is to be creative, add depth to this brief outline, and to be descriptive in a manner that your words can inspire a visual image within the reader's imagination. Try to connect with the reader on an emotional level by providing meaningful storytelling.

Present your document as follows:

- The document must be delivered in a digital format or printed on paper from a digital format (not hand written).
- Write it in a font of Times New Roman at a font size of 12, double spaced.
- Title the document: **VGAD Story by "your name"**
- Set only the title in a bold font
- Proper articulation of content and writing mechanics are expected (grammar, syntax, structure, etc.)
- Save the document as a common file type (doc, docx, or rtf) with your last name in the file name, for example: Smith_Story.rtf
- If word processing software is unavailable, providing the content in an email is acceptable.

3. **Two pieces of art** as outlined below by the College's Video Game Art and Design program.

Present your document as follows:

- Please sign and date each piece.
- Please include PHOTOCOPIES or DIGITAL COPIES ONLY, as the portfolio will not be returned.
- All submissions must be your own work. Any submission that contains plagiarized work, copied either manually or electronically, will be disqualified and you will be refused consideration.
- Any submission that contains inappropriate or offensive content will be refused consideration.
- ENSURE THAT YOUR NAME IS ON EACH OF THE CLEARLY LABELLED PIECES.
- Additional drawings or game ideas will not be accepted, viewed, or considered.
- Art submissions should show the applicant's current level of proficiency in the visual arts.
- All observational drawings are to be executed from real-life subject material, not from photographs, images, artwork, or other drawings.
- Drawings must be made on 8.5 x 11 sheets of plain white paper.

3a. Pencil sketch of a landscape (not based on images or photos). You may draw this from inside, looking out a window and it may include a building structure. Suggested time for completion of the final drawing, not including practice sketches: 30 – 60 minutes.

3b. Pencil or color pencil drawing of a real toy such as an action figure, collectible statue, video game console controller, teddy bear, or vehicle (not based on images or photos). The full view of the toy is visible in the drawing. Suggested time for completion of the final drawing, not including practice sketches: 30 – 60 minutes.

[View the Application Portfolio Rubric for this program](#) (57KB PDF)

HOW DO I SUBMIT THESE ADDITIONAL ADMISSION REQUIREMENTS?

1. Applicants should submit only copies of their artwork, such as a photocopied drawing, or a digital scan of the drawing. No originals should be submitted. Include applicant name and contact information.
2. Do not submit any framed, fragile or 3-dimensional work. Take a photo and submit that instead. Include applicant name and contact information.
3. If applicants submit digital files, please burn them onto a disk to include with the application, or email the images and include applicant name and contact information.
4. Any physical photocopies or printed pages of work on paper should be submitted in a 9 "x12" envelope and identified with applicant name on each page. Include applicant name and contact information within.
5. Each item included should be identified with an applicant name and date, and entry requirement number at the bottom of the page. Include contact information.

Please note: We emphasize that while advanced levels of writing, drawing, and computer skills may be an asset, they are not necessary, nor a guarantee for admission to the program.

***Note:**

Electives to be offered in each semester will be made available prior to registration. Other courses may be chosen provided that:

1. All prerequisites have been met,
2. The course is offered during the semester,
3. The maximum enrolment of the course is not exceeded,
4. The student's schedule can accommodate all scheduled classes for that course.

Tourism and Hospitality

Start Date: September

Credential: Certificate/Diploma

Program Length: One Year/Two Years

School: Academics, Applied Arts, and Tourism

Locations:

- Prince Philip Drive - On Campus delivery

Note:

Alternate year intake.

The Tourism and Hospitality programs are looking for “people-oriented” individuals with a desire to work in a fast-paced environment. Tourism is the world’s fastest growing industry and a dynamic part of our economy as one of Canada’s largest employers, accounting for 10% of all jobs. There are over 400 different tourism career opportunities, and an increasing demand for management level personnel.

Choose a career today in the diverse and dynamic tourism industry!

Flexible schedules and shift work are integral parts of many jobs within this occupation. Students should be prepared for this and other physical demands within the program and industry. Students with food allergies and sensitivities to environmental conditions, please be aware that frequent exposure to substances may affect these sensitivities.

TOURISM & HOSPITALITY MANAGEMENT - DIPLOMA

Prepare for management and leadership roles in the major industries of tourism: accommodations, food & beverage, recreation & entertainment, transportation and travel services with a Tourism & Hospitality Management diploma awarded to students who successfully complete the two-year program. The first year of the Tourism & Hospitality Management diploma is a common year with the Tourism & Hospitality Services certificate. In the second year of the program, students are further prepared for careers that may quickly lead to supervisory and management roles in the major industries of tourism.

The emphasis of the Diploma program is acquiring the necessary supervisory and management skills required in the global tourism industry. The program provides students with practical, theoretical and experiential learning, field trips and two six-week field placements. Students will attain the skills, competencies, and attitudes necessary to manage expanding and increasingly sophisticated tourism operations. Students develop excellent teamwork, decision-making, critical thinking, communication, and leadership skills throughout the program. They are also exposed to human resources, marketing, law, events, facilities, and food and beverage management methodologies and current industry trends.

The curriculum is designed to meet the standards established by the Canadian Tourism Human Resource Council and the provincial tourism industry. Graduates of this program pursue careers with a wide variety of tourism organizations, agencies or associations dedicated to tourism such as government and non-government agencies, community and tourism development associations, resorts, cruise ships, restaurants, and hotels, while working as a destination developer, tour guide, event planner, restaurant or bar manager, manager of a hotel or international resort, or employee for an airline or cruise ship. Graduates may also decide to take the entrepreneurial route and start their own businesses.

OBJECTIVES

Upon successful completion of the program, graduates will be able to:

1. Summarize the role and social, cultural and economic importance that tourism has in society.
2. Discuss the tourism industry sectors and interpret their interdependence.
3. Explain the various components of the tourism industry and how these components work together.
4. Communicate effectively and with confidence with peers, staff and customers in person, on the telephone, and via email or social media.
5. Demonstrate effective interpersonal and customer service skills in a professional manner.
6. Demonstrate management skills in leadership, team building and problem solving.
7. Contribute to the effective daily operations of a tourism business as a talented team member.
8. Perform all duties for front-line positions to prepare for possible management roles in tourism businesses.
9. Develop strategies to establish working relationships with clients and suppliers in order to maintain and strengthen their loyalty to the business.
10. Apply accounting and financial knowledge and skills, including cost control techniques, to the operation of a tourism business.
11. Apply operation and management principles to a tourism business.
12. Create memorable authentic tourism experiences to engage customers.

FUTURE OPPORTUNITIES

The growth of the tourism sector globally offers exciting employment opportunities throughout the world, and graduates will be well qualified to seek opportunities provincially, nationally and internationally. Graduates of this diploma program should have career goals that include supervisory positions. Employment opportunities exist as tourism and hospitality professionals in front-line or managerial positions with corporations, non-profit tourism organizations, tourism associations, hotels, resorts, attractions, and private businesses.

CERTIFICATIONS

Students in the Tourism & Hospitality Management Diploma program are required to complete nine certifications during their two-year program. These certifications are included in TR1120 – Professional Certifications I & TR1130 – Professional Certifications II.

Note: Students should be aware that additional fees apply for the certifications, field trips and tours. Additional expenses will be incurred for the purchase of items of clothing which are required for the program.

TOURISM & HOSPITALITY SERVICES – CERTIFICATE

The Tourism & Hospitality Services program focuses on tourism knowledge, skills, and modern trends, with an emphasis on the core skills and characteristics of the major industry sectors. Topics of interest include accommodations, food & beverage, cultural tourism & the arts, sustainability, social media, customer service, communications, and practical mathematics, etc. Students are required to complete semesters 1, 2 and 3 which includes a six-week field placement that will provide valuable work experience and additional knowledge of what is required to successfully compete in this sector.

OBJECTIVES

Upon successful completion of the certificate program, graduates will be able to:

1. Explain the role and social, cultural and economic importance that tourism has in society.
2. Identify the tourism industry sectors and explain their interdependence.
3. Explain the various components of the tourism industry and how these components work together.
4. Communicate effectively and with confidence with peers, supervisors and customers in person, on the telephone, and via email or social media.
5. Demonstrate entry-level skills in front office, housekeeping, and food and beverage.
6. Demonstrate effective interpersonal and customer service skills in a professional manner.
7. Contribute to the effective daily operations of a tourism and hospitality organization or business as a skilled team member.

FUTURE OPPORTUNITIES

The growth of the tourism sector globally offers exciting employment opportunities throughout the world, and graduates will be well qualified to seek opportunities within tourism and hospitality services provincially, nationally and internationally. Graduates of this certificate program should have career goals for entry-level employment. They will be able to seek meaningful employment within the major industry sectors: food & beverage, accommodations, recreation & entertainment, transportation and travel services.

CERTIFICATIONS

Students in the Tourism & Hospitality Services certificate program are required to complete five certifications during their one-year program. These certifications are included in TR1120 – Professional Certifications I.

Note: Students should be aware that additional fees apply for the certifications, field trips and tours. Additional expenses will be incurred for the purchase of items of clothing which are required for the program.

ENTRANCE REQUIREMENTS

Eligibility for admission to the Tourism & Hospitality requires the applicant to meet one of the following four academic criteria:

1. High School

Provincial High School Graduation Diploma with a 60% average in eight Level 3000 credits or equivalent

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science Transition Certificate

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with General College Profile (or Business-Related College Profile or Degree and Technical Profile) with an overall average pass mark of 60%.

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, are 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

PLEASE NOTE: Basic computer literacy skills, as well as strong core skills in English and Mathematics are definite assets for this program. These skills are important for success in the program.

PROGRAM TRANSFERABILITY

The Tourism and Hospitality program offer exit points after Year 1 and Year 2:

- * Students can graduate at the end of Year 1 with a Tourism and Hospitality Services Certificate.
- * Students graduate at the end of Year 2 with a Tourism and Hospitality Management Diploma.

Graduates of the Tourism and Hospitality Management Diploma have the opportunity to transfer credits to:

- Royal Roads University: Bachelor of Arts in Global Tourism Management; or Bachelor of Arts in International Hotel Management

***Elective Courses:**

Electives to be offered in each semester will be made available prior to registration. Other courses may be chosen provided that:

1. All prerequisites have been met,
2. The course is offered during the semester,
3. The maximum enrolment for the course is not exceeded, and
4. The student's schedule can accommodate all scheduled classes for that course.

Tourism and Hospitality Services Certificate courses are those listed in Semesters 1, 2, and 3 above.

Tourism and Hospitality Services

Start Date: September

Credential: Certificate

Program Length: One Year

School: Academics, Applied Arts, and Tourism

Locations & Delivery Modes:

- Online - Asynchronous delivery

PROGRAM DESCRIPTION

Courses in the Tourism & Hospitality Services certificate program will be available online via Distributing Learning Service over a one-year period so that those who are interested in taking courses in this dynamic and growing field can do so in an alternative learning format. Students can choose to enroll in one or multiple courses depending on their interests. Course hours may be adjusted depending on the delivery time frames. Students who complete all 15 courses will receive a post-secondary Certificate in Tourism & Hospitality Services. This exciting learning opportunity will provide individuals with increased access to Tourism & Hospitality Services online courses which allow the flexibility of time and place. Many of the courses in the program are set up as asynchronous online learning, which allows students to learn on their own schedule within a certain timeframe outlined by the instructor. Students can view instructional materials each week at any time they choose and does not include a live lecture component. Some practical components of FW1130 – Field Placement I may have an on-site requirement. Students must follow their prescribed program plan for full time studies to ensure courses are taken in the correct sequence for graduation.

Newfoundland and Labrador has captured the attention of the world like never before and tourism has significantly contributed to the Provinces economy. In Canada, the tourism sector is one of the Nation's largest employers, accounting for 10% of all jobs. This program will provide a unique and flexible opportunity for individuals to increase their post-secondary educational credentials in Tourism & Hospitality Services. Whether you are beginning your career or simply wish to upgrade your skills, this flexible online program is the perfect fit for you.

The Tourism & Hospitality Services program focuses on tourism knowledge, skills and modern trends, with an emphasis on the core skills and characteristics of the major industry sectors. Topics of interest include accommodations, food & beverage, cultural tourism and the arts, sustainability, social media, customer service, communications and practical mathematics, etc. The program also includes a field placement for hands-on experience, as well as several professional certifications. With a number of exciting job opportunities, start planning for your future today at CNA!

OBJECTIVES

Upon successful completion of the certificate program, graduates will be able to:

1. Explain the role and social, cultural and economic importance that tourism has in society.
2. Identify the tourism industry sectors and explain their interdependence.
3. Explain the various components of the tourism industry and how these components work together.
4. Communicate effectively and with confidence with peers, supervisors and customers in person, on the telephone, and via email or social media.
5. Demonstrate entry-level skills in front office, housekeeping, and food and beverage.
6. Demonstrate effective interpersonal and customer service skills in a professional manner.
7. Contribute to the effective daily operations of a tourism and hospitality organization or business as a skilled team member.

FUTURE OPPORTUNITIES

The growth of the tourism sector globally offers exciting employment opportunities throughout the world, and graduates will be well qualified to seek opportunities within tourism and hospitality services provincially, nationally and internationally. Graduates of this certificate program should have career goals for entry-level employment. They will be able to seek meaningful employment within the major industry sectors: food & beverage, accommodations, recreation & entertainment, transportation and travel services. Students will be eligible to use program credits towards year one of the Tourism & Hospitality diploma program at the Prince Philip Drive Campus.

PROFESSIONAL CERTIFICATIONS

Students in the Tourism & Hospitality Services Certificate program are required to complete professional certifications during TR1120 – Professional Certifications I.

Note: Students should be aware that additional fees apply for the certifications and field trips.

ENTRANCE REQUIREMENTS

Eligibility for admission to Tourism & Hospitality Services requires the applicant to meet one of the following four academic criteria:

1. High School

Provincial High School Graduation Diploma with a 60% average in nine Level 3000 credits or equivalent

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science Transition Certificate

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with General College Profile (or Business-Related College Profile or Degree and Technical Profile) with an overall average pass mark of 60%.

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, are 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements. For more information regarding the Mature Student Requirements, please refer to Procedure AC-102-PR: Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment. If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

PLEASE NOTE: Basic computer literacy skills, as well as strong core skills in English and Mathematics are definite assets for this program. These skills are important for success in the program.

Accounting

Start Date: September

Credential: Diploma

Program Length: Two Years

School: Business and Information Technology

Locations & Delivery Modes:

- Corner Brook - On Campus delivery
- Online - Asynchronous delivery
- Online - Synchronous delivery

PROGRAM DESCRIPTION

A meticulous art.

A highly functioning business counts on critical financial fundamentals that accounting brings to the table. More than number crunching, accounting is a data-driven, strategic, and ultimately impactful, practice for success, whether that be in local or global markets. Preparation is key, with planning and administering of accounting systems, reporting of financial information, examination of records, analysis of statements and more.

This two-year Accounting program has the goods to help you develop multiple skills in the field of general financial accounting. You will focus on developing critical thinking, communication, and problem-solving skills, with the addition of learning to interpret complex information and develop comprehensive reports that are typically presented to management. You will leave here with a learning portfolio, prepared to launch into your career or continue your educational plans.

If you have natural proficiency and a love for numbers and are excited about the concept of keeping a business or organization at peak operational efficiency, this field is an excellent choice for you.

This is a career to count on.

Program Highlights

- A six-week work exposure to hone your skills
- Training for diverse career opportunities
- Accredited by the Accreditation Council for Business Schools and Programs (ACBSP)
- Transfer credits to institutions such as Memorial University of Newfoundland (Grenfell), Athabasca University, Plymouth University and University of New Brunswick (Saint John)

Did you know?

- Canada's accounting sector is relatively more open to foreign service providers than the average of the 48 countries evaluated in the Services Trade Restrictiveness Index.[\[1\]](#)
- According to Statistics Canada, the operating revenue of the accounting, tax preparation, bookkeeping and payroll services industry in Canada increased by 5.2% to \$21.4 billion in 2019.
- Canada is the second largest destination market for U.S. accounting services exports and the fourth largest source of imports of accounting services to the United States.[\[2\]](#)
- In 2020, accounting services exports to Canada represented 9.9% of total U.S. accounting services exports and 7.1% of total U.S. accounting services imports.

OBJECTIVES

Upon successful completion of this program, graduates will be able to:

1. Apply fundamental principles of accounting to various types of financial transactions and situations including a

broad understanding of international accounting standards and practices

2. Demonstrate proficiency in financial reporting that includes the preparation and analysis of financial statements for a range of businesses and organizations using both manual and computerized accounting systems
3. Use a variety of software applications and tools, including accounting software, and spreadsheet programs to assist in preparing and analyzing financial statements
4. Develop financial and budgetary plans based on varying business objectives, changing business environments, and underlying business assumptions including a solid understanding of income tax, payroll tax, and sales tax
5. Make responsible and ethical accounting decisions that align with organizational values and effectively communicate to various stakeholders using both oral and written communications methods
6. Exhibit the application of employability skills defined by the Conference Board of Canada to facilitate successful entry into the workplace and work collaboratively with team members from diverse backgrounds and skill sets to achieve common goals

ENTRANCE REQUIREMENTS

Eligibility for admission requires the applicant to meet one of the following academic criteria:

1. High School

Provincial High School Graduation Certificate with a 60% overall average in the following (or equivalent):

- i. English 3201 or English 3202 (60% minimum)
- ii. Mathematics (4 credits) chosen from:
Advanced: 2200, 3200 (50% minimum in each course)
Academic: 2201 (50% minimum), 3201 (60% minimum)
- iii. Five credits at the 3000 Level

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with the following courses:

- i. Math Fundamentals: MA1040, MA1041

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with Business-Related College Profile including the following courses (or equivalent):

- i. English 3101A, 3101B, 3101C or 3102A, 3102B, 3102C
- ii. Mathematics 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C

Applicants with Adult Basic Education (Level III) Graduation with a different Profile may be eligible for admission to the program provided the appropriate selection of courses including those outlined above have been completed.

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, must be at least 19 years of age at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to [Procedure AC-102-PR Admission](#).

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

CAREER OPPORTUNITIES

Graduates of this program may obtain employment in a variety of marketing areas such as:

- Administrative Assistant
- Project Team Lead
- Finance Associate
- Financial Clerk
- Treasury Clerk
- Payroll Clerk

ACCREDITATION

Accounting is accredited by the Accreditation Council for Business Schools and Programs (ACBSP) in all campus locations. ACBSP is the leading specialized accreditation association for business education supporting, celebrating, and rewarding teaching excellence.

PROGRAM TRANSFERABILITY

The Accounting program offers exit points after Year 1 and Year 2.

*Students can graduate at the end of Year 1 with a Business Administration Certificate.

*Students graduate at the end of Year 2 with a Accounting Diploma.

Graduates of the Accounting program may have the opportunity to transfer credits to institutions/associations such as:

- Memorial University of Newfoundland, Grenfell Campus
- Athabasca University, Alberta
- Plymouth University, UK
- University of New Brunswick, Saint John Campus

Graduates may also wish to further their studies to achieve professional designations with:

- Canadian Institute of Financial Planning
- The Payroll Association of Canada
- Chartered Professional Accountants of Canada (CPA)

Accounting and Financial Management

Start Date: September

Credential: Diploma

Program Length: Three Years

School: Business and Information Technology

Locations & Delivery Modes:

- Grand Falls-Windsor - On Campus delivery
- Prince Philip Drive - On Campus delivery

PROGRAM DESCRIPTION

Strength in numbers.

The global economy counts on critical skills that accountants hold, as they are at the forefront of socioeconomic change. With a keen eye on best practices, and an affinity for numbers and regulation, those in the accounting field are managing information to make the most effective business decisions for their organization.

Our three-year Accounting and Financial Management diploma is designed to provide you with the knowledge and skills necessary to manage vital financial information and ensure that organizations run smoothly while complying with financial regulations. With a wide range of topics including financial accounting, managerial accounting, principles of auditing, taxation, and business finance, you'll engage in a combination of theoretical learning and practical experience.

A work exposure will give you the opportunity to gain real-world experience for a variety of roles, increasing your value as an accounting clerk, bookkeeper, tax preparer, auditor, or financial analyst.

If you are interested in pursuing a lucrative and reputable career, this comprehensive and practical diploma has absolute value for you.

It pays to be accountable.

Program Highlights

- A six-week work exposure to hone your skills
- Training for diverse career opportunities
- Accredited by the Accreditation Council for Business Schools and Programs (ACBSP)
- Transfer credits to institutions such as with Memorial University of Newfoundland (Grenfell), Athabasca University, Cape Breton University, Northwood University, Okanagan College, Plymouth University, and the University of New Brunswick (Saint John)

Did You Know?

- According to research, those working in accounting and finance typically earn an average of \$123,000 per year in Canada. And on average, their starting salary doubles by the time they reach the 10-year mark.[\[1\]](#)
- Canada's accounting sector is relatively more open to foreign service providers than the average of the 48 countries evaluated in the Services Trade Restrictiveness Index.[\[2\]](#)
- According to Statistics Canada, the operating revenue of the accounting, tax preparation, bookkeeping and payroll services industry in Canada increased by 5.2% to \$21.4 billion in 2019.
- Canada is the second largest destination market for U.S. accounting services exports and the fourth largest source of imports of accounting services to the United States.[\[3\]](#)
- In 2020, accounting services exports to Canada represented 9.9% of total U.S. accounting services exports and 7.1% of total U.S. accounting services imports.

OBJECTIVES

Upon successful completion of this program, graduates will be able to:

1. Apply fundamental principles of accounting to various types of financial transactions and situations including a broad understanding of international accounting standards and practices
2. Demonstrate proficiency in financial reporting that includes the preparation and analysis of financial statements for a range of businesses and organizations using both manual and computerized accounting systems
3. Use a variety of software applications and tools, including accounting software, and spreadsheet programs to assist in preparing and analyzing financial statements
4. Develop financial and budgetary plans based on varying business objectives, changing business environments, and underlying business assumptions including a solid understanding of income tax, payroll tax, and sales tax
5. Make responsible and ethical accounting decisions that align with organizational values and effectively communicate to various stakeholders using both oral and written communications methods
6. Exhibit the application of employability skills defined by the Conference Board of Canada to facilitate successful entry into the workplace and work collaboratively with team members from diverse backgrounds and skill sets to achieve common goals
7. Integrate business concepts for effective business planning and strategic management in a professional accounting environment using effective professional, time management, organization, teamwork, and leadership skills
8. Analyze complex financial data, identify problems, and propose solutions using sound accounting principles and practices

ENTRANCE REQUIREMENTS

Eligibility for admission requires the applicant to meet one of the following academic criteria:

1. High School

Provincial High School Graduation Certificate with a 60% overall average in the following (or equivalent):

i. English 3201 or English 3202 (60% minimum)

ii. Mathematics (4 credits) chosen from:

Advanced: 2200, 3200 (50% minimum in each course)

Academic: 2201 (50% minimum), 3201 (60% minimum)

iii. Five credits at the 3000 Level

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with the following courses:

i. Math Fundamentals: MA1040, MA1041

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with Business-Related College Profile including the following courses (or equivalent):

i. English 3101A, 3101B, 3101C or 3102A, 3102B, 3102C

ii. Mathematics 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C

Applicants with Adult Basic Education (Level III) Graduation with a different Profile may be eligible for admission to the program provided the appropriate selection of courses including those outlined above have been completed.

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, must be at least 19 years of age at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to [Procedure AC-102-PR Admission](#).

Atlantic Trades Business Seal

Start Date: September

Credential: Certificate

Program Length: 30 Weeks (Part-Time)

School: Business and Information Technology

Locations & Delivery Modes:

- Online - Asynchronous delivery

PROGRAM DESCRIPTION

The Atlantic Trades Business Seal program is designed for journey persons to advance their business and leadership skills and to gain regional career mobility. Graduates will be prepared for a managerial role within a company or will have gained the skillset required to create and manage their own business. Existing business owners will benefit from the program by developing the skills needed to take their business to the next level.

The program provides graduates with knowledge and skills in the following functional areas of business:

- Marketing & Sales
- Operations Management
- Business Planning
- Financial Management
- Human Resource Management

OBJECTIVES

Graduates of the Atlantic Trades Business Seal program will have the knowledge and skills that will allow them to:

1. Design an organizational structure for trade-related businesses
2. Write a trade-related business plan
3. Design and implement personnel policies
4. Identify and analyze trends and statistical data related to the growth and improvement of trade-related businesses
5. Identify options and alternatives for business growth and improvement
6. Interpret financial statements to make informed business decisions
7. Develop appropriate marketing strategies for trade-related businesses
8. Schedule people, materials and equipment
9. Develop feasible, competitive and profitable quotes or estimates

ACADEMIC ADVISING

Each student will be assigned an academic advisor to help guide you through the college experience. The advisor is trained to counsel you on college-related issues or to make mutually agreed upon referrals for you to other college professionals.

EMPLOYMENT OPPORTUNITIES

The Seal can prepare graduates for a managerial role at a company or to create their own business. Existing business owners will benefit from the program by developing the skills needed to take their business to the next level.

ENTRANCE REQUIREMENTS

Applicants must hold a Red Seal Credential or Certificate of Qualification in a designated trade.

CERTIFICATE REQUIREMENTS

Individuals must complete five stand-alone modules to meet the requirements for the Atlantic Trades Business Seal. Once these are successfully completed, a transcript must be submitted to the Apprenticeship and Trades Certification Division, which will issue the Atlantic Trades Business Seal.

Business Administration (General)

Start Date: September

Credential: Diploma

Program Length: Two Years

School: Business and Information Technology

Locations & Delivery Modes:

- Online - Asynchronous delivery

PROGRAM DESCRIPTION

The successful business administrator must be an effective leader, communicator and problem solver; one who can integrate rapidly emerging technology with diverse business functions such as accounting, marketing, and human resource management.

Students in the Business Administration (General) program will develop interpersonal and organizational skills. They will use the latest computer technology in business decision making and learn practical skills which will help them to be productive members of the workforce. Graduates can expect to build on this solid base during their entire business career.

Note: Year 1 courses can be completed at campuses that offer the Business Administration certificate program.

OBJECTIVES

Upon successful completion of the program, graduates will be able to:

1. Demonstrate the ability to effectively engage in research and information gathering processes.
2. Discuss general knowledge of accounting, human resources, and marketing, for application in a business environment.
3. Demonstrate entrepreneurship skills used in small- to medium-sized business environment.
4. Demonstrate application of the Conference Board of Canada employability skills.

ENTRANCE REQUIREMENTS

Academic:

Eligibility for admission to Business Administration/Business Management programs requires the applicant to meet one of the following four academic criteria:

1. High School

Provincial High School Graduation Certificate with a 60% overall average in the following (or equivalent):

i. English 3201 or English 3202 (60% minimum)

ii. Mathematics (4 credits) chosen from:

Advanced: 2200, 3200 (50% minimum in each course)

Academic: 2201 (50% minimum), 3201 (60% minimum)

iii. Five credits at the 3000 Level

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with the following courses:

i. Math Fundamentals: MA1040, MA1041

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with Business-Related College Profile including the following courses (or equivalent):

i. English 3101A, 3101B, 3101C or 3102A, 3102B, 3102C

ii. Mathematics 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C

Applicants with Adult Basic Education (Level III) Graduation with a different Profile may be eligible for admission to the program provided the appropriate selection of courses including those outlined above have been completed.

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, must be 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Students – Admission Requirements and Information

1. High School

- i. Proof of senior high school/secondary school Diploma/Certificate with equivalent minimum grades for the required high school courses listed above.
- ii. India applicants only – Proof of senior high school/secondary school Diploma/Certificate with an equivalent Grade 10 Mathematics (50% min.) and Business/Commerce Stream.

2. English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment. If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

CAREER OPPORTUNITIES

Graduates may find entry level job opportunities in a wide spectrum of organizations such as public institutions, small and/or large businesses, and financial institutions.

ACCREDITATION

Business Administration (General) is accredited by the Accreditation Council for Business Schools and Programs (ACBSP) in all campus locations. ACBSP is the leading specialized accreditation association for business education supporting, celebrating, and rewarding teaching excellence.

PROGRAM TRANSFERABILITY

The Business Administration/Management programs offer exit points after Year 1, Year 2, and Year 3.

- * Students can graduate at the end of Year 1 with a Business Administration Certificate.
- * Students graduate at the end of Year 2 with a Business Administration Diploma.
- * Students graduate at the end of Year 3 with a Business Management Diploma.

Graduates of the Business Administration/Management programs may have the opportunity to transfer credits to institutions/associations such as:

- Memorial University of Newfoundland
- Cape Breton University, Sydney, Nova Scotia
- Athabasca University, Alberta
- Lakehead College, Alberta
- University of Lethbridge, Alberta
- Lakehead University, Ontario
- University of New Brunswick, Saint John campus
- Okanagan College, British Columbia
- Northwood University, Michigan, USA

Graduates may also wish to further their studies to achieve professional designations with:

- Canadian Institute of Financial Planning
- Chartered Professional Accountants of Canada (CPA)
- Canadian Professional Sales Association
- Canadian Public Relations Society
- International Personnel Management Association (IPMA) - Canada
- The Payroll Association of Canada

Executive Office Management

Start Date: September

Credential: Diploma

Program Length: Two Years

School: Business and Information Technology

Locations & Delivery Modes:

- Corner Brook - On Campus delivery
- Grand Falls-Windsor - On Campus delivery
- Prince Philip Drive - On Campus delivery
- Online - Asynchronous delivery
- Online - Synchronous delivery

PROGRAM DESCRIPTION

This two-year diploma program is designed to enable students to acquire the entry level knowledge and skills needed to work as administrative professionals in today's modern office.

The major components of the program include document production, office management, personal and career growth with a service-learning element, social media management and current software programs. Related courses include communications, bookkeeping, computerized accounting, electronic spreadsheets, and organizational behaviour.

OBJECTIVES

Upon successful completion of the Executive Office Management program, graduates will be able to:

1. Design and create business documents using integrated software at an advanced level for effective communication.
2. Integrate professional communication and office management practices for application in the office environment.
3. Apply program learning in the business environment through experiential learning opportunities for enhanced industry networking.
4. Demonstrate application of the Conference Board of Canada employability skills for successful entry into the workplace.

CAREER OPPORTUNITIES

Graduates of the diploma program may expect to find employment opportunities in both the public and private sectors, including all levels of government, legal and medical offices, accounting firms, hospital and education facilities, and general business offices. As well as acquiring skills and knowledge necessary to become effective employees in today's electronic office, graduates may gain insight into the creation of a small business of their own. Graduates are trained for the following specific positions: administrative assistant, word processing operator, executive assistant, computerized bookkeeper, data processor, microcomputer specialist, receptionist, office assistant, as well as additional employment opportunities depending on electives selected.

PROGRAM TRANSFERABILITY

The Office Administration programs offer exit points after Year 1 and Year 2:

- Students can graduate at the end of Year 1 with an Office Administration Certificate
- Students graduate at the end of Year 2 with an Executive Office Management Diploma

ENTRANCE REQUIREMENTS

Eligibility for admission requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation

2. Comprehensive Arts and Science Certificate (College Transition program)

3. Adult Basic Education

Adult Basic Education (Level III) Graduation with General College Profile (or Business-Related College Profile or Degree and Technical Profile)

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, must be at least 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

Human Resources

Start Date: September

Credential: Diploma

Program Length: Two Years

School: Business and Information Technology

Locations & Delivery Modes:

- Online - Asynchronous delivery

PROGRAM DESCRIPTION

People first.

In today's competitive business environment, leaders recognize the importance of human resources (HR) to the success of organizations. The management of HR is a strategic approach to engaging and supporting employees, which in turn, creates an engaging, productive workplace. The functions of an HR Manager can vary across industries, but they typically include recruitment and onboarding of staff, compensation and benefits, training and professional development, compliance and safety, and employee relations. Today's HR manager must be knowledgeable about the practices involved in creating a welcoming, inclusive workplace culture.

Our two-year diploma in Human Resources has been designed to provide insight into the theory and practice of effective management in this exciting field. We want to provide you with an opportunity to gain the essential skills needed to become an effective HR coordinator in the various facets of HR, which can lead to a career in such areas as industrial/labour relations, supervision, occupational health and safety, recruitment, training and development, and compensation.

Venture into the world of business.

Program Highlights

- A six-week work exposure to gain real-world experience
- Transferable credits with CNA's articulation agreements with Memorial University (Grenfell), Athabasca University, Griffith University, Plymouth University, and the University of New Brunswick (Saint John)
- Preparation for a career in Human Resource Management, Industrial/Labour Relations, Supervision and General Management

Did You Know?

- Work culture leaders must look to the trends and threats on the horizon facing the Canadian workplace.
- Studies show that engaging with applicants in-person forges more meaningful connections than online alone.[\[1\]](#)
- Recruitment events offer cost-effective marketing strategies and enable hiring managers to conduct hundreds of micro interviews within the span of a few hours.
- Your success at a hiring event will only be as strong as your follow-up.

OBJECTIVES

Upon successful completion of this program, graduates will be able to:

1. Demonstrate proficiency in fundamental Human Resource Management concepts, including recruitment and selection, training and development, compensation and benefits, and employee relations
2. Design and implement effective recruitment and selection strategies to attract and retain top talent and design and deliver training and development programs to improve employee skills and enhance organizational performance
3. Foster positive employee relations by understanding employee needs, resolving conflict, and creating a positive workplace culture

4. Develop compensation and benefits programs that align with organizational goals and that are competitive with industry
5. Make responsible and ethical decisions that align with organizational values and effectively communicate human resource strategies and results to various stakeholders.
6. Exhibit the application of employability skills defined by the Conference Board of Canada to facilitate successful entry into the workplace and work collaboratively with team members from diverse backgrounds and skill sets to achieve common human resource goals

ENTRANCE REQUIREMENTS

Eligibility for admission to Human Resources program requires the applicant to meet one of the following academic criteria:

1. High School

Provincial High School Graduation Certificate with a 60% overall average in the following (or equivalent):

- i. English 3201 or English 3202 (60% minimum)
- ii. Mathematics (4 credits) chosen from:
Advanced: 2200, 3200 (50% minimum in each course)
Academic: 2201 (50% minimum), 3201 (60% minimum)
- iii. Five credits at the 3000 Level

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with the following courses:

- i. Math Fundamentals: MA1040, MA1041

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with Business-Related College Profile including the following courses (or equivalent):

- i. English 3101A, 3101B, 3101C or 3102A, 3102B, 3102C
- ii. Mathematics 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C

Applicants with Adult Basic Education (Level III) Graduation with a different Profile may be eligible for admission to the program provided the appropriate selection of courses including those outlined above have been completed.

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, must be at least 19 years of age at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to [Procedure AC-102-PR Admission](#).

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

CAREER OPPORTUNITIES

Graduates of this program may obtain employment in a variety of marketing areas such as:

- Clerk IV
- Administrative Officer
- HR Clerks
- HR Admin

- HR Assistant
- Project Officers
- HR Advisor
- Team Lead
- HR Coordinators

ACCREDITATION

Legal Administration

Start Date: September

Credential: Diploma

Program Length: Two Years

School: Business and Information Technology

Locations & Delivery Modes:

- Prince Philip Drive – On Campus delivery

PROGRAM DESCRIPTION

This two-year diploma program is designed to provide students with extensive knowledge of legal terminology, legal writing, court practices and document formatting. Students will obtain hands on experience through simulation exercises to prepare them for employment in the field of Legal Administration.

The major components of the program include Legal Transcription, Business Law, Office Management and Legal Document Production. Related courses include Communications (both oral and written), Bookkeeping, Digital Tools for the Office, and Medical Terminology for the Legal field.

OBJECTIVES

Upon successful completion of the Legal Administration program, graduates will be able to:

1. Create legal and business documents using extensive knowledge of legal terminology, legal writing, court practices and rules, and document formatting with integrated software at an advanced level for effective communication.
2. Apply professional communication, ethical behavior, and office management practices for application in the legal office environment.
3. Apply program learning in the legal office environment through experiential learning opportunities for enhanced industry networking.
4. Demonstrate application of the Conference Board of Canada employability skills for successful entry into the workplace.

CAREER OPPORTUNITIES

Graduates of the diploma program may expect to find employment opportunities in both the public and private sectors, including all levels of government, as well as legal firms, provincial and supreme courts, and other government and corporate legal departments. As well as acquiring skills and knowledge necessary to become effective employees in today's electronic office, graduates will be knowledgeable in the areas of civil litigation, incorporation, real estate, wills, estates, and family law.

Graduates are trained for the following specific positions: legal administrative assistant, legal assistant, court clerk I, court officer I, judicial assistant, legal transcriptionist, and administrative officer.

PROGRAM TRANSFERABILITY

The Office Administration programs offer exit points after Year 1 and Year 2.

- * Students can graduate at the end of Year 1 with an Office Administration Certificate
- * Students graduate at the end of Year 2 with a Legal Administration Diploma

1. High School

High School Graduation

2. Comprehensive Arts and Science Certificate (College Transition program)

3. Adult Basic Education

Adult Basic Education (Level III) Graduation with General College Profile (or Business-Related College Profile or Degree and Technical Profile)

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, must be at least 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

ACCREDITATION

Legal Administration is accredited by the Accreditation Council for Business Schools and Programs (ACBSP). ACBSP is the leading specialized accreditation association for business education supporting, celebrating, and rewarding teaching excellence.

Marketing

Start Date: September

Credential: Diploma

Program Length: Two Years

School: Business and Information Technology

Locations & Delivery Modes:

- Online - Asynchronous delivery

PROGRAM DESCRIPTION

Invested.

In this fast-paced world of supply and demand, marketers are aiming to work smarter, not harder. They must be efficient with workflows and processes, as well as flexible, adaptable, and prepared to pivot.

Our two-year Marketing diploma program is designed to provide you with a broad background in business administration with an emphasis on marketing. You will gain the knowledge and skills necessary to analyze the marketing environment and effectively develop comprehensive marketing strategies for implementation and monitoring, marketing product, price, promotion, and distribution.

You will build on your critical thinking, communication, and problem-solving skills. With the foundations of accounting, human resource management, business law, research, communications and more, you will be thoroughly prepared to work for a variety of organizations in marketing, sales, retailing, administration, advertising, and general management.

This investment of time will gain you dividends as you build your career!

Program Highlights

- A six-week work exposure to gain real-world experience in marketing
- Accredited by Accreditation Council for Business Schools and Programs (ACBSP)
- Transferable credits with CNA's articulation agreements with Memorial University (Grenfell), Athabasca University, Griffith University, Plymouth University, and the University of New Brunswick (Saint John)

Did you know?

- According to a recent industry report, e-commerce will account for 20.4% of global retail sales by the end of 2022, up from only 10% five years ago.[\[1\]](#)
- Reports from November 2022 show that consumers' usage of social media is up nearly 8% since the beginning of the year and there are an estimated 4.74 billion users currently on social media.[\[2\]](#)
- Globally, reports show that 85% of people have changed their purchasing habits to become more sustainable in the past five years.[\[3\]](#)

OBJECTIVES

Upon successful completion of this program, graduates will be able to:

1. Demonstrate proficiency in fundamental marketing concepts, including segmentation, targeting, positioning, branding, pricing, and promotion
2. Develop and implement comprehensive marketing strategies that are both effective and measurable
3. Analyze marketing decisions related to product, price, promotion, and distribution to provide viable business solutions
4. Utilize the latest digital marketing trends and tools, such as social media, search engine optimization, and email marketing to achieve marketing goals
5. Make responsible and ethical decisions that align with organizational values and effectively communicate marketing strategies and results to various stakeholders
6. Exhibit the application of employability skills defined by the Conference Board of Canada to facilitate successful

entry into the workplace and work collaboratively with team members from diverse backgrounds and skill sets to achieve common marketing goals

ENTRANCE REQUIREMENTS

Eligibility for admission requires the applicant to meet one of the following academic criteria:

1. High School

Provincial High School Graduation Certificate with a 60% overall average in the following (or equivalent):

- i. English 3201 or English 3202 (60% minimum)
- ii. Mathematics (4 credits) chosen from:
Advanced: 2200, 3200 (50% minimum in each course)
Academic: 2201 (50% minimum), 3201 (60% minimum)
- iii. Five credits at the 3000 Level

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with the following courses:

- i. Math Fundamentals: MA1040, MA1041

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with Business-Related College Profile including the following courses (or equivalent):

- i. English 3101A, 3101B, 3101C or 3102A, 3102B, 3102C
- ii. Mathematics 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C

Applicants with Adult Basic Education (Level III) Graduation with a different Profile may be eligible for admission to the program provided the appropriate selection of courses including those outlined above have been completed.

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, must be at least 19 years of age at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to [Procedure AC-102-PR Admission](#).

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

CAREER OPPORTUNITIES

Graduates of this program may obtain employment in a variety of marketing areas such as:

- Coordinator (Marketing)
- Social Media Marketing Coordinator
- Content Creator
- Social Media Management
- Coordinator
- Associate
- Consultant
- Marketing Assistant
- Business Development Representative
- Chamber Representatives

ACCREDITATION

Marketing is accredited by the Accreditation Council for Business Schools and Programs (ACBSP) in all campus

locations. ACBSP is the leading specialized accreditation association for business education supporting, celebrating, and rewarding teaching excellence.

PROGRAM TRANSFERABILITY

The Marketing program offers exit points after Year 1 and Year 2.

*Students can graduate at the end of Year 1 with a Business Administration Certificate.

*Students can graduate at the end of Year 2 with a Marketing Diploma.

Graduates of the Marketing program may have the opportunity to transfer credits to institutions/associations such as:

- Memorial University of Newfoundland, Grenfell Campus
- Athabasca University, Alberta
- Griffith University, Australia
- Plymouth University, UK
- University of New Brunswick, Saint John Campus

Graduates may also wish to further their studies to achieve professional designations with:

- Canadian Institute of Management (CIM)
- Canadian Professional Sales Association
- Canadian Public Relations Society
- International Personnel Management Association (IPMA) - Canada

Marketing Management and Analytics

Start Date: September

Credential: Diploma

Program Length: Three Years

School: Business and Information Technology

Locations & Delivery Modes:

- Prince Philip Drive - On Campus delivery

PROGRAM DESCRIPTION

Capitalizing on skills.

Businesses are striving to meet their customers where they are. Influencer marketing, digital platforms, video reels and social media are changing the world of brand building and advertising and enabling businesses to connect with niche audiences. Being tapped into e-commerce trends today is no longer an option – it's a necessity if businesses want to be competitive.

Essential to maximizing these tools is a strong foundation of marketing strategy and tactics, an understanding of trending and digital engagement and how to interpret the metrics, and the creation of consistent, high-quality content that helps build a brand and position it far and above the others.

Our three-year Marketing Management and Analytics program will help you capitalize on your natural go-getter skills with a combination of theoretical learning and practical experience. We cover a wide range of training, including market research, consumer behaviour, branding, advertising, digital marketing, artificial intelligence, design, customer experience management and sales management.

With us, you'll gain the knowledge and skills necessary to develop effective marketing strategies and tactics for a wide range of organizations. You will be able to competently fill the roles of marketing coordinator, brand manager, advertising specialist, digital marketing specialist or sales manager.

You'll be market ready – apply today!

Program Highlights

- Six-week work exposure to gain real-world experience in marketing
- Includes graphic design, artificial intelligence for marketing, customer experience management, and digital analytics
- Comprehensive management training for a high-demand, face-paced field
- Accredited by Accreditation Council for Business Schools and Programs (ACBSP)
- Transferable credits through CNA's articulation agreements with Cape Breton University, Memorial University (Grenfell), Athabasca University, Griffith University, Northwood University, Okanagan College, Plymouth University, and the University of New Brunswick (Saint John)

Did you know?

- Social media was the #1 marketing channel in 2022.[\[1\]](#)
- The #1 social media-related challenge for marketers is creating engaging content.[\[2\]](#)
- YouTube is the number one social media platform on which marketers build communities.[\[3\]](#)
- Consumers are most frustrated with inconsistent brand messaging.[\[4\]](#)
- A 2022 survey found that nearly 80% of retailers who've dedicated resources to improving sustainability believe their efforts have resulted in increased customer loyalty.[\[5\]](#)

OBJECTIVES

Upon successful completion of this program, graduates will be able to:

1. Demonstrate proficiency in fundamental marketing concepts, including segmentation, targeting, positioning,

- branding, pricing, and promotion
- 2. Develop and implement comprehensive marketing strategies that are both effective and measurable
- 3. Analyze marketing decisions related to product, price, promotion, and distribution to provide viable business solutions
- 4. Utilize the latest digital marketing trends and tools, such as social media, search engine optimization, and email marketing to achieve marketing goals
- 5. Make responsible and ethical decisions that align with organizational values and effectively communicate marketing strategies and results to various stakeholders
- 6. Exhibit the application of employability skills defined by the Conference Board of Canada to facilitate successful entry into the workplace and work collaboratively with team members from diverse backgrounds and skill sets to achieve common marketing goals
- 7. Develop effective marketing plans that align with the overall business strategy and meet the needs of the target market while building customer relationships and customer experience strategies
- 8. Collect, analyze, and interpret marketing data using various analytical tools such as Excel, Facebook Analytics, Earned Media Analytics, Google Analytics, and artificial intelligence tools

ENTRANCE REQUIREMENTS

Eligibility for admission to Business Administration/Business Management programs requires the applicant to meet one of the following academic criteria:

1. High School

Provincial High School Graduation Certificate with a 60% overall average in the following (or equivalent):

- i. English 3201 or English 3202 (60% minimum)
- ii. Mathematics (4 credits) chosen from:
Advanced: 2200, 3200 (50% minimum in each course)
Academic: 2201 (50% minimum), 3201 (60% minimum)
- iii. Five credits at the 3000 Level

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with the following courses:

- i. Math Fundamentals: MA1040, MA1041

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with Business-Related College Profile including the following courses (or equivalent):

- i. English 3101A, 3101B, 3101C or 3102A, 3102B, 3102C
- ii. Mathematics 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C

Applicants with Adult Basic Education (Level III) Graduation with a different Profile may be eligible for admission to the program provided the appropriate selection of courses including those outlined above have been completed.

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, must be at least 19 years of age at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to [Procedure AC-102-PR Admission](#).

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. Medical Office Management

Start Date: September

Credential: Diploma

Program Length: Two Years

School: Business and Information Technology

Locations & Delivery Modes:

- Prince Philip Drive - On Campus delivery
- Online - Asynchronous delivery
- Online - Synchronous delivery

PROGRAM DESCRIPTION

This two-year diploma program is designed to provide students with a focused study of medical office management theories and practices through hands on learning and simulation exercises needed to be successful in a medical office environment.

The major areas of the program include confidentiality, empathetic patient care, efficient medical office management practices, effective communications, document production, medical transcription, medical terminology, ethics, and medical office management. Students also utilize current software and medical office practices for document production, electronic and paper medical records, effective human relations skills, scheduling methods, patient record information management, medical billing, and various current computer applications.

OBJECTIVES

Upon successful completion of the Medical Office Management program, graduates will be able to:

1. Create advanced medical and business documents using extensive knowledge of medical terminology and integration of current software for professional and effective communication between patients, visitors, health care professionals and all stakeholders.
2. Manage a medical office by integrating current technologies to perform duties adhering to industry standards of ethics, confidentiality, professionalism, and compassionate patient care while applying effective office management practices.
3. Apply program learning in a medical office environment through experiential learning opportunities for enhanced industry networking and development of skills.
4. Demonstrate application of the Conference Board of Canada employability skills for successful entry into the workplace.

CAREER OPPORTUNITIES

Graduates of the diploma program may expect to find employment opportunities in various medical environments including hospital departments, long-term care facilities, general practitioners' and specialists' clinics, health boards, government departments, as well as in allied health care facilities such as chiropractics, physiotherapy, occupational therapy, massage therapy, mental health, and counselling services. Graduates are also prepared to work in community clinics, public health, dental, and optometry practices. As well as acquiring skills and knowledge necessary to become effective employees in today's electronic office, graduates will have extensive knowledge and skills in document production, medical transcription, medical terminology, anatomy, MCP Billing, electronic medical records, medical office management, and other related areas. Graduates are trained for the following specific positions: medical administrative assistant, medical office assistant, dental office assistant, medical receptionist, medical records clerk, and medical transcriptionist.

PROGRAM TRANSFERABILITY

The Office Administration programs offer exit points after Year 1 and Year 2.

* Students can graduate at the end of Year 1 with an Office Administration Certificate

* Students graduate at the end of Year 2 with a Medical Office Management Diploma

ENTRANCE REQUIREMENTS

Eligibility for admission requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation

2. Comprehensive Arts and Science Certificate (College Transition program)

3. Adult Basic Education

Adult Basic Education (Level III) Graduation with General College Profile (or Business-Related College Profile or Degree and Technical Profile)

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, must be at least 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

ACCREDITATION

Medical Office Management is accredited by the Accreditation Council for Business Schools and Programs (ACBSP) in all campus locations. ACBSP is the leading specialized accreditation association for business education supporting, celebrating, and rewarding teaching excellence.

Project Management

Start Date: September

Credential: Post Diploma

Program Length: Two Semesters

School: Business and Information Technology

Locations & Delivery Modes:

- Online - Asynchronous delivery

PROGRAM DESCRIPTION

Driving change one project at a time.

Project management is the roadmap for reaching goals, and project managers are the drivers. Through their strategic management skills, they help improve the success of planned initiatives by establishing objectives and goals, clear roles and responsibilities, timelines, and monitoring and reporting, among other critical project requirements.

Today's project-oriented economy requires highly trained managers to plan for change and innovation across every industry. Analysis shows that the demand for project managers is growing faster than that for workers in other occupations, putting them at the forefront of immense opportunities.[\[1\]](#)

Through this two-semester Post Diploma in Project Management you will develop robust skills and competencies to successfully implement projects that align with organizational strategic plans. You will acquire the techniques and tools to communicate effectively with colleagues, promote teamwork and successfully plan and implement projects that lead to successful business developments. Whether you're a manager, project manager or member of a team, these skills will help you to stay on track and motivate others.

With this training you can advance your first credential or work experience to transform your career journey. Set a course today!

Program Highlights

- This program aligns with the Project Management Institute's (PMI®) *A Guide to the Project Management Body of Knowledge* (PMBOK® Guide) and heavily utilizes the foundational standards and practice frameworks prescribed by the PMI®
- Learn to implement the PMI project management knowledge, processes, lifecycle phases, and the embodied concepts, tools, and techniques to achieve project success relative to stakeholder needs
- Gain knowledge to apply appropriate legal and ethical standards to your projects
- Become proficient with technology tools for communication, collaboration, information management, and decision support
- Align a project to an organization's strategic plans and business justification throughout the project management lifecycle

Did you know?

- According to the report published by RBC [RBC-Future-Skills-Report-FINAL-Singles.pdf](#), Canada is undergoing a demographic transformation requiring modern new-age leadership and project management styles.
- The [Project Management Institute \(PMI\)](#) has stated that by 2027, employers will need 87.7 million people working in project management roles across 11 countries. In Canada alone, nearly 90,000 new project managers will be hired.
- Project managers contribute to a nation's productivity, which supports GDP that in turn contributes to the standard of living.
- The average salary for a Project Management Manager is CA\$89,755.[\[2\]](#)

OBJECTIVES

Upon successful completion of this program, graduates will be able to:

1. Apply appropriate legal and ethical standards
2. Utilize technology tools for communication, collaboration, information management, and decision support
3. Align a project to the organization's strategic plans and business justification throughout the project management lifecycle
4. Apply project management practices to the launch of new programs, initiatives, products, services, and events relative to the stakeholder needs
5. Implement the PMI® project management knowledge, processes, lifecycle phases, and the embodied concepts, tools, and techniques to achieve project success

ACADEMIC ADVISING

Each student will be assigned an academic advisor to help guide you through the college experience. They are trained to advise you on college-related issues or to make mutually agreed upon referrals for you to other college professionals.

Students intending to complete the program on a part-time basis (less than four courses per semester) will be contacted by their advisor to create an academic plan that will enable them to complete the program. A part-time student must complete the program within five year from the date of program enrollment.

EMPLOYMENT OPPORTUNITIES

Graduates of the Project Management program can expect to find employment in a variety of industries, including construction, engineering, information technology, healthcare, finance, marketing, and many others. Any industry that involves managing projects or teams can benefit from the expertise of a project manager. Project managers can work in both the private and public sectors, in companies of various sizes, and in a range of job titles, such as project coordinator, project manager, program manager, or project director. They may also work as consultants or contractors, offering their services to multiple clients.

ENTRANCE REQUIREMENTS

Graduation from a recognized two- or three-year post-secondary diploma or degree, or a combination of other post-secondary work and industry experience acceptable to the College.

Records and Information Management

Start Date: September

Credential: Diploma

Program Length: Two Years

School: Business and Information Technology

Locations & Delivery Modes:

- Prince Philip Drive - On Campus delivery
- Online - Asynchronous delivery
- Online - Synchronous delivery

PROGRAM DESCRIPTION

This two-year diploma program is designed to provide students with an intense study of records and information theories and practices. Students will obtain hands on experience through simulation exercises to prepare them for employment in the field of Records and Information Management.

The major components of the program include Management and Control of Records, File Management and Information Security, Archives Principles, and Classification Systems. Related courses include Communications, Document Production, Office Management, Bookkeeping, Digital Tools for the Office, and Advanced Electronic Spreadsheets. Students will also receive participatory training with an Electronic Document Management System.

OBJECTIVES

Upon successful completion of the Records and Information Management program, graduates will be able to:

1. Manage records using extensive knowledge of information management principles ensuring quality control and improvement.
2. Demonstrate ability to administer records management systems in accordance with retention policies by verifying accuracy and adherence to current legislation.
3. Design and create business documents using integrated software at an advanced level for effective communication in the office environment.
4. Demonstrate application of the Conference Board of Canada employability skills for successful entry into the workplace.

CAREER OPPORTUNITIES

Graduates of the diploma program may expect to find employment opportunities in public and private sectors including government, oil and gas, healthcare, legal offices, educational facilities, and general offices. As well as acquiring skills and knowledge necessary to become effective employees in today's electronic office, graduates will have extensive knowledge and skills in information protection, management and control of records, confidentiality and security, document production, office management, plus other related areas. Graduates are trained for the following specific positions: information management technician (IM Tech I, II, or III), document control clerk, document control technician, information management coordinator, and archives assistant.

PROGRAM TRANSFERABILITY

The Office Administration programs offer exit points after Year 1 and Year 2.

* Students can graduate at the end of Year 1 with an Office Administration Certificate

* Students graduate at the end of Year 2 with a Records and Information Management Diploma

ENTRANCE REQUIREMENTS

Eligibility for admission requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation

2. Comprehensive Arts and Science Certificate (College Transition program)

3. Adult Basic Education

Adult Basic Education (Level III) Graduation with General College Profile (or Business-Related College Profile or Degree and Technical Profile)

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, must be at least 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

ACCREDITATION

Records and Information Management is accredited by the Accreditation Council for Business Schools and Programs (ACBSP) in all campus locations. ACBSP is the leading specialized accreditation association for business education supporting, celebrating, and rewarding teaching excellence.

Strategic Human Resource Management

Start Date: September

Credential: Diploma

Program Length: Three Years

School: Business and Information Technology

Locations & Delivery Modes:

- Grand Falls-Windsor - On Campus Delivery
- Prince Philip Drive - On Campus Delivery
- Online - Asynchronous delivery

PROGRAM DESCRIPTION

It's a people thing.

Human resource management is the strategic approach of engaging and supporting employees to create a productive, thriving workplace. The functions of an HR manager can vary across industries, but they typically include recruitment and onboarding, compensation and benefits, training and professional development, compliance and safety, and employee relations.

Our three-year diploma in Strategic Human Resource Management has been designed to provide insight into the theory and practice of effective management in this field. We offer the opportunity to gain powerful skills needed to become effective in the various areas of HR, leading to career options in industrial/labour relations, supervision, occupational health and safety, recruitment, training and development, compensation, human resource planning, attendance and disability management, and dispute resolution.

With us, you will build on fundamental business principles and go beyond, with a combination of theoretical learning and practical experience that focuses on developing critical thinking, communication, and problem-solving skills essential to effective and efficient management.

It is every manager's business to create and administer the programs and processes that improve workplace efficiency and build the employer-employee relationships that will ultimately drive the success of their company's strategy.

Make it your business. Apply now!

Program Highlights

- A six-week work exposure to gain real-world experience
- Transferable credits with CNA's articulation agreements with Cape Breton University, Memorial University (Grenfell), Athabasca University, Griffith University, Northwood University, Okanagan College, Plymouth University, and the University of New Brunswick (Saint John)
- WHIMIS certification

Did you know?

- A great leader is like the captain of a ship – relaying clear purpose and clarity to the crew in the journey ahead.
- Diversity, equity, and inclusion is a major contributor to empowering employees and creating a productive working environment. In fact, when it comes to retaining and securing talent in a competitive labour market, investing in DE&I is critical.[\[1\]](#)
- Work culture leaders must look to the trends and threats on the horizon facing the Canadian workplace
- Studies show that engaging with applicants in-person forges more meaningful connections than online alone.[\[2\]](#)
- Recruitment events offer cost-effectiveness marketing strategies and enable hiring managers to conduct hundreds of micro interviews within the span of a few hours
- Your success at a hiring event will only be as strong as your follow-up

OBJECTIVES

Upon successful completion of this program, graduates will be able to:

1. Demonstrate proficiency in fundamental Human Resource Management concepts, including recruitment and selection, training and development, compensation and benefits, and employee relations
2. Design and implement effective recruitment and selection strategies to attract and retain top talent and design and deliver training and development programs to improve employee skills and enhance organizational performance
3. Foster positive employee relations by understanding employee needs, resolving conflict, and creating a positive workplace culture
4. Develop compensation and benefits programs that align with organizational goals and that are competitive with industry
5. Make responsible and ethical decisions that align with organizational values and effectively communicate human resource strategies and results to various stakeholders.
6. Exhibit the application of employability skills defined by the Conference Board of Canada to facilitate successful entry into the workplace and work collaboratively with team members from diverse backgrounds and skill sets to achieve common human resource goals
7. Design and implement effective performance management systems that align employee goals with organizational objectives while contributing to the development of an organizations strategic plan by identifying and addressing human resource issues that impact organizational goals
8. Demonstrate knowledge of employment law and compliance requirements to ensure that organizational policies and practices meet legal standards

ENTRANCE REQUIREMENTS

Eligibility for admission to Business Administration/Business Management programs requires the applicant to meet one of the following academic criteria:

1. High School

Provincial High School Graduation Certificate with a 60% overall average in the following (or equivalent):

- i. English 3201 or English 3202 (60% minimum)
- ii. Mathematics (4 credits) chosen from:
Advanced: 2200, 3200 (50% minimum in each course)
Academic: 2201 (50% minimum), 3201 (60% minimum)
- iii. Five credits at the 3000 Level

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with the following courses:

- i. Math Fundamentals: MA1040, MA1041

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with Business-Related College Profile including the following courses (or equivalent):

- i. English 3101A, 3101B, 3101C or 3102A, 3102B, 3102C
- ii. Mathematics 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C

Applicants with Adult Basic Education (Level III) Graduation with a different Profile may be eligible for admission to the program provided the appropriate selection of courses including those outlined above have been completed.

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, must be at least 19 years of age at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to [Procedure AC-102-PR Admission](#).

5. International Students – Admission Requirements and Information

1. High School

- i. Proof of senior high school/secondary school Diploma/Certificate with equivalent minimum grades for the required high school courses listed above.
- ii. India applicants only – Proof of senior high school/secondary school Diploma/Certificate with an equivalent Grade

10 Mathematics (50% min.) and Business/Commerce Stream.

2. English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

CAREER OPPORTUNITIES

Graduates of this program may obtain employment in a variety of marketing areas such as:

- Clerk IV
- Administrative Officer
- HR Clerks
- HR Admin
- HR Assistant
- Project Officers
- HR Advisor
- Team Lead
- HR Coordinators

ACCREDITATION

Strategic Human Resource Management is accredited by the Accreditation Council for Business Schools and Programs (ACBSP) in all campus locations. ACBSP is the leading specialized accreditation association for business education supporting, celebrating, and rewarding teaching excellence.

PROGRAM TRANSFERABILITY

The Strategic Human Resource Management program offers exit points after Year 1, Year 2, and Year 3.

*Students can graduate at the end of Year 1 with a Business Administration Certificate.

*Students can graduate at the end of Year 2 with a Human Resources Diploma.

*Students can graduate at the end of Year 3 with a Strategic Human Resources Management Diploma.

Graduates of the Strategic Human Resource Management program may have the opportunity to transfer credits to institutions/associations such as:

- Cape Breton University, Sydney, Nova Scotia
- Memorial University of Newfoundland, Grenfell Campus
- Athabasca University, Alberta
- Griffith University, Australia
- Northwood University, Michigan, USA
- Okanagan College, British Columbia
- Plymouth University, UK
- University of New Brunswick, Saint John Campus

Graduates may also wish to further their studies to achieve professional designations with:

- Chartered Professionals in Human Resources (CPHR)
- Canadian Institute of Management (CIM)
- Canadian Professional Sales Association
- Canadian Public Relations Society

- International Personnel Management Association (IPMA) - Canada

Strategic Leadership and Project Management (International)

Start Date: September

Credential: Post Diploma

Program Length: Two Years

School: Business and Information Technology

Locations & Delivery Modes: TBD

This is a closed international offering for a full group of students that has been prearranged with the International Office. To discuss opportunities in this regard, please contact the Registrar's Office at registrar@cna.nl.ca

PROGRAM DESCRIPTION

Architects of Success.

Strategic leadership is about building and inspiring a strong, collaborative team that works toward the best outcomes for the company. Project management is about designing the blueprint for that success.

All business begins with strategy and requires strong leadership to cultivate talent, determine development needs and build a thriving organizational culture. Combining this skillset with the knowledge and best practices of project management – setting clear accountabilities, planning, monitoring, and reporting – creates clear, organized plans and improves team collaboration.[\[1\]](#)

With this two-year Post Diploma in Strategic Leadership and Project Management you can advance your first credential or work experience to transform your career in this globally relevant, future-focused field.

Applicable to every industry, these techniques and tools will provide you with the knowledge and know-how to successfully implement projects, bring out the best in your teams, and manage the complexities of meeting short-term targets while positioning the organization for sustainable growth and prosperity.

Through your innovative and flexible leadership strategies, you will help turn strategic vision into trackable success for your organization and create a solid framework for your future.

Program Highlights

- The program aligns itself with the PMI® A Guide to the Project Management Body of Knowledge (PMBOK® Guide), Project Management Institute, and heavily utilizes foundational standards and practice frameworks prescribed by the Project Management Institute (PMI)
- Incorporates innovative leadership into current and future business strategies
- Identify how organizational culture impacts leadership success
- Apply key leadership models/behavior styles in different environments
- Utilize technology tools for communication, collaboration, information management, and decision support
- Align a project to the organization's strategic plans and business justification throughout the project management lifecycle
- Apply project management practices to the launch of new programs, initiatives, products, services, and events relative to the stakeholder needs

Did you know?

- According to the report published by RBC [RBC-Future-Skills-Report-FINAL-Singles.pdf](#), Canada is undergoing a demographic transformation requiring modern new-age leadership and project management styles.
- Analysis shows that senior professionals are quickly approaching retirement age and set to exit the workforce, leaving knowledge and leadership gaps across every industry.[\[2\]](#)
- An Indeed job search for Strategic Leadership employment opportunities in November 2022 resulted in over 8,000 employment opportunities nationwide.
- The Project Management Institute (PMI) has stated that by 2027, employers will need 87.7 million people working in project management roles across 11 countries. In Canada alone, nearly 90,000 new project managers

will be hired.

- Project managers contribute to a nation's productivity, which supports GDP that in turn contributes to the standard of living.
- The average salary for a Project Management Manager is CA\$89,755.[\[3\]](#)

OBJECTIVES

Upon successful completion of this program, graduates will be able to:

1. Apply appropriate legal and ethical standards
2. Incorporate innovative leadership into current and future business strategies
3. Identify how culture impacts leadership success
4. Apply key leadership models/behavior styles in different environments
5. Utilize technology tools for communication, collaboration, information management, and decision support
6. Align a project to the organization's strategic plans and business justification throughout the project management lifecycle
7. Apply project management practices to the launch of new programs, initiatives, products, services, and events relative to the stakeholder needs
8. Implement the Project Management Institutes (PMI)® project management knowledge, processes, lifecycle phases, and the embodied concepts, tools, and techniques to achieve project success

ACADEMIC ADVISING

Each student will be assigned an academic advisor to help guide you through the college experience. They are trained to advise you on college-related issues or to make mutually agreed upon referrals for you to other college professionals.

Students intending to complete the program on a part-time basis (less than four courses per semester) will be contacted by their advisor to create an academic plan that will enable them to complete the program. A part-time student must complete the program within five years from the date of program enrolment.

EMPLOYMENT OPPORTUNITIES

Graduates of the Strategic Leadership and Project Management program can expect to find employment in various sectors, including but not limited to, the corporate sector, non-profit organizations, government agencies, consulting firms, the healthcare sector, and the education sector. These organizations often require individuals with strategic leadership skills to manage resources, develop long-term plans, and drive growth, impact, and improvement initiatives.

ENTRANCE REQUIREMENTS

Graduation from a recognized two- or three-year post-secondary diploma or degree, or a combination of other postsecondary work and industry experience acceptable to the College.

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment. If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

Bachelor of Applied Information Technology - Systems and Network Cybersecurity

Start Date: September

Credential: Applied Degree

Program Length: Four Years

School: Business and Information Technology

Locations & Delivery Modes:

- Prince Philip Drive - On Campus delivery

Note:

Applicants who have a Computer Systems and Networking diploma for CNA (or equivalent), may apply directly to year 3 of the Applied Degree program. Applicants who do not have this diploma should apply to year 1 of Computer Systems and Networking.

PROGRAM DESCRIPTION

Cyber-criminal activity is the fastest-growing crime in the nation and globally. Organizations are challenged with having to detect and respond to cybersecurity breaches as, or before, they happen and employers are in dire need of trained, educated cyber professionals. The Bachelor of Applied Information Technology: Systems and Network Cybersecurity is designed to meet the needs of this rapidly growing field.

Building on the existing two-year Diploma in Computer Systems and Networking, students will have the option to complete an additional two years to obtain a specialized Applied Degree titled: Bachelor of Applied Information Technology: Systems and Network Cybersecurity.

The student will learn how to protect against unauthorized access ensuring confidentiality, integrity and availability of resources shielding an organization from internal and external infiltration and attacks. Hands-on activities will prepare students with the skills to safeguard and monitor IT infrastructures, edge devices, networks, and data. This will be accomplished by:

- Utilizing specialized tools
- Applying information security practices
- Creating incident management policies and procedures; and,
- Implementing security risk management procedures.

These skills will ensure that the individual, and the organization, can effectively respond to dynamic security threats and adversaries.

Students will complete an applied degree that balances the hands-on training and theory required by employers. Courses incorporating personal development, communication, and leadership skills will enable the student to advance their career allowing them to take on more responsibility

OBJECTIVES

The Bachelor of Applied Information Technology: Systems and Network Cybersecurity degree will specialize in the field of Systems and Network Cybersecurity enabling the graduate to:

1. Execute a vision for security aligned with a company's IT strategy
2. Communicate short- and long-term organizational security strategies and policies
3. Design an organization's infrastructure
4. Securely manage an organization's infrastructure
5. Implement security risk management strategies
6. Conduct active and passive network monitoring

7. Analyze the cybersecurity needs of an organization
8. Develop the appropriate safeguards to ensure delivery of critical services
9. Implement the appropriate safeguards to ensure delivery of critical services
10. Create organizational policies and procedures for security incidents
11. Implement policies and procedures for security incidents
12. Utilize forensics software and tools to detect incidents
13. Execute offensive and defensive technologies to protect a network infrastructure
14. Perform continuous network monitoring to provide real-time security solutions
15. Interpret security reports to educate the organization about existing and emerging security risks

Graduates will be positioned to pursue industry certifications such as Cisco certifications, EC-Council certifications and certifications offered by the SANs institute.

EMPLOYMENT OPPORTUNITIES

Graduates of the program will be able to fill roles in industry such as:

- Cyber Security Expert (Defensive)
- IT Security Specialist
- Security Operations Specialist
- Penetration Tester
- Cyber Security Specialist
- Cybersecurity-Security Architect
- Cybersecurity Analyst
- Information Security Advisor
- Cloud Security Analyst

ENTRANCE REQUIREMENTS

Eligibility for admission to Bachelor of Applied Information Technology: Systems and Network Cybersecurity program requires the applicant to meet one of the following four academic criteria:

1. High School

Provincial High School Graduation Certificate with a 60% overall average in the following (or equivalent):

- i. English 3201 or English 3202 (60% minimum)
- ii. Mathematics (4 credits) chosen from:
Advanced: 2200, 3200 (50% minimum in each course)
Academic: 2201 (50% minimum), 3201 (60% minimum)
- iii. Five credits at the 3000 Level

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with the following courses:

Math Fundamentals: MA1040, MA1041

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with Business-Related College Profile including the following courses (or equivalent):

- i. English 3101A, 3101B, 3101C or 3102A, 3102B, 3102C
- ii. Mathematics 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C

Applicants with Adult Basic Education (Level III) Graduation with a different profile may be eligible for admission to the program provided the appropriate selection of courses including those outlined above have been completed.

4. Mature Student Requirements

Applicants who do not meet the educational prerequisites for this program, must be at least 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based

550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

Eligibility for direct admission to Year-3 of the Bachelor of Applied Information Technology: Systems and Network Cybersecurity program requires the applicant to meet the following academic criteria:

Completion of the College of the North Atlantic's Computer Systems and Networking (CSN) Diploma or the Computing Systems Engineering (CSE) Diploma or equivalent program provided they:

1. Have graduated within the last five (5) academic years from date of application
or:
2. Have graduated previous to the last five (5) academic years and have recent related and verifiable experience in the industry

Graduation from a recognized College or University with a diploma or degree in the area of Information Technology with a concentration in operating systems, networking and infrastructure may also be considered for advanced standing. A combination of other post-secondary and industry experience acceptable to the college as an entrance requirement will be considered on a case-by-case basis.

Courses

Semester 1

Computer Systems and Networking

Start Date: September

Credential: Diploma

Program Length: Two Years

School: Business and Information Technology

Locations & Delivery Modes:

- Corner Brook - On Campus delivery
- Prince Philip Drive - On Campus delivery

PROGRAM DESCRIPTION

The Computer Systems and Networking two-year program focuses on the skills, competencies and attitudes required to research, design, install and maintain computer systems and network infrastructure in a highly available and secure computing environment. The program combines theoretical and practical learning experiences in a team-oriented setting encompassing front-line computer systems, back-end server environments and the local and wide-area network infrastructure. The Infrastructure Support industry is customer-oriented and requires a high level of customer interaction and professionalism. These critical skills are developed through a number of courses in this program.

The program includes course work, team-oriented projects, and a final 15-week work term focusing on areas of technical learning, team building, communications, interpersonal skills, ethics, and best practices. This diversity provides opportunities for the student to acquire the skills, professionalism and adaptability required to succeed in the dynamic and challenging field of Information Technology infrastructure support.

The capstone project will enable the student to demonstrate the application of knowledge and skills developed throughout the program by performing an in-depth study of a problem, design, or technological application and fully documenting and presenting the findings.

OBJECTIVES

The aim of the Computer Systems and Networking program is to graduate a student with the theoretical and practical skills in information technology infrastructure support. This will enable her/him to:

1. provide computer technical assistance, support, and advice to customers and other users
2. install, modify and repair computer hardware and software
3. support local-area networks (LAN), wide-area networks (WAN), network segments, and Internet and intranet systems
4. design an organization's computer system in which all of the components including computers, the network, and software, work properly together
5. plan, coordinate, and implement the organization's information security policy
6. interpret and effectively apply industry procedures and policies in the workplace
7. incorporate the social, interpersonal and communication skills necessary to be a productive member of a team
8. apply the self-awareness and reflective skills required to create, evaluate and modify personal growth and career plans

College of the North Atlantic is a Cisco Networking Academy. Students have the opportunity to complete courses in the Academy program which provide a strong foundation in computer networking knowledge and skills utilizing the equipment of the industry's leading provider. As well, College of the North Atlantic is the only accredited Cisco Academy Instructor Training Center in Atlantic Canada.

EMPLOYMENT OPPORTUNITIES

Interconnected computing systems are an integral part of every business and the Computer Systems and Networking graduates are well suited to a broad range of computing infrastructure roles. These roles can be included, but not limited to:

Computer Support Specialist
Network Specialist
Computer Support Technician
LAN Team Member
I.T. Support Technician
Help Desk Technician
Server Support Analyst/Technician
Help Desk Analyst
Technology Support Analyst

ENTRANCE REQUIREMENTS

Eligibility for admission to Computer Systems and Networking program requires the applicant to meet one of the following four academic criteria:

1. High School

Provincial High School Graduation Certificate with a 60% overall average in the following (or equivalent):

- i. English 3201 or English 3202 (60% minimum)
- ii. Mathematics (4 credits) chosen from:
Advanced: 2200, 3200 (50% minimum in each course)
Academic: 2201 (50% minimum), 3201 (60% minimum)
- iii. Five credits at the 3000 Level

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with the following courses:

Math Fundamentals: MA1040, MA1041

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with Business-Related College Profile including the following courses (or equivalent):

- i. English 3101A, 3101B, 3101C or 3102A, 3102B, 3102C
- ii. Mathematics 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C

Applicants with Adult Basic Education (Level III) Graduation with a different profile may be eligible for admission to the program provided the appropriate selection of courses including those outlined above have been completed.

4. Mature Student Requirements

Applicants who do not meet the educational prerequisites for this program, must be at least 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

Enterprise Web Development

Start Date: September

Credential: Diploma

Program Length: Two Years

School: Business and Information Technology

Locations & Delivery Modes:

- Online - Synchronous delivery

PROGRAM DESCRIPTION

The web development and e-commerce fields are experiencing unprecedented growth as companies shift their businesses online. Professionals in this industry use software development skills and business knowledge to build, program and manage websites to attract customers and increase e-commerce revenue. The need exists for a technology program that focuses on a combination of Business and IT training to prepare graduates for the increased automation of the global marketplace.

The six-semester Enterprise Web Development diploma is an entry-level program designed for students to develop the competencies to program, design, configure, and maintain secure transaction-based websites on the Internet. Students will be able to build a web presence utilizing different frameworks and software to create a professional, efficient website where clients and customers can interact.

Students will learn how to utilize customer relationship management (CRM) systems, content management systems (CMS), social media management systems and enterprise resource planning (ERP) systems to strengthen and streamline how end-to-end transactions occur in both large corporations and small-medium sized companies. Students will be able to monitor the day-to-day activity and overall performance of websites to improve user experience and increase traffic while executing ad campaigns on search engines using the latest digital marketing tools and strategies.

The applied e-commerce website project in semester six (6) will give students the opportunity to demonstrate the application of knowledge by conducting an in-depth study of a problem, design, or industry project and documenting, and presenting the results. The final semester also includes a seven-week work exposure which gives the students an opportunity to apply their knowledge and skills in the workplace.

OBJECTIVES

Upon successful completion of the Enterprise Web Development diploma program, graduates will be able to:

1. Execute a vision for commerce sites aligned with a company's business strategy
2. Apply effective communication strategies to written and verbal output
3. Utilize critical thinking skills in analysis of day-to-day tasks
4. Develop secure e-commerce web software platforms
5. Maintain e-commerce websites and software platforms
6. Ensure e-commerce sites are properly integrated with backend systems including pricing inventory and customer relationship databases
7. Enable business transactions to be conducted on commercial websites
8. Implement a website solution based upon a set of business requirements or client specifications
9. Utilize content management systems (CMS) integrating databases and scripting languages
10. Develop data-driven websites for multiple platforms in accordance with best practices, security, usability, accessibility, and personalization
11. Implement customer relationship management (CRM) and social media management systems
12. Integrate enterprise resource planning (ERP) solutions
13. Implement UI/UX (User experience design/User interface design) cross-browser compatibility
14. Create a web presence utilizing programming languages such as Python, HTML, CSS, JavaScript, and API's

ENTRANCE REQUIREMENTS

Eligibility for admission to the Enterprise Web Development program requires the applicant to meet one of the following four academic criteria:

1. High School

Provincial High School Graduation Certificate with 60% overall average in the following (or equivalent):

- i. English 3201 or English 3202(60% minimum)
- ii. Mathematics (4 credits) chosen from:
Advanced: 2200, 3200 (50% minimum in each course)
Academic: 2201 (50% minimum), 3201 (60% minimum)
- iii. 5 credits from 3000 Level

Note: High School students who participated in the Technology Career Pathways (TCP) program can apply for the following exemptions:

- i. If MI1850 was completed as part of the TCP program an exemption can be granted for CP1855.
- ii. If MI1890 was completed as part of the TCP program an exemption can be granted for CP1895.

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with the following courses:

- i. Math Fundamentals: MA1040, MA1041

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with Business-Related College Profile including the following courses (or equivalent):

- i. English 3101A, 3101B, 3101C or 3102A, 3102B, 3102C
- ii. Mathematics 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C

Applicants with Adult Basic Education (Level III) Graduation with a different Profile may be eligible for admission to the program provided the appropriate selection of courses including those outlined above have been completed.

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, must be at least 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

OJ3106	EWeb Work Exposure	0	0	7 wks

Semester 6 – Spring will be 14 weeks. Students will complete PR3000, CP4475, and CP2085 in the first seven (7) weeks of the semester. The seven (7) week EWeb Work Exposure (OJ3106) will commence following successful completion of these three (3) courses.

Information Management

Start Date: September

Credential: Post Diploma

Program Length: One Year

School: Business and Information Technology

Locations & Delivery Modes:

- Online - Asynchronous delivery

PROGRAM DESCRIPTION

A career at your command

Did you know that professionals spend up to 50 per cent of their time searching for information? Today's workplace relies on the accurate, efficient and secure management of information to meet operational demands, demonstrate legal compliance and maintain competitive advantage. Information Management (IM) is the processes and technology that controls the storage, structure, processing, access and usage of the information required for organizational and business intelligence.

IM professionals organize and manage all activities involved in the information life cycle, automating processes, reducing operating costs and improving efficiencies for an organization's bottom line. They have the technical competencies needed to effectively analyze business processes and utilize IM tools and systems.

In CNA's three-semester online Information Management post-diploma program, we provide the training ground for you to build a career in this field. You will be able to implement IM best practices in training and consultation to ensure everyone in the organization adheres to regulatory standards, including the security, legal and privacy regulations required. The program will prepare you to meet the demand in today's rapidly changing world, and in the last semester you will have a chance to apply your knowledge in a seven-week work exposure and a capstone project. The future is at your fingertips!

Program Highlights:

- Only IM post-diploma program in Newfoundland and Labrador
- Engagement with industry experts and professional organizations
- The most current knowledge in the field, designed and delivered online by industry experts
- Includes national and international standards and important governance and compliance regulations
- Learn how to implement information management policies and programs transforming companies to compete in a global environment
- You are leveraging your first credential – whether it is a diploma or degree – to launch a new career in Information Management

Did You Know?

- Information helps businesses gain a competitive advantage
- Demand for IM professionals is growing for both public and private sectors and our graduates are filling those roles
- There is an increasing need to incorporate privacy and security in business processes
- Instructors are members of industry organizations such as Association of Records Management and Administrators (ARMA) and International Association of Privacy Professionals (IAPP)

OBJECTIVES

The objective of the Information Management program is to develop graduates with the ability to:

1. conduct themselves in an ethical and professional manner

2. participate as a member of a team providing information management services
3. manage all activities involved in the information life cycle
4. analyze information to inform the decision-making processes in order to support the organization
5. advocate the importance of and advise on Information Management policies and procedures throughout the organization through education, training and consultation
6. maximize technology to manage information in an efficient and effective manner

ACADEMIC ADVISING

Each student will be assigned an academic advisor to help guide you through the college experience. They are trained to advise you on college-related issues or to make mutually agreed upon referrals for you to other college professionals.

Students intending to complete the program on a part-time basis (less than four courses per semester) will be contacted by their advisor to create an academic plan that will enable them to complete the program. A part-time student must complete the program within five years from the date of program enrolment.

EMPLOYMENT OPPORTUNITIES

Graduates of the Information Management program can expect to find employment as Information Management Analysts, Records Analysts, and Records Management Consultants in industries such as oil & gas, healthcare and in government agencies.

Due to the nature of this field, employers may require a clear Certificate of Conduct from the Royal Newfoundland Constabulary (RNC), the Royal Canadian Mounted Police (RCMP) or local provincial/municipal police force prior to hiring.

ENTRANCE REQUIREMENTS

Graduation from a recognized two or three year post-secondary diploma or degree, or a combination of other post-secondary work and industry experience acceptable to the College.

Courses

Semester 1

Code	Title	Cr	Le	La
OP1390	Information Management I	4	3	2

Note: CR3540 Capstone Project, IM2115 IM Strategic Documentation and IM3010 Orientation to the IM Work Exposure will be completed in the first seven (7) weeks of the semester. OJ3040 IM Work Exposure will be completed in the second seven (7) weeks of the semester.

Software Development (Co-op)

Start Date: September

Credential: Diploma

Program Length: Three Years

School: Business and Information Technology

Locations & Delivery Modes:

- Corner Brook - On campus delivery
- Prince Philip Drive - On campus delivery

PROGRAM DESCRIPTION

The Software Development (Co-op) three-year program focuses on the competencies required to design, implement, and maintain software systems that operate in a secure business networked environment containing stationary and mobile devices. The program combines theoretical and practical learning experiences in a team-oriented setting.

The program includes course work, team projects, and three co-op placements. The program focuses on application development, database design and development, systems analysis, team building, communications, interpersonal skills, ethics, and best practices. This diversity provides opportunities for the student to acquire the skills, professionalism and adaptability required to succeed in the dynamic and challenging field of programming.

This is a co-operative education program that offers the student work term placements in May of the first academic year, in January of the second academic year and in September of the third academic year.

OBJECTIVES

Graduates of the Software Development (Co-op) program will have the knowledge and skills that will allow them to:

1. work effectively and efficiently in the Information and Communication Technology industry
2. be knowledgeable of the ethics, professionalism, safety and diversity in the work environment
3. demonstrate effective communications skills, a capacity for leadership, adaptability, responsible teamwork, quality assurance and co-operation in problem solving
4. write and maintain secure, customized web applications based on user requirements
5. analyze, design, develop, test, deploy and maintain full stack applications
6. possess practical programming skills enabling them to function as an entry level programmer in an object-oriented, database-oriented business programming environment
7. have in-depth understanding of object-oriented programming practices including database layer development on all dominate mobile and cloud ecosystems
8. understand and apply application security best practices when developing applications

EMPLOYMENT OPPORTUNITIES

Software Development graduates may find employment in both the private and public sectors.

Graduates of the program will be able to fill roles in industry such as:

- Application Developer
- Business Developer
- Software Developer
- Web Developer
- Computer Programmer
- Mobile App Developer
- Database Developer

ENTRANCE REQUIREMENTS

Eligibility for admission to Software Development (Co-op) program requires the applicant to meet one of the following four academic criteria:

1. High School

Provincial High School Graduation Certificate with a 60% overall average in the following (or equivalent):

- i. English 3201 or English 3202(60% minimum)
- ii. Mathematics (4 credits) chosen from:
Advanced: 2200, 3200 (50% minimum in each course)
Academic: 2201 (50% minimum), 3201 (60% minimum)
- iii. 5 credits from 3000 Level

Note: High School students who participated in the Technology Career Pathways (TCP) program can apply for the following exemptions:

- i. If MI1850 was completed as part of the TCP program an exemption can be granted for CP1850.
- ii. If MI1890 was completed as part of the TCP program an exemption can be granted for CP1890.

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with the following courses:

- i. Math Fundamentals: MA1040, MA1041

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with Business-Related College Profile including the following courses (or equivalent):

- i. English 3101A, 3101B, 3101C or 3102A, 3102B, 3102C
- ii. Mathematics 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B, and 3101C

Applicants with Adult Basic Education (Level III) Graduation with a different profile may be eligible for admission to the program provided the appropriate selection of courses including those outlined above have been completed.

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, are 19 years of age or older, and have been out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

School of
Engineering Technology

Architectural Engineering Technology

Start Date: September

Credential: Diploma

Program Length: Three Years

School: Engineering Technology

Locations & Delivery Modes:

- Ridge Road - On Campus delivery

PROGRAM DESCRIPTION

Buildings are an exciting and vital part of our physical environment. Not only must they provide shelter, but they must do it in a way which provides safe, healthy, and comfortable environments which can be built and operated within given cost guidelines. To achieve these goals buildings have become complex structures requiring teams of specialists. An important member of the design and construction team is the Architectural Engineering Technology program graduate.

The Architectural Engineering Technology program has been developed in response to provincial needs with input from professionals associated with the design and construction of buildings. Projects and assignments are designed to be as close as possible to the type of work graduates will encounter when entering the workforce.

Every effort is made to expose the student to the latest technology. Computers are used as a tool in problem solving in many technical courses. Microcomputers, computer aided drafting (CAD) equipment, and a variety of architectural and engineering software packages are made available to students to carry out their projects and assignments.

Graduates completing this program are automatically eligible for membership in the Association of Engineering Technicians and Technologists of Newfoundland and Labrador (AETTNL), as well as any similar association in Canada.

Upon completion of this program graduates may choose to further their education by completing a bachelor degree in technology or engineering at one of several institutions that have articulation agreements with College of the North Atlantic.

ACCREDITATION

This program is accredited by the Canadian Technology Accreditation Board under the mandate of the Canadian Council of Technicians and Technologists.

The academic credentials of graduates of accredited technology programs are recognized internationally by the signatories of the Sydney Accord. This provides graduates of the program with both national and international mobility for work and/or study.

OBJECTIVES

As a graduate of the Architectural Engineering Technology program, graduates will have the knowledge and skill that will allow him/her to:

1. Prepare complete sets of architectural drawings and related documentation for residential and commercial construction/renovation projects.
2. Have a complete understanding of the basic architectural principles in building design and detailing.
3. Apply the principles of building science and construction engineering to analyze and solve technical problems for construction projects.
4. Understand the relationship between architectural, structural, mechanical, electrical, and environmental building systems.

5. Apply the principles of project management to planning, scheduling, and monitoring of project development.
6. Communicate effectively with clients, contractors, other building professionals and municipal authorities during the design and construction of the building project.
7. Apply knowledge of applicable codes, zoning bylaws, and regulations to the building project.

CURRICULUM

General education consisting of Project Management Skills (theoretical and applied), Communication Skills (oral and written), Mathematics, Physics, Chemistry, Electrical and Magnetic Theory, Engineering Graphics, Engineering Technology Awareness.

Specific education in various aspects (theory and principles) of the Architectural profession including building services, site supervision, project management and construction management.

Practical education in various aspects of working drawings, architectural utility systems, and architectural graphics layouts.

CAREER OPPORTUNITIES

The need is growing for people trained in building technology. Graduates may find employment in a variety of areas such as architectural firms, engineering firms, government departments, crown corporations, construction firms, manufacturing industries, and supply and sales companies.

Graduates with two years of progressive work experience may be eligible to receive the designation of Professional Technologist (P. Tech) upon completion of a Professional Practice and Ethics Exam.

CERTIFICATIONS

In addition to the formal courses listed in the program of studies, students in the Architectural Engineering Technology program are required to obtain a certificate of completion of Standard First Aid/Heart Start and WHMIS/OHS over their three-year period of studies.

***Students should be aware that additional fees may apply to external certifications.**

ENTRANCE REQUIREMENTS

Eligibility for admission to an Engineering Technology program requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation Certificate with 60% overall average in the following (or equivalent):

i. English (2 credits) (minimum 60%) from: 3201

ii. Mathematics (4 credits) chosen from:

Advanced: 2200, 3200 (50% minimum in each course)

Academic: 2201 (50% minimum), 3201 (60% minimum)

Note: Students who received a combined average of 70% in high school Academic Mathematics 2201 and 3201, or a pass in both high school Advanced Mathematics 2200 and 3200 can be exempted from Math 1700. Students must apply for this exemption.

iii. Science (4 credits) two of which must be selected from:

Biology: 3201

Physics: 3204

Chemistry: 3202

Earth Systems: 3209

Note: The remaining two Science credits to be chosen from the highest Science mark in level 1, 2 or 3.

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with the following courses:

i. Math (60% MINIMUM) MA1040, MA1041

ii. Two Science courses chosen from one of the following three combinations:

a. Introductory Biology: BL1020, BL1021

b. Introductory Chemistry: CH1030, CH1031

c. Introductory Physics: PH1050, PH1051

Note: It is strongly recommended that CAS students who intend to enroll in Engineering Technology programs complete both of the Chemistry courses and both of the Physics courses.

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with Degree and Technical Profile including the following courses (or equivalent):

i. English (60% minimum) 3101A, 3101B, 3101C or 3102A, 3102B, 3102C

ii. Mathematics (60% minimum) 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C

iii. Science from one of the following sections:

a. Biology 1101, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C

b. Chemistry 1102, 2102A, 2102B, 2102C, 3102A, 3102B, 3102C

c. Physics 1104, 2104A, 2104B, 2104C, 3104A, 3104B, 3104C

Applicants with Adult Basic Education (Level III) Graduation with a different Profile may be eligible for admission to the program provided the appropriate selection of courses including those outlined above have been completed.

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, are 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

Courses

Semester 1 and 2

Refer to Engineering Technology (First Year)

Semester 3 (Intersession)

Code	Title	Cr	Le	La
CF2610	Building Materials I	2	2	1
DR1400	Wood Frame Construction	1	1	0
DR2150	Architectural Drawings	2	1	3
EG1240	Architectural Graphics I	2	1	3
BU2130	Service Learning	1	1	0

The Course and Lab hours per week are based on a 15 week semester. In intersession, the Course and Lab hours will be adjusted to reflect the shorter semester length. Refer to course outline.

Semester 4 (Fall)

Chemical Process Engineering Technology (Co-op)

Start Date: September

Credential: Diploma

Program Length: Three Years

School: Engineering Technology

Locations & Delivery Modes:

- Ridge Road - On Campus delivery

This program is currently undergoing a program review, which may result in some courses being changed, removed, and/or re-sequenced.

PROGRAM DESCRIPTION

Chemical Process Engineering Technologists play a vital role in the monitoring, operation, control and maintenance of equipment in a variety of industries including oil & gas. The program equips graduates with both the knowledge and practical skills necessary to begin their career as competent process operators and chemical engineering technologists.

The program covers safe work practices, process operations, chemical engineering principles and regulatory processes, process stream analysis, instrumentation and process control. Students will also acquire valuable work experience through the completion of a co-op work term.

Upon completion of this program graduates may choose to further their education by completing a bachelor degree in technology or engineering at one of several institutions that have articulation agreements with College of the North Atlantic.

ACCREDITATION

This program is currently accredited by Technology Accreditation Canada under the mandate of the Canadian Council of Technicians and Technologists.

The academic credentials of graduates of accredited technology programs are recognized internationally by the signatories of the Sydney Accord. This provides graduates of the program with both national and international mobility for work and/or study.

OBJECTIVES

As a chemical process engineering technologist, the graduate will have the knowledge and skills that will allow him/her to:

1. Assist in safe and efficient design, operation, troubleshooting, and maintenance of chemical process equipment.
2. Monitor and optimize petroleum, petrochemical, water and wastewater treatment processes.
3. Establish and maintain a safe work environment by adhering to and enforcing established safety standards, policies and procedures.
4. Work with other technologists, engineers and skilled trades persons to develop innovative solutions to problems in chemical process industries.
5. Work and communicate as members of a team with other professionals, as well as supervise the work of skilled professionals and trades persons in a variety of chemical processes and procedures.

CURRICULUM

General education consisting of Project Management Skills (theoretical and applied), Communication Skills (oral and written), Mathematics, Physics, Chemistry, Electrical and Magnetic Theory, Engineering Graphics, Engineering Technology Awareness.

Specific education in various aspects (theory and principles) of the chemical process control discipline including industrial chemistry, fluid mechanics, and mechanical systems.

Practical education in various aspects of chemical process applications including process controls, chemical reactors, and separation processes.

Work exposure consisting of field experience, gained from compensated work terms, in the field of chemical processes.

CAREER OPPORTUNITIES

Graduates of the Chemical Process Engineering Technology (Co-op) program can expect to find employment as process operators and technologists in areas such as oil & gas extraction and refining, offshore petroleum production installations, petrochemical industries, primary metal manufacturing, thermal power plants and water & waste treatment facilities.

Graduates with two years of progressive work experience may be eligible to receive the designation of Professional Technologist (P. Tech) upon completion of a Professional Practice and Ethics Exam.

Note: Students will also be required to complete a number of non-credit co-op education seminars throughout the program (resume writing, job search skills and interview preparation).

CERTIFICATIONS

Students in the Chemical Process Engineering Technology (Co-op) program are required to obtain the following external certifications throughout the program:

- Workplace Hazardous Materials Information System (WHMIS)
- Standard First Aid/Heart Start
- Transportation of Dangerous Goods
- H2S Awareness

***Students should be aware that additional fees may apply to external certifications.**

ENTRANCE REQUIREMENTS

Eligibility for admission to an Engineering Technology program requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation Certificate with 60% overall average in the following (or equivalent):

i. English (2 credits) (minimum 60%) from: 3201

ii. Mathematics (4 credits) chosen from:

Advanced: 2200, 3200 (50% minimum in each course)

Academic: 2201 (50% minimum), 3201 (60% minimum)

Note: Students who received a combined average of 70% in high school Academic Mathematics 2201 and 3201, or a pass in both high school Advanced Mathematics 2200 and 3200 can be exempted from Math 1700. Students must apply for the exemption.

iii. Science (4 credits) two of which must be selected from:

Biology: 3201

Physics: 3204

Chemistry: 3202

Earth Systems: 3209

Note: The remaining two Science credits to be chosen from the highest Science mark in level 1, 2 or 3.

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with the following courses:

- i. Math (60% minimum) MA1040, MA1041
- ii. Two Science courses chosen from one of the following three combinations:
 - a. Introductory Biology: BL1020, BL1021
 - b. Introductory Chemistry: CH1030, CH1031
 - c. Introductory Physics: PH1050, PH1051

Note: It is strongly recommended that CAS students who intend to enroll in Engineering Technology programs complete both of the Introductory Chemistry courses and both of the Introductory Physics courses.

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with Degree and Technical Profile including the following courses (or equivalent):

- i. English (60% minimum) 3101A, 3101B, 3101C or 3102A, 3102B, 3102C
- ii. Mathematics (60% minimum) 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C
- iii. Science from one of the following sections:
 - a. Biology 1101, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C
 - b. Chemistry 1102, 2102A, 2102B, 2102C, 3102A, 3102B, 3102C
 - c. Physics 1104, 2104A, 2104B, 2104C, 3104A, 3104B, 3104C

Applicants with Adult Basic Education (Level III) Graduation with a different Profile may be eligible for admission to the program provided the appropriate selection of courses including those outlined above have been completed.

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, are 19 years at the time of application and have been out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Civil Engineering Technology (Co-op)

Start Date: September

Credential: Diploma

Program Length: Three Years

School: Engineering Technology

Locations & Delivery Modes:

- Corner Brook - On Campus delivery
- Ridge Road - On Campus delivery

This program is currently undergoing a program review, which may result in some courses being changed, removed, and/or re-sequenced.

PROGRAM DESCRIPTION

The field of civil design and construction plays a central role in the economic viability of many industries and the province as a whole. The civil field includes such areas as residential, commercial, and industrial buildings; harbours, airports, roads, and other transportation facilities; and municipal infrastructure.

Natural resource development projects (hydropower, oil and gas, mineral processing, etc.) will continue to create substantial employment opportunities for Civil Engineering Technology (Co-op) graduates.

The Civil Engineering Technology (Co-op) program will enable graduates to play an important role in the professional team which is responsible for the translation of ideas into the finished product. The program will ensure that the graduates understand the need for, and have the skills to contribute to, the cost effective and efficient planning of construction projects from concept to completion.

Graduates completing this program are automatically eligible for membership in the Association of Engineering Technicians and Technologists of Newfoundland and Labrador (AETTNL), as well as any similar association in Canada.

ACCREDITATION

This program has been accredited since 1996 (Corner Brook) and 1997 (St. John's) by the Canadian Technology Accreditation Board (CTAB) under the mandate of the Canadian Council of Technicians and Technologists. In 2019, Technology Accreditation Canada (TAC) became the sole accrediting body of engineering technology programs in Canada. TAC will recognize CTAB accredited programs until the accreditation transition period is complete. For this reason, accreditation for the Civil Engineering Technology (Co-op) program in St. John's is TAC accredited until April 2026, while the program in Corner Brook is CTAB accredited until Fall 2023.

Graduates with two years of progressive work experience may be eligible to receive the designation of Professional Technologist (P. Tech) upon completion of a Professional Practice and Ethics Exam.

This program is also CEWIL (Co-operative Education and Work-Integrated Learning) accredited.

The academic credentials of graduates of accredited technology programs are recognized internationally by the signatories of the Sydney Accord.

OBJECTIVES

A graduate of the Civil Engineering Technology (Co-op) program will have the knowledge and skills that will allow him/her to:

1. Analyze the structural reactions of engineering work.

2. Participate in the scheduling of civil engineering projects and monitor the work.
3. Assist in planning, designing, inspecting, supervising, and constructing civil engineering projects.
4. Plan and design municipal infrastructure projects.
5. Assist with designing, inspecting and troubleshooting of transportation infrastructure.
6. Design, calculate and test asphalt and concrete mixes to industry standards and specifications.
7. Carry out engineering survey and construction layouts using conventional survey instruments and GPS systems.

CURRICULUM

General education consisting of Project Management Skills (theoretical and applied), Communication Skills (oral and written), Mathematics, Physics, Chemistry, Electrical and Magnetic Theory, Engineering Graphics, Engineering Technology Awareness.

Specific education in various aspects (theory and principles) of the civil discipline including strength of materials, structures, fluid mechanics, soils & foundations, building codes & services and planning & estimating.

Practical education in various aspects of the civil discipline including CADD drawings, material testing, highway technology, construction surveying, BIM and GIS.

Work exposure consisting of field experience, gained from a compensated work term, in the field of civil engineering technology.

CAREER OPPORTUNITIES

Graduates may find employment with contractors, consultants, house builders, manufacturers, suppliers, municipalities, provincial and federal governments and their agencies, and many others involved in such projects as the design of off-shore and on-shore structures and facilities, testing and inspection of structural components, estimation, sales, construction surveying, and project management.

CERTIFICATIONS

In addition to the formal courses listed in the program of studies, students in the Civil Engineering Technology (Co-op) program are required to obtain a certificate of completion of Standard First Aid/Heart Start and WHMIS over their three-year period of studies.

ENTRANCE REQUIREMENTS

Eligibility for admission to an Engineering Technology program requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation Certificate with 60% overall average in the following (or equivalent):

i. English (2 credits) (minimum 60%) from: 3201

ii. Mathematics (4 credits) chosen from:

Advanced: 2200, 3200 (50% minimum in each course)

Academic: 2201 (50% minimum), 3201 (60% minimum)

Note: Students who received a combined average of 70% in high school Academic Mathematics 2201 and 3201, or a pass in both high school

Advanced Mathematics 2200 and 3200 can be exempted from Math 1700. Students must apply for the exemption.

iii. Science (4 credits) two of which must be selected from:

Biology: 3201

Physics: 3204

Chemistry: 3202

Earth Systems: 3209

Note: The remaining two Science credits to be chosen from the highest Science mark in level 1, 2 or 3.

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with the following courses:

i. Math (60% MINIMUM) MA1040, MA1041

ii. Two Science courses chosen from one of the following three combinations:

a. Introductory Biology: BL1020, BL1021

b. Introductory Chemistry: CH1030, CH1031

c. Introductory Physics: PH1050, PH1051

Note: It is strongly recommended that CAS students who intend to enroll in Engineering Technology programs complete both of the Chemistry courses and both of the Physics courses.

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with Degree and Technical Profile including the following courses (or equivalent):

i. English (60% minimum) 3101A, 3101B, 3101C or 3102A, 3102B, 3102C

ii. Mathematics (60% minimum) 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C

iii. Science from one of the following sections:

a. Biology 1101, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C

b. Chemistry 1102, 2102A, 2102B, 2102C, 3102A, 3102B, 3102C

c. Physics 1104, 2104A, 2104B, 2104C, 3104A, 3104B, 3104C

Applicants with Adult Basic Education (Level III) Graduation with a different Profile may be eligible for admission to the program provided the appropriate selection of courses including those outlined above have been completed.

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, are 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

ARTICULATION

Graduates of Civil Engineering Technology (Co-op) may continue their studies at Marine Institute (Memorial University of Newfoundland) in the Bachelor of Technology program.

Computing Systems Engineering Technology (Co-op)

Start Date: September

Credential: Diploma

Program Length: Three Years

School: Engineering Technology

Locations & Delivery Modes:

- Ridge Road - On Campus delivery

This program is currently undergoing a program review, which may result in some courses being changed, removed, and/or re-sequenced.

PROGRAM DESCRIPTION

The Computing Systems Engineering Technology (Co-op) program prepares students for the field of scientific and engineering computing. A combination of programming theory and practice, networking, and electronics ensures the graduate will be prepared to work in the fields of cloud computing and mobile device application development, as well as develop the foundation for the emerging fields of machine learning and Big Data. Graduates will obtain theoretical foundations as well as practical hands on experience with analog electronics, digital systems, including logic, microprocessor interfacing, and embedded microcontrollers and applications. Students will work with mobile devices, robotic systems, and wireless control. Specialized skills in the software stream include, but will not be limited to, object-oriented programming, databases, networking, and modern web technologies. Graduates of this three year program receive the Diploma of Computing Systems Engineering Technology (Co-op).

Graduates completing this program are automatically eligible for membership in the Association of Engineering Technicians and Technologists of Newfoundland and Labrador (AETTNL), as well as any similar association in Canada.

Upon completion of this program graduates may choose to further their education by completing a bachelor degree in technology or engineering at one of several institutions that have articulation agreements with College of the North Atlantic.

Graduates enrolled in this program will also complete courses in the Cisco Networking Academy program which will place them on the path to Cisco certification at the CCNA level.

Note: This program may not be suitable for applicants who do not have normal colour perception.

ACCREDITATION

This program is accredited by the Canadian Technology Accreditation Board under the mandate of the Canadian Council of Technicians and Technologists.

This program is also CEWIL Canada (Co-operative Education and Work-Integrated Learning Canada) accredited.

The academic credentials of graduates of accredited technology programs are recognized internationally by the signatories of the Sydney Accord.

OBJECTIVES

As engineering technologists, graduates of this program will have the knowledge and skills that will allow them to:

1. Analyze, build, implement, and maintain computing systems and applications.
2. Design, develop, and implement relational database management systems.
3. Develop applications using object-oriented programming methods and practices.
4. Design and develop applications for mobile devices such as smart phones and tablets.

5. Prepare a quality assurance plan for testing and evaluation of software.
6. Design and implement computing systems suitable for cloud computing applications.
7. Specify, select, design, build, and troubleshoot micro-processor or micro-controller based systems.

CURRICULUM

General Education consisting of Project Management Skills (theoretical and applied), Communication Skills (oral and written), Mathematics, Physics, Chemistry, Electrotechnology, Engineering Graphics, Technology Awareness and Student Success.

Specific education in various aspects (theory and principles) of the computing engineering discipline including database design, Internet application development, embedded system development, graphical programming, and mobile application development, in addition to digital logic systems, microcontrollers, and IP networking.

Practical education in various aspects of the theory and principles of computing and programming.

Work exposure Laboratory and field experience, gained from compensated work terms, in the application embedded electronics and computing systems.

CAREER OPPORTUNITIES

The graduate from the program will be a technologist who specializes in integrating computing technology into consumer and industrial products, who finds employment with hi-tech companies utilizing computers in new and innovative ways.

Graduates with two years of progressive work experience may be eligible to receive the designation of Professional Technologist (P. Tech) upon completion of a Professional Practice and Ethics Exam.

Note: Students will also be required to complete a number of non-credit co-op education seminars throughout the 3-year program (resume writing, job search skills and interview preparation).

CERTIFICATIONS

Students in the Computing Systems Engineering Technology (Co-op) program are required to obtain the following external certifications throughout the program:

- Workplace Hazardous Materials Information System (WHMIS)
- Standard First Aid/Heart Start

***Students should be aware that additional fees may apply to external certifications.**

ENTRANCE REQUIREMENTS

Eligibility for admission to an Engineering Technology program requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation Certificate with 60% overall average in the following (or equivalent):

i. English (2 credits) (minimum 60%) from: 3201

ii. Mathematics (4 credits) chosen from:

Advanced: 2200, 3200 (50% minimum in each course)

Academic: 2201 (50% minimum), 3201 (60% minimum)

Note: Students who received a combined average of 70% in high school Academic Mathematics 2201 and 3201, or a pass in both high school

Advanced Mathematics 2200 and 3200 can be exempted from Math 1700. Students must apply for the exemption.

iii. Science (4 credits) two of which must be selected from:

Biology: 3201

Physics: 3204

Chemistry: 3202

Earth Systems: 3209

Note: The remaining two Science credits to be chosen from the highest Science mark in level 1, 2 or 3.

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with the following courses:

- i. Math (60% MINIMUM) MA1040, MA1041
- ii. Two Science courses chosen from one of the following three combinations:
 - a. Introductory Biology: BL1020, BL1021
 - b. Introductory Chemistry: CH1030, CH1031
 - c. Introductory Physics: PH1050, PH1051

Note: It is strongly recommended that CAS learners who intend to enroll in Engineering Technology programs complete both of the Chemistry courses and both of the Physics courses.

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with Degree and Technical Profile including the following courses (or equivalent):

- i. English (60% minimum) 3101A, 3101B, 3101C or 3102A, 3102B, 3102C
- ii. Mathematics (60% minimum) 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C
- iii. Science from one of the following sections:
 - a. Biology 1101, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C
 - b. Chemistry 1102, 2102A, 2102B, 2102C, 3102A, 3102B, 3102C
 - c. Physics 1104, 2104A, 2104B, 2104C, 3104A, 3104B, 3104C

Applicants with Adult Basic Education (Level III) Graduation with a different Profile may be eligible for admission to the program provided the appropriate selection of courses including those outlined above have been completed.

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, are 19 years of age or older, and have been out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

Electrical Engineering Technology (Power and Controls) Co-op

Start Date: September

Credential: Diploma

Program Length: Three Years

School: Engineering Technology

Locations & Delivery Modes:

- Ridge Road - On Campus delivery

This program is currently undergoing a program review, which may result in some courses being changed, removed, and/or re-sequenced.

PROGRAM DESCRIPTION

Electrical Engineering Technology (Power & Controls) Co-op is a three-year cooperative education program providing a comprehensive coverage of the electrical power discipline with emphasis on power systems, control systems and electrical design. The theoretical aspects of this program are complemented by extensive practical components that allow students to gain invaluable experience with installation, operation and maintenance practices. This is further supplemented with real-world experience provided by two work terms.

Graduates completing this program are automatically eligible for membership in the Association of Engineering Technicians and Technologists of Newfoundland and Labrador (AETTNL), as well as any similar association in Canada.

Upon completion of this program graduates may choose to further their education by completing a bachelor degree in technology or engineering at one of several institutions that have articulation agreements with College of the North Atlantic.

Note: This program may not be suitable for applicants who do not have normal colour perception.

ACCREDITATION

This program is accredited by Technology Accreditation Canada under the mandate of the Canadian Council of Technicians and Technologists.

The academic credentials of graduates of accredited technology programs are recognized internationally by the signatories of the Sydney Accord. This provides graduates of the program with both national and international mobility for work and/or study.

OBJECTIVES

Upon successful completion of the Electrical Engineering Technology (Power & Controls) Co-op program the graduate will be able to:

1. Evaluate, design and specify facility electrical systems such as power, lighting, heating, control and protection.
2. Design and specify electrical generation, transmission and distribution systems.
3. Design, test, analyze and commission industrial electrical power control systems.
4. Coordinate, plan, direct and interface with other electrical industry professionals as part of a technical support team.
5. Analyze, configure and assist in the electrical design of control systems in commercial and industrial applications employing Programmable Logic Controllers (PLC).
6. Design and specify electrical systems found in electrical utilities and industrial plants.
7. Maintain and troubleshoot electrical equipment such as motors, generators, transformers, protection and control devices.
8. Employ the use of power electronic circuits in the electrical design of commercial and industrial systems utilized

- by the electrical power industry.
9. Apply knowledge of current applicable codes, practices and safety standards.

CURRICULUM

General education consisting of Communication Skills (oral and written), Mathematics, Physics, Chemistry, Electrotechnology, Engineering Graphics and Technology Awareness.

Specific education in various aspects of the electrical power discipline including power systems, analysis, control systems, equipment and techniques and building electrical design.

Practical education in various aspects of the electrical workshop including shop tools, electrical wiring, installation and maintenance of electrical equipment and correct application of the Canadian Electrical Code.

Work exposure consisting of field experience, gained from compensated work terms, in the field of electrical engineering technology.

CAREER OPPORTUNITIES

Graduates of the Electrical Engineering Technology (Power & Controls) Co-op program can find employment with a wide variety of companies involved in the electrical industry. Typical employers include production plants, oil and gas exploration production companies, refineries, offshore servicing companies, power utilities, pulp and paper mills, electrical sales and service groups, shipyards, provincial and federal government departments and consulting engineering companies.

Graduates with two years of progressive work experience may be eligible to receive the designation of Professional Technologist (P. Tech) upon completion of a Professional Practice and Ethics Exam.

CERTIFICATIONS

In addition to the formal courses listed in the program of studies, students in the Electrical Engineering Technology (Power & Controls) Co-op program are required to obtain the following external certifications prior to start of Work Term I:

- Workplace Hazardous Materials Information System (WHMIS)
- Standard First Aid/Heart Start
- Arc Flash Awareness

***Students should be aware that additional fees may apply to external certifications.**

ENTRANCE REQUIREMENTS

Eligibility for admission to an Engineering Technology program requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation Certificate with 60% overall average in the following (or equivalent):

i. English (2 credits) (minimum 60%) from: 3201

ii. Mathematics (4 credits) chosen from:

Advanced: 2200, 3200 (50% minimum in each course)

Academic: 2201 (50% minimum), 3201 (60% minimum)

Note: Students who received a combined average of 70% in high school Academic Mathematics 2201 and 3201, or a pass in both high school

Advanced Mathematics 2200 and 3200 can be exempted from Math 1700. Students must apply for the exemption.

iii. Science (4 credits) two of which must be selected from:

Biology: 3201

Physics: 3204

Chemistry: 3202

Earth Systems: 3209

Note: The remaining two Science credits to be chosen from the highest Science mark in level 1, 2 or 3.

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with the following courses:

- i. Math (60% MINIMUM) MA1040, MA1041
- ii. Two Science courses chosen from one of the following three combinations:
 - a. Introductory Biology: BL1020, BL1021
 - b. Introductory Chemistry: CH1030, CH1031
 - c. Introductory Physics: PH1050, PH1051

Note: It is strongly recommended that CAS students who intend to enroll in Engineering Technology programs complete both of the Chemistry courses and both of the Physics courses.

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with Degree and Technical Profile including the following courses (or equivalent):

- i. English (60% minimum) 3101A, 3101B, 3101C or 3102A, 3102B, 3102C
- ii. Mathematics (60% minimum) 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C
- iii. Science from one of the following sections:
 - a. Biology 1101, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C
 - b. Chemistry 1102, 2102A, 2102B, 2102C, 3102A, 3102B, 3102C
 - c. Physics 1104, 2104A, 2104B, 2104C, 3104A, 3104B, 3104C

Applicants with Adult Basic Education (Level III) Graduation with a different Profile may be eligible for admission to the program provided the appropriate selection of courses including those outlined above have been completed.

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, are 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

Electronic Systems Engineering Technology (Co-op)

Start Date: September

Credential: Diploma

Program Length: Two Years

School: Engineering Technology

Locations & Delivery Modes:

- Corner Brook - On Campus delivery

PROGRAM DESCRIPTION

The Electronic Systems Engineering Technology (Co-op) program focuses on planning, designing, commissioning, servicing, troubleshooting, and decommissioning electronic systems. This general program enables graduates the opportunity to seek careers in a wide variety of technology areas, including electronic communications systems, computer network systems, industrial control systems, and surveillance and navigation systems.

The program is designed to provide graduates with the skills and knowledge required to implement and work with modern communication systems using digital and fiber optics principles, embedded microcontrollers, applications including robotic controls, artificial intelligence, wireless control and industrial instrumentation & controls. Thanks to the widespread proliferation of sophisticated systems around the world, the demand for well-qualified electronics technologists is, and will be, high for years to come.

Graduates of this accredited program automatically satisfy the academic requirements for membership in the Association of Engineering Technicians and Technologists of Newfoundland and Labrador (AETTNL), and qualify for certification with the appropriate work experience and references. Students enrolled in this program are eligible for full student membership after the first year. Certification credentials are transferrable across provincial associations.

Upon completion of this program, graduates may choose to further their education by completing a bachelor degree in technology or engineering at one of several institutions that have articulation agreements with College of the North Atlantic.

ACCREDITATION

This program is accredited by Technology Accreditation Canada under the mandate of the Canadian Council of Technicians and Technologists.

The academic credentials of graduates of accredited technology programs are recognized internationally by the signatories of the Sydney Accord. This provides graduates of the program with both national and international mobility for work and/or study.

Note: This program may not be suitable for applicants who do not have normal colour perception.

OBJECTIVES

As an Electronic Systems Engineering Technologist, the graduate will have the knowledge and skill that will allow him/her to:

1. Demonstrate a high level of skill in the application of electronics principles.
2. Produce electrical and electronics drawings, layouts and reports.
3. Apply the skills and techniques to troubleshoot logic and digital circuits, and embedded microprocessor-based and microcontroller-based systems, including assembly and high-level language programs.
4. Design, assemble, maintain, and troubleshoot analog and digital communication systems.
5. Install, analyze and maintain industrial instrumentation and process control equipment.

6. Apply appropriate troubleshooting techniques to electronic circuits or systems, and generate and perform test procedures.
7. Determine, select, recommend and justify the purchase of electronic equipment, components and systems.
8. Modify, maintain, repair and recommend electronic equipment and systems.
9. Design, build, test and troubleshoot electronic circuits, equipment, systems and subsystems.
10. Analyze and troubleshoot computer networks.
11. Apply current industry practices of project management and business principles.

CURRICULUM

General education consisting of Project Management Skills (theoretical and applied), Communication Skills (oral and written), Mathematics, Physics, Electrical and Magnetic Theory, Engineering Graphics, Engineering Technology Awareness.

Specific education in various aspects (theory and principles) of the Electronic Systems Engineering Technology profession including the theory and application of analog and digital electronics with specialized emphasis on Analog and Digital Communication Systems, Computer Programming, Microprocessor Interfacing Systems, Industrial Process Control Systems, and Networking.

Practical education employing labs and shops focused on installation, configuration, operation and maintenance training associated with digital communications, wireless communications systems, microcontrollers, computer networks, cabling systems, and industrial process control systems.

CAREER OPPORTUNITIES

Job prospects for the electronics industry are expected to be strong in the foreseeable future. The Electronics Systems Engineering Technology program is designed to produce a well-rounded graduate who will be capable of working in a variety of electronic related fields. Graduates of the program will find rewarding employment in both the service and support side of the electronics industry as well as the consumer side. They will obtain employment in the areas of telecommunications, manufacturing sales, service, and support, computer sales, service and support, provincial and federal agencies, consulting firms, business equipment sales and service, industrial sales and service, aircraft surveillance and navigation, R&D and utility companies.

Graduates with two years of progressive work experience may be eligible to receive the designation of Professional Technologist (P. Tech) upon completion of a Professional Practice and Ethics Exam.

ENTRANCE REQUIREMENTS

Eligibility for admission to Electronic Systems Engineering Technology (Co-op) program requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation Certificate with a 60% overall average in the following (or equivalent):

- i. English (2 credits) (minimum 60%) from: 3201
- ii. Mathematics (4 credits) chosen from:
Advanced: 2200, 3200 (50% minimum in each course)
Academic: 2201 (70% minimum), 3201 (70% minimum)
- iii. Science (4 credits) two of which must be selected from:
Biology: 3201
Physics: 3204
Chemistry: 3202
Earth Systems: 3209

Note: The remaining two Science credits to be chosen from the highest Science mark in level 1, 2 or 3.

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with the following courses:

- i. Math (70% minimum) MA1040, MA1041
- ii. Two Science courses chosen from one of the following three combinations:

- a. Introductory Biology: BL1020, BL1021
- b. Introductory Chemistry: CH1030, CH1031
- c. Introductory Physics: PH1050, PH1051

Note: It is strongly recommended that CAS learners who intend to enroll in Engineering Technology programs complete both of the Chemistry courses and both of the Physics courses.

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with Degree and Technical Profile including the following courses (or equivalent):

- i. English (60% minimum) 3101A, 3101B, 3101C or 3102A, 3102B, 3102C
- ii. Mathematics (70% minimum) 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C
- iii. Science from one of the following sections:
 - a. Biology 1101, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C
 - b. Chemistry 1102, 2102A, 2102B, 2102C, 3102A, 3102B, 3102C
 - c. Physics 1104, 2104A, 2104B, 2104C, 3104A, 3104B, 3104C

Applicants with Adult Basic Education (Level III) Graduation with a different Profile may be eligible for admission to the program provided the appropriate selection of courses including those outlined above have been completed.

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, are 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Courses

Semester 1 (Fall)

Code	Title	Cr	Le	La
PH1140	Applied Physics	4	3	2
ET1141	Introductory Electric Circuit Analysis	9	8	4
MA1101	Mathematics	5	5	0
CM1460	Writing for the Workplace	2	2	0
CI1321	Electrical/Electronic Fabrication Techniques	3	2	3

Semester 2 (Winter)

Code	Title	Cr	Le	La
AE2360	Analog Electronics I	6	5	2
DP1110	Digital Systems I(Logic)	4	3	2
CR1107	Network Fundamentals	4	3	3
CT2300	Applied Programming	4	3	2
ET1146	Advanced Electric Circuit Analysis	3	3	1
MC1850	Spreadsheet Applications	1	0	2

Semester 3 (Spring)

Code	Title	Cr	Le	La
CE3430	Network Cabling	4	3	3
WC1310	Co-op Work Term	5	0	0

Students in Electronic Systems Engineering Technology (Co-op) complete CE3430 (3 weeks) prior to beginning their Work Term.

CERTIFICATIONS

In addition to the formal courses listed in the program of studies, students in the Electronic Systems Engineering Technology (Co-op) program are required to obtain the following certificates of completion prior to WC1310 Co-op Work Term, Semester 3:

- Standard First Aid/Heart Start
- Workplace Hazardous Materials and Information Systems (WHMIS)
- Power Line Hazards Awareness
- Confined Space
- Fall Protection

***Students should be aware that additional fees may apply to external certifications.**

Semester 4 (Fall)

Code	Title	Cr	Le	La
EG2120	Applied Engineering Drafting	2	1	2
PR3150	Project Management and Financial Analysis	4	4	0
CM2800	Oral / Written Communication Skills	3	3	0
AE2365	Analog Electronics II	5	4	2
DP2110	Digital Systems II (Interfacing)	5	4	3
CE2730	RF Transmission & Antennas	4	3	2
PR2790	Capstone Project I (Seminar)	0	1	0

Semester 5 (Winter)

Code	Title	Cr	Le	La
MA2100	Mathematics	5	5	0
AE3300	Industrial Electronics & PLCs	4	3	2
DP3200	Embedded Controller Applications	4	3	2
CP2000	Embedded Linux	3	2	2
CE2280	Modulation and Encoding	5	4	2
PR2791	Capstone Project II	4	3	0

Semester 6 (Intersession)

Code	Title	Cr	Le	La
AE3301	Process Control	5	4	2
CE3110	Wireless Communications Systems	5	4	3
MA1530	Statistics	2	2	1

The Course and Lab hours per week are based on a 15-week semester. In intersession, the Course and Lab hours will be adjusted to reflect the shorter semester length. Refer to course outline.

Electronics Engineering Technology (Biomedical)

Start Date: September

Credential: Diploma

Program Length: Three Years

School: Engineering Technology

Locations & Delivery Modes:

- Ridge Road - On Campus delivery

This program is currently undergoing a program review, which may result in some courses being changed, removed, and/or re-sequenced.

PROGRAM DESCRIPTION

Health care environments have become more dependent on electronic medical diagnostic and therapeutic equipment that must be operated and maintained with great accuracy. Graduates of this program are part of an integrated health care team who install and maintain this equipment as well as their supporting computer systems. Graduates also assist other health care professionals in the optimization of equipment usage. The coordinated use and maintenance of this equipment must be completed in accordance with applicable codes, statutes and associated regulations.

The Electronics Engineering Technology (Biomedical) program is a biomedical engineering technology program with a strong foundation in electronics. Students enrolled in this program also receive training in the areas of biomedical instrumentation, microprocessor applications in the health care setting, anatomy and physiology, chemistry, biochemistry, health care and safety. This comprehensive program concludes with a practicum where students are provided with the opportunity to work in hospital-based biomedical departments or with medical equipment sales and service companies.

Note: This program may not be suitable for applicants who do not have normal colour perception.

ACCREDITATION

This program is accredited by Technology Accreditation Canada under the mandate of the Canadian Council of Technicians and Technologists.

The academic credentials of graduates of accredited technology programs are recognized internationally by the signatories of the Sydney Accord. This provides graduates of the program with both national and international mobility for work and/or study.

OBJECTIVES

As engineering technologists, graduates of this program will have the knowledge and skill that will allow him/her to:

1. Employ specialized biomedical test instrumentation including patient parameter simulators and analyzers, pressure and flow measurement devices, electrosurgical analyzers and electrical safety analyzers.
2. Troubleshoot, maintain, and calibrate complex, electro-medical equipment utilizing industry recognized techniques and protocols.
3. Demonstrate proficiency in the safe operation of electro-medical devices including patient care monitoring systems, defibrillators, electro-surgery units, diagnostic medical imaging systems, clinical laboratory instrumentation, dialysis delivery systems, respiratory care devices and other diagnostic, therapeutic and patient care instruments.
4. Modify, design, and construct medical electronic devices through the application of electronic and patient data-acquisition principles.
5. Apply an engineering approach to problem solving with respect to medical equipment systems, to enable the graduate to readily upgrade their knowledge and skills.
6. Demonstrate an awareness of and concern for patient and staff safety in the health care environment.

7. Maintain and operate Linux-based instrumentation within a wireless networking environment.

CURRICULUM

General education consisting of Communication Skills (oral and written), Mathematics, Physics, Chemistry, Electrotechnology, Engineering Graphics, Technology Awareness and Student Success.

Specific education in the theory and application of analog and digital electronics with a specialized emphasis on biomedical instruments, equipment and techniques and the interconnected computer systems associated with a modern healthcare environment.

Practical education in a Health Care environment through curriculum integrated labs.

Work exposure consisting of field experience, gained from the biomedical practicum.

CAREER OPPORTUNITIES

The graduates of this program may enter the work force in the employment of hospital biomedical engineering departments, with manufacturers and distributors of biomedical instrumentation, as well as independent sales and service organizations. Employment may include design and development of medical instrumentation, as well as purchase evaluation, acceptance testing, preventive and demand maintenance and operator training.

Graduates with two years of progressive work experience may be eligible to receive the designation of Professional Technologist (P. Tech) upon completion of a Professional Practice and Ethics Exam.

Upon recognition as a P.Tech and supplemental relevant experience in the field of biomedical engineering technology the graduate may be eligible to write certification examinations to be recognized as a Certified Biomedical Engineering Technologist (CBET). In many jurisdictions of Canada this certification is a requirement for advanced practice of the profession.

CERTIFICATIONS

In addition to the formal courses listed in the program of studies, students in the Electronics Engineering Technology (Biomedical) program are required to obtain a certificate of completion of Standard First Aid/Heart Start and WHMIS over their three-year period of studies.

***Students should be aware that additional fees may apply to external certifications.**

ENTRANCE REQUIREMENTS

Eligibility for admission to an Engineering Technology program requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation Certificate with 60% overall average in the following (or equivalent):

i. English (2 credits) (minimum 60%) from: 3201

ii. Mathematics (4 credits) chosen from:

Advanced: 2200, 3200 (50% minimum in each course)

Academic: 2201 (50% minimum), 3201 (60% minimum)

Note: Students who received a combined average of 70% in high school Academic Mathematics 2201 and 3201, or a pass in both high school

Advanced Mathematics 2200 and 3200 can be exempted from Math 1700. Students must apply for the exemption.

iii. Science (4 credits) two of which must be selected from:

Biology: 3201

Physics: 3204

Chemistry: 3202

Earth Systems: 3209

Note: The remaining two Science credits to be chosen from the highest Science mark in level 1, 2 or 3.

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with the following courses:

- i. Math (60% MINIMUM) MA1040, MA1041
- ii. Two Science courses chosen from one of the following three combinations:
 - a. Introductory Biology: BL1020, BL1021
 - b. Introductory Chemistry: CH1030, CH1031
 - c. Introductory Physics: PH1050, PH1051

Note: It is strongly recommended that CAS students who intend to enroll in Engineering Technology programs complete both of the Chemistry courses and both of the Physics courses.

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with Degree and Technical Profile including the following courses (or equivalent):

- i. English (60% minimum) 3101A, 3101B, 3101C or 3102A, 3102B, 3102C
- ii. Mathematics (60% minimum) 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C
- iii. Science from one of the following sections:
 - a. Biology 1101, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C
 - b. Chemistry 1102, 2102A, 2102B, 2102C, 3102A, 3102B, 3102C
 - c. Physics 1104, 2104A, 2104B, 2104C, 3104A, 3104B, 3104C

Applicants with Adult Basic Education (Level III) Graduation with a different Profile may be eligible for admission to the program provided the appropriate selection of courses including those outlined above have been completed.

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, are 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Courses

Semester 1 and 2

Refer to Engineering Technology (First Year)

Semester 3 (Intersession)

Code	Title	Cr	Le	La
CI1110	Signals & Measurements	3	2	2
CI1313	Fabrication Techniques/Network Cabling	3	2	3
CT2300	Applied Programming	4	3	2

The Course and Lab hours per week are based on a 15 week semester. In intersession, the Course and Lab hours will be adjusted to reflect the shorter semester length. Refer to course outline.

Semester 4 (Fall)

Code	Title	Cr	Le	La
AE2330	Analog Electronics I	6	5	2
CG1205	Health Care and Safety	3	2	2
DP1110	Digital Systems I (Logic)	4	3	2
MA2100	Mathematics	5	5	0
MP2140	Circuit Analysis I	4	3	2
CM2800	Oral / Written Communication Skills	3	3	0

Semester 5 (Winter)

Code	Title	Cr	Le	La
AE2331	Analog Electronics II	4	3	2
CR1107	Network Fundamentals	4	3	3
CE2280	Modulation and Encoding	5	4	2
DP2120	Digital Systems II (Interfacing)	5	4	3
ET2150	Advanced Circuit Analysis	5	5	0

Semester 6 (Intercession)

Code	Title	Cr	Le	La

AE3130	Active Circuit Applications	4	3	2
CI3400	Biomedical Instrumentation I	5	4	4
CR2402	Switching, Routing & Wireless	4	3	3
DP3200	Embedded Controller Applications	4	3	2
PR2830	Capstone Project I (Seminar)	*P/F	1	0
PR3150	Project Management and Financial Analysis	4	4	0

The credit hour from PR2830 Capstone Project I (Seminar) in Semester 7 is allotted to PR2831 Capstone Project II in Semester 8.

Semester 8 (Winter)

Code	Title	Cr	Le	La
TM1111	Medical Terminology	2	2	0
CR2903	Enterprise Network Security & Automation	4	3	3
CP2000	Embedded Linux	3	2	2
CI3412	Biomedical Instrumentation II	4	3	4
CI3510	Advanced Medical Systems	4	3	4
PR2831	Capstone Project II	4	3	0

Semester 9 (Intercession)

Code	Title	Cr	Le	La
WT1700	Biomedical Practicum	P/F	0	0

Note: The final semester of year 3 is a 7 week practicum. As well, in the third year of the program, there are regular site visits to health care facilities. While the requirements for all Health Boards are not the same, it is standard for any government position to provide a letter of conduct from local law enforcement (typically RNC or RCMP). Due to the nature of the work in Health care and its inherent risk, it is also required that health vaccination records be updated and any outstanding vaccinations be received prior to commencement of the practicum. As well as any allergies or sensitivities should be identified at this time. These requirements are initiated and need to be completed during Semester 8 (winter semester, year 3).

A letter of conduct will also be required for registration in some courses in semesters 7 and 8.

Engineering Technology (First Year)

Start Date: September

Credential: Diploma

Program Length: Two Semesters

School: Engineering Technology

Locations & Delivery Modes:

- Burin - On Campus delivery
- Carbonear - On Campus delivery
- Corner Brook - On Campus delivery
- Gander - On Campus delivery
- Ridge Road - On Campus delivery

This program is currently undergoing a program review, which may result in some courses being changed, removed, and/or re-sequenced.

SELECTION PROCESS

The college offers a common first year in the Engineering Technology. This allows students to complete the first two semesters of the engineering technology program that they have been accepted to at one of four CNA campuses that offer first year engineering technology. After completing the first two semesters, students must enter the campus which offers the program of their choice to complete the seven week Intersession (May, June), and the subsequent years of their program.

Individuals must submit their application to the campus where they intend to complete the first two semesters of their program. This begins a first come, first served provincial process which reserves a seat at the designated campus for the appropriate Intersession, and subsequent years of program study.

After successful completion of the first two semesters students progress to the Intersession in the program for which a seat has already been reserved. Any student who, after registration, wishes to change his/her original program choice **MUST** apply for a Program Transfer (see below).

CERTIFICATIONS

In addition to the formal semester courses listed in the program of studies, students may be required to obtain a certificate of completion of Standard First Aid/Heart Start over their three-year period of studies.

***Students should be aware that additional fees may apply to external certifications.**

TRANSFER PROCESS

If a student wishes to change his/her original program choice, he/she **MUST** request a program transfer and complete the appropriate form (Request to Transfer Form) which is available through the Registrar's Office.

Applicants cannot request a change in program prior to entry into the first year. A request to transfer does not guarantee entry into one's alternate, "new" program choice. Program transfer will be granted only if sufficient space is available. The following conditions apply:

1. The Request to Transfer Form must be received at the Registrar's Office by the second Friday of February.
2. Transfers are granted based on 1) space availability and 2) the student's weighted average at the end of semester one. In cases where the student has been exempted from courses in the first semester, the mark(s) obtained by the student at another postsecondary institution or high school will be used in calculating the weighted average.

ENTRANCE REQUIREMENTS

Eligibility for admission to an Engineering Technology program requires the applicant to meet one of the following four academic criteria:

1. High School

High School Graduation Certificate with a 60% overall average in the following (or equivalent):

i. English (2 credits) (minimum 60%) from: 3201

ii. Mathematics (4 credits) chosen from:

Advanced: 2200, 3200 (50% minimum in each course)

Academic: 2201 (50% minimum), 3201 (60% minimum)

Note: Students who received a combined average of 70% in high school Academic Mathematics 2201 and 3201, or a pass in both high school

Advanced Mathematics 2200 and 3200 can be exempted from Math 1700. Students must apply for the exemption.

iii. Science (4 credits) two of which must be selected from:

Biology: 3201

Physics: 3204

Chemistry: 3202

Earth Systems: 3209

Note: The remaining two Science credits to be chosen from the highest Science mark in level 1, 2 or 3.

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with the following courses:

i. Math (60% minimum) MA1040, MA1041

ii. Two Science courses chosen from one of the following three combinations:

a. Introductory Biology: BL1020, BL1021

b. Introductory Chemistry: CH1030, CH1031

c. Introductory Physics: PH1050, PH1051

Note: It is strongly recommended that CAS students who intend to enroll in Engineering Technology programs complete both of the Chemistry courses and both of the Physics courses.

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with Degree and Technical Profile including the following courses (or equivalent):

i. English (60% minimum) 3101A, 3101B, 3101C or 3102A, 3102B, 3102C

ii. Mathematics (60% minimum) 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C

iii. Science from one of the following sections:

a. Biology 1101, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C

b. Chemistry 1102, 2102A, 2102B, 2102C, 3102A, 3102B, 3102C

c. Physics 1104, 2104A, 2104B, 2104C, 3104A, 3104B, 3104C

Applicants with Adult Basic Education (Level III) Graduation with a different Profile may be eligible for admission to the program provided the appropriate selection of courses including those outlined above have been completed.

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, are 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

TRANSFERABILITY

Currently there are a number of agreements in place with other colleges and universities where students can obtain advanced standing into Engineering and Bachelor of Engineering Technology Programs.

- Memorial University – Bachelor of Technology
- Lakehead University – Bachelor of Engineering
- Cape Breton University – Bachelor of Engineering Technology
- Athabasca University – Bachelor of Science (Post Diploma)
- Camosun College - Engineering Bridge Programs for:
 - University of Victoria - Bachelor of Engineering
 - University of British Columbia – Bachelor of Engineering
- College of the North Atlantic – Other engineering technology programs (on a course by course basis). Every effort has been made to ensure that the maximum numbers of transfer credits are attainable by articulating new and revised courses for common curriculum areas.

Courses

Semester 1 (Fall)

Code	Title	Cr	Le	La
CM1400	Technical Report Writing I	3	3	0
ET1100	Electrotechnology	4	3	2
MA1700	Mathematics	4	3	2
PH1100	Physics	4	3	2
EG1110	Engineering Graphics	3	2	2
CH1120	Chemistry	4	3	2
SD1170	Technology Awareness I	P/NP	1	0

Admission into the appropriate Mathematics course will be decided by the grade in high school math.

Students who received a combined average of 70% in high school Academic Mathematics 2201 and 3201, or a pass in both high school Advanced Mathematics 2200 and 3200 can be exempted from MA1700 Mathematics. Students must apply for the exemption.

Note: Students may apply for an exemption from MA1700 provided they meet the appropriate high school level in Mathematics as noted above.

Semester 2 (Winter)

Code	Title	Cr	Le	La
CH1121	Chemistry	4	3	2
PH1101	Physics	4	3	2
MA1101	Mathematics	5	5	0
ET1101	Electrotechnology	4	3	2
CM1401	Technical Report Writing II	3	3	0
EG1430	AutoCAD Essentials	3	2	2
SD1171	Technology Awareness II	2	1	0

Environmental Engineering Technology (Co-op)

Start Date: September

Credential: Diploma

Program Length: Two Years

School: Engineering Technology

Locations & Delivery Modes:

- Corner Brook - On Campus delivery

Note:

Alternate year intake.

PROGRAM DESCRIPTION

The Environmental Industry is one of the fastest growing sectors of the economy. The industry needs a supply of skilled technical people to meet the challenges of the 21st century by reducing environmental pollution and maintaining the well-being of ecosystems. Students of the Environmental Engineering Technology program will receive multidisciplinary training in chemical, biological, and soil science and apply these skills using engineering principles for the protection and improvement of public health and the environment, including air, water, land resources, and sustainable development.

Environmental Engineering Technology graduates have advanced skills in the use of environmental sampling, monitoring & testing, data analysis, and information technology tools. They have the ability to manage environmental projects from planning through to implementation and the maintenance phase. They have applied knowledge of health, safety and environmental requirements and can contribute to risk assessment and environmental systems management.

Environmental Engineering Technologists are involved in water treatment, water and air pollution control, recycling, waste disposal, and public health issues. They are concerned with land protection and reclamation, industrial & hazardous waste containment and treatment, and municipal solid waste management, including the recycling of materials and energy recovery. They conduct hazardous-waste management studies, and help develop regulations for environmental protection. They conduct research on the environmental impact of proposed infrastructure and resource development projects, analyze scientific data, and perform quality-control checks. Many Environmental Engineering Technologists work as consultants, helping their clients to comply with regulations and to clean up hazardous sites.

The college offers a two year Co-operative education diploma program in Environmental Engineering Technology. The co-operative education component affords graduates the opportunity to combine practical work experience with academic learning.

Upon completion of this program graduates may choose to further their education by completing a bachelor degree in technology or engineering at one of several institutions that have articulation agreements with College of the North Atlantic. Graduates completing this program are automatically eligible for membership in the Association of Engineering Technicians and Technologists of Newfoundland and Labrador and Labrador (AETTNL), as well as any similar association in Canada.

OBJECTIVES

As an Environmental Engineering Technologist, the graduate will have the knowledge and skill that will allow him/her to:

1. Perform and interpret environmental procedures for air and water pollution control, and hazardous waste management.
2. Apply basic principles of science and engineering to environmental processes.
3. Select, evaluate, operate, calibrate, test, troubleshoot and maintain instrumentation common to the discipline.
4. Plan, design and implement environmental impact, assessment and remediation programs.
5. Demonstrate the methods of recognition, evaluation and control of hazards to people, facilities, equipment and the environment.
6. Collect representative environmental samples, perform routine and specialized tests and interpret results, using current and relevant tools.
7. Carry out work responsibilities adhering to the standards of professional conduct and principles of professional ethics.
8. Contribute to the development, implementation and maintenance of environmental management systems.
9. Apply the knowledge, techniques, skills, and modern tools of the discipline to broadly-defined environmental engineering technology activities.
10. Establish and maintain a safe work environment by following and enforcing environmental and safety standards and adhering to established legislation, practices, and procedures.

CURRICULUM

General education consisting of Project Management Skills (theoretical and applied), Communication Skills (oral and written), Mathematics, Chemistry, Biology, Soils, Environmental Law, Environmental Sustainability and Occupational Health and Safety.

Specific education in various aspects (theory and principles) of the Environmental Engineering discipline including Environmental Sampling, Industrial Hygiene, Air and Water Pollution Control, Environmental Engineering, Geographic Information Systems (GIS), Environmental Processes and Auditing, and Environmental Impact, Assessment and Remediation.

Practical education in various aspects of Environmental Engineering applications including Health Safety and Environmental (HSE) Audits, Environmental Sampling, Environmental Analysis and Environmental Assessment procedures.

Work exposure consisting of field experience, gained from a compensated work terms, in the field of HSE and Environmental Engineering.

Graduates are able to enter the work force as highly skilled employees with the capability to manage environmental and municipal infrastructure projects and to analyze and remediate urban environments.

CAREER OPPORTUNITIES

Graduates are prepared to take a proactive approach to all aspect of Environmental Engineering Technology and Occupational Health and Safety management. They may find employment in a wide range of environmental careers, such as:

Environmental Consultants, Watershed Specialists, Environmental Engineering Technologists, Environmental Protection Officers, Groundwater Specialists, Industrial and Municipal Water/Wastewater Plant Operators, Landfill Site Technologist, Water Quality Specialists, Environmental Basement Supervisor, Environmental Auditor, Industrial Hygienist, HSE advisor, Safety Coordinators, and Occupational Health and Safety Officers. Potential employment opportunities include health care, construction, waste management, oil and gas, pulp and paper, mining, manufacturing, government, and engineering consulting firms.

PROGRAM TRANSFERABILITY

Graduates of the Environmental Engineering Technology (Co-op) program who wish to pursue additional post-secondary studies can apply for entry with advanced standing at a number of Canadian Universities that the College has established credit transfer agreements with. Please refer to the Department of Advanced Education and Skills transfer guide, or contact your intended university or college.

Transfer Agreements:

- University of New Brunswick - Fredericton, NB

CERTIFICATIONS

In addition to the formal courses listed in the program of studies, students in the Environmental Engineering Technology (Co-op) program are required to obtain the following certificates of completion prior to the work term in Semester 6:

- Standard First Aid/Heart Start
- Workplace Hazardous Materials and Information Systems (WHMIS)
- Transportation of Dangerous Goods (TDG)
- Powerline Hazards Awareness
- OHS/Back Injury Prevention
- Pleasure Craft Operator

***Students should be aware that additional fees may apply to external certifications.**

Students will also be required to complete a number of non-credit co-op education seminars throughout the first year of the program to prepare for their co-op work placement.

ENTRANCE REQUIREMENTS

Eligibility for admission to the Environmental Engineering Technology (Co-op) program requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation Certificate with a 60% overall average in the following (or equivalent):

i. English (2 credits) (minimum 60%) from: 3201

ii. Mathematics (4 credits) chosen from:

Advanced: 2200, 3200 (50% minimum in each course)

Academic: 2201 (50% minimum), 3201 (60% minimum)

Note: Students who received a combined average of 70% in high school Academic Mathematics 2201 and 3201, or a pass in both high school

Advanced Mathematics 2200 and 3200 can be exempted from Math 1700. Students must apply for the exemption.

iii. Science (4 credits) two of which must be chosen from:

Biology: 3201

Physics: 3204

Chemistry: 3202

Earth Systems: 3209

Note: The remaining two Science credits to be chosen from the highest Science mark in level 1, 2 or 3.

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with the following courses:

i. Math MA1040, MA1041

ii. Two Science courses chosen from one of the following three combinations:

a. Introductory Biology: BL1020, BL1021

b. Introductory Chemistry: CH1030, CH1031

c. Introductory Physics: PH1050, PH1051

Note: It is recommended that CAS learners who intend to enroll in the Environmental Engineering Technology (Co-op) Diploma program complete both of the Introductory Chemistry courses and both of the Introductory Biology courses.

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with Degree and Technical Profile including the following courses (or equivalent):

i. English 3101A, 3101B, 3101C or 3102A, 3102B, 3102C

ii. Mathematics 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C

iii. Science from one of the following sections:

- a. Biology 1101, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C
- b. Chemistry 1102, 2102A, 2102B, 2102C, 3102A, 3102B, 3102C
- c. Physics 1104, 2104A, 2104B, 2104C, 3104A, 3104B, 3104C

Applicants with Adult Basic Education (Level III) Graduation with a different Profile may be eligible for admission to the program provided the appropriate selection of courses including those outlined above have been completed.

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, are 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

SPECIAL REQUIREMENTS

Because of the extensive field and laboratory exposure incorporated into this program, students will be required to obtain specialized clothing and equipment that includes a lab coat, safety glasses, graphics calculator, compass, CSA Safety Boots, CSA hardhat, rain gear, and other clothing appropriate for outdoor work.

Courses

Semester 1

Code	Title	Cr	Le	La
BL1100	Biology	4	3	2
CM1460	Writing for the Workplace	2	2	0
MA1100	Mathematics	5	4	2
EN1210	Geomatics I (Practical)	1	0	2
CH1120	Chemistry	4	3	2
EN1520	Environmental Sampling Techniques	3	2	2
EN1110	Soil Fundamentals	4	3	2

Semester 2

Code	Title	Cr	Le	La
MA1140	Applied Mathematics	5	4	2
EN2300	Environmental Law	3	3	0
CH1121	Chemistry	4	3	2
EN2321	Occupational Health and Safety	3	2	2
CM2800	Oral / Written Communication Skills	3	3	0
EN3200	Environmental Impact Assessment	3	3	0
MC1850	Spreadsheet Applications	1	0	2

Semester 3

Code	Title	Cr	Le	La
WC1520	Co-op Work Term	5	5	0

Semester 4

Code	Title	Cr	Le	La
CH2715	Analytical Chemistry	4	3	3

EN2545	Water and Waste Water Treatment	4	3	2
EN1601	Environmental Assessment II	4	3	2
PR1420	Capstone Project II	4	3	0

The Course and Lab hours per week are based on a 15-week semester. In intersession, the Course and Lab hours will be adjusted to reflect the shorter semester length. Refer to course outline.

Environmental Engineering Technology - Advanced Diploma

Start Date: May

Credential: Advanced Diploma

Program Length: One Year

School: Engineering Technology

Locations & Delivery Modes:

- Corner Brook - On Campus delivery

This program is currently undergoing a program review, which may result in some courses being changed, removed, and/or re-sequenced.

PROGRAM DESCRIPTION

The Environmental Engineering Technology - Advanced Diploma program recognizes the wide range of science and engineering backgrounds associated with this industry and is structured to accommodate the needs of a diverse range of applicants. The combination of common core topics, management courses, specialty courses, industry-sponsored project and liberal studies courses provides a unique balance of skill sets that prepares candidates for a broad range of career opportunities. While many participants pursue this advanced diploma for the credential, others are seeking professional development to complement their existing professional and university credentials.

This accelerated program allows students who already have a university degree or college diploma to obtain the Environmental Engineering Technology – Advanced Diploma in one year.

The Environmental Engineering Technology - Advanced Diploma program is intended to provide the additional skills and knowledge that engineering and science graduates require to successfully work on environmental assignments such as contaminated sites, water treatment facilities, sustainability management, contaminant hydrogeology, integrated solid waste management, environmental impact assessment, air quality, climate change, resource management, green energy technology projects and health safety and environmental compliance. Environmental engineering technologists are on the front lines of environmental protection. They apply science, ecology and engineering to minimize the adverse impacts of human activity on the natural world. Graduates will have the skills to work in pollution monitoring, environmental audits, environmental management, site assessment and remediation, project management and waste management.

ACCREDITATION

College of the North Atlantic will seek accreditation for this program from Technology Accreditation Canada (TAC) under the mandate of the Canadian Council of Technicians and Technologists.

The college will also seek recognition for graduates including:

1. CCEP (Canadian Certified Environmental Practitioner) and CEPIT (Canadian Environmental Practitioner-in-training) through ECO Canada (Environmental Careers Organization).
2. Certified Environmental Site Assessor (C.E.S.A.) with the Association of Environmental Site Assessors of Canada (AESAC).

Students may also have the opportunity to obtain the certification as a Canadian Registered Safety Professional (CRSP) upon further studies.

OBJECTIVES

Graduates of the Environmental Engineering Technology- Advanced Diploma program, will have the knowledge and skills that will allow him/her to:

1. Perform and interpret environmental procedures for air and water pollution control, and hazardous waste management.
2. Apply basic principles of science and engineering to environmental processes.
3. Select, evaluate, operate, calibrate, test, troubleshoot and maintain instrumentation and analytical equipment common to the discipline.
4. Plan, design and implement environmental impact, assessment and remediation programs.
5. Understand the methods of recognition, evaluation and control of hazards to people, facilities, equipment and the environment.
6. Collect representative environmental samples, perform routine and specialized tests and interpret results, using current and relevant tools
7. Carry out work responsibilities adhering to the standards of professional conduct and principles of professional ethics.
8. Contribute to the development, implementation and maintenance of environmental management systems.
9. An ability to select and apply the knowledge, techniques, skills, and modern tools of the discipline to broadly-defined environmental engineering technology activities.
10. Establish and maintain a safe work environment by following and enforcing environmental and safety standards and adhering to established legislation, practices, and procedures.

CURRICULUM

General education consisting of Project Management Skills (theoretical and applied), Communication Skills (oral and written), Mathematics, Chemistry, Biology, Soils, Environmental Law, Environmental Sustainability and Occupational Health and Safety.

Specific education in various aspects (theory and principles) of the Environmental Engineering discipline including Environmental Sampling, Industrial Hygiene, Air and Water Pollution Control, Environmental Engineering, Geographic Information Systems (GIS), Environmental Processes and Auditing, and Environmental Impact, Assessment and Remediation .

Practical education in various aspects of Environmental Engineering applications including Health Safety and Environmental(HSE) Audits, Environmental Sampling, Environmental Analysis and Environmental Assessment procedures.

Graduates are able to enter the work force as highly skilled employees with the capability to manage environmental and municipal infrastructure projects and to analyze and remediate urban environments.

CAREER OPPORTUNITIES

Graduates are prepared to take a proactive approach to all aspect of Environmental Engineering Technology and occupational health and safety management. They may find employment in a wide range of environmental careers, such as:

Environmental Consultants, Watershed Specialists, Environmental Engineering Technologists, Environmental Protection Officers, Groundwater Specialists, Industrial and Municipal Water/Wastewater Plant Operators, Landfill Site Technologist, Water Quality Specialists, Environmental Assessment Supervisor, Environmental Auditor, Industrial Hygienist, HSE Advisor, Safety Coordinators, and Occupational Health and Safety Officers. Potential employment opportunities include health care, construction, waste management, oil and gas, pulp and paper, mining, manufacturing, government, and engineering consulting firms.

PROGRAM TRANSFERABILITY

Graduates of the Environmental Engineering Technology Advanced Diploma program who wish to pursue additional post-secondary studies can apply for entry with advanced standing at a number of Canadian Universities that the College has established credit transfer agreements with. Please refer to the Department of Advanced Education and Skills transfer guide, or contact your intended university or college.

Transfer Agreements:

- University of New Brunswick - Fredericton, NB

CERTIFICATIONS

In addition to the formal courses listed in the program of studies, learners in the Environmental Engineering Technology Advanced Diploma program are required to obtain a certificate of completion of Standard First Aid & CPR/AED, Workplace Hazardous Materials and Information Systems (WHMIS), Transportation of Dangerous Goods (TDG), Powerline Hazards Awareness, Back Injury Prevention, and Pleasure Craft Operator upon graduation.

Note: Students should be aware that additional fees and expenses apply for some of the certifications, field trips, and tours throughout the program.

ENTRANCE REQUIREMENTS

Eligibility for admission to the Environmental Engineering Technology – Advanced Diploma program requires the applicant to have a university degree in science courses to include Calculus, Statistics, Chemistry and Biology from an institution recognized by the College of the North Atlantic (OR a combination of other post-secondary and industry experience acceptable to the college as an entrance requirement).

SPECIAL REQUIREMENTS

Because of the extensive field and laboratory exposure incorporated into this program, students will be required to obtain specialized clothing and equipment that includes a lab coat, safety glasses, graphics calculator, compass, CSA Safety Boots, CSA hard hat, rain gear, and other clothing appropriate for outdoor work.

Courses

Semester 1 Intersession

The Course and Lab hours per week are based on a 15 week semester. In intersession, the Course and Lab hours will be adjusted to reflect the shorter semester length.

Geomatics/Surveying Engineering Technology (Co-op)

Start Date: September

Credential: Diploma

Program Length: Three Years

School: Engineering Technology

Locations & Delivery Modes:

- Ridge Road - On Campus delivery

This program is currently undergoing a program review, which may result in some courses being changed, removed, and/or re-sequenced.

PROGRAM DESCRIPTION

Geomatics is a comprehensive discipline that uses arts, science, and technology to gather, store, process, model, analyze, and deliver spatially referenced or location information. It encompasses the fields of geodesy, Global Navigation Satellite Systems (GNSS), land surveying, hydrography, mapping, remote sensing (often called earth observation), photogrammetry, and Geographic Information Systems (GIS). Mainstream technologies, such as Google Earth, smartphones, 3D movies, and self-driving cars, are all based on geomatics technologies.

The Geomatics/Surveying Engineering Technology (Co-op) program prepares students for successful careers in their chosen branch of geomatics. Using state-of-the-art equipment and software, students acquire the skills and knowledge to excel in an ever-advancing industry.

Graduates of the program will be able to apply their skills and knowledge to any number of unique projects, including combating climate change, urban planning, constructing pipelines, operating and troubleshooting navigation systems, investigating lost property boundaries, seafloor structure installation and commissioning, and preserving tangible and intangible cultural heritage, to name just a few.

The Geomatics/Surveying Engineering Technology (Co-op) program boasts nearly a 100 percent employment rate, with graduates working all over the world and receiving competitive starting salaries ranging from \$40,000 up to \$100,000 annually, depending on the field and geographical location of employment. Recent graduates report immediate and sustained employment within the geomatics field.

With rapid advancements in technology from location-based mobile devices, data capture with drones or Remotely Piloted Aircraft Systems (RPAS), cloud computing, augmented and virtual reality, and 3D modelling for construction, preservation, and renovations, the need for geomatics professionals is increasing at an accelerated pace.

CAREER OPPORTUNITIES

The diverse subject matter of geomatics allows graduates of the Geomatics/Surveying Engineering Technology (Co-op) program to obtain jobs in a number of different areas, including:

- Land Surveying and Cadastral Mapping
- Municipal Design
- Construction Engineering
- Ocean Mapping and Marine Construction
- Marine Seismic Survey
- Infrastructure and Resource Management
- Utilities Management and Mapping
- Environmental Monitoring
- Oil and Gas Development
- Mining Surveying and Mapping
- Cultural Preservation

Graduates of the program may also find themselves:

- using Remotely Piloted Aircraft Systems (RPAS) and Global Navigation Satellite Systems (GNSS) for topographic mapping
- providing technical support for spatial data collection and integration for infrastructure management
- travelling the globe providing technical support
- producing 3D models
- using Geographic Information Systems (GIS) and remote sensing to provide advice on green mining projects
- providing offshore navigation and positioning for the installation of marine structures and the completion of marine seismic surveys
- conducting boundary retracement surveys for the production of legal land survey plans

Graduates with two years of progressive work experience may be eligible to receive the designation of Professional Technologist (P. Tech) upon completion of a Professional Practice and Ethics Exam.

Graduates who have obtained a certificate of completion from the Canadian Board of Examiners for Professional Surveyors (CBEPS) may become members of provincial survey associations, such as the Association of Newfoundland Land Surveyors (ANLS), and begin their training to become professional land surveyors. They may also become student members of the Association of Canada Lands Surveyors (ACLS) and members of Professional Surveyors Canada (PSC).

SKILL SETS ACQUIRED

Graduates of the Geomatics/Surveying Engineering Technology (Co-op) program will have employable skills in:

- Land Surveying
- Construction Surveying
- Geodetic Surveying
- Hydrographic Surveying
- Topographic Mapping
- Remote Sensing
- Photogrammetry
- Geographic Information Systems (GIS)
- Global Navigation Satellite Systems (GNSS)
- Robotic Total Station Applications
- Terrestrial and Mobile 3D Laser Scanning
- Remotely Piloted Aircraft Systems (RPAS)

ACCREDITATION

This program is accredited by Technology Accreditation Canada under the mandate of the Canadian Council of Technicians and Technologists.

The academic credentials of graduates of accredited technology programs are recognized internationally by the signatories of the Sydney Accord. This provides graduates of the program with both national and international mobility for work and/or study.

The Geomatics/Surveying Engineering Technology (Co-op) program also receives several specific exam exemptions from the Canadian Board of Examiners for Professional Surveyors (CBEPS), which establishes, assesses, and certifies the academic qualifications of individuals who apply to become professional land surveyors and/or geomatics professionals in Canada.

Graduates of the Geomatics/Surveying Engineering Technology (Co-op) program:

- are automatically eligible for membership in the Association of Engineering Technicians and Technologists of Newfoundland and Labrador (AETTNL), as well as any similar association in Canada
- are eligible to further their education by completing a Bachelor of Technology (B. Tech) at Memorial University, which has an articulation agreement with the College of the North Atlantic
- can further their careers in geomatics by attending the University of New Brunswick, which awards graduates of the Geomatics/Surveying Engineering Technology (Co-op) program a limited number of credits toward a

Bachelor of Science in Engineering (BScE) in Geomatics Engineering

OBJECTIVES

Graduates of the Geomatics/Surveying Engineering Technology (Co-op) program will be able to:

1. Assemble, manage, collect, process, and interpret geomatics project data.
2. Design and establish horizontal and vertical survey networks, including error analysis and adjustments.
3. Analyze, translate, and present processed geomatics data.
4. Work in teams to plan and monitor various parts of geomatics projects.
5. Evaluate and apply geomatics equipment and techniques to complete various geomatics projects.
6. Identify and analyze physical features using various remote sensing techniques.
7. Perform various engineering surveys for design, construction, and layout.
8. Interpret, process, and analyze geomatics data to produce digital plans, drawings, and reports.
9. Correctly apply principles of reference systems and reference frames, time systems, and earth properties when performing geodetic computations and surveys.
10. Use aerial photogrammetry to produce various photogrammetric products.

CURRICULUM

General education consisting of Communications (oral or written), Mathematics, Physics, Chemistry, Electrotechnology, Computers, and Engineering Graphics.

Specific education in all aspects of Geomatics.

Practical education employing extensive field training to provide experience with instrumentation and software, through Surveying Camps and practical lab sessions.

Work exposure consisting of field experience, gained from compensated work terms, in the field of geomatics/surveying.

HANDS-ON LEARNING

The Geomatics/Surveying Engineering Technology (Co-op) program provides students with opportunities for hands-on learning through the following:

- course laboratories
- two work terms
- two field camps

CERTIFICATIONS

In addition to the formal courses listed in the program of studies, students in the Geomatics/Surveying Engineering Technology (Co-op) program are required to obtain a certificate of completion, valid upon graduation, for the following:

- Standard First Aid/Heart Start
- Workplace Hazardous Materials Information System (WHMIS)

Additionally, students may have the option of obtaining the following certificate (when offered):

- Small Remotely Piloted Aircraft Systems (RPAS), Visual Line-of-Sight (VLOS) Advanced Operations Certificate

Students should be aware that additional fees may apply for field camp activities as well as any external certifications required throughout the program.

ENTRANCE REQUIREMENTS

Eligibility for admission to an Engineering Technology program requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation Certificate with a 60% overall average in the following (or equivalent):

i. English (2 credits) (minimum 60%) from: 3201

ii. Mathematics (4 credits) chosen from:

Advanced: 2200, 3200 (50% minimum in each course)

Academic: 2201 (50% minimum), 3201 (60% minimum)

Note: Students who received a combined average of 70% in high school Academic Mathematics 2201 and 3201, or a pass in both high school

Advanced Mathematics 2200 and 3200 can be exempted from Math 1700. Students must apply for the exemption.

iii. Science (4 credits) two of which must be selected from:

Biology: 3201

Physics: 3204

Chemistry: 3202

Earth Systems: 3209

Note: The remaining two Science credits to be chosen from the highest Science mark in level 1, 2 or 3.

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with the following courses:

i. Math (60% MINIMUM) MA1040, MA1041

ii. Two Science courses chosen from one of the following three combinations:

a. Introductory Biology: BL1020, BL1021

b. Introductory Chemistry: CH1030, CH1031

c. Introductory Physics: PH1050, PH1051

Note: It is strongly recommended that CAS students who intend to enroll in Engineering Technology programs complete both of the Chemistry courses and both of the Physics courses.

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with Degree and Technical Profile including the following courses (or equivalent):

i. English (60% minimum) 3101A, 3101B, 3101C or 3102A, 3102B, 3102C

ii. Mathematics (60% minimum) 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C

iii. Science from one of the following sections:

a. Biology 1101, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C

b. Chemistry 1102, 2102A, 2102B, 2102C, 3102A, 3102B, 3102C

c. Physics 1104, 2104A, 2104B, 2104C, 3104A, 3104B, 3104C

Applicants with Adult Basic Education (Level III) Graduation with a different Profile may be eligible for admission to the program provided the appropriate selection of courses including those outlined above have been completed.

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, are 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

Instrumentation and Controls Engineering Technology

Start Date: September

Credential: Diploma

Program Length: Three Years

School: Engineering Technology

Locations & Delivery Modes:

- Ridge Road - On Campus delivery

This program is currently undergoing a program review, which may result in some courses being changed, removed, and/or re-sequenced.

PROGRAM DESCRIPTION

The International Society of Automation (ISA) defines instrumentation as "the art and science of measurement and control". It involves using and/or working with instruments used to measure, record, and control process variables (such as level, flow, temperature, and pressure). Complex process control and measurement systems are found in the oil and gas industries, chemical processing industry, food processing operations, power generation, and the pulp and paper industry. Control systems are becoming increasingly used in automating industrial processes to improve productivity, conserve energy, and reduce pollution. This has created a strong demand for trained instrumentation professionals. As our provincial industrial sector grows, instrumentation and controls continue to be an extremely important field of technology.

Graduates completing this program are automatically eligible for membership in the Association of Engineering Technicians and Technologists of Newfoundland and Labrador (AETTNL), as well as any similar association in Canada.

Upon completion of this program graduates may choose to further their education by completing a bachelor degree in technology or engineering at one of several institutions that have articulation agreements with College of the North Atlantic.

ACCREDITATION

This program is accredited by the Canadian Technology Accreditation Board under the mandate of the Canadian Council of Technicians and Technologists.

The academic credentials of graduates of accredited technology programs are recognized internationally by the signatories of the Sydney Accord.

Note: This program may not be suitable for applicants who do not have normal colour perception.

OBJECTIVES

As engineering technologists, graduates of this program will have the knowledge and skills that will allow them to:

1. Design, install, troubleshoot and maintain process automation field and control room devices and systems such as distributed control systems (DCS), programmable logic controllers (PLC), and emergency shutdown systems.
2. Design and program control system interfaces, human machine interfaces (HMI) and graphical interfaces.
3. Use basic engineering principles and knowledge of industrial control systems to help design the control and safety systems for an industrial process.
4. Apply principles of process control to analyze the performance of industrial processes.
5. Apply concepts of measurement and sensor selection to specify, install, configure, calibrate, troubleshoot, and maintain various process instruments commonly used in industry, including electronic transmitters, pneumatic

- devices, and control valves.
6. Maintain, calibrate and troubleshoot various analytical instruments and analyzer sampling systems found in industrial process.
 7. Demonstrate an understanding of industry standards, best practices, and workplace procedures related to safety and professionalism.
 8. Prepare technical reports and presentations for effective communications in the workplace.

CURRICULUM

General education consisting of Communication Skills (oral and written), Mathematics, Physics, Chemistry, Electrotechnology, Engineering Graphics, and Technology Awareness.

Specific education focuses on various aspects of process measurement and control, including process control system design incorporating programmable control systems (PLC / DCS / ESD), human machine interfaces (HMI), and machine control and condition monitoring. Specific emphasis is also placed on industrial process analyzers and analyzer sampling systems.

Practical education through curriculum integrated labs employing industrial equipment, techniques and practices relating to the installation, operation and maintenance of transducers, transmitters, measurement and control instruments, and microprocessor-based instrumentation.

CAREER OPPORTUNITIES

Enrolment in the Instrumentation Controls Engineering Technology program results in making a very multifaceted career choice. It prepares graduating students for opportunities in employment locally and internationally in industries such as oil and gas, chemical processing, pulp and paper, power generation, food processing, and manufacturing. Typical positions for a graduate are instrumentation technologist, technical sales/service representative, consultant, plant maintenance person, testing & commissioning technologist, instrument designer, or control systems technologist.

Graduates with two years of progressive work experience may be eligible to receive the designation of Professional Technologist (P. Tech) upon completion of a Professional Practice and Ethics Exam.

CERTIFICATIONS

In addition to the formal courses listed in the program of studies, students in the Instrumentation and Controls Engineering Technology program are required to obtain the following external certifications throughout the program:

- Workplace Hazardous Materials Information System (WHMIS)
- Standard First Aid/Heart Start

***Students should be aware that additional fees may apply to external certifications.**

Graduates of the program may be eligible to receive a "Hazardous Areas Training Certificate." This certification is industry recognized and is designed for personnel carrying out installations, inspection and maintenance of electrical apparatus in potentially hazardous explosive areas in the onshore and offshore oil and gas industries.

ENTRANCE REQUIREMENTS

Eligibility for admission to an Engineering Technology program requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation Certificate with a 60% overall average in the following (or equivalent):

- i. English (2 credits) (minimum 60%) from: 3201
- ii. Mathematics (4 credits) chosen from:
Advanced: 2200, 3200 (50% minimum in each course)
Academic: 2201 (50% minimum), 3201 (60% minimum)

Note: Students who received a combined average of 70% in high school Academic Mathematics 2201 and 3201, or a

pass in both high school

Advanced Mathematics 2200 and 3200 can be exempted from Math 1700. Students must apply for the exemption.

iii. Science (4 credits) two of which must be selected from:

Biology: 3201

Physics: 3204

Chemistry: 3202

Earth Systems: 3209

Note: The remaining two Science credits to be chosen from the highest Science mark in level 1, 2 or 3.

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with the following courses:

i. Math (60% MINIMUM) MA1040, MA1041

ii. Two Science courses chosen from one of the following three combinations:

a. Introductory Biology: BL1020, BL1021

b. Introductory Chemistry: CH1030, CH1031

c. Introductory Physics: PH1050, PH1051

Note: It is strongly recommended that CAS students who intend to enroll in Engineering Technology programs complete both of the Chemistry courses and both of the Physics courses.

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with Degree and Technical Profile including the following courses (or equivalent):

i. English (60% minimum) 3101A, 3101B, 3101C or 3102A, 3102B, 3102C

ii. Mathematics (60% minimum) 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C

iii. Science from one of the following sections:

a. Biology 1101, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C

b. Chemistry 1102, 2102A, 2102B, 2102C, 3102A, 3102B, 3102C

c. Physics 1104, 2104A, 2104B, 2104C, 3104A, 3104B, 3104C

Applicants with Adult Basic Education (Level III) Graduation with a different Profile may be eligible for admission to the program provided the appropriate selection of courses including those outlined above have been completed.

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, are 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

Courses

Semester 1 and 2

Refer to Engineering Technology (First Year)

Semester 3 (Intersession)

Code	Title	Cr	Le	La
AE1265	Analog Electronics	3	2	2
CI1313	Fabrication Techniques/Network Cabling	3	2	3
CI1360	Basic Process Automation	2	1	2
ET2100	Electrotechnology	3	2	2

The Course and Lab hours per week are based on a 15 week semester. In intersession, the Course and Lab hours will be adjusted to reflect the shorter semester length. Refer to course outline.

Semester 4 (Fall)

Code	Title	Cr	Le	La
CR1107	Network Fundamentals	4	3	3
CI2110	Pressure and Level Measurement and Control	4	3	3
DP1110	Digital Systems I(Logic)	4	3	2
MA2100	Mathematics	5	5	0
MP2170	AC Circuits and Machines	4	3	3

Semester 5 (Winter)

Code	Title	Cr	Le	La
CE2810	Industrial Communication Systems	4	3	2
CI2230	Flow and Temperature Measurement and Control	4	3	2
DP2435	Digital Systems II	4	3	2
DP3110	PLC	4	3	3
DR2350	Engineering Graphics for Instrumentation	2	1	2
MP3170	Industrial Motor Controls	4	3	2

Semester 6 (Intersession)

Code	Title	Cr	Le	La
CE2940	HMI & SCADA	4	3	2
CI2120	Final Control Elements and Instrument Air Systems	3	2	2
PE2730	Industrial Instrumentation Practices	2	1	3

The Course and Lab hours per week are based on a 15 week semester. In intersession, the Course and Lab hours will be adjusted to reflect the shorter semester length. Refer to course outline.

Semester 7 (Fall)

Code	Title	Cr	Le	La
CI1520	Process Analyzers I	4	3	2
CI2310	Advanced Control Strategies	4	3	3
CI3860	DCS	4	3	3
CM2800	Oral / Written Communication Skills	3	3	0
PR2740	Capstone Project I (Seminar)	*P/F	1	0
PR3150	Project Management and Financial Analysis	4	4	0

**The credit hour from PR2740 Capstone Project I (Seminar) in Semester 7 is allotted to PR2741 Capstone Project II in Semester 8.*

Semester 8 (Winter)

Code	Title	Cr	Le	La
FM3100	Fluid Power	3	3	1
CI3120	Safety Shutdown & Machine Monitoring Systems	4	3	2
CI3822	Process Analyzers II	4	3	3
PE2240	Hazardous Areas	3	2	2
PR2741	Capstone Project II	4	3	0

Management Systems Engineering Technology (Co-op)

Start Date: September

Credential: Diploma

Program Length: Three Years

School: Engineering Technology

Locations & Delivery Modes:

- Ridge Road - On Campus delivery

This program is currently undergoing a program review, which may result in some courses being changed, removed, and/or re-sequenced.

PROGRAM DESCRIPTION

Management Systems Engineering Technologists are the link between engineering and business. Relying on strong technical ability, good business judgment, and superior people skills, Management Systems Engineering Technologists improve profitability, productivity, quality and safety in the production and service sectors. This unique combination of skills makes graduates attractive to employers in a wide variety of industries including oil and gas, energy, mining, manufacturing, food processing, fabrication, construction, government, consulting, and health care.

ACCREDITATION

This program is accredited by the Canadian Technology Accreditation Board under the mandate of the Canadian Council of Technicians and Technologists.

Graduates completing this program are automatically eligible to apply for membership in the Association of Engineering Technicians and Technologists of Newfoundland and Labrador (AETTNL), as well as any similar association in Canada.

Upon completion of this program graduates may choose to further their education by completing a bachelor degree in technology or engineering at one of several institutions that have articulation agreements with College of the North Atlantic.

This program is also a CEWIL (Co-operative Education and Work-integrated Learning) accredited program.

OBJECTIVES

As a management systems engineering technologist, the graduate will have the knowledge and skill that will allow him/her to:

1. Analyze engineering and business processes, using industrial engineering principles, to improve productivity.
2. Optimize process designs that are both safe and productive while ensuring quality standards are met at minimal cost.
3. Plan and control projects using project and cost management techniques and superior documentation and communication skills.
4. Employ problem solving and management strategies that are fundamental to success in various industry and business settings.
5. Create quality assurance / quality control procedures, in an industrial environment, to improve the effectiveness of the business.
6. Formulate efficiency improvement plans using lean manufacturing techniques.

CURRICULUM

General education consisting of Communication Skills, Mathematics, Physics, Chemistry, Electrotechnology, and Engineering Graphics (CAD).

Specific education in engineering technology consisting of computer based analysis and design, materials science, machine design, business management, project management and control, and supply chain management.

Practical education employing labs and shops focused on management systems engineering technology such as ergonomics, work measurement, plant layout, facility planning, production planning, and computer integrated manufacturing.

Work exposure consisting of field experience, gained from compensated work terms, in the field of industrial engineering.

CAREER OPPORTUNITIES

Graduates of this program may obtain employment in a wide variety of industries. Previous graduates have been successful in obtaining employment with oil and gas, energy, servicing, aerospace, mining, ship building, manufacturing and health services industries.

Graduates with two years of progressive work experience may be eligible to receive the designation of Professional Technologist (P. Tech) upon completion of a Professional Practice and Ethics Exam.

CERTIFICATIONS

In addition to the formal courses listed in the program of studies, students in the Management Systems Engineering Technology (Co-op) program are required to obtain the following certifications of completion over their three-year period of study:

- Standard First Aid/Heart Start
- WHMIS/OHS

***Students should be aware that additional fees may apply to external certifications.**

ENTRANCE REQUIREMENTS

Eligibility for admission to an Engineering Technology program requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation Certificate with a 60% overall average in the following (or equivalent):

i. English (2 credits) (minimum 60%) from: 3201

ii. Mathematics (4 credits) chosen from:

Advanced: 2200, 3200 (50% minimum in each course)

Academic: 2201 (50% minimum), 3201 (60% minimum)

Note: Students who received a combined average of 70% in high school Academic Mathematics 2201 and 3201, or a pass in both high school

Advanced Mathematics 2200 and 3200 can be exempted from Math 1700. Students must apply for the exemption.

iii. Science (4 credits) two of which must be selected from:

Biology: 3201

Physics: 3204

Chemistry: 3202

Earth Systems: 3209

Note: The remaining two Science credits to be chosen from the highest Science mark in level 1, 2 or 3.

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with the following courses:

i. Math (60% MINIMUM) MA1040, MA1041

ii. Two Science courses chosen from one of the following three combinations:

a. Introductory Biology: BL1020, BL1021

b. Introductory Chemistry: CH1030, CH1031

c. Introductory Physics: PH1050, PH1051

Note: It is strongly recommended that CAS students who intend to enroll in Engineering Technology programs

complete both of the Chemistry courses and both of the Physics courses.

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with Degree and Technical Profile including the following courses (or equivalent):

- i. English (60% minimum) 3101A, 3101B, 3101C or 3102A, 3102B, 3102C
- ii. Mathematics (60% minimum) 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C
- iii. Science from one of the following sections:
 - a. Biology 1101, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C
 - b. Chemistry 1102, 2102A, 2102B, 2102C, 3102A, 3102B, 3102C
 - c. Physics 1104, 2104A, 2104B, 2104C, 3104A, 3104B, 3104C

Applicants with Adult Basic Education (Level III) Graduation with a different Profile may be eligible for admission to the program provided the appropriate selection of courses including those outlined above have been completed.

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, must be 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

Courses

Mechanical Engineering Technology

Start Date: September

Credential: Diploma

Program Length: Three Years

School: Engineering Technology

Locations & Delivery Modes:

- Ridge Road - On Campus delivery

This program is currently undergoing a program review, which may result in some courses being changed, removed, and/or re-sequenced.

PROGRAM DESCRIPTION

Mechanical Engineering Technologists develop a diverse technical background, good "hands-on" skills, and excellent people skills. Students will be engaging in emerging trends and the latest innovations in new technologies, building design and building operations. Students will be immersed in Mechatronics, Technical Modeling, Building Operations, Mechanical Building Systems and Machine Design.

These attributes make them well suited to employment in a wide variety of industries in both field and management related roles.

Graduates completing this program are automatically eligible for membership in the Association of Engineering Technicians and Technologists of Newfoundland and Labrador (AETTNL), as well as any similar association in Canada.

Upon completion of this program, graduates may choose to further their education by completing a bachelor degree in technology or engineering at one of several institutions that have articulation agreements with College of the North Atlantic.

ACCREDITATION

This program is accredited by Technology Accreditation Canada under the mandate of the Canadian Council of Technicians and Technologists.

The academic credentials of graduates of accredited technology programs are recognized internationally by the signatories of the Sydney Accord. This provides graduates of the program with both national and international mobility for work and/or study.

OBJECTIVES

Upon successful completion of the Mechanical Engineering Technology program, graduates will have the knowledge and skill that will allow him/her to:

1. Apply fundamental principles for machine design and operation.
2. Create mechanical working drawings and computer based models of mechanical systems using AutoCAD and related engineering analysis software including REVIT.
3. Assist in the design, installation, implementation, operation, maintenance, and management of power generation systems, Heating Ventilation and Air Conditioning (HVAC) systems, and general mechanical support systems which are required for petroleum production systems, petroleum refineries, processing plants, office buildings and residences.
4. Design and create components using vacuum forming, 3D printing, injection molding and laser cutting processes.
5. Program and perform maintenance on robotics for automation applications.

CURRICULUM

General education consisting of Project Management Skills (theoretical and applied), Communication Skills (oral and written), Mathematics, Physics, Chemistry, Electrotechnology, Computers, Engineering Graphics, Technology Awareness, and Student Success.

Specific education consisting of discipline-specific courses such as Mechanics, Strengths, Thermodynamics, , Machine Design, Hydraulics and Pneumatics, Economics, Engineering Management, Quality Assurance, Maintenance, Machining Process Controls and Technological Thesis (Design Project).

Practical education employing labs and shops focused on Engineering Graphics, Materials & Processes, Machine Shop Practices, and Computer Numerical Control (CNC).

CAREER OPPORTUNITIES

The broad base of competencies acquired through this program of study prepares graduates for careers in a wide variety of industries including the petroleum sector, mining, electrical power generation, food processing, manufacturing, and engineering consulting.

Graduates with two years of progressive work experience may be eligible to receive the designation of Professional Technologist (P. Tech) upon completion of a Professional Practice and Ethics Exam.

CERTIFICATIONS

In addition to the formal courses listed in the program of studies, students in the Mechanical Engineering Technology program are required to obtain the following external certifications throughout the program:

- Workplace Hazardous Materials Information System (WHMIS)
- Standard First Aid/Heart Start

***Students should be aware that additional fees may apply to external certifications.**

ENTRANCE REQUIREMENTS

Eligibility for admission to an Engineering Technology program requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation Certificate with a 60% overall average in the following (or equivalent):

i. English (2 credits) (minimum 60%) from: 3201

ii. Mathematics (4 credits) chosen from:

Advanced: 2200, 3200 (50% minimum in each course)

Academic: 2201 (50% minimum), 3201 (60% minimum)

Note: Students who received a combined average of 70% in high school Academic Mathematics 2201 and 3201, or a pass in both high school

Advanced Mathematics 2200 and 3200 can be exempted from Math 1700. Students must apply for the exemption.

iii. Science (4 credits) two of which must be selected from:

Biology: 3201

Physics: 3204

Chemistry: 3202

Earth Systems: 3209

Note: The remaining two Science credits to be chosen from the highest Science mark in level 1, 2 or 3.

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with the following courses:

i. Math (60% MINIMUM) MA1040, MA1041

ii. Two Science courses chosen from one of the following three combinations:

- a. Introductory Biology: BL1020, BL1021
- b. Introductory Chemistry: CH1030, CH1031
- c. Introductory Physics: PH1050, PH1051

Note: It is strongly recommended that CAS students who intend to enroll in Engineering Technology programs complete both of the Chemistry courses and both of the Physics courses.

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with Degree and Technical Profile including the following courses (or equivalent):

- i. English (60% minimum) 3101A, 3101B, 3101C or 3102A, 3102B, 3102C
- ii. Mathematics (60% minimum) 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C
- iii. Science from one of the following sections:
 - a. Biology 1101, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C
 - b. Chemistry 1102, 2102A, 2102B, 2102C, 3102A, 3102B, 3102C
 - c. Physics 1104, 2104A, 2104B, 2104C, 3104A, 3104B, 3104C

Applicants with Adult Basic Education (Level III) Graduation with a different Profile may be eligible for admission to the program provided the appropriate selection of courses including those outlined above have been completed.

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, are 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

Mechanical Engineering Technology (Manufacturing) Co-op

Start Date: September

Credential: Diploma

Program Length: Three Years

School: Engineering Technology

Locations & Delivery Modes:

- Ridge Road - On Campus delivery

This program is currently undergoing a program review, which may result in some courses being changed, removed, and/or re-sequenced.

PROGRAM DESCRIPTION

Mechanical Engineering Technologists, who complete studies focused on manufacturing, are proficient in the specification, implementation, operation, maintenance and supervision of manufacturing systems and personnel. These technologists are prepared to assume the role of decision-maker early in their careers in both the traditional and advanced manufacturing sectors. The knowledge of core mechanical engineering principles, above average problem-solving ability, and superior "hands-on" skills also make these graduates well suited to employment in related industries.

Students in this program utilize the advanced technology resources available through the College's Manufacturing Technology Center (MTC). The MTC is mandated to provide both direct and indirect support to industry through activities such as product and process prototyping.

Graduates completing this program are automatically eligible for membership in the Association of Engineering Technicians and Technologists of Newfoundland and Labrador (AETTNL), as well as any similar association in Canada.

Upon completion of this program graduates may choose to further their education by completing a bachelor degree in technology or engineering at one of several institutions that have articulation agreements with College of the North Atlantic.

ACCREDITATION

This program is accredited by Technology Accreditation Canada under the mandate of the Canadian Council of Technicians and Technologists.

The academic credentials of graduates of accredited technology programs are recognized internationally by the signatories of the Sydney Accord. This provides graduates of the program with both national and international mobility for work and/or study.

OBJECTIVES

Upon the successful completion of the Mechanical Engineering Technology (Manufacturing) Co-op program the graduate will be able to:

1. Utilize Computer Aided Design and Computer Aided Manufacturing (CAD/CAM) software as per industry standards.
2. Design mechanical components/assemblies and create engineering drawings and specifications through the use of 2D and 3D CAD and Modeling software.
3. Develop electro-pneumatic and other automation systems, through hands-on practical experience with programming and operating Computer Numerical Control (CNC) equipment, Robotics, Programmable Logic Controllers (PLC's).

4. Operate Computer Integrated Manufacturing (CIM) systems drawing on the knowledge learned through core-engineering concepts of materials science, strength of materials, and machine design.
5. Apply quality assurance standards and practical quality control techniques in precision measurement.
6. Manage projects, resources and people in a supervisor role through the use of problem solving and related skills.

CURRICULUM

General education consisting of Project Management Skills (theoretical and applied), Communication Skills (oral and written), Mathematics, Physics, Chemistry, Electrotechnology, Computers, Engineering Graphics, Technology Awareness, and Student Success.

Specific education consisting of discipline specific courses such as Mechanics, Strengths of Materials, Materials and Processes, Machine Design, Hydraulics and Pneumatics, Engineering Management, Quality Assurance, and Maintenance.

Practical education employing labs and shops focused on Computer Numerical Control (CNC), Tool Design, and Computer Integrated Manufacturing.

Work exposure consisting of field experience, gained from compensated work terms, in the field of manufacturing.

CAREER OPPORTUNITIES

Career opportunities for graduates of this program exist with consulting firms, manufacturing firms, shipbuilding yards, oil & gas servicing industry, food processing plants, research institutions and government departments.

CERTIFICATIONS

In addition to formal semester courses listed in the program of studies, students in the Mechanical Engineering Technology (Manufacturing) Co-op program are required to obtain a certificate of completion in Standard First Aid/Heart Start and WHMIS, over their three-year period of studies.

***Students should be aware that additional fees may apply to external certifications.**

ENTRANCE REQUIREMENTS

Eligibility for admission to an Engineering Technology program requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation Certificate with a 60% overall average in the following (or equivalent):

i. English (2 credits) minimum 60% from: 3201

ii. Mathematics (4 credits) chosen from:

Advanced: 2200, 3200 (50% minimum in each course)

Academic: 2201 (50% minimum), 3201 (60% minimum)

Note: Students who received a combined average of 70% in high school Academic Mathematics 2201 and 3201, or a pass in both high school

Advanced Mathematics 2200 and 3200 can be exempted from Math 1700. Students must apply for the exemption.

iii. Science (4 credits) two of which must be selected from:

Biology: 3201

Physics: 3204

Chemistry: 3202

Earth Systems: 3209

Note: The remaining two Science credits to be chosen from the highest Science mark in level 1, 2 or 3.

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with the following courses:

i. Math (60% MINIMUM) MA1040, MA1041

ii. Two Science courses chosen from one of the following three combinations:

- a. Introductory Biology: BL1020, BL1021
- b. Introductory Chemistry: CH1030, CH1031
- c. Introductory Physics: PH1050, PH1051

Note: It is strongly recommended that CAS students who intend to enroll in Engineering Technology programs complete both the Chemistry courses and both of the Physics courses.

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with Degree and Technical Profile including the following courses (or equivalent):

- i. English (60% minimum) 3101A, 3101B, 3101C or 3102A, 3102B, 3102C
- ii. Mathematics (60% minimum) 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C
- iii. Science from one of the following sections:
 - a. Biology 1101, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C
 - b. Chemistry 1102, 2102A, 2102B, 2102C, 3102A, 3102B, 3102C
 - c. Physics 1104, 2104A, 2104B, 2104C, 3104A, 3104B, 3104C

Applicants with Adult Basic Education (Level III) Graduation with a different Profile may be eligible for admission to the program provided the appropriate selection of courses including those outlined above have been completed.

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, are 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

ARTICULATION

Graduates of Mechanical Engineering Technology (Manufacturing) Co-op may continue their studies at Memorial University of Newfoundland in the Bachelor of Technology program or may apply to Lakehead University's post diploma Bachelor of Engineering program.

Courses

Semester 1 and 2

Refer to Engineering Technology (First Year)

Semester 3 (Intersession)

Code	Title	Cr	Le	La
CG1500	Work Methods and Measurement	4	3	2
TM1310	Technical Modeling - Mechanical Drawings	2	1	2
SP1200	Machine Shop Practice	1	0	3
TM1320	Technical Modeling - 3D Modeling	2	1	2

The Course and Lab hours per week are based on a 15 week semester. In intersession, the Course and Lab hours will be adjusted to reflect the shorter semester length. Refer to course outline.

Semester 4 (Fall)

Code	Title	Cr	Le	La

Petroleum Engineering Technology (Co-op)

Start Date: September

Credential: Diploma

Program Length: Three Years

School: Engineering Technology

Locations & Delivery Modes:

- Ridge Road - On Campus delivery

PROGRAM DESCRIPTION

The world demand for energy is growing and the oil and gas industry will supply much of this energy for decades to come. The sustained discoveries of oil and gas along the East Coast coupled with continued oil and gas discoveries on the Grand Banks of Newfoundland and Labrador, and in the Arctic Regions, renews Canada's commitment to become self-sufficient in its fossil energy needs. As a result, the industry continues to demand highly skilled engineering technologists to fulfill many roles. The three-year TAC Accredited Petroleum Engineering Technology (Co-op) program is designed to train technologists for lucrative careers in the oil and gas industry, which is supported by the increased interest in sustainable methods of further enhancing science and technology to develop these reservoirs.

ACCREDITATION

This program is accredited by Technology Accreditation Canada under the mandate of the Canadian Council of Technicians and Technologists.

The academic credentials of graduates of accredited technology programs are recognized internationally by the signatories of the Sydney Accord. This provides graduates of the program with both national and international mobility for work and/or study.

OBJECTIVES

As a petroleum engineering technologist, the graduate will have the knowledge and skill that will allow him/her to:

1. Demonstrate the knowledge, skills and attitudes required to participate in finding solutions to sustainable Oil and Gas development.
2. Construct and interpret maps and sections using surface geology, subsurface (drill hole) geology and geophysical data.
3. Interpret topographic maps & profiles, geologic maps & sections, and seismic data to assist in land-based and offshore resource exploration and development.
4. Analyze drill cuttings, drill core, and data from open-hole & cased-hole logging tools in order to evaluate reservoir formations in terms of porosity, permeability, fluid saturation and net pay.
5. Assist in planning, designing, inspecting, supervising, and constructing oil and gas wells.
6. Assist in estimating petroleum reserves and optimizing productivity using petroleum engineering principles.
7. Select, operate, troubleshoot and maintain the equipment associated with the separation of the produced gas/oil/water fluids.

CURRICULUM

General education consisting of Project Management Skills (theoretical and applied), Communication Skills (oral and written), Mathematics, Physics, Chemistry, Electrotechnology, Computers, Engineering Graphics, Technology Awareness, and Student Success.

Specific education consisting of technical courses covering Mechanics, Fluid Mechanics, Thermodynamics, Materials and Processes, Instrumentation and Capstone Project.

Practical education employing labs and shops focused on Drilling, Production, Facilities, Reservoir and Geology.

Work exposure consisting of field experience, gained from a minimum 12 week work term which provides students the opportunity to gain valuable related work experience.

CAREER OPPORTUNITIES

Graduates of this program may obtain employment in all aspects of the petroleum industry. These opportunities include but are not limited to oil and natural gas exploration, production and processing, refining, oil and gas pipeline construction, gas utilities, as well as a variety of related activities associated with refining and transportation.

Graduates with two years of progressive work experience may be eligible to receive the designation of Professional Technologist (P. Tech) upon completion of a Professional Practice and Ethics Exam.

CERTIFICATIONS

Students in Petroleum Engineering Technology (Co-op) program will be required to complete the following safety certifications throughout their three-years of study:

- H2S Awareness
- WHMIS
- Standard First Aid/Heart Start
- Transportation of Dangerous Goods (TDG) - **during the second year of studies.**

***Students should be aware that additional fees may apply to external certifications.**

Note:

Students will also be required to complete a number of non-credit co-op education seminars throughout the program (resume writing, job search skills and interview preparation).

ENTRANCE REQUIREMENTS

Eligibility for admission to an Engineering Technology program requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation Certificate with a 60% overall average in the following (or equivalent):

i. English (2 credits) (minimum 60%) from: 3201

ii. Mathematics (4 credits) chosen from:

Advanced: 2200, 3200 (50% minimum in each course)

Academic: 2201 (50% minimum), 3201 (60% minimum)

Note: Students who received a combined average of 70% in high school Academic Mathematics 2201 and 3201, or a pass in both high school

Advanced Mathematics 2200 and 3200 can be exempted from Math 1700. Students must apply for the exemption.

iii. Science (4 credits) two of which must be selected from:

Biology: 3201

Physics: 3204

Chemistry: 3202

Earth Systems: 3209

Note: The remaining two Science credits to be chosen from the highest Science mark in level 1, 2 or 3.

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with the following courses:

i. Math (60% MINIMUM) MA1040, MA1041

ii. Two Science courses chosen from one of the following three combinations:

a. Introductory Biology: BL1020, BL1021

b. Introductory Chemistry: CH1030, CH1031

c. Introductory Physics: PH1050, PH1051

Note: It is strongly recommended that CAS students who intend to enroll in Engineering Technology programs complete both of the Chemistry courses and both of the Physics courses.

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with Degree and Technical Profile including the following courses (or equivalent):

- i. English (60% minimum) 3101A, 3101B, 3101C or 3102A, 3102B, 3102C
- ii. Mathematics (60% minimum) 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C
- iii. Science from one of the following sections:
 - a. Biology 1101, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C
 - b. Chemistry 1102, 2102A, 2102B, 2102C, 3102A, 3102B, 3102C
 - c. Physics 1104, 2104A, 2104B, 2104C, 3104A, 3104B, 3104C

Applicants with Adult Basic Education (Level III) Graduation with a different Profile may be eligible for admission to the program provided the appropriate selection of courses including those outlined above have been completed.

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, are 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

Courses

Semester 1 (Fall)

Code	Title	Cr	Le	La
CH1120	Chemistry	4	3	2

Advanced Care Paramedicine

Start Date: September

Credential: Post Diploma

Program Length: 4 Semesters

School: Health Sciences

Locations & Delivery Modes:

- Bay St. George - Blended delivery
- Prince Philip Drive - Blended delivery

PROGRAM DESCRIPTION

The provision of emergency medical services (EMS) is a unique and vital community service. Paramedics are highly skilled members of a health care team who function in the realm of EMS, initiating medical treatment for individuals in urgent and non-urgent situations. Based on sound knowledge, paramedics demonstrate rational problem-solving abilities and excellent decision-making skills. This program addresses not only the operational/procedural skills of the advanced care paramedic but also ethical and professional behaviors essential to practice, such as effective communication.

The Advanced Care Paramedicine Program is a four-semester post-diploma program offering training in advanced emergency care to Primary Care Paramedics who are presently practicing in one of the four regional health authorities in the province of Newfoundland and Labrador. Mental/physical fitness and healthy lifestyles are emphasized throughout the program, as paramedics must be fit to perform the requirements of the occupation.

This post-diploma program is designed to allow advancement of practice from the PCP level to the ACP level while allowing students to maintain employment in their respective communities. The program utilizes a blended delivery and part-time structure with a combination of D2L based learning, clinical simulation, and clinical practicum to allow students to meet the requirements for entry to practice at the ACP level in accordance with the National Occupational Competency Profile for Paramedics (NOCP). **Students will be required to attend three, one-week long mandatory practical sessions per semester at specific dates and attend hospital based clinical shifts each semester. Hospital based clinical shifts will be broken down into individual shifts spread throughout the semester (semester 1 - equivalent of one-week hospitality shifts; semester 2 - equivalent of two-weeks of hospitality shifts; and semester 3 - equivalent of three-weeks of hospitality shifts).**

This is a challenging program that provides the student with extensive learning experiences while also allowing currently employed PCPs the opportunity to advance their skills. Graduates of this post-diploma program will be prepared to work competently and skillfully, providing advanced out-of-hospital care in accordance with the national standards for advanced care paramedics.

PROGRAM OBJECTIVES

Upon successful completion of the Advanced Care Paramedicine program, graduates will be able to:

1. Perform advanced skills in respiratory, cardiac, trauma, obstetric care, paediatrics, pharmacology, and medical emergencies.
2. Meet the entry-to-practice competencies and requirements of an Advanced Care Paramedic (ACP) as defined by the National Occupational Competency Profile for Paramedics.
3. Contribute productively as a member of the health care team.
4. Use judgement and critical thinking skills to reach decisions that will best benefit the patient, and work autonomously in their areas of responsibility.
5. Use critical thinking and problem-solving skills that promote logical and independent decision-making in the provision of ACP care.

CLINICAL PLACEMENTS

Clinical placements are a required element of this program and students will be assigned placements at approved training sites. Additional sites may be considered in consultation with program faculty. There is no guarantee that students will receive their preferred placement. All expenses associated with the completion of clinical placement will be the responsibility of the student.

Students require a clear Certificate of Conduct (Criminal Record Check and Vulnerability Sector Check) to be permitted into a clinical placement. Students with an unclear Certificate of Conduct are advised to speak with program faculty at the beginning of the program.

For programs with competitive admissions, clinical placements are not affected by ranking in the competitive admissions process and will be determined under institutional guidelines.

ENTRANCE REQUIREMENTS

Due to the nature of the ACP advanced scope of practice and the critical nature of the professional role, candidates must demonstrate the appropriate proficiency at the PCP level before beginning the ACP program. Eligibility for consideration of admission to the ACP post-diploma program requires the applicant to meet the following criteria:

- Completion of a paramedic diploma or certificate with successful completion of national COPR examination (PCP) or provincial equivalent
- A comprehensive entrance exam covering prerequisite PCP knowledge and skills administered by CNA
- Minimum of one-year experience (1,900 hours) as a Primary Care Paramedic

Additional Entrance Requirements

- Hold and maintain an active license to practice as a PCP in the province of NL for the duration of the program.
- Current Basic Life Support (BLS)
- Valid** Certificate of Conduct, including Criminal Record and Vulnerable Sector Check
- Students will require a clear and current Certificate of Conduct (Criminal Record and Vulnerable Sector Check) prior to clinical practicum. Applicants with a criminal offense listed on their Certificate of Conduct (Criminal Record and Vulnerable Sector Check) may be denied access to clinical placement and may be unable to complete their program.
- Immunization Record providing evidence that the applicant has received the required vaccinations/screening tests. Completing the immunization record will require physician's visits, blood tests, and a TB screening test; detailed instructions are included on the School of Health Sciences Student Information and Program Awareness Form. The applicant is responsible for ensuring that all medical requirements are fulfilled, and the immunization record complete before submission. Certain vaccinations require a series of immunizations over a period; therefore, it is essential to start the process as early as possible. The applicant is also responsible for all associated costs (vaccinations, laboratory testing, physician fees, certificate of conduct fees, etc.).

(See the Additional Information for Health Sciences Applicants (Definitions and Regulations) section of the calendar or under the Admissions Regulations section of our website for details.)

Diagnostic Ultrasonography

Start Date: September

Credential: Diploma

Program Length: Three Years

School: Health Sciences

Locations & Delivery Modes:

- Prince Philip Drive - On Campus delivery

PROGRAM DESCRIPTION

Detection is vital.

Sonography is critical in today's advancing medical field. This investigative method uses high-frequency sound waves to view and record diagnostic images of internal anatomy in real time. And like medical detectives, sonographers use their specialized training to examine the evidence and find clues to anomalies in the human body.

They provide detailed ultrasound images for Radiologists to interpret and report vital information regarding the patient for diagnosis and treatment. Ultrasound has grown to include applications in abdomen, obstetrics, gynecology, vascular and superficial structures.

With the continuously expanding applications of ultrasound in today's technologically advanced society, this makes for an exciting and challenging career. This exact, fascinating health science field has a high demand for graduates of this three-year diploma. There are diverse opportunities for you in this specialized profession, including work in hospital and clinic settings, treatment centres and health care facilities, with equipment manufacturers training others on the applications, and in post-secondary education.

As a frontline detective a typical workday will never be dull, as no two cases are the same. Your national accreditation provides you with portable skills highly sought throughout the country. And with the soaring global growth of this field, it could easily lead to work overseas.

If the distinctive features of this program catch your eye, contact us to investigate your opportunities!

Program Highlights

- Intense training to become an integral part of the healthcare team
- The program is seeking accreditation by Accreditation Canada
- Prepares you to challenge the Sonography Canada certification exam
- Sonography Canada provides portability within Canada

Did you know?

- Ultrasound is sound waves with frequencies higher than the upper audible limit of human hearing.
- Sonographers are medical detectives; they find clues to get the result. The Radiologist only sees what the Sonographer finds!
- There are no risks involved in performing or receiving an ultrasound procedure.
- The global diagnostic ultrasound market is experiencing a boom now until 2028.

The average Canadian salary is CAD 80,000 per year, with the median annual salary of CAD 64,000 per year.

ca.talent.com

OBJECTIVES

Upon successful completion of the Diagnostic Ultrasonography program, graduates will be able to:

1. Utilize academic knowledge as outlined in the Sonography Canada Competency Profile and apply learned knowledge in clinical practice.
2. Apply critical thinking and problem-solving skills that promote competence in the performance of ultrasound

procedures.

3. Communicate effectively and work collaboratively with other members of the health care team to serve patients and employers with the highest degree of competence.
4. Maintain a high level of professional conduct in the performance of all duties.

CURRICULUM

This is a 28-month program that includes a combination of training at CNA and Regional Health Authorities across the province. Graduates of the program are eligible to write the certification examinations set by Sonography Canada and the American Registry of Diagnostic Medical Sonographers (ARDMS). To obtain sufficient practice and confidence, students enrolled in this program must be willing to scan classmates and be willing to be scanned.

PROGRAM TRANSFERABILITY

Graduates may elect to further their studies and obtain a Bachelor of Technology degree from Memorial University of Newfoundland or a Bachelor of Sciences (Post Diploma, Human Science) from Athabasca University.

ACCREDITATION

This program is currently “Registered” for accreditation with Accreditation Canada/EQual. “Registered” status serves as an important demonstration of our commitment to providing quality education in alignment with accreditation and regulatory requirements. “Registered” status is not an accreditation status, nor does it guarantee any eventual accreditation. If you require additional information regarding our “Registered” accreditation status and endeavors and/or any potential implications this may have on your future abilities to practice as a healthcare professional, we encourage you to reach out to the Dean’s office.

CERTIFICATIONS

Students must possess valid Standard First Aid with Basic Life Support (BLS) certification to be eligible for graduation from the College.

CLINICAL PLACEMENTS

Clinical placements are a required element of this program and students will be assigned placements at approved training sites. Additional sites may be considered in consultation with program faculty. There is no guarantee that students will receive their preferred placement. All expenses associated with the completion of clinical placement will be the responsibility of the student.

Students require a clear Certificate of Conduct (Criminal Record Check and Vulnerability Sector Check) to be permitted into a clinical placement. Students with an unclear Certificate of Conduct are advised to speak with program faculty at the beginning of the program.

For programs with competitive admissions, clinical placements are not affected by ranking in the competitive admissions process and will be determined under institutional guidelines.

ENTRANCE REQUIREMENTS

Eligibility for consideration of admission to the Diagnostic Ultrasonography program requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation Certificate with a 60% overall average in the following (or equivalent):

- i. English 3201 or 3202 (minimum 60%)
- ii. Mathematics (4 credits) chosen from:
 - Advanced: 2200, 3200 (50% minimum in each course)
 - Academic: 2201 (50% minimum), 3201 (60% minimum)
- iii. Science (4 credits):
 - Biology: 3201
 - Physics: 3204

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with the following courses:

- i. English (minimum 60%): CM1060, CM1061
- ii. Math (minimum 60%): MA1040, MA1041
- iii. Four Science courses:
 - a. Biology: BL1020, BL1021
 - b. Physics: PH1050, PH1051

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with Degree and Technical Profile (overall 60% average) including the following courses (or equivalent):

- i. English (minimum of 60%) 3101A, 3101B, 3101C or 3102A, 3102B, 3102C
- ii. Mathematics (minimum of 60%) 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C
- iii. Science from the following sections:
 - a. Biology 1101, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C
 - b. Physics 1104, 2104A, 2104B, 2104C, 3104A, 3104B, 3104C

Note: Applicants with Adult Basic Education (Level III) Graduation with a different Profile (and appropriate grades) may be eligible for admission to the program provided the appropriate selection of courses including those outlined above have been completed.

Additional Entrance Requirements

- Completion of the Casper Admissions Exam.
 - The Casper Admissions Exam official score will be used as part of the points-based system to determine ranking in the competitive entry process
 - All applicants are required to complete Casper* Admissions Exam (CSP-10201 – Canadian Professional Health Sciences) as part of their application for the 2023/2024 admissions cycle. To complete Casper, visit [TakeAltus.com](https://takealtus.com).
- Valid** Certificate of Conduct, including Criminal Record and Vulnerable Sector Check.
- Students will require a clear and current Certificate of Conduct (Criminal Record and Vulnerable Sector Check) prior to clinical practicum. Applicants with a criminal offense listed on their Certificate of Conduct (Criminal Record and Vulnerable Sector Check) may be denied access to clinical placement and may be unable to complete their program.
- Immunization Record providing evidence that the applicant has received the required vaccinations/screening tests. Completing the immunization record will require physician's visits, blood tests, and a TB screening test; detailed instructions are included on the School of Health Sciences Student Information and Program Awareness Form. The applicant is responsible for ensuring that all medical requirements are fulfilled, and the immunization record complete before submission. Certain vaccinations require a series of immunizations over a period; therefore, it is essential to start the process as early as possible. The applicant is also responsible for all associated costs (vaccinations, laboratory testing, physician fees, certificate of conduct fees, etc.).
- ESL students only – one of the following:
 - IELTS: minimum overall band score of 7
 - TOEFL Score: minimum score of 94

(See the Additional Information for Health Sciences Applicants ([Definitions and Regulations](#)) section of the calendar or under the Admissions Regulations section of our website for details.)

***Casper.** The Casper test comprises 12 sections of video and written scenarios. Following each scenario, you will be required to answer a set of probing questions under a time contract. The test typically takes between 75-90 minutes to complete. Each response is graded by a different rater, giving a very robust and reliable view of personal and professional characteristics important to our program. No studying is required for Casper, although you may want to familiarize yourself with the test structure at [TakeAltus.com](https://takealtus.com), and ensure you have a quiet environment to take the test. We strongly urge you to take advantage of the 12-section practice test, which will not only immerse you in the test environment but will also ensure you meet the technical requirements to access and complete the test.

Casper test results are valid for one admissions cycle. Applicants who have already taken the test in previous years will therefore be expected to re-take it.

For a more detailed look at the Casper test, please see [this video](#).

**Acceptance of the Certificate of Conduct (Criminal Record and Vulnerable Sector Check) is at the discretion of the Health Authority of which clinical practicum is being sought.

COMPETITIVE ENTRY APPLICATION PROCESS - FALL 2023

Program Start Date September 2023

The competitive admissions process is points-based and includes:

[View the Competitive Entry Application Process for this program](#)

Deadline for receipt of application	March 3rd 2023
Deadline for receipt of ALL supporting documentation*	March 10th 2023
Initial round of acceptances	April 30th 2023

*Documentation received after the deadline **WILL NOT** be considered

****Candidates not accepted for the intake to which they applied must re-apply for admission to future offerings. Applications WILL NOT be kept on file.**

Emergency Medical Responder to Primary Care Paramedicine Program

Start Date: September

Credential: Diploma

Program Length: 9 Semesters

School: Health Sciences

Locations & Delivery Modes:

- Prince Philip Drive - Blended delivery

PROGRAM DESCRIPTION

Provision of emergency medical services (EMS) is a unique and vital community service. Paramedics are highly skilled members of a health care team who function within the discipline of emergency and pre-hospital care. Paramedics initiate medical treatment for individuals in urgent and non-urgent situations. Based on sound knowledge, these practitioners demonstrate rational problem-solving abilities and excellent decision-making skills. This program addresses the operational/procedural skills of primary care paramedics, as well as the ethical and professional behaviours such as effective communication. Mental/physical fitness and healthy lifestyles are emphasized throughout the program, as paramedics must be fit to perform the requirements of the occupation.

The Emergency Medical Responder (EMR) to Primary Care Paramedicine (PCP) program is a 9-semester diploma program offering training to EMRs who are presently practicing in Newfoundland and Labrador. Mental/physical fitness and healthy lifestyles are emphasized throughout the program, as paramedics must be fit to perform the requirements of the occupation.

This part-time blended diploma program is designed to allow advancement of practice from the EMR level to the PCP level while allowing students to maintain employment in their respective communities. The program utilizes a blended delivery and part-time structure with a combination of D2L based learning, laboratory sessions, clinical simulation and clinical practicum to allow students to meet the requirements for entry to practice at the PCP level in accordance with the National Occupational Competency Profile for Paramedics (NOCP). **Students will be required to attend all on campus laboratory sessions offered throughout the semester, the frequency and amount of time required each semester will vary based on course requirements. In addition, there are two full-time clinical placements that are mandatory in the program (Semester 6 for 3 weeks and Semester 9 for 14 weeks).**

This is a challenging program that provides the student with extensive classroom and clinical/practicum experience. Graduates of this program will be prepared to work in a competent and skillful manner providing pre-hospital care in accordance with the national standards for paramedics.

OBJECTIVES

Upon successful completion of this program, graduates will be able to:

1. Demonstrate required skills, knowledge, and abilities, as prescribed by the Paramedic Association of Canada National Occupational Competency Profile with consistency, independence, timeliness, accuracy, and appropriateness.
2. Integrate assessment, diagnostic, and treatment procedures into the holistic management of patients in the out-of-hospital setting.
3. Use critical thinking and problem-solving skills that promote logical and independent decision-making in the provision of paramedic care.
4. Maintain a level of physical and mental health necessary to perform the bona fide occupational requirements.
5. Communicate effectively and work collaboratively with other members of the health care team to serve patients and employers with the highest degree of competence.
6. Reflect professionalism through personal deportment and public interactions.
7. Demonstrate ethical behaviour, empathy and respect for individuals.

CLINICAL PLACEMENTS

Clinical placements are a required element of this program and students will be assigned placements at approved training sites. Additional sites may be considered in consultation with program faculty. There is no guarantee that students will receive their preferred placement. All expenses associated with the completion of clinical placement will be the responsibility of the student.

Students require a clear Certificate of Conduct (Criminal Record Check and Vulnerability Sector Check) to be permitted into a clinical placement. Students with an unclear Certificate of Conduct are advised to speak with program faculty at the beginning of the program.

For programs with competitive admissions, clinical placements are not affected by ranking in the competitive admissions process and will be determined under institutional guidelines.

ENTRANCE REQUIREMENTS

- Completion of an Emergency Medical Responder program
- Current licensure as an Emergency Medical Responder in the province of NL
- Minimum of one-year experience (1,900 hours) as an EMR
- High School Graduation
- Letter of Support from Employer

Additional Entrance Requirements

- Current Basic Life Support (BLS)
- Class 04 Driver's License (minimum)
- Valid* Certificate of Conduct, including Criminal Record and Vulnerable Sector Check
- Students will require a clear and current Certificate of Conduct (Criminal Record and Vulnerable Sector Check) prior to clinical practicum. Applicants with a criminal offense listed on their Certificate of Conduct (Criminal Record and Vulnerable Sector Check) may be denied access to clinical placement and may be unable to complete their program.
- Immunization Record providing evidence that the applicant has received the required vaccinations/screening tests. Completing the immunization record will require physician's visits, blood tests, and a TB screening test; detailed instructions are included on the School of Health Sciences Student Information and Program Awareness Form. The applicant is responsible for ensuring that all medical requirements are fulfilled, and the immunization record complete before submission. Certain vaccinations require a series of immunizations over a period; therefore, it is essential to start the process as early as possible. The applicant is also responsible for all associated costs (vaccinations, laboratory testing, physician fees, certificate of conduct fees, etc.).

*Acceptance of the Certificate of Conduct (Criminal Record) is at the discretion of the organization in which the clinical practicum is being sought.

Medical Laboratory Assistant

Start Date: September

Credential: Certificate

Program Length: One Year

School: Health Sciences

Locations & Delivery Modes:

- Grand Falls-Windsor - On Campus delivery
- Prince Philip Drive - On Campus delivery

PROGRAM DESCRIPTION

Drawing on sharp skills.

Medical laboratory assistants play an essential role in healthcare. These laboratory professionals collect patient specimens, carry out pre-analytical procedures to prepare specimens for analysis and perform data entry, clerical and reception duties. As an integral member of the health care team, the medical laboratory assistant is part of the front-line laboratory staff and is often the first person with whom patients/clients interact. This requires strong communication, critical thinking and organizational/time management skills as well as professional conduct.

These are dedicated professionals, serving the health care needs of the patient with respect for an individual's diversity, dignity, values and beliefs, ensuring everyone's safety and protecting the confidentiality of patient information.

College of the North Atlantic's (CNA) Medical Laboratory Assistant program provides a quality learning environment that blends academic study and hands-on training with clinical training for those aspiring to a career in laboratory health sciences. A 36-week program, Semesters 1 and 2 (15 weeks each in duration) take place on campus and in Semester 3 you complete a six-week clinical placement at a hospital or clinic in Newfoundland Labrador. Upon graduation, you will be eligible to write the certification examination set by the Canadian Society for Medical Laboratory Science.

This certificate qualifies you for work in hospital laboratories, public health laboratories, clinics, research labs, reference labs, insurance companies, private laboratories, Canadian Blood Services and manufacturing. While this is a demanding field, it is an extremely rewarding career worth pursuing.

If you are intrigued by the science of blood, this career is for you!

Program Highlights

- Robust training to become an integral part of the healthcare community and fill the identified occupational need.
- The Medical Laboratory Assistant program is accredited by Accreditation Canada.
- You can leverage your certificate for transition into the Medical Laboratory Technologist program at CNA.
- Prepares graduates to challenge the Canadian Society of Medical Laboratory Science (CSMLS) certification exam.
- The CSMLS provides portability to most provinces and territories.

Did You Know?

- There is a rising need for this type of program across Canada.
- Today's healthcare system would not function as efficiently and effectively without the work performed by MLAs every day.
- Some 70% of all medical decisions depend on laboratory results.

OBJECTIVES

Upon successful completion of Medical Laboratory Assistant program, the graduate will:

1. Utilize academic knowledge as outlined in the Canadian Society for Medical Laboratory Science (CSMLS) competency profile and apply the learned knowledge in clinical practice.
2. Perform pre-analytical clinical laboratory procedures using appropriate equipment and instruments in accordance with established protocols.
3. Communicate and interact effectively with clients, family members, and members of the health care team.
4. Maintain a high level of professional practice, meeting legal and ethical requirements, while following established protocols, safety guidelines, and existing legislation in the performance of duty.
5. Use quality management / continuous improvement principles to investigate, evaluate, and problem solve in a rapidly changing environment.

CURRICULUM

This is a 36 week program, which includes training at the College as well as clinical placements at various hospitals/clinics throughout Newfoundland and Labrador. Semesters 1 and 2 (15 weeks each in duration) take place at the College whereas Semester 3 consists of a 6-week clinical placement. Graduates of the program will be eligible to write the certification examination set by the Canadian Society for Medical Laboratory Science.

ACCREDITATION

The Medical Laboratory Assistant (MLA) program is accredited by Accreditation Canada until December 2023.

This program is currently “Accredited” with Accreditation Canada/Equal. Our “Accredited” status serves as an important demonstration of our commitment to providing quality education in alignment with accreditation and regulatory requirements. If you require additional information regarding our accreditation status and endeavors and/or any potential implications our accreditation status may have on your future abilities to practice as a healthcare professional, we encourage you to reach out to the Dean for the School of Health Sciences

CERTIFICATIONS

Students must possess valid Standard First Aid with Cardiopulmonary Resuscitation (CPR) /Basic Life Support (BLS) certification to be eligible for graduation from the College.

CLINICAL PLACEMENTS

Clinical placements are a required element of this program and students will be assigned placements at approved training sites. Additional sites may be considered in consultation with program faculty. There is no guarantee that students will receive their preferred placement. All expenses associated with the completion of clinical placement will be the responsibility of the student.

Students require a clear Certificate of Conduct (Criminal Record Check and Vulnerability Sector Check) to be permitted into a clinical placement. Students with an unclear Certificate of Conduct are advised to speak with program faculty at the beginning of the program.

For programs with competitive admissions, clinical placements are not affected by ranking in the competitive admissions process and will be determined under institutional guidelines.

ENTRANCE REQUIREMENTS

Eligibility for admission to the Medical Laboratory Assistant program requires the applicant to meet one of the following five academic criteria:

1. High School

High School Graduation Certificate with a 60% overall average in the following (or equivalent):

- i. English 3201 or 3202 (minimum 60%)
- ii. Mathematics (4 credits) chosen from:
 - Advanced: 2200, 3200 (50% minimum in each course)
 - Academic: 2201 (50% minimum), 3201 (60% minimum)
- iii. Science (4 credits):
 - Biology: 3201 (minimum 60%)

Chemistry: 3202 (minimum 60%)

iv. Electives (2 additional credits) chosen from any of the remaining 3000 level courses offered in the Senior High School Program.

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with the following courses:

1 English (minimum 60%): **CM1060, CM1061**

2 Math (minimum 60%): **MA1040, MA1041**

3 Four Science courses chosen from two of the following three combinations:

a. Biology: **BL1020, BL1021**

b. Chemistry: **CH1030, CH1031**

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with Degree and Technical Profile (overall 60% average) including the following courses (or equivalent):

1 English (minimum of 60%) 3101A, 3101B, 3101C or 3102A, 3102B, 3102C

2 Mathematics (minimum of 60%) 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C

3 Science from two of the following sections:

a. Biology 1101, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C

b. Chemistry 1102, 2102A, 2102B, 2102C, 3102A, 3102B, 3102C

Applicants with Adult Basic Education (Level III) Graduation with a different Profile (and appropriate grades) may be eligible for admission to the program provided the appropriate selection of courses including those outlined above have been completed.

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, must be at least 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

Note: Students meeting academic entrance requirements are accepted on a first come, first served basis. Before final acceptance is granted, additional documentation must be submitted; see the Additional Information for Health Sciences Applicants section of the calendar or under the Admissions Regulations section of our website for details.

Additional Entrance Requirements

- Valid** Certificate of Conduct, including Criminal Record and Vulnerable Sector Check.
- Students will require a current Certificate of Conduct (Criminal Record and Vulnerable Sector Check) prior to starting their program. Applicants with a criminal offense listed on their Certificate of Conduct (Criminal Record and Vulnerable Sector Check) may be denied access to clinical placement by the College's clinical partners and may be unable to complete their program.
- Students will need to complete a Student Pre-Placement Immunizations and Communicable Diseases Screening with their Health Care Provider. Completing the immunization record will require physician's visits, blood tests, and a TB screening test; detailed instructions are included on the Student Pre-Placement Immunizations and Communicable Diseases Screening. The applicant is responsible for ensuring that all medical requirements are fulfilled, and the screening form complete before submission. Certain vaccinations require a series of immunizations over a period; therefore, it is essential to start the process as early as possible. The applicant is also responsible for all associated costs (vaccinations, laboratory testing, physician fees, certificate of conduct fees, etc.).

(See the Additional Information for Health Sciences Applicants (Definitions and Regulations) section of the calendar or under the Admissions Regulations section of our website for details.)

Medical Laboratory Technology

Start Date: September

Credential: Diploma

Program Length: Three Years

School: Health Sciences

Locations & Delivery Modes:

- Prince Philip Drive - On Campus delivery

PROGRAM DESCRIPTION

Medical laboratory technologists are integral members of the health care team who perform diagnostic laboratory testing on blood, body fluids and tissues to aid the physician in the diagnosis, treatment and prevention of disease. It is a fast-paced and challenging profession that will appeal to students with a fascination for biological science. It requires manual dexterity, visual color discrimination, a keen eye for detail, organizational/time management skills and judgment/decision-making ability.

Medical laboratory technologists perform a wide array of diagnostic tests including examining bacterial cultures for identification and antibiotic sensitivity, assuring the compatibility of blood for transfusion, identifying abnormal cells, and analyzing the chemical composition of body fluids. As one of Canada's largest group of health care professionals, MLTs play a critical role in the health care system, as up to 80% of decisions related to patient diagnosis and treatment are based on laboratory test results.

This program develops not only the technical skills of the medical laboratory technologist but also the ethical and professional behaviours required of the profession. It is a challenging program that provides the student with extensive classroom, laboratory and clinical/practicum experience. Graduates will be prepared to work in a competent manner providing accurate diagnostic testing in accordance with the national standards for medical laboratory technologists.

OBJECTIVES

Upon successful completion of the Medical Laboratory Technology program, graduates will be able to:

1. Demonstrate required knowledge, skills and abilities, as prescribed by the Canadian Society for Medical Laboratory Science (CSMLS) competency profile, with timelines, accuracy and proficiency.
2. Practice and promote the principles of quality management and the efficient utilization of resources.
3. Apply critical thinking and problem-solving skills that promote competence in the performance of laboratory procedures.
4. Demonstrate research skills to constructively solve problems.
5. Communicate effectively and work collaboratively with other members of the health care team to serve patients and employers with the highest degree of competence.
6. Demonstrate a high level of professional conduct in the performance of duty.

CURRICULUM

The curriculum for this program is designed to encompass three years of training. The first three semesters are spent at the college and emphasis is placed on academic and theoretical training. During the fourth semester the student will have an introduction to the clinical application through a two week practicum at an affiliated clinical site. During the second program year an emphasis is placed on theoretical knowledge unique to the program's disciplines and application of this knowledge in a simulated laboratory environment. The program's third and final year encompasses practical training and clinical experience conducted in affiliated health care institutions.

Graduates of the program at the Prince Philip Drive Campus will be eligible to sit the certification examination set by the Canadian Society for Medical Laboratory Science (CSMLS). The CSMLS is the national professional body for

medical laboratory technologists.

PROGRAM TRANSFERABILITY

Graduates may elect to further their studies and obtain a Bachelor of Technology degree from Memorial University of Newfoundland (MUN) or a Bachelor of Sciences (Post Diploma, Human Science) from Athabasca University.

ACCREDITATION

The Medical Laboratory Technology (MLT) program is accredited by Accreditation Canada until May 2028.

This program is currently “Accredited” with Accreditation Canada/Equal. Our “Accredited” status serves as an important demonstration of our commitment to providing quality education in alignment with accreditation and regulatory requirements. If you require additional information regarding our accreditation status and endeavors and/or any potential implications our accreditation status may have on your future abilities to practice as a healthcare professional, we encourage you to reach out to the Dean for the School of Health Sciences.

CERTIFICATIONS

Students must possess valid Standard First Aid with Cardiopulmonary Resuscitation (CPR) /Basic Life Support (BLS) certification to be eligible for graduation from the College.

CLINICAL PLACEMENTS

Clinical placements are a required element of this program and students will be assigned placements at approved training sites. Additional sites may be considered in consultation with program faculty. There is no guarantee that students will receive their preferred placement. All expenses associated with the completion of clinical placement will be the responsibility of the student.

Students require a clear Certificate of Conduct (Criminal Record Check and Vulnerability Sector Check) to be permitted into a clinical placement. Students with an unclear Certificate of Conduct are advised to speak with program faculty at the beginning of the program.

For programs with competitive admissions, clinical placements are not affected by ranking in the competitive admissions process and will be determined under institutional guidelines.

ENTRANCE REQUIREMENTS

Eligibility for admission to the Medical Laboratory Technology program requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation Certificate with a 60% overall average in the following (or equivalent):

- i. English 3201 or 3202 (minimum 60%)
- ii. Mathematics (4 credits) chosen from:
 - Advanced: 2200, 3200 (50% minimum in each course)
 - Academic: 2201 (50% minimum), 3201 (60% minimum)
- iii. Science (4 credits):
 - Biology: 3201 (minimum 60%)
 - Chemistry: 3202 (minimum 60%)

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with the following courses:

- i. English (minimum 60%): CM1060, CM1061
- ii. Math (minimum 60%): MA1040, MA1041
- iii. Four Science courses:
 - Biology: BL1020, BL1021 (minimum 60%)
 - Chemistry: CH1030, CH1031 (minimum 60%)

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with Degree and Technical Profile (overall 60% average) including the following courses (or equivalent):

- i. English (minimum of 60%) 3101A, 3101B, 3101C or 3102A, 3102B, 3102C
- ii. Mathematics (minimum of 60%) 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C
- iii. Science:
 - Biology (minimum 60%) 1101, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C
 - Chemistry (minimum 60%) 1102, 2102A, 2102B, 2102C, 3102A, 3102B, 3102C

Note: Applicants with Adult Basic Education (Level III) Graduation with a different Profile (and appropriate grades) may be eligible for admission to the program provided the appropriate selection of courses including those outlined above have been completed.

Additional Entrance Requirements

- Completion of the Casper Admissions Exam.
 - The Casper Admissions Exam official score will be used as part of the points-based system to determine ranking in the competitive entry process
 - All applicants are required to complete Casper* Admissions Exam (CSP-10201 – Canadian Professional Health Sciences) as part of their application for the 2023/2024 admissions cycle. To complete Casper, visit [TakeAltus.com](https://takealtus.com).
- Valid** Certificate of Conduct, including Criminal Record and Vulnerable Sector Check.
- Students will require a clear and current Certificate of Conduct (Criminal Record and Vulnerable Sector Check) prior to clinical practicum. Applicants with a criminal offense listed on their Certificate of Conduct (Criminal Record and Vulnerable Sector Check) may be denied access to clinical placement and may be unable to complete their program.
- Immunization Record providing evidence that the applicant has received the required vaccinations/screening tests. Completing the immunization record will require physician's visits, blood tests, and a TB screening test; detailed instructions are included on the School of Health Sciences Student Information and Program Awareness Form. The applicant is responsible for ensuring that all medical requirements are fulfilled, and the immunization record complete before submission. Certain vaccinations require a series of immunizations over a period; therefore, it is essential to start the process as early as possible. The applicant is also responsible for all associated costs (vaccinations, laboratory testing, physician fees, certificate of conduct fees, etc.).
- ESL students only – one of the following:
 - IELTS: minimum overall band score of 7
 - TOEFL Score: minimum score of 94

(See the Additional Information for Health Sciences Applicants (Definitions and Regulations) section of the calendar or under the Admissions Regulations section of our website for details.)

***Casper.** The Casper test comprises 12 sections of video and written scenarios. Following each scenario, you will be required to answer a set of probing questions under a time contract. The test typically takes between 75-90 minutes to complete. Each response is graded by a different rater, giving a very robust and reliable view of personal and professional characteristics important to our program. No studying is required for Casper, although you may want to familiarize yourself with the test structure at [TakeAltus.com](https://takealtus.com), and ensure you have a quiet environment to take the test. We strongly urge you to take advantage of the 12-section practice test, which will not only immerse you in the test environment but will also ensure you meet the technical requirements to access and complete the test.

Casper test results are valid for one admissions cycle. Applicants who have already taken the test in previous years will therefore be expected to re-take it.

For a more detailed look at the Casper test, please see [this video](#).

****Acceptance of the Certificate of Conduct (Criminal Record and Vulnerable Sector Check)** is at the discretion of the Health Authority of which clinical practicum is being sought.

COMPETITIVE ENTRY APPLICATION PROCESS - FALL 2023

Program Start Date September 2023

The competitive admissions process is points-based and includes:

[View the Competitive Entry Application Process for this program](#)

Deadline for receipt of application	March 3rd 2023
Deadline for receipt of ALL supporting documentation*	March 10th 2023
Initial round of acceptances	April 30th 2023

*Documentation received after the deadline **WILL NOT** be considered

****Candidates not accepted for the intake to which they applied must re-apply for admission to future offerings. Applications WILL NOT be kept on file.**

Notes:

Courses with 30 hrs lab to be delivered in condensed block format over a period of 5 days.

Students in the 3rd and 8th semester of the program will be assigned to one of the affiliated hospitals: Burin Peninsula Health Care Centre, Carbonear General Hospital, Central Newfoundland Regional Health Centre, Dr. G. B. Cross Memorial Hospital, Health Sciences Centre, St. Clare's Mercy Hospital, James Paton Memorial Hospital, Charles S. Curtis Memorial Hospital, Labrador Health Centre, and Western Memorial Regional Hospital. Smaller rural sites may also be utilized in Semester 3.

Medical Radiography

Start Date: September

Credential: Diploma

Program Length: Three Years

School: Health Sciences

Locations & Delivery Modes:

- Prince Philip Drive - On Campus delivery

PROGRAM DESCRIPTION

Medical Radiological Technologists (MRTs) play a vital role in the diagnosis and treatment of many injuries and illnesses. At a physician's request, MRTs operate equipment that emits x-rays to produce images of a body part or system. Their work involves a wide variety of procedures and specialties, including routine general radiography, mammography, angiography, fluoroscopy, and computed tomography. Committed to providing the highest standard of care, MRTs use professional judgment and critical thinking to reach decisions, anticipate outcomes, and respond appropriately to individual patient needs and varying contexts of practice.

This is a challenging program consisting of theory courses, psychomotor skill laboratories, and clinical practicum based courses. The program provides the student with extensive classroom and clinical experience. Graduates of this program will be prepared to work competently and skillfully, providing diagnostic imaging care per the national standards for MRT practice. Furthermore, graduates of the program will be well-positioned to challenge the national competency examination as directed through the Canadian Association of Medical Radiation Technologists.

OBJECTIVES

Upon successful completion of the Medical Radiography program, graduates will be able to:

1. Demonstrate the required skills, knowledge, and abilities, as prescribed by the Canadian Association of Medical Radiation Technologists in relation to development as a professional, communicator, collaborator, care provider, leader, scholarly practitioner, and clinical expert.
2. Contribute productively as a member of the health care team
3. Use judgement and critical thinking skills to reach decisions which will best benefit the patient, and work autonomously in their areas of responsibility
4. Use critical thinking and problem-solving skills that promote logical and independent decision-making in the provision of MRT care.
5. Communicate effectively and work collaboratively with other members of the health care team to serve patients and employers with the highest degree of competence.
6. Reflect professionalism through personal deportment and public interactions.
7. Demonstrate ethical behavior, empathy, and respect for individuals expected of an entry level-MRT.

ACCREDITATION

The Medical Radiography (MR) program is accredited by Accreditation Canada until August 2025.

This program is currently "Accredited" with Accreditation Canada/Equal. Our "Accredited" status serves as an important demonstration of our commitment to providing quality education in alignment with accreditation and regulatory requirements. If you require additional information regarding our accreditation status and endeavors and/or any potential implications our accreditation status may have on your future abilities to practice as a healthcare professional, we encourage you to reach out to the Dean for the School of Health Sciences.

PROGRAM TRANSFERABILITY

Graduates may elect to further their studies and obtain a Bachelor of Technology degree from Memorial University of Newfoundland or a Bachelor of Sciences (Post Diploma, Human Science) from Athabasca University.

CERTIFICATIONS

Students must possess valid Standard First Aid with Cardiopulmonary Resuscitation (CPR) /Basic Life Support (BLS) certification to be eligible for graduation from the College.

CLINICAL PLACEMENTS

Clinical placements are a required element of this program and students will be assigned placements at approved training sites. Additional sites may be considered in consultation with program faculty. There is no guarantee that students will receive their preferred placement. All expenses associated with the completion of clinical placement will be the responsibility of the student.

Students require a clear Certificate of Conduct (Criminal Record Check and Vulnerability Sector Check) to be permitted into a clinical placement. Students with an unclear Certificate of Conduct are advised to speak with program faculty at the beginning of the program.

For programs with competitive admissions, clinical placements are not affected by ranking in the competitive admissions process and will be determined under institutional guidelines.

ENTRANCE REQUIREMENTS

Eligibility for consideration of admission to the Medical Radiography program requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation Certificate with a 60% overall average in the following (or equivalent):

- i. English 3201 or 3202 (minimum 60%)
- ii. Mathematics (4 credits) chosen from:
Advanced: 2200, 3200 (50% minimum in each course)
Academic: 2201 (50% minimum), 3201 (60% minimum)
- iii. Science (4 credits):
Biology: 3201
Physics: 3204

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with the following courses:

- 1. English (minimum 60%): CM1060, CM1061
- 2. Math (minimum 60%): MA1040, MA1041
- 3. Four Science courses:
 - a. Biology: BL1020, BL1021
 - b. Physics: PH1050, PH1051

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with Degree and Technical Profile (overall 60% average) including the following courses (or equivalent):

- 1. English (minimum of 60%) 3101A, 3101B, 3101C or 3102A, 3102B, 3102C
- 2. Mathematics (minimum of 60%) 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C
- 3. Science from the following sections:
 - a. Biology 1101, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C
 - b. Physics 1104, 2104A, 2104B, 2104C, 3104A, 3104B, 3104C

Note: Applicants with Adult Basic Education (Level III) Graduation with a different Profile (and appropriate grades) may be eligible for admission to the program provided the appropriate selection of courses including those outlined above have been completed.

Additional Entrance Requirements

- Completion of the Casper Admissions Exam.
 - The Casper Admissions Exam official score will be used as part of the points-based system to determine ranking in the competitive entry process
 - All applicants are required to complete Casper* Admissions Exam (CSP-10201 – Canadian Professional Health Sciences) as part of their application for the 2023/2024 admissions cycle. To complete Casper, visit [TakeAltus.com](https://takealtus.com).
- Valid** Certificate of Conduct, including Criminal Record and Vulnerable Sector Check.
- Students will require a clear and current Certificate of Conduct (Criminal Record and Vulnerable Sector Check) prior to clinical practicum. Applicants with a criminal offense listed on their Certificate of Conduct (Criminal Record and Vulnerable Sector Check) may be denied access to clinical placement and may be unable to complete their program.
- Immunization Record providing evidence that the applicant has received the required vaccinations/screening tests. Completing the immunization record will require physician's visits, blood tests, and a TB screening test; detailed instructions are included on the School of Health Sciences Student Information and Program Awareness Form. The applicant is responsible for ensuring that all medical requirements are fulfilled, and the immunization record complete before submission. Certain vaccinations require a series of immunizations over a period; therefore, it is essential to start the process as early as possible. The applicant is also responsible for all associated costs (vaccinations, laboratory testing, physician fees, certificate of conduct fees, etc.).
- ESL students only – one of the following:
 - IELTS: minimum overall band score of 7
 - TOEFL Score: minimum score of 94

(See the Additional Information for Health Sciences Applicants (Definitions and Regulations) section of the calendar or under the Admissions Regulations section of our website for details.)

***Casper.** The Casper test comprises 12 sections of video and written scenarios. Following each scenario, you will be required to answer a set of probing questions under a time contract. The test typically takes between 75-90 minutes to complete. Personal Care Attendant (PCA)

Start Date: September

Credential: Certificate

Program Length: 2 Semesters (30 Weeks)

School: Health Sciences

Locations & Delivery Modes:

- Bonavista - On Campus delivery
- Burin - On Campus delivery
- Carbonear - On Campus delivery
- Clarenville - On Campus delivery
- Corner Brook - On Campus delivery
- Grand Falls-Windsor - On Campus delivery
- Happy Valley-Goose Bay - On Campus delivery
- Placentia - On Campus delivery
- Prince Philip Drive - On Campus delivery

PROGRAM DESCRIPTION

As integral members of the interdisciplinary healthcare team, Personal Care Attendants are responsible for providing support to clients in all aspects of daily living through companionship, physical, spiritual and psychosocial care. Through the use of classroom instruction, skills development laboratories, and supervised practicums; the PCA educational program provides learners with the necessary skills to work with clients in a variety of institutionalized settings.

OBJECTIVES

Upon successful completion of the Personal Care Attendant (PCA) program, graduates will be able to:

1. Provide holistic, client-centered care across the life-span.
2. Provide safe, competent, and ethical care that adheres to legislation, employer policies and procedures, scope of employment, educational program, evidence-informed practice, and ethical principles.
3. Adhere to workplace safety legislation, employer policies for maintaining a safe working environment, and procedures for responding to and reporting workplace safety concerns.
4. Communicate effectively with clients, families, and the health care team.
5. Respect cultural diversity of the client, family, colleague, and community.
6. Document in a clear, concise manner that is consistent with legal requirements, employer policies, and the provision of care.
7. Report pertinent information in a timely manner to appropriate health care team professionals.
8. Recognize the significance of professionalism, life-long learning, self-care, well-being, and safety in the role of the PCA.

FUTURE OPPORTUNITIES

Graduates will have potential employment opportunities to work as part of a multidisciplinary team in a variety of institutionalized health care settings within Newfoundland and Labrador.

CERTIFICATIONS

To be eligible for clinical and graduation, students must possess valid Standard First Aid and Basic Life Support (BLS) or Cardiopulmonary Resuscitation – Health Care Provider (CPR-HCP) / certification. BLS or CPR-HCP must have an in-person delivery or a blended delivery model where skills are practiced hands-on with an instructor.

In addition, students must complete on-line modules in Gentle Persuasive Approach (GPA) as well as Workplace Hazardous Materials Information System (WHMIS).

Note: Students may be expected to incur costs associated with completion of the First Aid/CPR certification and the on-line modules in GPA and WHMIS.

CLINICAL PLACEMENTS

Clinical placements are a required element of this program and students will be assigned placements at approved training sites. Additional sites may be considered in consultation with program faculty. There is no guarantee that students will receive their preferred placement. All expenses associated with the completion of clinical placement will be the responsibility of the student.

Students require a clear Certificate of Conduct (Criminal Record Check and Vulnerability Sector Check) to be permitted into a clinical placement. Students with an unclear Certificate of Conduct are advised to speak with program faculty at the beginning of the program.

For programs with competitive admissions, clinical placements are not affected by ranking in the competitive admissions process and will be determined under institutional guidelines.

ENTRANCE REQUIREMENTS

Eligibility for admission to the Personal Care Attendant program requires the applicant to meet one of the following criteria:

1. High School

Provincial High School Graduation Certificate, possess a Grade 12 diploma or Grade 12 equivalency documentation.

2. Adult Basic Education (ABE)

Adult Basic Education (Level III)

3. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program must be at least 19 years of age at the time of application and out of school for at least one (1) year and demonstrate Grade 12 literacy and numeracy equivalency to be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

4. International Applicants – English Proficiency

Demonstrate English proficiency on the IELTS (International English Language Testing System – Academic version) with an overall score of 7.0 and scores of 7.0 speaking, 7.5 listening, 6.5 reading and 7.0 writing. For more information visit: IELTS: www.ielts.org

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

The following additional documents are required at the time of online registration. Failure to provide documents may result in not being enrolled in the program. The list includes:

1. **Current Certificate of Conduct** obtained from the Royal Newfoundland Constabulary, the Royal Canadian Mounted Police, or local provincial/municipal forces, including the “**Vulnerable Sector Check**”. Documents must be within **no more than two months prior to registration**. Applicants with a criminal offence listed on their Certificate of Conduct may be denied admission.
2. **Provide two reference letters** supporting entrance into the program. References cannot be provided by family members or friends. References may be provided by individuals such as:
 - Employers
 - Teachers/instructors
 - Representative from a volunteer agency

3. **Perform 20 volunteer service** hours within the past two years. Volunteer service may include, but is not limited to:
 - Community agencies
 - School programs
 - Church groups
 - Charitable organizations
 Written verification is required for all volunteer hours.
 Note: If an applicant was unable to obtain the 20 volunteer hours; a letter indicating the extenuating circumstances must be submitted.
4. **Complete a one page written personal statement.** Personal statements must address the following:
 - Reason(s) for interest in the program
 - Personal characteristics/skills/abilities that applicants bring to the program
 - Knowledge gained from volunteer experience(s)
5. **The School of Health Science Student Information Program Awareness Form**
6. **The Newfoundland and Labrador Student Pre-Placement Immunization and Communicable Diseases Screening Form.**

Other documents maybe required depending on the clinical training sites.

Courses

Semester 1

Code	Title	Cr	Le	La
PC1120	Foundations for Practice	3	3	0
CM1170	Essentials for Communication & Documentation	3	3	0
PC1130	Workplace Safety	2	2	0
PC1141	Understanding Aging, Dementia & Dying	3	3	1
PC1145	Fundamentals I: Care Basics	6	5	3
PC1150	Clinical Practice I	4	0	4 wks

Semester 2

Code	Title	Cr	Le	La
PC1210	Basic Concepts in Medication Awareness	2	2	0

PC1220	Mental Health Concepts	2	2	0
PC1225	Fundamentals II: Body Systems Approach to Care	6	5	2
PC1230	Clinical Practice II	5	0	5 wks
PC1235	Clinical Preceptorship	3	0	5 wks

Course Lecture (Le) and Lab (La) hours per week are based on a 15 week semester. The actual lecture and lab hours during both semesters will be adjusted to account for the clinical training component.

Practical Nursing

Start Date: September

Credential: Diploma

Program Length: 19 Months

School: Health Sciences

Locations & Delivery Modes:

- Bay St. George - On Campus delivery
- Burin - On Campus delivery
- Carbonear - On Campus delivery
- Clarendville - On Campus delivery
- Corner Brook - On Campus delivery
- Gander - On Campus delivery
- Grand Falls-Windsor - On Campus delivery
- Happy Valley-Goose Bay - On Campus delivery
- St. Anthony - On Campus delivery

PROGRAM DESCRIPTION

College of the North Atlantic brokers the Practical Nursing program from the Centre for Nursing Studies, delivering it in regions, outside St. John's, with a demonstrated labor market need. To access information for the offering in St. John's please refer to cns.easternhealth.ca.

This program is designed to prepare graduates to provide nursing services for clients across the lifespan in institutional and community based settings within the approved scope of practice for licensed practical nurses in Newfoundland and Labrador. It introduces the student to the role of practical nurse in promoting, protecting, restoring, maintaining and supporting the health status of individuals across the health and developmental continuum.

The program encompasses classroom work supplemented with skills lab and nursing practice components.

CLINICAL PLACEMENTS

Clinical placements are a required element of this program and students will be assigned placements at approved training sites. Additional sites may be considered in consultation with program faculty. There is no guarantee that students will receive their preferred placement. All expenses associated with the completion of clinical placement will be the responsibility of the student.

Students require a clear Certificate of Conduct (Criminal Record Check and Vulnerability Sector Check) to be permitted into a clinical placement. Students with an unclear Certificate of Conduct are advised to contact student.placements@cna.nl.ca prior to beginning the program.

For programs with competitive admissions, clinical placements are not affected by ranking in the competitive admissions process and will be determined under institutional guidelines.

PN Bursary

The Province of Newfoundland and Labrador provides a Practical Nursing Bursary Program for students enrolled in the Practical Nursing program. The program provides up to a \$5,000 bursary to selected students, which covers the education program costs. For more information visit the Department of Health and Community Services website.

"All students in the Practical Nursing Program must demonstrate their capacity to meet the entry-level practical nurse competencies. Please review the CLPNNL Becoming a Licensed Practical Nurse in Canada: Requisite Skills and

Abilities document at www.clpnnl.ca. The purpose of this document is to provide potential practical nursing students with information on the requisite skills and abilities of a Licensed Practical Nurse.”

ENTRANCE REQUIREMENTS

1. Applicants who have followed the High School Curriculum of Newfoundland and Labrador

To be eligible for Academic admission, you will need to successfully receive an average of 50% or more in the following 3000 level high school courses, or equivalent:

- i. English 3201
 - ii. Mathematics - one of the following
 - a. Advanced Mathematics 3200
 - b. Academic Mathematics 3201
 - iii. Science - one of the following
 - a. Biology 3201 OR
 - b. Chemistry 3202
 - iv. Social Studies or Modern/Classical Language (MCL) - one of the following
 - a. Social Studies 3201, or equivalent
 - b. Sciences Humaines 3231
 - c. Two credits at the 3000 level in Religious Studies. French or other MCL
 - v. Two credits in any subject area at the 3000 level
- OR

Applicants in their final year of high school who will complete the graduation requirements for high school as set by the Department of Education and obtained an average of not less than 50% in 3000 level core courses as listed above may be conditionally accepted prior to the writing of final exams. This conditional acceptance will be subject to verification that the applicant has obtained an average of not less than 50% in 3000 level core courses, when final examination results are released.

2. Applicants who have followed the High School Curriculum of other Provinces of Canada // International Applicants

Applicants from other provinces of Canada shall have successfully completed graduation requirements for high school as set by the home province and obtained a passing grade in 3000 level core courses.

3. Applicants who have followed the Adult Basic Education Program (ABE)

Applicants shall have completed the Level III Adult Basic Education Certificate (ABE) Academic Stream as set by the Department of Education obtained an average of not less than 50% in 3000 level core courses as listed in #1 above.

4. Applicants for Mature Student Status

Mature student status is meant to allow individuals the opportunity to demonstrate academic potential if they have not fulfilled the admission criteria outlined previously.

A mature student is an applicant 19 years of age or older, has been away from full-time high school studies for at least two years, and can demonstrate potential for success through academic, professional or volunteer activities and other accomplishments. These candidates are expected to provide an official transcript of the highest level of education obtained.

*Meeting the mature student criteria will not guarantee admission to the Practical Nursing Program.

****Note: All applicants must follow the Application Process outlined below and must supply all documentation described therein.**

General Admission Requirements

English Language Requirement

Applicants must be competent in the English Language. A test of English language will be required for applicants whose first language is not English AND/OR applicants who have completed high school in a language other than English. Applicants who do not meet the criteria above but have post-secondary courses completed in English should contact the campus for further instruction regarding testing.

The tests with the acceptable scores are:

- IELTS (International English Language Testing System – Academic version). Scores: overall score of 7.0 with scores of 7.0 speaking, 7.5 listening, 6.5 reading and 7.0 writing.
- CELBAN (Canadian English Language Benchmark Assessment for Nurses). Scores: 8 speaking, 10 listening, 8 reading and 7 writing. The official results of test score must be submitted before a decision will be made on your application. Test scores are valid for two years from the testing date. All cost associated with the English language requirements are the responsibility of the applicant.
- The official results of test score must be submitted before a decision will be made on your application. Test scores are valid for two years from the testing date. All cost associated with the English language requirements are the responsibility of the applicant.

Interviews

The College of the North Atlantic reserves the right to interview applicants in any of the admission categories.

Assessments

An applicant may be recommended to write an assessment type test.

Application Process

The number of students admitted to the Practical Nursing Program is determined annually by the provincial human resource needs for Licensed Practical Nurses (LPNs). **The application and selection process is competitive.**

Applications to the Practical Nursing Program at the College of the North Atlantic will be reviewed for admission **only** when **all** of the following have been provided **within the identified time frames**. Incorrect, incomplete and/or missing information may jeopardize an applicant's inclusion in the selection process.

- **Online** application form (and applicable fee) submitted.
- Certified copy of the **official birth certificate** from the Department of Vital Statistics.
- **Official** high school transcript from the Department of Education or equivalency certificate.
- **Certified copy** of Level II (Grade 11) marks and Level III (Grade 12) first term results (for current high school students).
- **Official transcript** of all post-secondary courses/programs (if applicable).
- **Personal Statement** (completed on the personal statement form).
- **Two references** (forms provided) *Please note that ***references from family, friends, relatives or co-workers will be deemed unsatisfactory***. If possible, references should come from previous or current employers and/or instructors/teachers/professors. **Referees must forward the Reference Form directly to the campus.**
- All potential nursing students must read the College for Licensed Practical Nurses of Newfoundland and Labrador document entitled: "Becoming a Licensed Practical Nurse in Canada: Requisite Skills and Abilities" to determine their ability to meet the requirements of the program. The Skills Abilities form must be submitted confirming you have read the document found at the following link:
https://www.clpnnl.ca/sites/default/files/inline-files/Requisite_Skills_and_Abilities_1.pdf

Please note: Applications will not be considered complete until the original transcript has been provided.

Photocopies and photographs are not accepted. Transcripts e-mailed directly from an educational institution will be considered official transcripts.

*Once an applicant receives a letter of acceptance, the following **documentation must be submitted by July 31th**.*

- Certificate for Basic Life Support (BLS); BLS/Health Care Provider/AED; or Cardio-Pulmonary Resuscitation – Health Care Provider (CPR/HCP) **and** a certificate for Standard First Aid. **Note:** Courses have to be a direct delivery model or a blended model where skills are practiced hands on with supervision. Both to be completed after **January 2023**. Annual BLS / CPR-HCP re-certification will be required.
- Current Criminal Record Screening Certificate/Police Records Check and Vulnerable Sector Check in satisfactory standing (**dated no earlier than July 2023**). International students can request these documents once they arrive in the province.

- Child Protection Records (may be required)
- Student Information form (regarding allergies).

Once an applicant receives a letter of acceptance, the following document must be submitted no later than September 29th.

- **Student Pre-Placement Immunization and Communicable Disease Screening package.**

Primary Care Paramedicine

Start Date: September

Credential: Diploma

Program Length: 68 Weeks

School: Health Sciences

Locations & Delivery Modes:

- Bay St. George - On Campus delivery
- Prince Philip Drive - On Campus delivery

PROGRAM DESCRIPTION

Provision of emergency medical services (EMS) is a unique and vital community service. Paramedics are highly skilled members of a health care team who function within the discipline of emergency and pre-hospital care. Paramedics initiate medical treatment for individuals in urgent and non-urgent situations. Based on sound knowledge, these practitioners demonstrate rational problem-solving abilities and excellent decision-making skills. This program addresses the operational/procedural skills of the primary care paramedics, as well as the ethical and professional behaviours such as effective communication. Mental/physical fitness and healthy lifestyles are emphasized throughout the program, as paramedics must be fit to perform the requirements of the occupation.

This is a challenging program that provides the student with extensive classroom and clinical/practicum experience. Graduates of this program will be prepared to work in a competent and skillful manner providing pre-hospital care in accordance with the national standards for paramedics.

OBJECTIVES

Upon successful completion of the Primary Care Paramedicine program, graduates will be able to:

1. Demonstrate required skills, knowledge, and abilities, as prescribed by the Paramedic Association of Canada National Occupational Competency Profile with consistency, independence, timeliness, accuracy, and appropriateness.
2. Integrate assessment, diagnostic, and treatment procedures into the holistic management of patients in the out-of-hospital setting.
3. Use critical thinking and problem-solving skills that promote logical and independent decision-making in the provision of paramedic care.
4. Maintain a level of physical and mental health necessary to perform the bona fide occupational requirements.
5. Communicate effectively and work collaboratively with other members of the health care team to serve patients and employers with the highest degree of competence.
6. Reflect professionalism through personal deportment and public interactions.
7. Demonstrate ethical behaviour, empathy and respect for individuals.

ACCREDITATION

The *Primary Care Paramedicine (PCP)* program is accredited by Accreditation Canada until *June 2025*. This program is currently “Accredited” with Accreditation Canada/Equal. Our “Accredited” status serves as an important demonstration of our commitment to providing quality education in alignment with accreditation and regulatory requirements. If you require additional information regarding our accreditation status and endeavors and/or any potential implications our accreditation status may have on your future abilities to practice as a healthcare professional, we encourage you to reach out to the Dean for the School of Health Sciences.

CLINICAL PLACEMENTS

Clinical placements are a required element of this program and students will be assigned placements at approved training sites. Additional sites may be considered in consultation with program faculty. There is no guarantee that students will receive their preferred placement. All expenses associated with the completion of clinical placement will

be the responsibility of the student.

Students require a clear Certificate of Conduct (Criminal Record Check and Vulnerability Sector Check) to be permitted into a clinical placement. Students with an unclear Certificate of Conduct are advised to speak with program faculty at the beginning of the program.

For programs with competitive admissions, clinical placements are not affected by ranking in the competitive admissions process and will be determined under institutional guidelines.

ENTRANCE REQUIREMENTS

Eligibility for consideration of admission to the Primary Care Paramedicine program requires the applicant to meet one of the following three academic criteria:

1. High School

High School Graduation Certificate with a 60% overall average in the following (or equivalent):

- i. English: 3201 or 3202 (minimum 60%)
- ii. Mathematics (4 credits) chosen from:
Advanced: 2200, 3200 (50% minimum in each course)
Academic: 2201 (50% minimum), 3201 (60% minimum)
- iii. Two Science courses:
Biology: 3201
Chemistry: 3202

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with the following courses:

- i. English (minimum 60%): CM1060, CM1061
- ii. Math (minimum 60%): MA1040, MA1041
- iii. Four Science courses:
Biology: BL1020, BL1021
Chemistry: CH1030, CH1031

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with Degree and Technical Profile (overall 60% average) including the following courses (or equivalent):

- i. English (minimum of 60%) 3101A, 3101B, 3101C or 3102A, 3102B, 3102C
- ii. Mathematics (minimum of 60%) 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C
- iii. Science :
Biology 1101, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C
Chemistry 1102, 2102A, 2102B, 2102C, 3102A, 3102B, 3102C

Applicants with Adult Basic Education (Level III) Graduation with a different Profile (and appropriate grades) may be eligible for admission to the program provided the appropriate selection of courses including those outlined above have been completed.

Additional Entrance Requirements

- Completion of the Casper Admissions Exam.
 - The Casper Admissions Exam official score will be used as part of the points-based system to determine ranking in the competitive entry process
 - All applicants are required to complete Casper* Admissions Exam (CSP-10201 – Canadian Professional Health Sciences) as part of their application for the 2023/2024 admissions cycle. To complete Casper, visit [TakeAltus.com](https://www.takealtus.com).
- Current Cardiopulmonary Resuscitation (CPR) or Basic Life Support (BLS)
- Current First Aid Certificate (Standard)
- Class 05 Learner (Level 1) Driver's License (minimum)
 - **Note: Employers may require that Paramedics have a Class 04 driver's license which can be obtained through a Provincial Motor Vehicle Registration Office.**
- Valid** Certificate of Conduct, including Criminal Record and Vulnerable Sector Check
- Students will require a clear and current Certificate of Conduct (Criminal Record and Vulnerable Sector Check) prior to clinical practicum. Applicants with a criminal offense listed on their Certificate of Conduct (Criminal Record and Vulnerable Sector Check) may be denied access to clinical placement and may be unable to complete

their program.

- Immunization Record providing evidence that the applicant has received the required vaccinations/screening tests. Completing the immunization record will require physician's visits, blood tests, and a TB screening test; detailed instructions are included on the School of Health Sciences Student Information and Program Awareness Form. The applicant is responsible for ensuring that all medical requirements are fulfilled, and the immunization record complete before submission. Certain vaccinations require a series of immunizations over a period; therefore, it is essential to start the process as early as possible. The applicant is also responsible for all associated costs (vaccinations, laboratory testing, physician fees, certificate of conduct fees, etc.).
- ESL students only – one of the following:
 - IELTS: minimum overall band score of 7
 - TOEFL Score: minimum score of 94

(See the Additional Information for Health Sciences Applicants (Definitions and Regulations) section of the calendar or under the Admissions Regulations section of our website for details.)

***Casper.** The Casper test comprises 12 sections of video and written scenarios. Following each scenario, you will be required to answer a set of probing questions under a time contract. The test typically takes between 75-90 minutes to complete. Each response is graded by a different rater, giving a very robust and reliable view of personal and professional characteristics important to our program. No studying is required for Casper, although you may want to familiarize yourself with the test structure at [TakeAltus.com](https://www.takealtus.com), and ensure you have a quiet environment to take the test. We strongly urge you to take advantage of the 12-section practice test, which will not only immerse you in the test environment but will also ensure you meet the technical requirements to access and complete the test.

Casper test results are valid for one admissions cycle. Applicants who have already taken the test in previous years will therefore be expected to re-take it.

For a more detailed look at the Casper test, please see this video.

****Acceptance of the Certificate of Conduct (Criminal Record and Vulnerable Sector Check)** is at the discretion of the Health Authority of which clinical practicum is being sought.

COMPETITIVE ENTRY APPLICATION PROCESS - FALL 2023

Program Start Date September 2023

The competitive admissions process is points-based and includes:

[View the Competitive Entry Application Process for this program](#)

Deadline for receipt of application	March 3rd 2023
Deadline for receipt of ALL supporting documentation*	March 10th 2023
Initial round of acceptances	April 30th 2023

*Documentation received after the deadline **WILL NOT** be considered

****Candidates not accepted for the intake to which they applied must re-apply for admission to future offerings. Applications WILL NOT be kept on file.**

Rehabilitation Assistant (OTA and PTA)

Start Date: September

Credential: Diploma

Program Length: 9 Semesters

School: Health Sciences

Locations & Delivery Modes:

- Online - Asynchronous delivery

PROGRAM DESCRIPTION

Rehabilitation Assistants work as members of a health care team under the supervision of and in collaboration with Occupational Therapists and Physiotherapists. Rehabilitation Assistants are involved with the safe and proficient delivery of activities that have been established as a treatment plan for clients coping with temporary or permanent limitations in occupational performance and/or functional movement. The role of the Rehabilitation Assistant varies depending on the practice setting, which includes rehabilitation facilities, hospitals, long-term care facilities, community settings, and private practices. The Rehabilitation Assistant works with individuals, families, or groups, helping clients achieve optimal levels of physical, psychosocial, and/or cognitive abilities.

This part-time program is offered through distributed learning offering flexibility, collaboration, and interaction with a cohort model to minimize isolation often associated with distance education. Online courses are enhanced by laboratory sessions and structured clinical placements (nineteen weeks at 4 points throughout the program).

Graduates of this program will be equipped with the technical and theoretical skills required to work as Rehabilitation Assistants in hospitals, health centers, community organizations, rehabilitation facilities, and long-term care facilities. Rehabilitation Assistants work under the supervision of Occupational Therapists and/or Physiotherapists.

Graduates of College of the North Atlantic's Occupational Therapist Assistant or Physiotherapist Assistant Certificate program may apply to the Rehabilitation Assistant (OTA and PTA) program to receive dual certification. Graduates with one certification (OTA or PTA) from another institution are also eligible for advanced standing into the Rehabilitation Assistant program; entry point will be determined on a case-by-case basis.

PROGRAM MISSION

Fostering an educational experience that equips students with theoretical knowledge and technical skills required to work as Rehabilitation Assistants.

PROGRAM VISION

Sustaining Canada's most accessible Rehabilitation Assistant Diploma program through innovative post-secondary education strategies.

PROGRAM PHILOSOPHY

Providing a vital supporting role in the delivery of efficient and effective rehabilitation services.

OBJECTIVES

Upon successful completion of the Rehabilitation Assistant (OTA/PTA) program, graduates will be able to:

1. Apply the academic knowledge and skills outlined in the competency profiles for Physiotherapist Assistants (Canadian Physiotherapy Association) and Occupational Therapist Assistants (Canadian Association of Occupational Therapists).
2. Apply the learned academic knowledge and skills in clinical practice.
3. Apply effective communication skills and professional behaviors.

4. Perform delegated therapeutic skills safely and effectively under the supervision of an Occupational Therapist or Physiotherapist.
5. Provide the community with skilled Rehabilitation Assistants who can serve their employers and clients with the highest degree of competence.

ACCREDITATION

The Rehabilitation Assistant program at College of the North Atlantic has been accredited by the Occupational Therapist Assistant and Physiotherapist Assistant Education Accreditation Program (OTA & PTA EAP) in collaboration with Physiotherapy Education Accreditation Canada (PEAC) and the Canadian Association of Occupational Therapists (CAOT). The status of Accreditation was granted to the program on November 30, 2016 for the period until April 30, 2024.

Occupational Therapist Assistant and Physiotherapist Assistant Education Accreditation Program
Suite 26, 509 Commissioners Road West
London, Ontario
N6J 1Y5
(226) 636-0632
www.otapta.ca

CLINICAL PLACEMENTS

Clinical placements are a required element of this program and students will be assigned placements at approved training sites. Additional sites may be considered in consultation with program faculty. There is no guarantee that students will receive their preferred placement. All expenses associated with the completion of clinical placement will be the responsibility of the student.

Students require a clear Certificate of Conduct (Criminal Record Check and Vulnerability Sector Check) to be permitted into a clinical placement. Students with an unclear Certificate of Conduct are advised to speak with program faculty at the beginning of the program.

ENTRANCE REQUIREMENTS

Eligibility for admission to the Rehabilitation Assistant program requires the applicant to meet one of the following four academic criteria:

1. High School

High School Graduation Certificate with a 60% overall average in the following (or equivalent):

i. English 3201 or 3202 (minimum 60%)

ii. Mathematics (4 credits) chosen from:

Advanced: 2200, 3200 (50% minimum in each course)

Academic: 2201 (50% minimum), 3201 (60% minimum)

iii. Science – (2 credits) chosen from one of:

Biology: 3201

Physics: 3204

Chemistry: 3202

Earth Systems: 3209

iv. Electives (2 additional credits) chosen from any of the remaining 3000 level courses offered in the Senior High School Program.

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with the following courses:

i. English (minimum 60%): CM1060, CM1061

ii. Math (minimum 60%): MA1040, MA1041

iii. Two Science courses chosen from one of the following three combinations:

a. Biology: BL1020, BL1021

b. Chemistry: CH1030, CH1031

c. Physics: PH1050, PH1051

Note: It is strongly recommended that CAS students who intend to enroll in the Rehabilitation Assistant (OTA/PTA) program complete both of the Introductory Biology courses.

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with Degree and Technical Profile (overall 60% average) including the following courses (or equivalent):

- i. English (minimum of 60%) 3101A, 3101B, 3101C or 3102A, 3102B, 3102C
- ii. Mathematics (minimum of 60%) 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C
- iii. Science from one of the following sections:
 - a. Biology 1101, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C
 - b. Chemistry 1102, 2102A, 2102B, 2102C, 3102A, 3102B, 3102C
 - c. Physics 1104, 2104A, 2104B, 2104C, 3104A, 3104B, 3104C

Applicants with Adult Basic Education (Level III) Graduation with a different Profile (and appropriate grades) may be eligible for admission to the program provided the appropriate selection of courses including those outlined above have been completed.

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, must be at least 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

Students meeting academic entrance requirements are accepted on a first come, first served basis. Before final acceptance is granted, additional documentation must be submitted; see the Additional Information for Health Sciences Applicants section of the calendar or under the Admissions Regulations section of our website for details.

Additional Entrance Requirements

- Valid** Certificate of Conduct, including Criminal Record and Vulnerable Sector Check.
- Students will require a current Certificate of Conduct (Criminal Record and Vulnerable Sector Check) prior to starting their program. Applicants with a criminal offense listed on their Certificate of Conduct (Criminal Record and Vulnerable Sector Check) may be denied access to clinical placement by the College's clinical partners and may be unable to complete their program.
- Students will need to complete a Student Pre-Placement Immunizations and Communicable Diseases Screening with their Health Care Provider. Completing the immunization record will require physician's visits, blood tests, and a TB screening test; detailed instructions are included on the Student Pre-Placement Immunizations and Communicable Diseases Screening. The applicant is responsible for ensuring that all medical requirements are fulfilled, and the screening form complete before submission. Certain vaccinations require a series of immunizations over a period; therefore, it is essential to start the process as early as possible. The applicant is also responsible for all associated costs (vaccinations, laboratory testing, physician fees, certificate of conduct fees, etc.).

(See the Additional Information for Health Sciences Applicants (Definitions and Regulations) section of the calendar or under the Admissions Regulations section of our website for details.)

Respiratory Therapy

Start Date: September

Credential: Diploma

Program Length: Three Years

School: Health Sciences

Locations & Delivery Modes:

- Prince Philip Drive - On Campus delivery

PROGRAM DESCRIPTION

Respiratory therapists are healthcare professionals who contribute to the diagnosis and management of cardiorespiratory disorders, providing such services as cardiopulmonary resuscitation, ventilator management, oxygen and aerosol therapy, patient assessment and evaluation, and diagnostic services including pulmonary function testing. Most respiratory therapists work in hospitals, neonatal nurseries, operating rooms, intensive care units, general wards, pulmonary function labs, and emergency departments. Respiratory therapists may also work in community settings such as homecare, asthma clinics, research, and medical equipment sales and service. Respiratory therapists require good judgement, excellent interpersonal skills, and the ability to maintain their composure in critical medical situations.

Respiratory Therapy (RT) is a challenging comprehensive three-year program featuring two years of classroom, laboratory, clinical simulation, and clinical practicum exposure followed by one year of clinical education in an affiliated clinical site. Program topics include anatomy and physiology, microbiology, applied sciences, pharmacology, pathophysiology, mechanical ventilation, cardiopulmonary diagnostics, and neonatal respiratory care. Clinical application courses in years 1 and 2 utilize simulation and clinical site visits to facilitate theory integration and transition to the third and final year. The clinical phase will consist of 37 weeks of training conducted at approved training facilities within the provincial Regional Health Authorities. The RT program develops the technical skills and professional behaviours required for graduates to work competently as an integral member of the health care team.

Furthermore, program graduates will be well-positioned to challenge the national competency examination as directed through the Canadian Board for Respiratory Care. After completing this exam, they will be eligible to register with the Newfoundland and Labrador Council of Health Professionals.

OBJECTIVES

Upon successful completion of the Respiratory Therapy program, graduates will be able to:

1. Demonstrate the knowledge, skills, and abilities outlined in the National Alliance of Respiratory Therapy Regulatory Bodies (NARTRB) National Competency Framework (NCF) with timeliness, accuracy, and proficiency.
2. Practice and promote the principles of quality management and the efficient utilization of resources.
3. Apply critical thinking and problem-solving skills that promote competence in the performance of respiratory therapy procedures
4. Demonstrate a high level of professional conduct in the performance of duty.
5. Communicate effectively and work collaboratively with other health care team members to serve patients and employers with the highest degree of competence.

ACCREDITATION

The *Respiratory Therapy (RT)* program is accredited by Accreditation Canada until *May 2024*.

This program is currently “Accredited” with Accreditation Canada/Equal. Our “Accredited” status serves as an important demonstration of our commitment to providing quality education in alignment with accreditation and regulatory requirements. If you require additional information regarding our accreditation status and endeavors and/or any potential implications our accreditation status may have on your future abilities to practice as a healthcare

professional, we encourage you to reach out to the Dean for the School of Health Sciences.

PROGRAM TRANSFERABILITY

Graduates may elect to further their studies and obtain a Bachelor of Technology degree from Memorial University of Newfoundland or a Bachelor of Science (Post-Diploma, Human Science) from Athabasca University.

Graduates may also pursue further studies in the areas of Anesthesia Assistant, Cardiovascular Perfusion, or Polysomnography.

CERTIFICATIONS

Students must possess a valid Standard First Aid with Cardiopulmonary Resuscitation/Basic Life Support (CPR or BLS) certification to be eligible for graduation from the College.

CLINICAL PLACEMENTS

Clinical placements are a required element of this program and students will be assigned placements at approved training sites. Additional sites may be considered in consultation with program faculty. There is no guarantee that students will receive their preferred placement. All expenses associated with the completion of clinical placement will be the responsibility of the student.

Students require a clear Certificate of Conduct (Criminal Record Check and Vulnerability Sector Check) to be permitted into a clinical placement. Students with an unclear Certificate of Conduct are advised to speak with program faculty at the beginning of the program.

For programs with competitive admissions, clinical placements are not affected by ranking in the competitive admissions process and will be determined under institutional guidelines.

ENTRANCE REQUIREMENTS

Eligibility for consideration of admission to the RT program requires the applicant to meet one of the following three academic criteria:

1. High School

High School Graduation Certificate with a 60% overall average in the following (or equivalent):

- i. English 3201 or 3202 (minimum 60%)
- ii. Mathematics (4 credits) chosen from:
 - Advanced: 2200, 3200 (50% minimum in each course)
 - Academic: 2201 (50% minimum), 3201 (60% minimum)
- iii. Two Science courses:
 - Biology: 3201
 - Chemistry: 3202

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with the following courses:

- i. English (minimum 60%): CM1060, CM1061
- ii. Math (minimum 60%): MA1040, MA1041
- iii. Four Science courses
 - Biology: BL1020, BL1021
 - Chemistry: CH1030, CH1031

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with Degree and Technical Profile (overall 60% average) including the following courses (or equivalent):

- i. English (60% minimum) 3101A, 3101B, 3101C or 3102A, 3102B, 3102C
- ii. Mathematics (60% minimum) 1104A, 1104B, 1104C, 2104A, 2104B, 2104C, 3104A, 3104B, 3104C
- iii. Science
 - Biology 1101, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C

Chemistry 1102, 2102A, 2102B, 2102C, 3102A, 3102B, 3102C

Note: Applicants with Adult Basic Education (Level III) Graduation with a different Profile (and appropriate grades) may be eligible for admission to the program provided the appropriate selection of courses including those outlined above have been completed.

Additional Entrance Requirements

- Completion of the Casper Admissions Exam.
 - The Casper Admissions Exam official score will be used as part of the points-based system to determine ranking in the competitive entry process
 - All applicants are required to complete Casper* Admissions Exam (CSP-10201 – Canadian Professional Health Sciences) as part of their application for the 2023/2024 admissions cycle. To complete Casper, visit [TakeAltus.com](https://takealtus.com).
- Valid** Certificate of Conduct, including Criminal Record and Vulnerable Sector Check.
- Students will require a clear and current Certificate of Conduct (Criminal Record and Vulnerable Sector Check) prior to clinical practicum. Applicants with a criminal offense listed on their Certificate of Conduct (Criminal Record and Vulnerable Sector Check) may be denied access to clinical placement and may be unable to complete their program.
- Immunization Record providing evidence that the applicant has received the required vaccinations/screening tests. Completing the immunization record will require physician's visits, blood tests, and a TB screening test; detailed instructions are included on the School of Health Sciences Student Information and Program Awareness Form. The applicant is responsible for ensuring that all medical requirements are fulfilled, and the immunization record complete before submission. Certain vaccinations require a series of immunizations over a period; therefore, it is essential to start the process as early as possible. The applicant is also responsible for all associated costs (vaccinations, laboratory testing, physician fees, certificate of conduct fees, etc.).
- ESL students only – one of the following:
 - IELTS: minimum overall band score of 7
 - TOEFL Score: minimum score of 94

(See the Additional Information for Health Sciences Applicants (Definitions and Regulations) section of the calendar or under the Admissions Regulations section of our website for details.)

***Casper.** The Casper test comprises 12 sections of video and written scenarios. Following each scenario, you will be required to answer a set of probing questions under a time contract. The test typically takes between 75-90 minutes to complete. Each response is graded by a different rater, giving a very robust and reliable view of personal and professional characteristics important to our program. No studying is required for Casper, although you may want to familiarize yourself with the test structure at [TakeAltus.com](https://takealtus.com), and ensure you have a quiet environment to take the test. We strongly urge you to take advantage of the 12-section practice test, which will not only immerse you in the test environment but will also ensure you meet the technical requirements to access and complete the test.

Casper test results are valid for one admissions cycle. Applicants who have already taken the test in previous years will therefore be expected to re-take it.

For a more detailed look at the Casper test, please see [this video](#).

****Acceptance of the Certificate of Conduct (Criminal Record and Vulnerable Sector Check)** is at the discretion of the Health Authority of which clinical practicum is being sought.

COMPETITIVE ENTRY APPLICATION PROCESS

Program Start Date September 2023

The competitive admissions process is points-based and includes:

[View the Competitive Entry Application Process for this program](#)

Deadline for receipt of application

March 3rd 2023

Deadline for receipt of ALL supporting documentation*

March 10th 2023

Initial round of acceptances

April 30th 2023

*Documentation received after the deadline **WILL NOT** be considered

****Candidates not accepted for the intake to which they applied must re-apply for admission to future offerings. Applications WILL NOT be kept on file.**

Veterinary Technician

Start Date: September

Credential: Diploma

Program Length: Two Years

School: Health Sciences

Locations & Delivery Modes:

- Prince Philip Drive - On Campus delivery

PROGRAM DESCRIPTION

Creature comfort.

Veterinary technicians play a vital role in the health and well-being of animal patients. They work alongside veterinarians in the care of animals, providing emergency and routine care. These activities may include preventive medicine, nutrition support, dentistry and various laboratory procedures.

There has been a huge increase in demand for veterinary care since the COVID-19 pandemic and a predicted critical future shortage of veterinary capacity in Canada. [\[1\]](#)

With this two-year diploma, you will have the opportunity to combine a love of animals with the technical skills to build a career that brings your patients – and you – great comfort. You will study pharmacology, radiography, laboratory testing, animal nursing, surgery and anesthesia. While the focus will be on cats, dogs and other common pets, you will also learn about veterinary care for horses, cattle, birds and other exotic species.

Building trust and rapport with another living creature is a privilege and a joy, particularly when you take part in their healing and help them thrive. Helping beloved family pets have longer, healthier lives takes care and dedication, and the rewards are endless. It may not be all puppies and kittens every day – as lizards and snakes deserve love too! You never know what adventure awaits you from the animal world.

With 16 areas of specialization after graduation, this dynamic and fast-paced career provides substantial growth opportunities. Consider this exciting and fulfilling profession for your life's work.

Program Highlights

- The program is seeking accreditation through the Canadian Veterinary Medical Association (CVMA); upon successful accreditation graduates are eligible to write the Veterinary Technician National Exam (VTNE) for greater portability across Canada and the United States
- Students develop skills in anesthesia, pharmacology, x-ray, laboratory testing, surgical assistance and nursing

Did You Know?

- Earnings for this type of job are higher in Newfoundland and Labrador than the national median salary - \$49,130, compared to \$43,265 nationally.
- According to an occupational search (EMSI), for both Newfoundland and Labrador and across Canada, there has been a growing demand for these highly qualified professionals over the past 10 years, with an expected additional 12.2% increase by 2028.
- The month of October is dedicated to recognizing Registered Veterinary Technicians and the role they play in veterinary medicine.

OBJECTIVES

Upon successful completion of this program, graduates will be able to:

1. Perform basic patient examinations and collect data on vital signs.
2. Restrain and manage animals in clinical situations.
3. Prepare and administer medications and pharmaceuticals as prescribed by a veterinarian.
4. Prepare anesthetic delivery systems, induce anesthesia, and monitor patients under anesthesia.
5. Prepare and maintain the surgical area and assist during surgical procedures.
6. Perform dental prophylactic procedures.
7. Produce standard diagnostic images.
8. Collect and process samples for diagnostic laboratory work.
9. Perform common veterinary diagnostic tests, such as blood chemistries, differentials, cultures, and sensitivities.
10. Perform basic veterinary practice management including computer applications.
11. Counsel clients on a variety of topics surrounding animal care.

CURRICULUM

The curriculum for the Veterinary Technician program is spread over two years. In the first semester, students will explore the field of Veterinary Technician and gain the background knowledge required for success. Semesters 2 & 3 introduce clinically relevant skills, including large animals, preparing students for the second year, which focuses on advanced skills. The second year develops dental and surgical skills, with the addition of exotics and lab animals. The final semester is an 8-week clinical placement at veterinary facilities.

Classes and laboratory sessions for this program may take place Monday - Friday in the afternoon/early evening.

Graduates of the program will be eligible to sit the Veterinary Technician National Exam (VTNE) certification examination set by the American Association of Veterinary State Board and then register with the Eastern Veterinary Technician Association (EVTA).

ACCREDITATION

This program will seek accreditation through the Canadian Veterinary Medical Association (CVMA).

CERTIFICATIONS

Students must possess valid Standard First Aid with Cardiopulmonary Resuscitation (CPR) certification to be eligible for graduation from the College.

CLINICAL PLACEMENTS

Clinical placements are a required element of this program, and students will be assigned placements at approved training sites. Additional sites may be considered in consultation with program faculty. There is no guarantee that students will receive their preferred placement. All expenses associated with the completion of clinical placement will be the responsibility of the student.

Students require a clear Certificate of Conduct (Criminal Record Check and Vulnerability Sector Check) to be permitted into a clinical placement. Students with an unclear Certificate of Conduct are advised to speak with program faculty at the beginning of the program.

For programs with competitive admissions, clinical placements are not affected by ranking in the competitive admissions process and will be determined under institutional guidelines.

ENTRANCE REQUIREMENTS

Eligibility for admission to the Veterinary Technician program requires the applicant to meet one of the following three academic criteria:

1. High School

High School Graduation Certificate with a 60% overall average in the following (or equivalent):

- i. English 3201 or 3202 (minimum 60%)
- ii. Mathematics (4 credits) chosen from:
 - Advanced: 2200, 3200 (50% minimum in each course)
 - Academic: 2201 (50% minimum), 3201 (60% minimum)
- iii. Science (all courses below are required):
 - Biology: 2201 and 3201 (60% minimum in each course)
 - Chemistry: 3202 (60% minimum)

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with the following courses:

- i. English (minimum 60%): CM1060, CM1061
- ii. Math (minimum 60%): MA1040, MA1041
- iii. Four Science courses
 - Biology (minimum 60%): BL1020, BL1021
 - Chemistry (minimum 60%): CH1030, CH1031

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with Degree and Technical Profile (overall 60% average) including the following courses (or equivalent):

- i. English (minimum of 60%) 3101A, 3101B, 3101C or 3102A, 3102B, 3102C
- ii. Mathematics (minimum of 60%) 1104A, 1104B, 1104C, 2104A, 2104B, 2104C, 3104A, 3104B, 3104C
- iii. Science from the following sections:
 - Biology (minimum 60%) 1101, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C
 - Chemistry (minimum 60%) 1102, 2102A, 2102B, 2102C, 3102A, 3102B, 3102C

Note: Applicants with Adult Basic Education (Level III) Graduation with a different Profile (and appropriate grades) may be eligible for admission to the program provided the appropriate selection of courses including those outlined above have been completed.

Additional Entrance Requirements

- Volunteer/work experience
 - The Casper Admissions Exam official score will be used as part of the points-based system to determine ranking in the competitive entry process
 - Applicants are not required to have volunteer or work experience in order to apply but the experience will be considered in competitive ranking (see competitive entry application process for more details)
- ESL students only – one of the following:
 - IELTS: minimum overall band score of 7
 - TOEFL Score: minimum score of 94

Additional Requirements Upon Acceptance

- Valid *Certificate of Conduct, including Criminal Record. Students will require a clear and current Certificate of Conduct (Criminal Record) prior to clinical practicum.
 - Applicants with a criminal offense listed on their Certificate of Conduct (Criminal Record) may be denied access to clinical placement and may be unable to complete their program.
- Rabies vaccination, required upon acceptance to the program. Students must be willing to complete rabies vaccination series. This must be completed before the end of the first month of classes. Students without rabies vaccinations will not be able to complete the program. Students are responsible for all associated costs.

*Acceptance of the Certificate of Conduct (Criminal Record) is at the discretion of the organization in which the clinical practicum is being sought.

COMPETITIVE ENTRY APPLICATION PROCESS - FALL 2023

Program Start Date is September 2023

The competitive admissions process is points-based and includes:

X-Ray Skills for Medical Laboratory Technologists

Start Date: September

Credential: Post Diploma

Program Length: 4 Semesters

School: Health Sciences

Locations & Delivery Modes:

- Online - Asynchronous delivery

PROGRAM DESCRIPTION

The picture of health.

This specialized X-ray program is unlike any other. If you are a graduate of the Medical Laboratory Technology program working in your field, this is an opportunity to augment your skill set. This program can unlock exciting new challenges and diversity in your career – making you even more employable in today's medical world.

X-rays, as a medical advance, has been in existence for quite some time; in fact, because of its amazing applications in imaging, it is often referred to as the most useful medical advancement in history¹. Despite incredible technological advancements in imaging, X-rays remain the most common form of imaging used by medical professionals today.

This four-semester post diploma program enhances the practice of medical laboratory technology with a practice subset of medical radiation technology. The program emphasizes a practical approach to developing the knowledge and skills necessary to perform a limited scope of general radiography. You will learn how to interpret requisitions from requesting physicians, provide quality patient care and operate sophisticated radiation emitting devices to produce images of the skeletal, digestive, respiratory and urinary systems.

Along with theory of X-ray production, equipment use and image optimization, you will also study radiographic anatomy, positioning techniques and radiation safety and quality procedures. Theoretical learning is supplemented by practical clinical exposure during the second semester.

The third semester concentrates on providing a correlation between theory and patient care through seven (7) weeks of intensive simulation procedures. You will then advance to a 16-week clinical radiography placement where you will participate in work-integrated learning under the direct supervision of a registered medical radiography technologist.

With this experience, combined with theoretical and practical concepts and, following attainment of clinical competence, you will be ready to practice as an entry-level Combined Laboratory and X-Ray (CLXT) Technologist!

Program Highlights

- Qualifications to work in both laboratory and X-ray fields
- Two clinical placements and one on-campus simulation course
- Practice within the standards of the Combined Laboratory and X-Ray Technologist (CXLT) Scope of Practice NL

Did You Know?

- X-rays are electromagnetic energy waves that act similarly to light rays, but at wavelengths approximately 1,000 times shorter than those of light.
- X-rays are the oldest and most useful medical technology..
- X-rays have been used in the art world to examine paintings, where rough sketches and even other paintings are found beneath a visible surface. They reveal the integrity of priceless artifacts, such as ancient Egyptian mummies or fossils, without damaging them.

[1] [Fun facts about radiology - Reina Imaging](#)

PROGRAM OBJECTIVES

Upon successful completion of the X-Ray Skills for Medical Laboratory Technologists program, students will be able to:

1. Practice within the standards of the Combined Laboratory and X-Ray (LX) Technologist Scope of Practice NL.
2. Operate general diagnostic imaging equipment and correctly position patients to produce quality images that assist in diagnosis.
3. Follow radiation protection practices and legislation to minimize risk to patients, staff and visitors.
4. Maintain and assess radiographic, accessory, and image processing equipment for quality assurance and mitigation of potential risks.
5. Provide general patient care, assessments, and transfers as needed.
6. Practice independent judgment and critical thinking in the performance of duties.
7. Perform administrative and clerical duties using computer technology while ensuring compliance with legal, quality and privacy standards.

CLINICAL PLACEMENTS

Clinical placements are a required element of this program, and you will be assigned placements at approved training sites. Additional sites may be considered in consultation with program faculty. There is no guarantee you will receive your preferred placement. All expenses associated with the completion of clinical placement will be the responsibility of the student.

You will require a clear Certificate of Conduct (Criminal Record Check and Vulnerability Sector Check) to be permitted into a clinical placement. Those with an unclear Certificate of Conduct are advised to speak with program faculty at the beginning of the program.

ENTRANCE REQUIREMENTS

Entrance requirements for the X-Ray Skills for Medical Laboratory Technologists program are as follows:

- Graduation from an accredited program in Medical Laboratory Technology
- MLT Certification and membership with the Canadian Society for Medical Laboratory Science (CSMLS)
- Employed at a Regional Health Authority within the province of Newfoundland and Labrador as a Medical Laboratory Technologist and sponsored by the employer

School of
Industrial Trades
and Natural Resources

Aircraft Maintenance Engineering Technician

Start Date: September

Credential: Diploma

Program Length: Two Years

School: Natural Resources and Industrial Trades

Locations & Delivery Modes:

- Gander - On Campus delivery

PROGRAM DESCRIPTION

Airworthy.

With some four billion people flying commercially each year, safety is the top priority for airlines. That means that this job makes you one of the most valuable technicians in the world.

Airworthiness pertains to the ability of an aircraft to complete necessary functions in a safe and efficient manner so that it can take to the sky, stay there and reach its destination. This requires going through every facet of the plane to ensure it is able to fly and safely perform before the pilot even considers taking the craft to the air. It means having those repair designs approved, passing necessary certifications to have passengers on board and permission to occupy the designated air space. When these and the environmental protection requirements are met, a certificate of airworthiness is issued by the civil aviation authority where the aircraft is registered. Then you're ready for take off.

This is a career with great responsibility and great reward. According to the Government of Canada labour market stats, salaries can reach over \$50 an hour. And this program can get you there.

With us, you'll train in inspection, maintenance, and repair of aircraft and aircraft components. Some of the duties you'll undertake include troubleshooting and repair for fixed wing aircraft and helicopters, and aircraft systems and avionics, ground handling and routine inspection for aviation safety and airworthiness, and power plant and structural repairs.

You'll have the chops and the certifications to work on anything from airliners to helicopters to fighter jets. There are no boring days at work here. In this crucial role, your senses are honed, your concentration is absolute, and time at work really does fly.

It's time to embark upon your exciting new career. Apply now!

Program Highlights

- Attain three Aircraft Maintenance Engineer licenses: M1-Small aircraft, M2- Large aircraft and E-Avionics
- Accreditation by Transport Canada - meets the basic training requirements for the Aircraft Maintenance Engineer's license categories "M1", "M2" and "E"
- Transport Canada-granted 21-month experience credit towards the 48 months required, and credit for having completed the required knowledge exams
- Qualify to write an exam in Aircraft Maintenance Regulations to acquire an Aircraft Maintenance Engineer's license.

Did you know?

- According to international independent subject matter experts, global civil aircraft production revenues are forecasted to return to their 2019 pre-pandemic levels by 2024, one year earlier than initially forecasted.
- In 2021, the Canadian aerospace industry contributed over \$24B in GDP and close to 200,000 jobs to the Canadian economy.
- About 13,100 openings for aircraft and avionics equipment mechanics and technicians are projected each year.
- Overall employment of aircraft and avionics equipment mechanics and technicians is projected to grow 6% from 2021 to 2031.

[1] [Aircraft Maintenance Technician in Canada | Wages - Job Bank](#)

[2] [State of Canadian Aerospace Industry \(canada.ca\)](#)

OUTCOMES

1. Exhibit safety practices in the aviation industry.
2. Exhibit skills and knowledge required to work in the aircraft maintenance field.
3. Apply related knowledge that supports technical training.
4. Exhibit professional behaviors expected in the aircraft industry
5. Meet the requirements for three Aircraft Maintenance Engineer licenses: M1-Small aircraft, M2- Large aircraft and E-Avionics

ACCREDITATION

This program is accredited by Transport Canada as meeting the basic training requirements for the Aircraft Maintenance Engineer's license categories "M1", "M2" and "E". Transport Canada also grants qualified graduates a 21-month experience credit towards the 48 months required and credit for having completed the required knowledge exams. After successful completion of this program and the required work experience, apprentices qualify to write an exam in Aircraft Maintenance Regulations to acquire an Aircraft Maintenance Engineer's license.

ENTRANCE REQUIREMENTS

Eligibility for admission requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation Certificate with a 60% average in eight level 3000 credits, or equivalent, including Mathematics (4 credits) chosen from:

- i. Advanced: 2200, 3200 (50% minimum in each course)
- ii. Academic: 2201 (50% minimum), 3201 (60% minimum)

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with MA1040 (Math Fundamentals 1) and MA1041 (Math Fundamentals II) OR clearing High School course deficiencies through Comprehensive Arts and Science (Transition) individual courses.

3. Adult Basic Education

Adult Basic Education (Level III) Graduation with a Degree and Technical Profile (or Business Related College Profile), including the following courses (or equivalent):

- i. Mathematics: 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B and 3101C

Applicants with Adult Basic Education (Level III) Graduation with a different Profile may be eligible for admission to the program provided the appropriate selection of courses, including those outlined above, have been completed.

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, must be at least 19 years of age at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

EMPLOYMENT OPPORTUNITIES

Graduates may find employment in the following areas:

- Fixed wing airlines
- Helicopter operators
- Rotary commercial airlines
- Aircraft manufacturers
- Repair and overhaul companies
- Private operators
- Flying schools
- Government departments

Semester 6

Code	Title	Hrs
RW3141	Rotary Wing Aircraft Systems	55
AV2310	Major Communications Radio Install	55
AV2320	Auto Flight	55
PT2121	Reciprocating Engine Overhaul	55

Aircraft Structural Repair Technician

Start Date: September

Credential: Certificate

Program Length: One Year

School: Natural Resources and Industrial Trades

Locations & Delivery Modes:

- Gander - On Campus delivery

PROGRAM DESCRIPTION

Riveting work.

Meticulous detail, integrity of the materials and the dedication of the technician make for the safety required by law for any aircraft before it leaves the ground. Damage assessment, repairs, overhaul and modifications, along with inspection of all components of the aircraft structure – inside and out – ensures they are safe to fly.

A structural repair technician's day-to-day tasks usually involve working with tools and equipment such as drills, riveters and hydraulic presses. They may also be required to carry out repair work on composite and metal structures, as well as inspect avionics systems and components.

There is a great opportunity in this field, with just one year of investment. The emphasis in the Aircraft Structural Repair Technician program is on the structure of multiple aircraft, and how to assess, repair or replace various components. This involves using specialized equipment and techniques and gaining familiarity with a variety of materials used in the construction of aircraft (wood, fabric, sheet metal and composite materials).

You will learn to identify the stresses acting on aircraft structures to determine the urgency of repair when damaged. You will become familiar with sheet metal forming processes, materials, fasteners, and equipment. You will perform special metal treatment processes and repair forgings and extrusions as per manufacturer's specifications. Your skills will extend to applying advanced composite fabrication techniques, identifying advanced composite structural damage, completing a full damage assessment, and performing effective structural repairs as per Canadian Aviation Regulatory or aircraft manufacturer's standards.

This program is recognized by Transport Canada and awards you credit toward the Aircraft Maintenance Engineer's licence in Structural Repair. In one year, you'll be en route to your new career! Or stay with us for another and set a course toward an occupation as Aircraft Maintenance Engineering Technician.

Either way, this is your entry point into the exciting aircraft repair industry. Get ready to board!

Program Highlights

- Build on this program and set a course toward an occupation as Aircraft Maintenance Engineering Technician
- Accredited by Transport Canada as meeting the basic training requirements for the Aircraft Maintenance Engineer's license category "S"
- Transport Canada grants qualified graduates a 10-month experience credit towards the 36 months required and credit for having completed the required knowledge exams
- After successful completion of this program and the required work experience, apprentices qualify to write an exam in Aircraft Maintenance Regulations to acquire an Aircraft Maintenance Engineer's

Did you know?

- On average, the salary range in this career is about \$53,000 per year, but can reach some \$95,000, according to Indeed.com.[\[1\]](#)
- According to international independent subject matter experts, global civil aircraft production revenues are forecasted to return to their 2019 pre-pandemic levels by 2024, one year earlier than initially forecasted.

- In 2021, the Canadian aerospace industry contributed over \$24B in GDP and close to 200,000 jobs to the Canadian economy.

[1] [Aircraft Structural Repair Technician Jobs \(with Salaries\) 2023 | Indeed.com Canada](#)

OUTCOMES

Upon successful completion of this program graduates will be able to:

1. Develop techniques, standards and practices of structural repair that conforms to Transport Canada guidelines for the occupation.
2. Provide a broad overview of aircraft maintenance and repair functions with specific emphasis on safety practices in the industry.
3. Apply safe work practices and personal protection.
4. Meet the requirements to become an Aircraft Maintenance Engineer category "S" - Structural Repair.
5. Exhibit strong and logical troubleshooting skills
6. Apply related knowledge and skills to complement and support technical training
7. Exhibit professional attitudes and behavior required within the aviation industry

ACCREDITATION

This program is accredited by Transport Canada as meeting the basic training requirements for the Aircraft Maintenance Engineer's license category "S. Transport Canada also grants qualified graduates a 10-month experience credit towards the 36 months required and credit for having completed the required knowledge exams. After successful completion of this program and the required work experience, apprentices qualify to write an exam in Aircraft Maintenance Regulations to acquire an Aircraft Maintenance Engineer's license.

ENTRANCE REQUIREMENTS

Eligibility for admission requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation

2. Adult Basic Education

Adult Basic Education (Level III) Graduation with General College Profile (or Business Related College Profile or Degree and Technical Profile). It is strongly recommended that courses include the following:

- i. Mathematics 1102A, 1102B, 1102C and 2102A, 2102B, 2102C or 3102A, 3102B and 3102C
- ii. Science 3101, 3102, 3103

3. Comprehensive Arts and Science (CAS) Trades

Comprehensive Arts and Science (Trades) Certificate

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, must be at least 19 years of age at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

EMPLOYMENT OPPORTUNITIES

Graduates may find employment in the following areas:

- Aircraft repair stations
- Aircraft manufacturing facilities
- Composite fabricators
- Composite repair stations
- Helicopter service centers
- Helicopter overhaul facilities
- Regional and national airlines

AMET - Advanced Diploma (EASA)

Start Date: TBD

Credential: Advanced Diploma

Program Length: 15 Weeks

School: Natural Resources and Industrial Trades

Locations & Delivery Modes:

- Gander - On Campus delivery

PROGRAM DESCRIPTION

This program is designed to provide a course of study that will prepare graduates for employment under the regulation for European Aviation Safety Agency (EASA) certification as an Aircraft Maintenance Engineer. Some of the duties of graduates include:

- Perform aviation safety and airworthiness inspections
- Troubleshoot and repair fixed wing aircraft and helicopters
- Safely perform ground handling and routine inspections
- Perform power plant and structural repairs
- Troubleshoot and repair aircraft systems and avionics

OUTCOMES

1. Prepare students for EASA certification exams
2. Strengthen exam and essay writing techniques
3. Review content in the Aircraft Maintenance Engineering Program
4. Practice exams for EASA certification
5. Complete EASA certification exams
6. Demonstrate safety practices in the aviation industry
7. Demonstrate skills and knowledge required to work in the aircraft maintenance field
8. Develop and strengthen the related knowledge and skill in subjects which complement and support the technical training
9. Demonstrate positive attitudes and behavior that will enable graduates to become successful in the industry

ENTRANCE REQUIREMENTS

Eligibility for admission requires the applicant to meet one of the following academic criteria:

1. AMET Diploma (2009-Present) CNA

Graduation from the College of the North Atlantic Aircraft Maintenance Engineering Technician program 2009 to present

EMPLOYMENT OPPORTUNITIES

Graduates may find employment in the following areas:

- International aircraft servicing companies
- Aircraft servicing companies
- National aircraft companies
- Regional aircraft companies
- Aircraft refurbishing groups

Courses

Semester 1

Code	Title	Hrs
PH1030	Physics Refresher for EASA Module 2	60
CM1030	Essay Writing for EASA Exams	6
MA1150	Math Refresher for EASA Module 1	18
PE1220	EASA Module 3, 4, 5 Refresher	24
PE1230	EASA Module 5 Top Up	24
GM1340	EASA Module 6 Top Up	12
GM1350	EASA Module 7 (A) Top Up	24
GM1360	EASA Module 6, 7 (A), 8 Refresher	24
GM1230	Human Factors EASA Module 9	25
GM1700	Legislation EASA Module 10	35
AF1170	EASA Module 11 (A) Top Up	42
AF1180	EASA Module 11 (A) New Technologies	30
AF1190	EASA Module 11 (A) Refresher	24
PT1200	EASA Module 15 Top Up	54
PT1210	EASA Module 15, 17 (A) Refresher	24

Auto Body and Collision Technician

Start Date: September

Credential: Certificate

Program Length: 34 Weeks

School: Natural Resources and Industrial Trades

Locations & Delivery Modes:

- Prince Philip Drive - On Campus delivery

PROGRAM DESCRIPTION

This red seal program is designed to assist you in developing sufficient basic skills and knowledge to enter the labor force as an apprentice Mechanic in Auto Body and Collision. Some of the duties include:

- Repair and replace vehicle structures and body parts
- Remove and install interior and exterior finishes
- Hammer out dents, buckles and other defects
- Operate soldering equipment and plastic filler
- Remove damaged fenders, panels and grills
- Weld replacement parts
- Straighten frames and underbodies
- File, grind, mask and tape body surfaces in preparation for painting

OUTCOMES

1. Demonstrate safe work practices and personal protection.
2. Use tools and equipment.
3. Determine the type of paint; plan refinishing system; remove, prepare, seal and mask; apply coatings to vehicle.
4. Demonstrate correct use of chemicals within the shop environment.
5. Compute cost estimates for completing repairs.
6. Manage customer needs, complaints, questions and special challenges.

ENTRANCE REQUIREMENTS

Eligibility for admission requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation

2. Adult Basic Education

Adult Basic Education (Level III) Graduation with General College Profile (or Business Related College Profile or Degree and Technical Profile). It is strongly recommended that courses include the following:

- i. Mathematics 1102A, 1102B, 1102C and 2102A, 2102B, 2102C or 3102A, 3102B and 3102C
- ii. Science 3101, 3102, 3103

3. Comprehensive Arts and Science (CAS) Trades

Comprehensive Arts and Science (Trades) Certificate

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, must be at least 19 years of age at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment. If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

EMPLOYMENT OPPORTUNITIES

Graduates may find employment in the following areas:

- Body Shops
- Frame Shops
- Garages and Dealerships
- Service Stations

Automotive Service Technician

Start Date: September

Credential: Certificate

Program Length: 35 Weeks

School: Natural Resources and Industrial Trades

Locations & Delivery Modes:

- Bay St. George - On Campus delivery
- Gander - On Campus delivery
- Prince Philip Drive - On Campus delivery

PROGRAM DESCRIPTION

This red seal program provides training in adjusting, testing and repairing engines, steering systems, braking systems, drive trains, vehicle suspensions, electrical systems and air conditioning systems, and do wheel alignments. Some of the duties include:

- Repair, rebuild and service specific parts
- Diagnose using testing equipment
- Dismantle and reassemble damaged parts
- Prepare scheduled maintenance
- Interact and advise customers

Note: This program may not be suitable for applicants who do not have normal color perception.

OUTCOMES

1. Demonstrate safe work practices and personal protection.
2. Diagnose and repair engine systems.
3. Diagnose and repair engine support systems.
4. Diagnose and repair vehicle management systems.
5. Diagnose and repair drive line systems.
6. Diagnose and repair electrical systems and components.

ENTRANCE REQUIREMENTS

Eligibility for admission requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation

2. Adult Basic Education

Adult Basic Education (Level III) Graduation with General College Profile (or Business Related College Profile or Degree and Technical Profile). It is strongly recommended that courses include the following:

- i. Mathematics 1102A, 1102B, 1102C and 2102A, 2102B, 2102C or 3102A, 3102B and 3102C

Baking and Pastry Arts

Start Date: September

Credential: Certificate

Program Length: One Year

School: Natural Resources and Industrial Trades

Locations & Delivery Modes:

- Bay St. George - On Campus delivery

PROGRAM DESCRIPTION

This red seal eligible program gives you great hands on skills in both baking and pastry, including cakes, tortes, cookies, frozen and cream-based desserts. It provides the foundation for a career as a lead baker or pastry chef. The courses empower students by exploring baking and ingredient theory while gaining a greater understanding of the craft. This program will challenge your artistic side by expanding your capability in the design and creation of specialized baked goods. You will work in real bakery environments where you gain experience in production of baked goods consistent with industry standards. Some of the duties include:

- Weighing, measuring and mixing ingredients according to recipes
- Cutting and forming dough, prepare fillings
- Using ovens to bake products
- Decoration of baked goods
- Stock selection and rotation ingredients and supplies
- Developing support skills as an independent Baker
- Healthy Baking

OBJECTIVES

Upon successful completion of the Baking and Pastry Arts program, graduates will be able to:

1. Prepare yeast-raised products to include breads and yeast-leavened pastries to include laminated doughs, breakfast pastries and leavened cakes.
2. Prepare a variety of cakes, fillings and icings to include chemical and mechanical leavening techniques.
3. Prepare a variety of egg and dairy-based products, fried baked goods, and a variety of pastry products to include but not limited to meringue, fritters, and pies.
4. Identify, select and demonstrate the use of various chocolates and sugar and the common uses for the decoration processes.
5. List and explain the application of mixes and other convenience products pertaining to the baking process.
6. Describe and apply the principles of nutrition to maximize nutrient retention in baking preparation.
7. Apply communication, workplace, computer, and mathematic technical skills in simulated and real-world environments.
8. Complete the Competency and Task requirements for Baker National Occupational Analysis (NOA).

EMPLOYMENT OPPORTUNITIES

Graduates may find employment in the following areas:

- Specialty shops
- Hotels
- Restaurants
- Bakery manufactures
- Self employed

ENTRANCE REQUIREMENTS

Eligibility for admission requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation

2. Adult Basic Education

Adult Basic Education (Level III) Graduation with General College Profile (or Business-Related College Profile or Degree and Technical Profile). It is strongly recommended that courses include the following:

- i. Mathematics 1102A, 1102B, 1102C and 2102A, 2102B, 2102C or 3102A, 3102B and 3102C
- ii. Science 3101, 3102, 3103

3. Comprehensive Arts and Science (CAS) Trades

Comprehensive Arts and Science (Trades) Certificate

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program must be at least 19 years of age at the time of application and out of school for at least one (1) year to be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

Carpenter

Start Date: September

Credential: Certificate

Program Length: 36 Weeks

School: Natural Resources and Industrial Trades

Locations & Delivery Modes:

- Carbonear - On Campus delivery
- Clarenville - On Campus delivery
- Happy Valley-Goose Bay - On Campus delivery
- Port aux Basques - On Campus delivery

PROGRAM DESCRIPTION

This red seal program offers training in the use of hand and power tools in residential and commercial construction in accordance to National Building Codes. Some of the duties include:

- Read and interpret blueprints, drawings and sketches
- Calculate requirements and specifications
- Prepare layouts
- Use measuring tools
- Cut, shape and assemble and join materials
- Build and install foundations, floor beams, subfloors, walls and roof systems
- Install doors, stairs, moldings and hardware trims
- Operate hand and portable power tools
- Utilize various construction products
- Complete construction projects for stairs, concrete, floors, walls and roofs

OUTCOMES

1. Demonstrate safe work practices and personal protection.
2. Use tools and equipment safely.
3. Interpret drawings and specifications.
4. Solve problems and keep a construction project on schedule.
5. Use various types of scaffolding.
6. Apply National Building Code standards and energy efficient concepts

ENTRANCE REQUIREMENTS

Eligibility for admission requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation

2. Adult Basic Education

Adult Basic Education (Level III) Graduation with General College Profile (or Business Related College Profile or Degree and Technical Profile). It is strongly recommended that courses include the following:

- i. Mathematics 1102A, 1102B, 1102C and 2102A, 2102B, 2102C or 3102A, 3102B and 3102C
- ii. Science 3101, 3102, 3103

3. Comprehensive Arts and Science (CAS) Trades

Comprehensive Arts and Science (Trades) Certificate

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, must be at least 19 years of age at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

EMPLOYMENT OPPORTUNITIES

Graduates may find employment on the following areas:

- General contractor
- Custom woodworking shops
- Building suppliers
- Residential and commercial construction
- Industrial Maintenance

Commercial Driver

Start Date: September

Credential: Certificate

Program Length: 13 Weeks

School: Natural Resources and Industrial Trades

Locations & Delivery Modes:

- Bay St. George - On Campus delivery

PROGRAM DESCRIPTION

This program offers training in the safe and effective operation of Tandem trucks and Tractor Trailer units. Some of the duties include:

- Perform preventive maintenance, defensive driving, and fuel conservation
- Deliver cargo and materials
- Interpret and communicate instructions through dispatch
- Maintain a truck log and keep records of transported materials
- Clean, inspect and service vehicle
- Perform trailer operations and demonstrate defensive driving skills
- Perform pre, post and on route inspections

The program also offers certification in the Transportation of Dangerous Goods (TDG), Air Brakes (9A), WHMIS, First Aid, Powerline Hazards and Professional Driver Improvement Course (PDIC). There will be classroom, yard, off and on and highway training with low student to instructor ratios.

Students successfully completing the program qualify for a Class 1 license with Class 3 and 9A endorsements.

OUTCOMES

1. Demonstrate defensive driving techniques, proper economical vehicle operation, and emergency procedures.
2. Demonstrate knowledge of types of trucks, power trains, engines, drive lines, brake systems, tires and trailers.
3. Demonstrate techniques to drive on course roads, through town and on the Trans Canada Highway.
4. Demonstrate knowledge of proper freight handling procedures and methods of preparing and handling documentation connected with transfers of cargo and monies.
5. Demonstrate safe work practices and personal protection.

ENTRANCE REQUIREMENTS

Eligibility for admission requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation

2. Adult Basic Education

Adult Basic Education (Level III) Graduation with General College Profile (or Business Related College Profile or Degree and Technical Profile). It is strongly recommended that courses include the following:

- i. Mathematics 1102A, 1102B, 1102C and 2102A, 2102B, 2102C or 3102A, 3102B and 3102C
- ii. Science 3101, 3102, 3103

3. Comprehensive Arts and Science (CAS) Trades

Comprehensive Arts and Science (Trades) Certificate

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, must be at least 19 years of age at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. Driver's License and Medical

- i. You must possess an unrestricted Class 5 driver's license for one (1) year.
- ii. You must submit a Motor Registration Division - Medical Examination Report with a vision test completed by a doctor.
- iii. You must possess a Driving Abstract record showing no more than four (4) demerit points.

[Government of Newfoundland and Labrador - Digital Government and Service NL | Motor Registration Division Online Appointments](#)

Upon starting the program, students will be required to complete a commercial written test successfully. Once completed you will be issued a permit by the Department of Motor Registration Division that allows you to be instructed by a licensed commercial driver in preparation for a Class 03 license.

6. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

EMPLOYMENT OPPORTUNITIES

Graduates may find employment in the following areas:

- Trucking companies
- Manufacturing and distribution companies
- Retail outlets
- Moving companies

Construction/Industrial Electrician

Start Date: September

Credential: Certificate

Program Length: 37 Weeks

School: Natural Resources and Industrial Trades

Locations & Delivery Modes:

- Burin - On Campus delivery
- Carbonear - On Campus delivery
- Corner Brook - On Campus delivery
- Happy Valley-Goose Bay - On Campus delivery
- Labrador West - On Campus delivery
- Seal Cove - On Campus delivery
- St. Anthony - On Campus delivery

PROGRAM DESCRIPTION

This red seal program offers training in how to install, alter and maintain electrical systems that are designed to provide heat, light, power, control, signals or fire alarms for all types of buildings and structures. Some of the duties include:

- Read and interpret electrical, mechanical and architectural drawings
- Determine code specifications for writing layouts
- Cut, thread, bend, assemble and install conduits
- Position, maintain and install distribution and control equipment
- Safely test circuits to ensure integrity

OUTCOMES

1. Demonstrate safe work practices and personal protection.
2. Use and maintain tools and equipment.
3. Analyze electrical theory and its application to lighting, power and control equipment.
4. Interpret instructions given in plans and specifications pertaining to electrical installations.
5. Demonstrate problem solving skills involving electrical systems.
6. Conduct trouble shooting to maintain electrical systems and equipment.

Note: This program may not be suitable for applicants who do not have normal color perception.

ENTRANCE REQUIREMENTS

Eligibility for admission requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation

2. Adult Basic Education

Adult Basic Education (Level III) Graduation with General College Profile (or Business Related College Profile or Degree and Technical Profile). It is strongly recommended that courses include the following:

- i. Mathematics 1102A, 1102B, 1102C and 2102A, 2102B, 2102C or 3102A, 3102B and 3102C
- ii. Science 3101, 3102, 3103

3. Comprehensive Arts and Science (CAS) Trades

Comprehensive Arts and Science (Trades) Certificate

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, must be at least 19 years of age at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

Cook

Start Date: September

Credential: Certificate

Program Length: 34 Weeks

School: Natural Resources and Industrial Trades

Locations & Delivery Modes:

- Bay St. George - On Campus delivery
- Prince Philip Drive - On Campus delivery

PROGRAM DESCRIPTION

This red seal program provides training in the preparation and presentation of a variety of food for a variety of groups. Some of the duties include:

- Estimate food requirements using menus
- Retrieve food from storage and suppliers
- Wash, peel and cut vegetables
- Prepare, season and cook foods
- Evaluate nutritional values and sanitation standards

OUTCOMES

1. Demonstrate safe work practices and personal protection.
2. Develop menus.
3. Practice and maintain sanitary standards.
4. Develop production procedures.

ENTRANCE REQUIREMENTS

Eligibility for admission requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation

2. Adult Basic Education

Adult Basic Education (Level III) Graduation with General College Profile (or Business Related College Profile or Degree and Technical Profile). It is strongly recommended that courses include the following:

- i. Mathematics 1102A, 1102B, 1102C and 2102A, 2102B, 2102C or 3102A, 3102B and 3102C

School: Natural Resources and Industrial Trades

Locations & Delivery Modes:

- Prince Philip Drive - On Campus delivery

Note:

Applicants are now being accepted for Year 2. Applicants who have either a certificate, diploma, post/advanced diploma or degree in the area of Cooking, plus a minimum of 320 hrs of work experience, may apply directly to year 2 (Semester 5).

PROGRAM DESCRIPTION

Serving up excellence.

As an international melting pot of language, culture and foods, Canada is one of the most exciting places in the world to explore cuisines. Diverse ethnic, traditional and fusion foods offer stimulating experiences to thrill the palate. Growing trends are advancing modern cuisine, authentic and exotic pub hubs, nutritional aspects of food, and the local sourcing of ingredients. The world of specialized and locally prepared food is exploding in popularity.

What an exciting time to be in culinary management! Our own province is riding the peak of this movement, as renowned food critics and chefs come to taste for themselves the unique fare our restaurants have to offer. The success of these restaurants and this industry have firmly placed Newfoundland and Labrador on the map for high value-added culinary production.

CNA culinary graduates have fed this growing industry with high-quality and accredited professionals for decades. Now, we're complementing the main course with business related skills to navigate challenges encountered in the culinary world. Professionalism, human resources management, and business management are some examples of skillsets developed to improve success in the kitchen. Because success depends on team work, efficient cost controls, and creativity to maximize the use of food culinary experts are now expected to utilize a broader range of skills.

With new and innovative food preparation techniques, cooks are incorporating food science in their kitchens and experimenting with modernist cuisine. With us, you will be exposed to new technologies in cooking equipment that includes automated computerized ovens, blast chillers, immersion circulators, thermal mixers and smart kitchens. This program addresses the increased emphasis on using local and fresh foods and explores trends such as farm-to-fork, international cuisine, sustainable sourcing, artisanal baking, charcuterie and preserving products through traditional processes.

You'll gain an understanding of local sourcing, including how food is produced, and the challenges associated with obtaining food while promoting conservation and sustainability. This program includes training in food and beverage pairing, advanced baking, sugar work, butchering, catering and event planning, among other vital components of this field. You will also gain knowledge in health-focused areas such as dietary requirements, allergies and intolerances, and effectively demonstrate creative ways to mitigate the impact of these constraints on production. Creativity, a keen sense of taste and smell, interest in precision work and a good memory for details are key attributes for this career. You will be required to remember and apply cooking methods and adapt them in accordance with available supplies and dietary restrictions. You must be able to work independently and as part of a team, have good organizational skills and have the ability to multi-task to work effectively. Other important abilities include solid mathematical, communication and customer service skills. You need to be versatile enough to assist with any task that needs doing within the kitchen.

We have seasoned, award-winning instructors who will mentor you in all you need to know about culinary composition and flavor compatibility and building the perfect dishes from scratch.

If you have an appetite for this exciting career, we're taking orders now!

Program Highlights

- Aligns with the requirements of the Atlantic Apprenticeship Curriculum Standard (AACS), and National Occupational Analysis (NOA) under the guidance of the Immigration, Population Growth and Skills (IPGS).
- Gives you the option to pursue apprenticeship through additional work experience and completion of advanced blocks of training.
- Trains cooks with advanced and specialized skills, facilitating movement to other positions such as kitchen managers, executive chefs, banquet managers, food service administrators and coordinators, general managers, owners, or food editors.
- Prepares you for work in the hospitality and tourism sector – restaurants, hotels, resorts, catering establishments, country clubs and cruise ships, as well as for remote camps, offshore and seniors complexes.
- Examines cooking holistically; specific areas of study include butchery, botany, chemistry and thermodynamics, visual presentation, food safety, human nutrition and international history.

Did you know?

- Following a record year in 2021, the Canadian food and beverage (F&B) industry is expected to grow by more than 11% by the end of 2025.
- According to the Government of Newfoundland and Labrador, tourism has grown to contribute over \$1 billion to the provincial economy, with the F&B services industry accounting for 54% of all jobs in tourism.
- The rising demand for organic, natural and fresh foods among consumers due to rising health awareness is the major factor expected to enhance the demand for the F&B market.
- Cooking stimulates all five senses with the interaction of placement, colours, scents and flavours, making it a remarkable form of art.
- The F&B industry is one of the most essential components of several economies across the world – the 2020 global food and beverage market size was estimated to be \$7 trillion.

OBJECTIVES

Upon successful completion of this program, graduates will be able to:

1. Demonstrate safety and sanitation practices in the culinary industry.
2. Exhibit advanced skills and knowledge required to perform culinary techniques.
3. Apply the related knowledge and skill in culinary subjects which complement and support the practical training.
4. Execute professional behaviors to become successful in the culinary industry.
5. Perform ethical and sustainable food preparation practices.
6. Employ new, local, and international techniques in the art of cooking.
7. Apply managerial techniques to navigate business and human resources challenges in the culinary industry.

ENTRANCE REQUIREMENTS

Eligibility for admission requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation

2. Adult Basic Education

Adult Basic Education (Level III) Graduation with General College Profile (or Business Related College Profile or Degree and Technical Profile). It is strongly recommended that courses include the following:

- i. Mathematics 1102A, 1102B, 1102C and 2102A, 2102B, 2102C or 3102A, 3102B and 3102C
- ii. Science 3101, 3102, 3103

3. Comprehensive Arts and Science (CAS) Trades

Comprehensive Arts and Science (Trades) Certificate

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, must be at least 19 years of age at the time of application and out of school for at least one year may be considered on an individual basis under the Mature

Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

Eligibility for direct admission to Year 2 - Semester 5 of the Culinary Management program requires the applicant to meet the following academic criteria:

1. Cook or Culinary graduate:

Applicants must have graduated from a recognized College or University with a certificate, diploma, post/advanced diploma or degree in the area of Cooking.

2. Minimum of 320 hours work experience as a Cook

Courses

Semesters 1 to 3 - Refer to Cook Entry Level (Block 1) <http://www.cna.nl.ca/program/cook>

Hairstylist

Start Date: September

Credential: Certificate

Program Length: 37 Weeks

School: Natural Resources and Industrial Trades

Locations & Delivery Modes:

- Bay St. George - On Campus delivery
- Gander - On Campus delivery

PROGRAM DESCRIPTION

This red seal program offers training in how to cut and style hair to suit their clients face and lifestyle. Some of the duties include:

- Cut, trim, color, wave and style hair, wigs and hairpieces
- Shave, trim and shape beards and moustaches
- Suggest appropriate hairstyles
- Maintain supplies and equipment
- Self-educate on new hairstyles and fashions

Note: This program may not be suitable for persons with allergies and/or respiratory problems. Anyone with either of these conditions should check with a doctor to determine medical suitability.

OUTCOMES

1. Demonstrate safe work practices and personal protection.
2. Use and maintain tools and equipment.
3. Demonstrate the skills required to style, cut and color hair.
4. Prepare clients for services.
5. Perform reception duties.

ENTRANCE REQUIREMENTS

Eligibility for admission requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation

2. Adult Basic Education

Adult Basic Education (Level III) Graduation with General College Profile (or Business Related College Profile or Degree and Technical Profile). It is strongly recommended that courses include the following:

- i. Mathematics 1102A, 1102B, 1102C and 2102A, 2102B, 2102C or 3102A, 3102B and 3102C
- ii. Science 3101, 3102, 3103

3. Comprehensive Arts and Science (CAS) Trades

Comprehensive Arts and Science (Trades) Certificate

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, must be at least 19 years of age at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

EMPLOYMENT OPPORTUNITIES

Graduates may find employment in the following areas:

- Hair salons
- Hair shows
- Sales representative

APPRENTICESHIP

Upon completion of the pre-employment certificate program, a graduate may pursue Red Seal Certification by finding employment, registering as an "Apprentice" and completing the following Advanced Level training and required work experience. The apprenticeship may take 2-3 years and would lead to Journeyperson status in the trade.

For more information regarding apprenticeship refer to Plans of Training (POT) - Immigration, Population Growth and Skills (gov.nl.ca).

Heating Systems Technician

Start Date: September

Credential: Diploma

Program Length: Two Years

School: Natural Resources and Industrial Trades

Locations & Delivery Modes:

- Seal Cove - On Campus delivery

PROGRAM DESCRIPTION

This program is designed to prepare you for employment in the residential and commercial heating industry. Some of the duties include:

- Read blueprints and interpret drawings or specifications.
- Design heating system components and assemble components using hand and power tools.
- Install components such as thermostats, motors, piping and safety devices, and connect to fuel supply, ventilation and electrical systems.
- Test installed units and adjust controls for proper functioning, troubleshoot and repair malfunctioning oil burners, gas appliances, solid-fuel appliances, geo- thermal and air source heat pumps, and their controls.
- Troubleshoot and repair malfunctioning hydronic and forced air heating systems.
- Install and maintain alternate energy sources, combination and solar units.
- Perform scheduled maintenance on heating systems and their components.

OUTCOMES

1. Use and maintain tools, materials and equipment required for the maintenance and installation of heating systems (oil, gas, electric, heat pumps and solid fuels).
2. Test and adjust residential hydronic and forced air heating systems.
3. Design and install residential hydronic and forced air heating systems.
4. Interpret trade blueprints and electrical and system schematics.
5. Recognize hazards and employ good safety practices.
6. Demonstrate with confidence the knowledge and skills required for an entry level apprentice.
7. Install, maintain, service and troubleshoot heating appliances (wood, oil, electric, geothermal and air source heat pumps, and gas).
8. Recognize alternative energy application potential in the heating industry.
9. Employ energy efficiency and promote green technologies.
10. Pursue further skills and knowledge required to gain other trade related certifications.

ENTRANCE REQUIREMENTS

Eligibility for admission requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation

2. Adult Basic Education

Adult Basic Education (Level III) Graduation with General College Profile (or Business Related College Profile or Degree and Technical Profile). It is strongly recommended that courses include the following:

- i. Mathematics 1102A, 1102B, 1102C and 2102A, 2102B, 2102C or 3102A, 3102B and 3102C
- ii. Science 3101, 3102, 3103

3. Comprehensive Arts and Science (CAS) Trades

Comprehensive Arts and Science (Trades) Certificate

4. Mature Student Requirements

Heavy Duty Equipment Technician/Truck and Transport Mechanic

Start Date: September

Credential: Certificate

Program Length: 37 Weeks

School: Natural Resources and Industrial Trades

Locations & Delivery Modes:

- Bay St. George - On Campus delivery
- Happy Valley-Goose Bay - On Campus delivery
- Placentia - On Campus delivery

PROGRAM DESCRIPTION

This red seal program is designed to provide you with the skills and knowledge required for employment in the field of Heavy Duty Equipment Technician/Truck and Transport Mechanic. Some of the duties include:

- Interpret work orders and technical manuals
- Maintain, clean and lubricate equipment
- Diagnose faults and malfunctions
- Adjust, repair or replace defective parts
- Performance test repaired equipment
- Follow manufactures specifications and legislated regulations

OUTCOMES

1. Demonstrate safe work practices and personal protection.
2. Use and maintain tools and equipment.
3. Diagnose and repair engines and engine support systems.
4. Diagnose and repair steering, suspension and brake systems.
5. Diagnose and repair hydraulic and pneumatic systems.
6. Write service reports and record analysis

ENTRANCE REQUIREMENTS

Eligibility for admission requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation

2. Adult Basic Education

Adult Basic Education (Level III) Graduation with General College Profile (or Business Related College Profile or Degree and Technical Profile). It is strongly recommended that courses include the following:

Science 3101, 3102, 3103

3. Comprehensive Arts and Science (CAS) Trades

Comprehensive Arts and Science (Trades) Certificate

Heavy Equipment Operator

Start Date: September

Credential: Certificate

Program Length: 22 Weeks

School: Natural Resources and Industrial Trades

Locations & Delivery Modes:

- Bay St. George - On Campus delivery
- Placentia - On Campus delivery
- St. Anthony - On Campus delivery

PROGRAM DESCRIPTION

This program provides training in the safe and effective operation of Heavy Duty Earth Moving Equipment. Some of the duties include:

- Explore the operation of heavy equipment
- Perform preventative maintenance
- Develop skills necessary to become proficient in the use of the following heavy equipment

EQUIPMENT CATEGORIES

- Dozer
- Front End Loader
- Grader
- Tandem Dump Truck
- Off-Highway Dump Truck
- Tractor-Loader-Backhoe (TLB)
- Excavator

OUTCOMES

1. Demonstrate knowledge of machine capabilities and industry expectations.
2. Develop servicing procedures and techniques to maximize the life span of construction equipment.
3. Demonstrate skills in basic machine maneuvering, control and operation in work simulated projects.
4. Demonstrate knowledge of standards for road construction as well as other municipal projects.
5. Demonstrate safe work practices and personal protection.

ENTRANCE REQUIREMENTS

Eligibility for admission requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation

2. Adult Basic Education

Adult Basic Education (Level III) Graduation with General College Profile (or Business Related College Profile or Degree and Technical Profile). It is strongly recommended that courses include the following:

- i. Mathematics 1102A, 1102B, 1102C and 2102A, 2102B, 2102C or 3102A, 3102B and 3102C
- ii. Science 3101, 3102, 3103

3. Comprehensive Arts and Science (CAS) Trades

Comprehensive Arts and Science (Trades) Certificate

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, must be at least 19 years of age at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

Upon enrollment into the program, students who are selecting Tandem Dump Truck must provide the following additional documentation:

- i. An unrestricted Class 5 driver's license for one (1) year.
- ii. A Motor Registration Division - Medical Examination Report with a vision test completed by a doctor.
- iii. A Driving Abstract record showing no more than four (4) demerit points.

[Government of Newfoundland and Labrador - Digital Government and Service NL | Motor Registration Division Online Appointments](#)

Upon starting the program, students will be required to complete a commercial written test successfully. Once completed you will be issued a permit by the Department of Motor Registration Division that allows you to be instructed by a licensed commercial driver in preparation for a Class 03 license.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

EMPLOYMENT OPPORTUNITIES

Graduates may find employment in the following areas:

- General contractors
- Paving companies
- Pipeline companies
- Logging
- Mining
- Landscaping

Hydrogen Technician

Start Date: September

Credential: Diploma

Program Length: Two Years

School: Natural Resources and Industrial Trades

Locations & Delivery Modes:

- Corner Brook - On Campus delivery

PROGRAM DESCRIPTION

Fuel Sustainability

The green hydrogen industry around the world is growing. As world nations strive to make the global initiative of net zero emissions by 2050 a reality, hydrogen is increasingly being used as a clean energy source. College of the North Atlantic (CNA) is endeavoring to support the creation of the required skilled workforce required at hydrogen production facilities.

Hydrogen is the simplest and most abundant element on earth. It is an efficient energy carrier that can store and deliver usable energy. It has the capability of mitigating the challenges of the fossil fuel economy, particularly pollution.

With your training as a Hydrogen Technician, you will gain strong technical skills and be on the cutting edge of a revolutionary change in the sustainable energy economy. Governments across this country and beyond are investing in the sector for what is expected to be a global \$2.5 trillion industry¹. For a skilled workforce, we are aligning with global reports and their recommendations to build on existing occupations such as Power Engineering and Process Operators and upskilling to meet the needs of this emerging hydrogen industry.

This program will provide training related to hydrogen safety and production technologies. As ammonia is a carrier for hydrogen and is a key part of the green hydrogen industry, safety training and production technologies will also be examined.

Program Highlights

- Train to become a versatile plant operator
- Global and local applications and relevance
- Practical training provided to reinforce theoretical concepts

Did you know?

- Hydrogen is an energy carrier, not an energy source, and it can deliver or store a tremendous amount of energy.²
- Reaching net zero emissions means removing an equal amount of CO₂ from the atmosphere as we release into it.
- Hydrogen production globally was valued at over US\$120 billion and is expected to grow over 5% annually through 2028.³
- Some analysts expect hydrogen could meet 24 per cent of world energy demand by 2050.⁴

[3] [Hydrogen production - Wikipedia](#)

[4] [How Ottawa hopes to supercharge Canada's hydrogen fuel sector | CBC News](#)

OBJECTIVES

Upon successful completion of this program, graduates will be able to:

1. Demonstrate the practical skills necessary for a 4th Class, Power Engineer.

2. Prepare for a provincial examination in Power Engineering 4th Class part "A" and "B".
3. Demonstrate safety procedures required in hydrogen, ammonia, fuel, and steam-based plant environments.
4. Demonstrate problem solving skills and team-based work practices to optimize hydrogen production.
5. Utilize essential skill training to enhance their career experience and opportunities.
6. Utilize control documentation and reporting systems in Power Engineering and Process Operation environments.
7. Develop and practice mechanical and electrical diagnostics, installation, calibration, repair, and replacement of instruments, controls, output devices, in start up, idle, shut down, decommissioning and commissioning within a processing environment.
8. Develop and employ standardized operating procedures using technology integrated preventative maintenance procedures for reliability utilizing performance data, monitoring, production indicators, and quality tracking.
9. Develop a comprehensive familiarity for safe processing of cryogenic based fuel cells, electrolyzers, cooling systems, transportation systems, handling, maintenance, storage, and electrolysis.

CERTIFICATIONS

In addition to the formal courses listed in the program of studies, students in the Hydrogen Technician diploma program are required to obtain a certificate of completion in the following prior to graduation:

1. Introduction to Confined Space
2. Introduction to Fall Arrest & Protection
3. Introduction to Lock-out – Tag-out
4. Standard First Aid/Heart Start
5. WHMIS
6. Introduction to Newfoundland and Labrador Health & Safety Act
7. 4th Class Power Engineering

Students should be aware that additional fees may apply for extra certifications.

ENTRANCE REQUIREMENTS

1. High School

High School Graduation Certificate with a 60% overall average in the following (or equivalent):

i. English (2 credits) (minimum 60%) from: 3201

ii. Mathematics (4 credits) chosen from:

Advanced: 2200, 3200 (50% minimum in each course)

Academic: 2201 (50% minimum), 3201 (60% minimum)

iii. Science: (4 credits) two of which must be selected from:

Biology: 3201

Physics: 3204

Chemistry: 3202

Earth Systems: 3209

Note: The remaining two Science credits to be chosen from the highest Science mark in level 1, 2 or 3. **Note that it is recommended that students considering the Hydrogen Technician program should complete High School Physics.**

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with the following courses:

i. Math (60% MINIMUM) MA1040, MA1041

ii. Two Science courses chosen from one of the following three combinations:

a. Introductory Biology: BL1020, BL1021

b. Introductory Chemistry: CH1030, CH1031

c. Introductory Physics: PH1050, PH1051

Note: It is strongly recommended that CAS students who intend to enroll in Engineering Technology programs complete both of the Chemistry courses and both of the Physics courses.

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with Degree and Technical Profile including the following courses (or equivalent):

- i. English (60% minimum) 3101A, 3101B, 3101C or 3102A, 3102B, 3102C
- ii. Mathematics (60% minimum) 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C
- iii. Science from one of the following sections:
 - a. Biology 1101, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C
 - b. Chemistry 1102, 2102A, 2102B, 2102C, 3102A, 3102B, 3102C
 - c. Physics 1104, 2104A, 2104B, 2104C, 3104A, 3104B, 3104C

Applicants with Adult Basic Education (Level III) Graduation with a different Profile may be eligible for admission to the program provided the appropriate selection of courses including those outlined above have been completed.

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, are 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

EMPLOYMENT OPPORTUNITIES

Graduates of the Hydrogen Technician program are trained for industrial plant operations. Importantly, graduates are provided with diverse foundational training to upskill effectively for specific hydrogen processes required by employers. Hydrogen Technicians can work in both the private and public sector industries for hydrogen, manufacturing, mining, oil and gas. Employment opportunities are also available in government, health care, and educational facilities.

Semester 1 (Fall)

Code	Title	Cr	Hrs

Industrial Mechanic (Millwright)

Credential: Certificate

Program Length: 37 Weeks

School: Natural Resources and Industrial Trades

Locations & Delivery Modes:

- Corner Brook - On Campus delivery
- Labrador West - On Campus delivery
- Placentia - On Campus delivery

PROGRAM DESCRIPTION

This red seal program offers the training required to become a mechanic for stationary industrial machinery. Some of the duties include:

- Read and interpret diagram, schematics and service manuals
- Operate rigging equipment and dollies to move equipment
- Fit, align, attach and connect: bearings, gears, shafts, motors, couplings and belts
- Test, align and adjust equipment
- Perform predictive and operational maintenance
- Employ vibration analysis
- Service and repair hydraulic, pneumatic and programmable logic controls
- Perform tack welds

OUTCOMES

1. Demonstrate safe work practices and personal protection.
2. Use and maintain tools and equipment.
3. Interpret drawings, plans, and be able to layout and develop projects according to specifications.
4. Perform assigned tasks following quality and production standards required in industry.
5. Plan for installation and maintenance of components and systems.

ENTRANCE REQUIREMENTS

Eligibility for admission requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation

2. Adult Basic Education

Adult Basic Education (Level III) Graduation with General College Profile (or Business Related College Profile or Degree and Technical Profile). It is strongly recommended that courses include the following:

- i. Mathematics 1102A, 1102B, 1102C and 2102A, 2102B, 2102C or 3102A, 3102B and 3102C
- ii. Science 3101, 3102, 3103

3. Comprehensive Arts and Science (CAS) Trades

Comprehensive Arts and Science (Trades) Certificate

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, must be at least 19 years of age at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

EMPLOYMENT OPPORTUNITIES

Graduates may find employment in the following areas:

- Mining
- Forestry
- Oil and gas
- Private companies
- Manufacturing
- Government maintenance departments

Instrumentation and Control Technician

Start Date: September

Credential: Certificate

Program Length: 34 Weeks

School: Natural Resources and Industrial Trades

Locations & Delivery Modes:

- Seal Cove - On Campus delivery

PROGRAM DESCRIPTION

This red seal program involves automation in the production of various commodities. Complex process control and measurement systems such as those found in the oil and gas industry, chemical plants, food processing operations, and the pulp and paper industry require sensitive and accurate instruments. Some of the duties include:

- Repair, maintain, calibrate, adjust and install industrial measuring and controlling instrumentation
- Ensure plant machinery is safe and operating correctly
- Regulate water flow and air quality
- Monitor and calibrate instruments
- Read and interpret circuit diagrams, blueprints and schematics
- Inspect, test, diagnose faults
- Write maintenance reports
- Repair, calibrate components and instruments
- Perform schedule preventative maintenance
- Observe safe repair procedures according to regulated standards

OUTCOMES

1. Demonstrate safe work practices and personal protection.
2. Interpret drawings, codes, standards and government regulations.
3. Use tools and measuring equipment.
4. Conduct new installations.
5. Use and maintain analyzers
6. Use and maintain various types of field mounted equipment.

ENTRANCE REQUIREMENTS

Eligibility for admission requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation

2. Adult Basic Education

Adult Basic Education (Level III) Graduation with General College Profile (or Business Related College Profile or Degree and Technical Profile). It is strongly recommended that courses include the following:

- i. Mathematics 1102A, 1102B, 1102C and 2102A, 2102B, 2102C or 3102A, 3102B and 3102C
- ii. Science 3101, 3102, 3103

3. Comprehensive Arts and Science (CAS) Trades

Comprehensive Arts and Science (Trades) Certificate

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, must be at least 19 years of age at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

Machinist

Start Date: September

Credential: Certificate

Program Length: 37 Weeks

School: Natural Resources and Industrial Trades

Locations & Delivery Modes:

- Placentia - On Campus delivery

PROGRAM DESCRIPTION

This red seal program is designed to train individuals in the knowledge, skills, and experience necessary to set up and operate precision metal cutting and grinding machines such as lathes, milling machines, drills, shapers, boring mills and grinders. A variety of equipment is used to manufacture, install, operate, adjust and repair machine tools and other machines in common use. Duties of a machinist include: study specifications, charts, drawings or sample parts to determine the machining operation to be performed, calculate dimensions and tolerances, and prepare working sketches if necessary, set up and operate tools, which may be computer numerically controlled, to perform precision machining operations. Work could either be in job shops or production jobs. In job shops, you will make a wide variety of repair parts for different types of machinery and industrial equipment in different situations. In production shops, you will produce parts using mass production methods including CNC machining and other tools.

OUTCOMES

1. Demonstrate safe work practices and personal protection.
2. Interpret specifications, charts, drawings or sample parts to determine the machining operation required.
3. Select workplace materials.
4. Calculate dimensions and tolerances, and prepare sketches if necessary.
5. Set up and operate tools.

ENTRANCE REQUIREMENTS

Eligibility for admission requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate

3. Adult Basic Education

Adult Basic Education (Level III) Graduation with General College Profile (or Business Related College Profile or Degree and Technical Profile). It is strongly recommended that courses include the following:

- i. Mathematics 1102A, 1102B, 1102C and 2102A, 2102B, 2102C or 3102A, 3102B and 3102C
- ii. Science 3101, 3102, 3103

4. Comprehensive Arts and Science (CAS) Trades

Comprehensive Arts and Science (Trades) Certificate

5. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, must be at least 19 years of age at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment. If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

EMPLOYMENT OPPORTUNITIES

Graduates may find employment in the following areas:

- Manufacturing
- Mining
- Aviation
- Machine shops
- Pulp and Paper
- Private shops

Marine Cook

Start Date: September

Credential: Certificate

Program Length: 41 Weeks

School: Natural Resources and Industrial Trades

Locations:

- Prince Philip Drive - On Campus delivery

PROGRAM DESCRIPTION

This 41-week program prepares students for a career as a Marine Cook, working on a seafaring vessel. Students are required to complete all aspects of the program curriculum as well as the Marine Emergency Duties (MED) certification, and a 28-day sea service that involves working in the galley on an offshore vessel.

Upon completion of the training, students are required to pass two final examinations, the theory (written) portion and the practical application component, that are a requirement of Transport Canada's Marine Safety Branch. Graduates can then apply to Transport Canada for Ship's Cook certification.

In addition to a Certificate in Marine Cooking, graduates earn certificates in Marine Advanced First Aid, Security Awareness Training for Seafarers with Designated Security Duties, and BS-STCW95.

OUTCOMES

As a graduate of the Marine Cook program, graduates will have the knowledge and skills that will allow them to:

1. Plan menus ensuring nutritional needs are met.
2. Order food and kitchen supplies for crew, with plan for duration of voyage.
3. Make optimum use of food supplies and manage inventory, reducing waste while offering high quality, and nutritious meal plans.
4. Prepare high quality foods ensuring meal service in a timely manner.
5. Offer a variety of foods to administer to food preferences, cultural desires, allergies, and other dietary needs.
6. Maintain the quality and safety of food in preparation, service, and storage.
7. Know that a well-fed crew is a productive crew.
8. Maintain galley equipment and tools in a safe and hygienic manner.
9. Participate in vessel related duties according to the requirements of ship.

ENTRANCE REQUIREMENTS

Eligibility for admission requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation

2. Adult Basic Education

Adult Basic Education (Level III) Graduation with a Degree and Technical Profile (or Business Related College Profile), including the following courses (or equivalent):

- i. Mathematics: 1102A, 1102B, 1102C, 2102A, 2102B, 2102C, 3102A, 3102B and 3102C
- ii. Science 3101, 3102, 3103

Applicants with Adult Basic Education (Level III) Graduation with a different Profile may be eligible for admission to the program provided the appropriate selection of courses, including those outlined above, have been completed.

3. Comprehensive Arts and Science (CAS) Trades

Comprehensive Arts and Science (Trades) Certificate

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, must be at least 19 years of age at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

ADDITIONAL ENTRANCE REQUIREMENT:

A medical, by a Transport Canada-approved Marine Medical Examiner is required for admission into the program.

ACCREDITATION

The Marine Cook program has been accredited with Transport Canada since January 2008.

CERTIFICATIONS

In addition to the formal semester courses listed in the program of students, students in the Marine Cook program are required to obtain certifications in the following areas:

- BS - STCW95
- Marine Advanced First Aid
- Security Awareness Training for Seafarers with Designated Security Duties

Note: Students should be aware that additional fees and expenses apply for these certifications.

EMPLOYMENT OPPORTUNITIES

Graduates may find employment opportunities on government regulated vessels and private vessels. Examples of areas with a need for Marine Cooks include the marine industry, tourism, and the military.

Courses

Semester 1

Mobile Crane Operator

Start Date: November

Credential: Certificate

Program Length: 25 Weeks

School: Natural Resources and Industrial Trades

Locations & Delivery Modes:

- Bay St. George - On Campus delivery

PROGRAM DESCRIPTION

This red seal program exposes you to the safe and efficient operation of Mobile Cranes. Some of the duties include:

- Become proficient in the use of 50-ton Lattice Boom Crawler, 30 Rough Terrain, 20- and 18-ton Boom Truck
- Perform safe operations and routine maintenance for mobile cranes
- Proficiently assemble and disassemble mobile cranes

OUTCOMES

1. Demonstrate safe work practices and personal protection.
2. Assess site hazards.
3. Operate equipment safely.
4. Recognize and evaluate conditions which are potentially hazardous to safe operation.
5. Interpret and apply load charts, rigging procedures and related documentation.
6. Interpret and apply visual and audio communication.

ENTRANCE REQUIREMENTS

Eligibility for admission requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation

2. Adult Basic Education

Adult Basic Education (Level III) Graduation with General College Profile (or Business Related College Profile or Degree and Technical Profile). It is strongly recommended that courses include the following:

- i. Mathematics 1102A, 1102B, 1102C and 2102A, 2102B, 2102C or 3102A, 3102B and 3102C
- ii. Science 3101, 3102, 3103

3. Comprehensive Arts and Science (CAS) Trades

Comprehensive Arts and Science (Trades) Certificate

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, must be at least 19 years of age at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. Driver's License and Medical

You must possess an unrestricted Class 5 driver's license for one (1) year.

Upon acceptance into the program, you must provide the following additional documentation:

- ii. You must submit a Motor Registration Division - Medical Examination Report with a vision test completed by a doctor.
- iii. You must possess a Driving Abstract record showing no more than four (4) demerit points.

[Government of Newfoundland and Labrador - Digital Government and Service NL | Motor Registration Division Online Appointments](#)

Upon starting the program, students will be required to complete a commercial written test successfully. Once completed you will be issued a permit by the Department of Motor Registration Division that allows you to be instructed by a licensed commercial driver in preparation for a Class 03 license.

6. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

EMPLOYMENT OPPORTUNITIES

Graduates may find employment in the following area:

- Oil Field Industries
- Construction
- Industrial
- Mining
- Cargo
- Railways

The apprenticeship may take 4-5 years and would lead to Journey person status in the trade. For more information regarding apprenticeship refer to Plans of Training (POT) - Immigration, Population Growth and Skills (gov.nl.ca).

Non-Destructive Testing Technician

Start Date: September

Credential: Certificate

Program Length: 37 Weeks

School: Natural Resources and Industrial Trades

Locations:

- Port aux Basques - On Campus delivery

PROGRAM DESCRIPTION

Integrity in practice.

This technical field is critical across many industries to test the quality of manufactured materials to ensure the safety of the public and those performing the work in those industries.

Non-destructive testing (NDT) technicians are employed to accurately test items for potential flaws or failures using various NDT test methods such as liquid penetrant inspection, magnetic particle inspection, ultrasonic testing and radiography testing. They use these techniques to evaluate the properties of a material, component, structure, or system for flaws or welding defects without causing damage to the original part.

That is the advantage of this type of testing – the pieces being tested are left undamaged by the process and allows for an item to be repaired or replaced if problems are found. It is a very accurate method of inspection and provides a cost-effective way to ensure the integrity – and therefore safety – of the item before a malfunction occurs. With Canada's stringent safety standards, companies are seeking out trained NDT technicians to enhance their quality assurance measures.

Through our Non-Destructive Testing Technician program, you will build the skills in high demand across industries such as manufacturing, construction, automotive, energy and aerospace. If you are detail-oriented, have excellent dexterity and mechanical skills and embrace the idea of physically demanding work, this program will prepare you for a productive, rewarding career.

With a commitment to excellence and innate pride in your work, you will help make the world a safer place.

Program Highlights

- Prepares you to write the National Exams that are required by the Canadian General Standards Board
- Enhances your versatility in industry as you are trained in 4 core NDT fields including liquid penetrant inspection, magnetic particle inspection, ultrasonic testing and radiography testing
- Provides radiation safety training as required by national training standards

Did You Know?

- The Global Non-destructive Testing (NDT) Market is expected to reach approximately USD 23 billion expanding at a CAGR of around 6%, during the forecast period, 2020 – 2026.[1]
- There is a global shortage of certified and skilled technicians to operate the advanced machinery for this testing
- There is a surging demand for NDT Technicians in the Aerospace and Oil & Gas industries

[1] [Non-Destructive Testing \(NDT\) Market Size, Share | Report 2020 - 2026 \(dataintelo.com\)](#)

OUTCOMES

1. Perform Liquid Penetrant Inspection.
2. Perform Magnetic Particle Inspection.
3. Carry out Ultrasonic Inspection.
4. Carry out Radiographic Inspection.
5. Demonstrate knowledge of Quality Assurance, Control Documentation and Reporting Systems for various industrial sectors.
6. Develop attitudes conducive to the successful application of skills on the job.
7. Develop an awareness and concern for good safety practices in the work place.
8. Develop academic skills and knowledge in mathematics, communications, and science.
9. Distinguish among various properties of metals with respect to their impact on NDT methods.

ENTRANCE REQUIREMENTS

Eligibility for admission requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation

2. Adult Basic Education

Adult Basic Education (Level III) Graduation with General College Profile (or Business Related College Profile or Degree and Technical Profile). It is strongly recommended that courses include the following:

i. Mathematics 1102A, 1102B, 1102C and 2102A, 2102B, 2102C or 3102A, 3102B and 3102C

ii. Science 3101, 3102, 3103

3. Comprehensive Arts and Science (CAS) Trades

Comprehensive Arts and Science (Trades) Certificate

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, must be at least 19 years of age at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

Plumber

Start Date: September

Credential: Certificate

Program Length: 34 Weeks

School: Natural Resources and Industrial Trades

Locations & Delivery Modes:

- Bonavista - On Campus delivery

PROGRAM DESCRIPTION

This red seal program prepares you to install and repair pipes, fixtures and other plumbing equipment for water distribution and waste water disposal in residential, commercial and industrial buildings. Some of your duties include:

- Read blueprints, drawings and specifications for plumbing systems
- Examine water supply networks, waste and drainage systems
- Install, repair and maintain domestic, commercial or industrial fixtures and systems
- Connect, bead, thread and join pipes
- Leak test utilizing air and water

OUTCOMES

1. Demonstrate safe work practices and personal protection.
2. Plan work activity.
3. Use and maintain hand and portable power tools and equipment.
4. Interpret plans and specifications and prepare layouts and working drawings.
5. Prepare components and fixtures according to specifications and assume responsibility for the end product.

ENTRANCE REQUIREMENTS

Eligibility for admission requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation

2. Adult Basic Education

Adult Basic Education (Level III) Graduation with General College Profile (or Business Related College Profile or Degree and Technical Profile). It is strongly recommended that courses include the following:

- i. Mathematics 1102A, 1102B, 1102C and 2102A, 2102B, 2102C or 3102A, 3102B and 3102C
- ii. Science 3101, 3102, 3103

3. Comprehensive Arts and Science (CAS) Trades

Comprehensive Arts and Science (Trades) Certificate

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, must be at least 19 years of age at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

Power Engineering Technology

Start Date: September

Credential: Diploma

Program Length: Two Years

School: Natural Resources & Industrial Trades

Locations & Delivery Modes:

- Corner Brook - On Campus delivery

PROGRAM DESCRIPTION

Power Engineers, Power Plant Operators, Boiler Operators and Stationary Engineers, are some of the descriptions that summarize a technically skilled professional who may be responsible for the safe operation and maintenance of equipment such as pumps, gas compressors, generators, motors, boilers, steam turbines, air conditioning systems, heat exchangers and refrigeration equipment.

This program is intended to prepare the student for entrance into the Power Engineering field at the 4th Class level after successful completion and meeting *SOPEEC requirements for the first year of the program and entrance into the Power Engineering field at the 3rd Class level after successful completion and meeting **SOPEEC requirements for the second year of the program.

*Upon successful completion of the **first year** program requirements a student **is** eligible to make application to the Department of Advanced Education and Skills and Labour (DAESL) for review and approval to write examinations towards 4th Class Power Engineering certification. Students will be required to complete the practical requirements and utilize the Practicum Guide endorsed by the DAESL.

Upon successful completion of the **second year program requirements a student **is** eligible to make application to the Department of Advanced Education and Skills and Labour (DAESL) for review and approval to write examinations towards 3rd Class Power Engineering certification. Students will be required to complete the practical requirements and utilize the Practicum Guide endorsed by the DAESL.

This program includes a 6-week on the job training experience that students will be able to complete the practical requirements. Graduates of the program are expected to work in varying temperatures, environments, confined spaces, may be required to perform climbing, use hand and power tools, various specialty testers, and perform preventative maintenance of the equipment.

OBJECTIVES

As graduates of the Power Engineering Technology program, graduates will have the knowledge and skills that will allow him/her to:

1. Demonstrate the practical skills necessary for a 4th Class, Power Engineer.
2. Develop and practice proper safety procedures.
3. Demonstrate problem solving skills and good work practices.
4. Utilize essential skill training to enhance their career experience and opportunities.
5. Gain knowledge of control documentation and reporting systems in Power Engineering environments.
6. Prepare for a provincial examination in Power Engineering 4th Class part "A" and "B".
7. Demonstrate the practical skills necessary for a 3rd Class, Power Engineer.

CERTIFICATIONS

In addition to the formal courses listed in the program of studies, students in the Power Engineering Technology Diploma program are required to obtain a certificate of completion in the following upon graduation:

1. Introduction to Confined Space
2. Introduction to Fall Arrest & Protection
3. Introduction to Lock-out – Tag-out
4. Standard First Aid/Heart Start
5. WHMIS
6. Introduction to Newfoundland and Labrador Health & Safety Act

Students should be aware that additional fees may apply for external certifications.

Students will also be required to complete one-day non-credit educational seminars throughout the program in on the job training for the full-time Diploma program. This includes resume writing, job search, interview preparation and professionalism at the worksite.

ENTRANCE REQUIREMENTS

NOTE:

Students who have valid 4th Class Certification and who meet the academic entrance requirements for the Power Engineering Technology program listed below may apply for entry into year two of the program.

If students have a 4th Class Certification and do not meet the academic requirements of the Power Engineering Technology program listed below may apply as a mature student and complete the appropriate CAAT testing, or complete courses in our Comprehensive Arts & Science (CAS) Transition program to meet the academic requirements they are deficient in.

Eligibility for admission to the Power Engineering Technology Program requires the applicant to meet one of the following four academic criteria:

1. High School

High School Graduation Certificate with a 60% overall average in the following (or equivalent):

- i. English (2 credits) (minimum 60%) from: 3201
- ii. Mathematics (4 credits) chosen from:
Advanced: 2200, 3200 (50% minimum in each course)
Academic: 2201 (50% minimum), 3201 (60% minimum)
- iii. Science: (4 credits) two of which must be selected from:
Biology: 3201
Physics: 3204
Chemistry: 3202
Earth Systems: 3209

Note: The remaining two Science credits to be chosen from the highest Science mark in level 1, 2 or 3. **Note that it is recommended that students considering the Power Engineering program should complete High School Physics.**

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with the following courses:

- i. Math (60% MINIMUM) MA1040, MA1041
- ii. Two Science courses chosen from one of the following three combinations:
 - a. Introductory Biology: BL1020, BL1021
 - b. Introductory Chemistry: CH1030, CH1031
 - c. Introductory Physics: PH1050, PH1051

Note: It is strongly recommended that CAS students who intend to enroll in Engineering Technology programs complete both of the Chemistry courses and both of the Physics courses.

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with Degree and Technical Profile including the following courses (or equivalent):

- i. English (60% minimum) 3101A, 3101B, 3101C or 3102A, 3102B, 3102C
- ii. Mathematics (60% minimum) 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C
- iii. Science from one of the following sections:
 - a. Biology 1101, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C
 - b. Chemistry 1102, 2102A, 2102B, 2102C, 3102A, 3102B, 3102C
 - c. Physics 1104, 2104A, 2104B, 2104C, 3104A, 3104B, 3104C

Applicants with Adult Basic Education (Level III) Graduation with a different Profile may be eligible for admission to the program provided the appropriate selection of courses including those outlined above have been completed.

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, are 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

EMPLOYMENT OPPORTUNITIES

Graduates may find employment in the following areas:

- Municipal buildings
- Provincial buildings
- Federal buildings
- Health care institutions
- Educational institutions
- Manufacturing
- Mining
- Fishery
- Pulp and Paper
- Oil and Gas

Courses

Note: Courses are delivered sequentially in modular format.

Semester 1 (Fall)

Code	Title	Cr	Hrs
PW1112	Mechanics & Dynamics	2	30
PW1113	Phys. & Chem. Thermodynamics	2	30
PW1114	Canada Power Eng. Leg. & Reg.	2	30

Code	Title	Cr	Hrs
PW1115	Intro to Plant & Fire Safety	2	30
PW1116	Plant Operation & Environment	2	30
PW1117	Mat. Science & Welding Tech.	2	30
PW1118	Fluid Handling Technology	1	15
PW1119	Electro-Technology Concepts	2	30
PW1122	Energy Plant Inst. & Controls	2	30
PW1123	Industrial Communications	1	15
PW1124	Introduction to Boiler Designs	2	30
PW1125	Elements of Boiler Systems	3	45
PW1126	Power Ops. & Maint. Lab I	6	100

Semester 2 (Winter)

Code	Title	Cr	Hrs
PW1201	Lubrication & Bearings	2	30
PW1202	Pumps and Compressors	2	30
PW1203	Boiler Safety Devices	2	30
PW1204	Plant Operation & Maintenance	2	30
PW1205	Energy Plant Maintenance	2	30
PW1206	Water Treatment	2	30
PW1207	Prime Movers & Heat Engines	1	15
PW1208	Plant Auxiliary Systems	2	30
PW1209	Compress. & Absorption Refrig.	3	45
PW1211	HVAC for Facility Operators	1	15
PW1212	Bldg. Enviro - Systems & Ctrl.	3	45
PW1213	Ind. Plant Configurations	3	45

Semester 3 (Intersession)

Code	Title	Cr	Hrs
PW1302	Power Ops. & Maint. Lab II	6	100

An exit option exists after the first year for students who successfully complete their studies, practicum and fulfill all SOPEEC requirements.

Upon successful completion of Year One of the Power Engineering Technology Program, students are eligible to make application to the Department of Immigration, Population Growth and Skills for review and approval to write examinations towards 4th Class Power Engineering certification.

Semester 4 (Fall)

Code	Title	Cr	Hrs
PW2100	Applied Mathematics	3	45
PW2110	Applied Science	3	45
PW2111	Ind. Drawings, Leg. & Codes	2	30
PW2112	Code Calculations - ASME I	2	30
PW2113	Fuels, Combust. & FG Analysis	2	30
PW2114	Piping, Valves & Traps	3	45
PW2115	Electrical Theory & Calc.	3	45
PW2116	Instrumentation & Control	2	30
PW2117	Safety & Fire Prevention	1	15
PW2118	Boiler Designs	2	30
PW2119	Power Ops. & Maint. Lab III	6	100

Semester 5 (Winter)

Code	Title	Cr	Hrs
PW2200	Boilers & Furnace Operation	3	45
PW2201	Boiler Water Treatment	2	30
PW2202	Pumps, Welding & P. Vessels	3	45

Code	Title	Cr	Hrs
PW2203	Steam Turbines & Auxiliaries	2	30
PW2204	Gas Turbines, Cogen. & IC Engines	3	45
PW2205	Compressors	2	30
PW2206	Refrigeration Aux & Operation	2	30
PW2207	Heat Exch. & Wastewater Treat.	2	30
PW2208	Plant Maintenance & Admin.	1	15
PW2209	Power Ops. & Maint. Lab IV	6	100
Semester 6 (Interession)			
Code	Title	Cr	Hrs
PW2300	On the Job Training	5	240

Upon successful completion of Year Two of the Power Engineering Technology Program, students are eligible to make application to the Department of Immigration, Population Growth, and Skills for review and approval to write examinations towards 3rd Class Power Engineering certification.

Powerline Technician

Start Date: September

Credential: Certificate

Program Length: 35 Weeks

School: Natural Resources and Industrial Trades

Locations & Delivery Modes:

- Happy Valley-Goose Bay - On Campus delivery
- Seal Cove - On Campus delivery
- St. Anthony - On Campus delivery

PROGRAM DESCRIPTION

This red seal program will prepare you to build and repair overhead and underground power lines used to conduct electricity from generating plants to the customer. Some of the duties include:

- Erect and maintain steel, wood or concrete poles, towers and guy wires
- Install, maintain and repair overhead and underground powerlines, cables, insulators, lighting arrestors and switches
- Repair or replace transformers and street lighting
- Splice, solder and insulate conductors
- Diagnose power distribution and transmission faults

OUTCOMES

1. Demonstrate safe work practices and personal protection.
2. Interpret occupational documents.
3. Use and maintain tools and equipment.
4. Use and maintain electrical distribution systems and their equipment.

ENTRANCE REQUIREMENTS

Eligibility for admission requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation

2. Adult Basic Education

Adult Basic Education (Level III) Graduation with General College Profile (or Business Related College Profile or Degree and Technical Profile). It is strongly recommended that courses include the following:

- i. Mathematics 1102A, 1102B, 1102C and 2102A, 2102B, 2102C or 3102A, 3102B and 3102C
- ii. Science 3101, 3102, 3103

3. Comprehensive Arts and Science (CAS) Trades

Comprehensive Arts and Science (Trades) Certificate

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, must be at least 19 years of age at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. Driver License

Applicants are required to have a valid Class 05 license prior to acceptance into the Powerline Technician Program.

Notes: Driver License and Endorsements

- a) A NL Air Brake endorsement (9A) may be required to operate some vehicles within the program and upon employment.
- b) Employers may seek graduates who can obtain a Class 03 License. NL Motor Vehicle Regulations requires a valid Class 05 for a minimum of 12 months prior to applying for a Class 3 license.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

EMPLOYMENT OPPORTUNITIES

Graduates may find employment in the following areas:

- Utility companies
- Private contractors

Refrigeration and Air Conditioning Mechanic

Start Date: September

Credential: Certificate

Program Length: 37 Weeks

School: Natural Resources and Industrial Trades

Locations & Delivery Modes:

- Ridge Road - On Campus delivery

PROGRAM DESCRIPTION

This red seal program offers training in planning, preparing and laying out any cooling system or heat-cooling system that is used in a residential, commercial, institutional or industrial refrigeration setting. Some of the duties include:

- Install and start up refrigeration and air cooling systems
- Service, repair and replace refrigeration and air conditioning piping and components
- Interpret blueprints and verbal instruction
- Assemble and install refrigeration and air conditioning components
- Install and calibrate controls
- Perform leak detection, record keeping and performance test

OUTCOMES

1. Demonstrate safe work practices and personal protection.
2. Interpret mechanical and architectural drawings, acts, codes, standards, legislation, and service and operating manuals.
3. Use and maintain tools and equipment.
4. Arrange for refrigeration and air conditioning installation and maintenance.

ENTRANCE REQUIREMENTS

Eligibility for admission requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation

2. Adult Basic Education

Adult Basic Education (Level III) Graduation with General College Profile (or Business Related College Profile or Degree and Technical Profile). It is strongly recommended that courses include the following:

- i. Mathematics 1102A, 1102B, 1102C and 2102A, 2102B, 2102C or 3102A, 3102B and 3102C
- ii. Science 3101, 3102, 3103

3. Comprehensive Arts and Science (CAS) Trades

Comprehensive Arts and Science (Trades) Certificate

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, must be at least 19 years of age at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

Renovation Technician

Start Date: September

Credential: Certificate/Diploma

Program Length: 68 Weeks

School: Natural Resources and Industrial Trades

Locations & Delivery Modes:

- Clarendville - On Campus delivery

Note:

Alternate Year Intake

PROGRAM DESCRIPTION

This two year diploma program will provide students with hands on experience and knowledge pertaining to the world of home and light commercial building renovation. Building systems, efficient building techniques, energy conserving systems, sustainable building approaches, estimating and project management are some of the topics students of the Renovation Technician program will cover.

Graduates will have the skills required to work in a variety of residential and commercial building construction settings focusing on renovation projects. Students will learn to recognize hazardous materials and the need for proper waste disposal strategies, as well as proper use of both non-renewable and renewable energy sources.

Students in the Renovation Technician program will receive a Certificate for Carpenter upon completion of the Carpenter Entry Level courses in Semesters 1, 2 and 3, providing an opportunity to register as a first-year carpenter apprentice. A Diploma in Renovation Technician will be awarded for completion of all courses listed in Semesters 1 through 6.

OUTCOMES

1. Practice safety work procedures.
2. Manage a renovation project as it relates to core and sub trade practices.
3. Demonstrate problem solving skills, good work practices, strong communication skills, and utilize practical hands on experience gained directly from job placements in industry.
4. Perform with carpenter skills and knowledge in construction techniques related to building sciences, green technologies, waste management, estimation/budgeting and scheduling.
5. Solve problems with associated trades in the areas of electrical, HVAC, plumbing, painting, plastering, masonry and drafting.

ENTRANCE REQUIREMENTS

Eligibility for admission requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation

2. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with General College Profile (or Business Related College Profile or Degree and Technical College Profile). It is strongly recommended that courses include the following:

- i. Mathematics 1102A, 1102B, 1102C and 2102A, 2102B, 2102C or 3102A, 3102B and 3102C
- ii. Science 3101, 3102, 3103

3. Comprehensive Arts and Science (CAS) Trades

Comprehensive Arts and Science (Trades) Certificate

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, must be at least 19 years of age at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

EMPLOYMENT OPPORTUNITIES

Graduates may find employment in the following areas:

- General contractors
- Commercial contractors
- Private contractors

Small Equipment Service Technician

Start Date: September

Credential: Certificate

Program Length: 36 Weeks

School: Natural Resources and Industrial Trades

Locations & Delivery Modes:

- Bay St. George - On Campus delivery

PROGRAM DESCRIPTION

The Small Equipment Service Technician program is designed to enable you to learn the knowledge and skills associated with the repair and maintenance of recreational equipment such as snowmobiles, ATVs, motorcycles, personal water craft and outboard motors, and fuel-powered tools such as chainsaws and lawnmowers. Some of the duties include:

- Review and interpret work orders and technical manuals
- Inspect engines, motors and other mechanical components using test devices
- Diagnose and isolate faults
- Repair or replace components using hand tools
- Performance test repaired equipment
- Perform scheduled maintenance and advise customers on repair cost

OUTCOMES

1. Demonstrate safe work practices and personal protection.
2. Use and maintain tools and equipment.
3. Interpret schematics and wiring diagrams.
4. Identify major engine components.
5. Maintain and repair lubricant systems.
6. Maintain and repair light duty engines.

ENTRANCE REQUIREMENTS

Eligibility for admission requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation

2. Adult Basic Education

Adult Basic Education (Level III) Graduation with General College Profile (or Business Related College Profile or Degree and Technical Profile). It is strongly recommended that courses include the following:

- i. Mathematics 1102A, 1102B, 1102C and 2102A, 2102B, 2102C or 3102A, 3102B and 3102C
- ii. Science 3101, 3102, 3103

3. Comprehensive Arts and Science (CAS) Trades

Comprehensive Arts and Science (Trades) Certificate

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, must be at least 19 years of age at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

EMPLOYMENT OPPORTUNITIES

Graduates may find employment in the following areas:

- Rental dealerships
- Recreational dealerships
- Independent garages
- Service stations
- Repair shops
- Manufacturing companies

A certificate from College of the North Atlantic will be awarded upon successful completion of pre-employment level courses.

APPRENTICESHIP

Upon completion of the pre-employment certificate program, a graduate may pursue Blue Seal Certification by finding employment, registering as an "Apprentice" and completing the following Advanced Level training and required work experience. The apprenticeship may take 4-5 years and would lead to Journey person status in the trade. For more information regarding apprenticeship refer to [Plans of Training \(POT\) - Immigration, Population Growth and Skills \(gov.nl.ca\)](http://gov.nl.ca).

Steamfitter/Pipefitter

Start Date: September

Credential: Certificate

Program Length: 35 Weeks

School: Natural Resources and Industrial Trades

Locations & Delivery Modes:

- Clarenville - On Campus delivery

PROGRAM DESCRIPTION

This red seal program offers training in repairing and maintaining pipe and steam systems. Some of the duties include:

- Determine required pipe and tools necessary to complete a layout and sequence of tasks
- Create detail sketches for pipe and equipment fabrication and installation
- Measure, cut, thread, groove, bend, assemble and install metal, plastic and fiberglass pipes, valves and fittings and join sections
- Perform performance leak tests and pipe securement
- Perform maintenance and replacement of worn components
- Perform pipeline construction
- Safely layout, assemble, fabricate, maintain and repair piping systems
- Perform blueprint reading for piping and tubing
- Perform maintenance on low pressure steam and heating and cooling systems

OUTCOMES

1. Demonstrate safe work practices and personal protection.
2. Use and maintain tools and equipment.
3. Perform common installation processes.
4. Plan lifts.
5. Hoist loads.
6. Install high and low pressure process steam systems.

ENTRANCE REQUIREMENTS

Eligibility for admission requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation

2. Adult Basic Education

Adult Basic Education (Level III) Graduation with General College Profile (or Business Related College Profile or Degree and Technical Profile). It is strongly recommended that courses include the following:

- i. Mathematics 1102A, 1102B, 1102C and 2102A, 2102B, 2102C or 3102A, 3102B and 3102C
- ii. Science 3101, 3102, 3103

3. Comprehensive Arts and Science (CAS) Trades

Comprehensive Arts and Science (Trades) Certificate

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, must be at least 19 years of age at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

Welder

Start Date: September

Credential: Certificate

Program Length: 36 Weeks

School: Natural Resources and Industrial Trades

Locations & Delivery Modes:

- Burin - On Campus delivery
- Corner Brook - On Campus delivery
- Labrador West - On Campus delivery
- Placentia - On Campus delivery
- Prince Philip Drive - On Campus delivery

PROGRAM DESCRIPTION

This red seal program offers training in joining and severing metals in beams, girders, vessels, piping and other metal components that make metal parts used in construction and manufacturing plants, and weld parts, tools, machines and equipment. Some of the duties are:

- Develop patterns in given layouts, blueprints and work orders
- Clean and check for defects and shape component parts
- Examine blueprints and work orders
- Perform welding of various metals

OUTCOMES

1. Demonstrate safe work practices and personal protection.
2. Interpret drawings and develop layout patterns for projects.
3. Use and maintain tools and equipment.
4. Follow required codes, specifications and standards.
5. Employ various welding methods using SMAW, GMAW, FCAW and GTAW

ENTRANCE REQUIREMENTS

Eligibility for admission requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation

2. Adult Basic Education

Adult Basic Education (Level III) Graduation with General College Profile (or Business Related College Profile or Degree and Technical Profile). It is strongly recommended that courses include the following:

- i. Mathematics 1102A, 1102B, 1102C and 2102A, 2102B, 2102C or 3102A, 3102B and 3102C
- ii. Science 3101, 3102, 3103

3. Comprehensive Arts and Science (CAS) Trades

Comprehensive Arts and Science (Trades) Certificate

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, must be at least 19 years of age at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

Welder/Metal Fabricator (Fitter)

Start Date: September

Credential: Diploma

Program Length: 74 Weeks

School: Natural Resources and Industrial Trades

Locations:

- Port aux Basques

PROGRAM DESCRIPTION

Versatility empowers.

Welders and Metal Fabricators use two different but related disciplines to transform raw metal materials into new usable forms. Our lives are completely surrounded – and supported – by this craft, from architectural structures, machines and heavy equipment to railings, hand tools and cutlery.

This combination of disciplines is extremely valuable in industry. There are applications for both fields across a range of industries such as auto, construction, energy and aerospace. Someone who has both welder and metal fabricator training has more choice in the job market when seeking employment. With the versatility of combined disciplines you can contribute to project efficiency with your ability to perform multiple tasks.

With that in mind, we have created this program with components of both our Welder and Metal Fabricator programs to give you work-ready skills to enter the labour force.

You leave equipped with the skills to plan a sequence of tasks to efficiently cut metal; lay out, cut and fabricate structural steel; develop patterns or follow directions from blueprints and engineering drawings; rig, hoist and move materials; perform welds of various metals using diverse welding methods; tack weld, bolt and rivet components; assemble and fit metal sections and sub-sections; install fabricated parts in the final product; and test materials and equipment using state-of-the-art techniques.

If this versatile program is a good fit for you, apply now!

Program Highlights

- Diploma in two years
- A combination of two Trades programs for a unique set of skills
- Ability to pursue apprenticeship in Welder or Metal Fabricator (Fitter) upon program completion

Did You Know?

- The global metal fabrication market is anticipated to expand at a CAGR of around 4% during the forecast period, 2020-2026.^[1]
- Shifting trends in finance and manufacturing sectors and the adoption of automated fabrication process is expected to propel market growth.
- Increasing demand and supply for metal fabrication across various industries such as automotive, aerospace and defense and manufacturing is anticipated.
- Wage levels in Newfoundland and Labrador are on par with the highest in Canada.^[2]
- Some of the most popular metal types available for metal fabrication include titanium, brass, aluminum, magnesium, nickel, silver, copper and gold.

^[1] [Metal Fabrication Market Size, Growth & Industry Analysis | Research Report 2026 \(dataintelo.com\)](#)

^[2] [Labourer - Metal Fabrication in Canada | Wages - Job Bank](#)

OUTCOMES

Upon successful completion of the program graduates will be able to:

1. Demonstrate safe work practices and personal protection.
2. Interpret shop drawings, sketches and fabrication drawings.
3. Follow required codes, specifications and standards.
4. Prepare work area and equipment schedule.
5. Prepare final products for finish.
6. Demonstrate welds using SMAW, GMAW, FCAW and GTAW.
7. Perform non-destructive testing inspections on finished products.
8. Perform welds of various metals.
9. Perform welds of various positions required by industry.
10. Complete a project that encompasses skills from both welding and metal fabrication.

ENTRANCE REQUIREMENTS

Eligibility for admission requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation

2. Adult Basic Education

Adult Basic Education (Level III) Graduation with General College Profile (or Business Related College Profile or Degree and Technical Profile). It is strongly recommended that courses include the following:

- i. Mathematics 1102A, 1102B, 1102C and 2102A, 2102B, 2102C or 3102A, 3102B and 3102C
- ii. Science 3101, 3102, 3103

3. Comprehensive Arts and Science (CAS) Trades

Comprehensive Arts and Science (Trades) Certificate

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, must be at least 19 years of age at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Welding Engineering Technician

Start Date: September

Credential: Diploma

Program Length: Two Years

School: Natural Resources & Industrial Trades

Locations & Delivery Modes:

- Burin - On Campus delivery

PROGRAM DESCRIPTION

A quality constructed career.

High quality welding of materials and equipment is essential across numerous industries in today's economy. Welded materials support our daily lives, influence the world around us, and endure through time. Weld quality is thus critical for citizens' health and safety and is also related to the economic health of a country.

The Welding Engineering Technician acts as a liaison between professional engineers and welding practitioners and ensures that appropriate systems are in place to monitor welding integrity. In fact, it is they who create and manage quality control and quality assurance systems, examine industry standards and codes, and recommend which welding processes and procedures to apply for achievement of compliance. They perform visual and non-destructive testing (NDT) of welded materials, evaluate and record test results and recommend corrective actions.

This work requires attention to detail and great problem-solving skills, as well as the technical knowledge to complete diverse tasks that utilize the latest in welding technology and contribute to creating safe, strong assemblies that last.

CNA's project-based, immersive Welding Engineering Technician program is designed to meet growing industry demand for these highly trained technicians. In our modern shops and laboratory facilities, you'll gain skills and knowledges in Welding, Materials Science, Non-destructive Testing, and Computer Aided Design/Computer Aided Manufacturing (CAD/CAM). With us, you will develop the skills and knowledge to excel in this profession. The work placement is optional – you can stay and avail of additional hands-on training or graduate and get straight to work in the industry.

Upon completing this program, you'll have qualifications or credentials on provincial, national and international levels and you are automatically eligible for membership in the Association of Engineering Technicians and Technologists of Newfoundland and Labrador (AETTNL), as well as similar associations in Canada.

If a diverse network of work opportunities sparks your interest, apply today!

Program Highlights

- Diversely certified instructors guide your applied learning
- Our state-of-the-art welding shop is uniquely Canadian Welding Bureau (CWB)-certified, providing you with opportunities to engage with industry professionals throughout the program
- NDT laboratories are fully equipped to demonstrate the most modern flaw detection processes including digital ultrasonic inspection, radiography, magnetic particle inspection, liquid penetrant inspection and x-ray fluorescence
- Advanced metallurgy laboratories provide immersive experiences in evaluating material properties
- Numerous certification opportunities are provided throughout the program

Did You Know?

- The global welding market size was US \$20.23 billion in 2020 and is projected to grow to US \$28.66 billion in 2028.

- Over 70% of all fabricated products are made with the expertise of welders.
- Major North American energy systems and civil/marine infrastructures are nearing their end of design life and must be refitted and renewed.
- Aging demographics in this field indicate an acute need to refresh the workforce.
- Graduates of the program have opportunities to travel the globe to work on major infrastructure projects.
- Welding failures are a leading cause of industrial and environmental catastrophes, resulting in more stringent weld quality requirements, materials verification and the need for welding inspectors.

ACCREDITATION

This program is accredited by the Canadian Technology Accreditation Board under the mandate of the Canadian Council of Technicians and Technologists.

The academic credentials of accredited technology programs are recognized internationally by the signatories of the Dublin Accord.

NOTE: There are specific vision requirements that are required by the Canadian General Standards Board prior to completing final certification in each discipline. Please refer to the following link for the requirements: <http://www.nrcan-rncan.gc.ca/mms-smm/ndt-end/eli-adm/vis-vis-eng.htm>

OBJECTIVES

Upon successful completion of this program, graduates will be able to:

1. Develop, manage, and implement welding-related quality management systems
2. Interpret and apply standards and codes for welding and non-destructive testing
3. Develop and maintain welding inspection procedures
4. Execute welding inspection and non-destructive testing procedures as defined by standards, codes, and related specifications
5. Interpret and evaluate quality inspection and test results
6. Verify and recommend welding operator qualifications
7. Prepare and maintain inspection records and reports
8. Set up equipment, lay out work to specifications, and weld to prescribed standards
9. Perform project management activities within a welding and fabrication, and quality assurance, context.

CURRICULUM

General education consisting of Communication Skills (oral and written), Mathematics, Physics, Chemistry, Electrotechnology, Engineering Graphics, Technology Awareness, and Student Success.

Specific education in the theory and application of welding processes, procedures, and weldments.

Practical education employing labs and shops focused on Welding, Materials, Science, Nondestructive Testing and Computer Aided Design/Computer Aided Manufacturing (CAD/CAM).

CAREER OPPORTUNITIES

The student, upon graduation, may find employment with contractors, metal fabricators, quality assurance/quality control consultants, welding inspection firms, suppliers, oil & gas exploration/production/processing facilities and any other group that must comply with standards associated with the welding industry.

Graduates completing this program are automatically eligible for membership in the Association of Engineering Technicians and Technologists of Newfoundland and Labrador (AETTNL), as well as any similar association in Canada.

Graduates with two years of progressive work experience may be eligible to receive the designation of Certified Technician (C. Tech) upon completion of a Professional Practice and Ethics Exam

EXTERNAL CERTIFICATIONS

Students in the Welding Engineering Technician program will be required to complete certifications in the following areas prior to the start of Semester 3 (Note: Fees for these examinations are not included in tuition/supply fees):

- Standard First Aid/Heart Start
- WHMIS

As an option, students will be eligible to write the following external certifications prior to the start of Semester 3 (Note: Fees for these examinations are not included in tuition/supply fees):

- CSA W47.1 Welder/Welder Operator Qualification
 - Shielded Metal Arc Welding (SMAW) technique
- Canadian Nuclear Safety Commission
 - Certified Exposure Device Operator

Additionally, students will be eligible to write the following certification examinations upon graduation (Note: Fees for these examinations are not included in tuition/supply fees):

- CSA W178.2 Welding Inspection Level 1
- CSA W47.1 Welder/Welder Operator Qualification
 - Multiple techniques
- CAN/CGSB 48.9712:
- Radiography (RT) Level I
- Ultrasonic Inspection (UT) Level I
- Magnetic Particle Inspection (MT) Level II
- Liquid Penetrant Inspection (PT) Level II

NOTE: There are specific vision requirements that are required by the Canadian General Standards Board prior to completing final certification in each discipline. Please refer to the following link for the requirements: <http://www.nrcan-rncan.gc.ca/mms-smm/ndt-end/eli-adm/vis-vis-eng.htm>

ENTRANCE REQUIREMENTS

Eligibility for admission to an Engineering Technology program requires the applicant to meet one of the following four academic criteria:

1. High School

High School Graduation Certificate with a 60% overall average in the following (or equivalent):

- English (2 credits) (minimum 60%) from: 3201
- Mathematics (4 credits) chosen from:

Advanced: 2200, 3200 (50% minimum in each course)

Academic: 2201 (50% minimum), 3201 (60% minimum)

Note: Students who received a combined average of 70% in high school Academic Mathematics 2201 and 3201, or a pass in both high school

Advanced Mathematics 2200 and 3200 can be exempted from Math 1700. Students must apply for the exemption.

- Science (4 credits) two of which must be selected from:

Biology: 3201

Physics: 3204

Chemistry: 3202

Earth Systems: 3209

Note: The remaining two Science credits to be chosen from the highest Science mark in level 1, 2 or 3.

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with the following courses:

- Math (60% minimum) MA1040, MA1041
- Two Science courses chosen from one of the following three combinations:
 - Introductory Biology: BL1020, BL1021
 - Introductory Chemistry: CH1030, CH1031
 - Introductory Physics: PH1050, PH1051

Note: It is strongly recommended that CAS students who intend to enroll in Engineering Technology programs complete both of the Chemistry courses and both of the Physics courses.

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with Degree and Technical Profile including the following courses (or equivalent):

- i. English (60% minimum) 3101A, 3101B, 3101C or 3102A, 3102B, 3102C
- ii. Mathematics (60% minimum) 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C
- iii. Science from one of the following sections:
 - a. Biology 1101, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C
 - b. Chemistry 1102, 2102A, 2102B, 2102C, 3102A, 3102B, 3102C
 - c. Physics 1104, 2104A, 2104B, 2104C, 3104A, 3104B, 3104C

Applicants with Adult Basic Education (Level III) Graduation with a different Profile may be eligible for admission to the program provided the appropriate selection of courses including those outlined above have been completed.

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, are 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

Courses

Semester 1 (Fall)

Code	Title	Cr	Le	La
PH1100	Physics	4	3	2
EG1110	Engineering Graphics	3	2	2
ET1100	Electrotechnology	4	3	2
MA1700	Mathematics	4	3	2
CM1400	Technical Report Writing I	3	3	0
WD1440	SMAW Fundamentals	4	2	6

Semester 2 (Winter)

Code	Title	Cr	Le	La
EG1430	AutoCAD Essentials	3	2	2
MA1101	Mathematics	5	5	0
CM1401	Technical Report Writing II	3	3	0

Welding Engineering Technician (Co-op)

Start Date: September

Credential: Diploma

Program Length: Two Years

School: Natural Resources & Industrial Trades

Locations & Delivery Modes:

- Burin - On Campus delivery

PROGRAM DESCRIPTION

A quality constructed career.

High quality welding of materials and equipment is essential across numerous industries in today's economy. Welded materials support our daily lives, influence the world around us, and endure through time. Weld quality is thus critical for citizens' health and safety and is also related to the economic health of a country.

The Welding Engineering Technician acts as a liaison between professional engineers and welding practitioners and ensures that appropriate systems are in place to monitor welding integrity. In fact, it is they who create and manage quality control and quality assurance systems, examine industry standards and codes, and recommend which welding processes and procedures to apply for achievement of compliance. They perform visual and non-destructive testing (NDT) of welded materials, evaluate and record test results and recommend corrective actions.

This work requires attention to detail and great problem-solving skills, as well as the technical knowledge to complete diverse tasks that utilize the latest in welding technology and contribute to creating safe, strong assemblies that last.

CNA's project-based, immersive Welding Engineering Technician program is designed to meet growing industry demand for these highly trained technicians. In our modern shops and laboratory facilities, you'll gain skills and knowledges in Welding, Materials Science, Non-destructive Testing, and Computer Aided Design/Computer Aided Manufacturing (CAD/CAM). With us, you will develop the skills and knowledge to excel in this profession. The work placement is optional – you can stay and avail of additional hands-on training or graduate and get straight to work in the industry.

Upon completing this program, you'll have qualifications or credentials on provincial, national and international levels and you are automatically eligible for membership in the Association of Engineering Technicians and Technologists of Newfoundland and Labrador (AETTNL), as well as similar associations in Canada.

If a diverse network of work opportunities sparks your interest, apply today!

Program Highlights

- Choose to complete the optional embedded 12-week (minimum) work placement, or complete program courses only – the graduation time is the same
- Diversely certified instructors guide your applied learning
- Our state-of-the-art welding shop is uniquely Canadian Welding Bureau (CWB)-certified, providing you with opportunities to engage with industry professionals throughout the program
- NDT laboratories are fully equipped to demonstrate the most modern flaw detection processes including digital ultrasonic inspection, radiography, magnetic particle inspection, liquid penetrant inspection and x-ray fluorescence
- Advanced metallurgy laboratories provide immersive experiences in evaluating material properties
- Numerous certification opportunities are provided throughout the program

Did you know?

- The global welding market size was US \$20.23 billion in 2020 and is projected to grow to US \$28.66 billion in 2028.
- Over 70% of all fabricated products are made with the expertise of welders.
- Major North American energy systems and civil/marine infrastructures are nearing their end of design life and must be refitted and renewed.
- Aging demographics in this field indicate an acute need to refresh the workforce.
- Graduates of the program have opportunities to travel the globe to work on major infrastructure projects.
- Welding failures are a leading cause of industrial and environmental catastrophes, resulting in more stringent weld quality requirements, materials verification and the need for welding inspectors.

ACCREDITATION

This program is accredited by the Canadian Technology Accreditation Board under the mandate of the Canadian Council of Technicians and Technologists.

The academic credentials of accredited technology programs are recognized internationally by the signatories of the Dublin Accord.

NOTE: There are specific vision requirements that are required by the Canadian General Standards Board prior to completing final certification in each discipline. Please refer to the following link for the requirements: <http://www.nrcan-rncan.gc.ca/mms-smm/ndt-end/eli-adm/vis-vis-eng.htm>

OBJECTIVES

Upon successful completion of this program, graduates will be able to:

1. Develop, manage, and implement welding-related quality management systems
2. Interpret and apply standards and codes for welding and non-destructive testing
3. Develop and maintain welding inspection procedures
4. Execute welding inspection and non-destructive testing procedures as defined by standards, codes, and related specifications
5. Interpret and evaluate quality inspection and test results
6. Verify and recommend welding operator qualifications
7. Prepare and maintain inspection records and reports
8. Set up equipment, lay out work to specifications, and weld to prescribed standards
9. Perform project management activities within a welding and fabrication, and quality assurance, context.

CURRICULUM

General education consisting of Communication Skills (oral and written), Mathematics, Physics, Chemistry, Electrotechnology, Engineering Graphics, Technology Awareness, and Student Success.

Specific education in the theory and application of welding processes, procedures, and weldments.

Practical education employing labs and shops focused on Welding, Materials, Science, Nondestructive Testing and Computer Aided Design/Computer Aided Manufacturing (CAD/CAM).

CAREER OPPORTUNITIES

The student, upon graduation, may find employment with contractors, metal fabricators, quality assurance/quality control consultants, welding inspection firms, suppliers, oil & gas exploration/production/processing facilities and any other group that must comply with standards associated with the welding industry.

Graduates completing this program are automatically eligible for membership in the Association of Engineering Technicians and Technologists of Newfoundland and Labrador (AETTNL), as well as any similar association in Canada.

Graduates with two years of progressive work experience may be eligible to receive the designation of Certified Technician (C. Tech) upon completion of a Professional Practice and Ethics Exam

EXTERNAL CERTIFICATIONS

Students in the Welding Engineering Technician program will be required to complete certifications in the following areas prior to the start of Semester 3 (Note: Fees for these examinations are not included in tuition/supply fees):

- Standard First Aid/Heart Start
- WHMIS

As an option, students will be eligible to write the following external certifications prior to the start of Semester 3 (Note: Fees for these examinations are not included in tuition/supply fees):

- CSA W47.1 Welder/Welder Operator Qualification
 - Shielded Metal Arc Welding (SMAW) technique
- Canadian Nuclear Safety Commission
 - Certified Exposure Device Operator

Additionally, students will be eligible to write the following certification examinations upon graduation (Note: Fees for these examinations are not included in tuition/supply fees):

- CSA W178.2 Welding Inspection Level 1
- CSA W47.1 Welder/Welder Operator Qualification
 - Multiple techniques
- CAN/CGSB 48.9712:
- Radiography (RT) Level I
- Ultrasonic Inspection (UT) Level I
- Magnetic Particle Inspection (MT) Level II
- Liquid Penetrant Inspection (PT) Level II

NOTE: There are specific vision requirements that are required by the Canadian General Standards Board prior to completing final certification in each discipline. Please refer to the following link for the requirements: <http://www.nrcan-rncan.gc.ca/mms-smm/ndt-end/eli-adm/vis-vis-eng.htm>

ENTRANCE REQUIREMENTS

Eligibility for admission to an Engineering Technology program requires the applicant to meet one of the following four academic criteria:

1. High School

High School Graduation Certificate with a 60% overall average in the following (or equivalent):

i. English (2 credits) (minimum 60%) from: 3201

ii. Mathematics (4 credits) chosen from:

Advanced: 2200, 3200 (50% minimum in each course)

Academic: 2201 (50% minimum), 3201 (60% minimum)

Note: Students who received a combined average of 70% in high school Academic Mathematics 2201 and 3201, or a pass in both high school

Advanced Mathematics 2200 and 3200 can be exempted from Math 1700. Students must apply for the exemption.

iii. Science (4 credits) two of which must be selected from:

Biology: 3201

Physics: 3204

Chemistry: 3202

Earth Systems: 3209

Note: The remaining two Science credits to be chosen from the highest Science mark in level 1, 2 or 3.

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with the following courses:

i. Math (60% MINIMUM) MA1040, MA1041

ii. Two Science courses chosen from one of the following three combinations:

a. Introductory Biology: BL1020, BL1021

b. Introductory Chemistry: CH1030, CH1031

c. Introductory Physics: PH1050, PH1051

Note: It is strongly recommended that CAS students who intend to enroll in Engineering Technology programs complete both of the Chemistry courses and both of the Physics courses.

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with Degree and Technical Profile including the following courses (or equivalent):

i. English (60% minimum) 3101A, 3101B, 3101C or 3102A, 3102B, 3102C

ii. Mathematics (60% minimum) 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C

iii. Science from one of the following sections:

a. Biology 1101, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C

b. Chemistry 1102, 2102A, 2102B, 2102C, 3102A, 3102B, 3102C

c. Physics 1104, 2104A, 2104B, 2104C, 3104A, 3104B, 3104C

Applicants with Adult Basic Education (Level III) Graduation with a different Profile may be eligible for admission to the program provided the appropriate selection of courses including those outlined above have been completed.

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, are 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to [Procedure AC-102-PR Admission](#).

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

Courses

Semester 1 (Fall)

Code	Title	Cr	Le	La
PH1100	Physics	4	3	2
EG1110	Engineering Graphics	3	2	2
ET1100	Electrotechnology	4	3	2
MA1700	Mathematics	4	3	2
CM1400	Technical Report Writing I	3	3	0
WD1440	SMAW Fundamentals	4	2	6

Semester 2 (Winter)

Code	Title	Cr	Le	La
EG1430	AutoCAD Essentials	3	2	2
MA1101	Mathematics	5	5	0
CM1401	Technical Report Writing II	3	3	0
CF1100	Materials and Processes I	3	3	1
WD1450	SMAW Processes	4	2	6
SP1320	Radiation Safety	2	2	1
MC1850	Spreadsheet Applications	1	0	2

Semester 3 (Spring)

Code	Title	Cr	Le	La

WD2300	Welding Failure Analysis	3	2	2
WD2450	Welding Metallurgy	2	2	1
SP2120	NDT - PT & UT	3	2	3
SP1450	Quality Management Systems	3	3	0

Semester 6 (Interession)

Code	Title	Cr	Le	La
LW1070	Ethics, Sustainability & Law	2	2	0
WD3120	Cost Analysis Project	5	2	8
DR3310	CAD/CAM	2	1	2

The Course and Lab hours per week are based on a 15 week semester. In interession, the Course and Lab hours will be adjusted to reflect the shorter semester length. Refer to course outline.

Wind Turbine Technician

Start Date: September

Credential: Certificate

Program Length: One Year

School: Natural Resources & Industrial Trades

Locations & Delivery Modes:

- Bay St. George - On Campus delivery

PROGRAM DESCRIPTION

Next-generation energy

There is a worldwide movement in the air – harnessing wind capacity for renewable energies. According to the Global Wind Energy Council, electrification with renewables is the most cost-efficient way to decarbonize the global economy. It is expected to not only improve the health of the planet, but also generate wealth for nations and vast employment opportunities.

The generation of electricity through wind energy doesn't emit greenhouse gases or air pollutants, and it doesn't consume large quantities of freshwater or generate toxic, hazardous or radioactive waste.[1] And this form of sustainable energy will create new jobs and boost economic growth in regions investing in this next-generation wind technology. Change is here, and it's bringing the future of energy.

CNA is riding these winds of change and introducing the first program of its kind in the province. The Wind Turbine Technician program will prepare you for the varied demands of this exciting energy industry. This training will reinforce your understanding of the mechanical and electrical systems of turbine and hydraulic systems, which you will maintain in your role as technician. Our extensive safety training and rescue drills will establish acumen and respect for the strict protocols of the industry.

Join us, be a part of keeping the lights on.

Program Highlights

- Learn critical safety competencies working at heights and within wind turbine nacelles
- Build a diverse skillset with training in mechanical, electrical, and hydraulic fields
- Apply classroom theory in a wind turbine training facility

Did You Know?

- The new report of the UN's Intergovernmental Panel on Climate Change (IPCC) stated that the Earth is already 1.1°C warmer than before industrialization.
- 2021 was the second-best year on record for the global wind industry, with 93.6 GW new installed capacity.[2]
- Canada's wind, solar and energy storage sector grew by 10.5% in 2022.[3]

OBJECTIVES

Upon successful completion of this program, graduates will be able to:

1. Apply and complete Newfoundland and Labrador's occupational and health requirements for safety while ascending and descending wind turbines.
2. Establish an understanding of the mechanical, electrical, and control systems and sub-systems common to modern wind turbines.
3. Implement troubleshooting and problem-solving skills required to maintain a wind turbine.
4. Perform mechanical, hydraulic, and electrical component maintenance, repair, and replacement of parts to correct malfunctions.
5. Apply preventative maintenance and inspection procedures on wind turbines

CERTIFICATIONS

In addition to the formal courses listed in the program of studies, students in the Wind Turbine Technician certificate program are required to obtain a certificate of completion in the following prior to graduation:

1. Standard First Aid & CPR/AED Level C
2. WHMIS
3. Certified Fall Protection
4. Lock-out – Tag-out – Workplace Electrical Safety
5. Confined Space Awareness
6. Wind Turbine High Angle Rescue

ENTRANCE REQUIREMENTS

Eligibility for admission requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation Certificate with a 60% average in eight level 3000 credits, or equivalent, including Mathematics (4 credits) chosen from:

- i. Advanced: 2200, 3200 (50% minimum in each course)
- ii. Academic: 2201 (50% minimum), 3201 (60% minimum)

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with MA1040 (Math Fundamentals I) and MA1041 (Math Fundamentals II) OR clearing High School course deficiencies through Comprehensive Arts and Science (Transition) individual courses.

3. Adult Basic Education

Adult Basic Education (Level III) Graduation with a Degree and Technical Profile (or Business Related College Profile), including the following courses (or equivalent):

- i. Mathematics: 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B and 3101C

Applicants with Adult Basic Education (Level III) Graduation with a different Profile may be eligible for admission to the program provided the appropriate selection of courses, including those outlined above, have been completed.

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, must be at least 19 years of age at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to [Procedure AC-102-PR Admission](#).

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

MEDICAL ASSESSMENT

Prior to entry into the program students must be cleared by a physician to be able to complete required physical activities with assessment submitted to Admissions

EMPLOYMENT OPPORTUNITIES

Graduates from the Wind Turbine Technician program will have employment opportunities with wind energy projects across Canada. There is a need within these wind projects for installation, operation, maintenance, and repair of wind turbines. As wind energy continues to emerge globally international opportunities may also be available for students.

1. [Annual-Wind-Report-2022 screen final April.pdf \(gwec.net\)](#)
2. [Global Wind Report 2022 - Global Wind Energy Council \(gwec.net\)](#)
3. [Canadian Renewable Energy Association - Wind, Solar, Storage. \(renewablesassociation.ca\)](#)

This program is currently undergoing course development, which may result in some courses being changed and/or removed, below is an example of some of the courses you may be required to complete:

- Blueprint Reading and Sketching
- Workplace Communications
- Computer Essentials
- Wind Energy Electrical Fundamentals
- Wind Turbine Electrical Equipment and Distribution
- Wind Turbine Controls
- Wind Turbine Hydraulics
- Wind Turbine Trade Math
- Wind Turbine Mechanical Systems I
- Wind Turbine Mechanical Systems II
- Physics
- Introduction to Wind Turbine Systems
- Wind Turbine Work Practices I
- Wind Turbine Work Practices II
- Wind Turbine Rotor Inspection and Repair

Agriculture Technician Co-op

Start Date: September

Credential: Diploma

Program Length: Two Years

School: Natural Resources and Industrial Trades

Locations & Delivery Modes:

- Corner Brook - On Campus delivery

PROGRAM DESCRIPTION

Throughout the program students will be engaged in sustainable agriculture and exposed to the study of plants and animals including the biological effects of soil, climate, chemical management activities, tillage, fertilization and irrigation on plant and animal performance and enhancement. Program participants will perform physical agriculture tasks combining energy, labor, skills and machinery using the latest technology and best practices in a real world setting on a day to day basis. Students of the Agricultural Technician Co-op program will participate in a field camp at the Center for Agriculture and Forestry Development. Graduates will be able to balance the market demands for various farm products with several socioeconomic factors including cost of production, taxation, research funding, technical assistance, land usage, and potential environmental impacts.

Agriculture technician students will receive instruction in a broad range of course content aimed at developing good analytical and organizational skills, as well as the ability to work effectively as a team member. After successfully completing this program, individuals will have a basic working knowledge of agricultural techniques and procedures related to the care of livestock and plants and should be able to safely operate farm equipment.

OBJECTIVES

Upon successful completion of the program, graduates will be able to:

1. Perform a wide variety of duties in support of agriculture using farm tools and equipment.
2. Conduct agriculture research following established guidelines, procedures and directions to move towards a reliable, sustainable and safe supply of healthy food products for future generations.
3. Prepare land, select seed and nutrient varieties, plant, harvest and market agriculture products.
4. Care for livestock, as required on a day-to-day basis.
5. Safely operate farm tractors, calibrate and maintain farm equipment, and attachments.

EMPLOYMENT OPPORTUNITIES

The province's agriculture industry is a significant contributor to the economy of rural Newfoundland and Labrador. The industry includes approximately 550 farms and 100 manufacturers with farm receipts totaling \$140 million. During peak season, the agriculture industry employs 4000 people. Agriculture Technicians can work with Provincial and Federal Governments, existing agriculture operations or develop their own farming enterprise.

ENTRANCE REQUIREMENTS

Academic:

Eligibility for admission to the Agriculture Technician Diploma program requires the applicant to meet one of the following academic criteria:

1. High School

Provincial High School Graduation Certificate with a 60% average in eight level 3000 credits or equivalent.

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate.

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with General College Profile (or Business-Related College Profile or Degree and Technical Profile) with an average pass mark of 60%

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program must be at least 19 years of age at the time of application and out of school for at least one (1) year to be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

CERTIFICATIONS

In addition to the formal courses listed in the program of studies, students in the Agriculture Technician program are required to complete or obtain valid certification in the following areas upon graduation:

Standard First Aid & CPR/AED

ATV Training

WHMIS/OHS

Chainsaw Safety

SPECIAL REQUIREMENTS

NOTE: Students should be aware that additional fees apply for certifications, field trips/tours. Additional expenses will be necessary for the purchase of items of clothing required for scheduled labs and outdoor work.

Courses

Semester 1

Code	Title	Cr	Le	La
AG1100	Sustainable Agriculture & the Food System	2	2	0
AG1350	Farm Facilities	3	2	2
GE1310	Soil Fundamentals	3	2	3
AG1400	General Agronomy	4	3	2
MC1080	Introduction to Computers	2	2	0
AG1120	Agriculture Safety/Field Exposure	4	2	5

Semester 2

Code	Title	Cr	Le	La
AG1510	Animal Care	3	2	2
AG1600	Vegetable and Fruit Production	3	2	3
AG1620	Field Crops	3	2	3
CM1460	Writing for the Workplace	2	2	0
AG1430	Precision Farming	2	1	3
AG1560	Dairy Production	3	2	3

Semester 3 (Intersession)

Code	Title	Cr	Le	La
AG1640	Tillage and Planting	3	2	3
AG1300	Farm Equipment Operation	3	2	4
WC1850	Co-op Work Term	5	0	0

Note:

Additional fees and expenses will be required for participation in the field camp included in AG1300.

Prior to beginning WC1850 students in the Agriculture Technician Co-op complete AG1640 and AG1300 and are required to obtain the Pesticide Applicator License.

Semester 4

Code	Title	Cr	Le	La
AG1720	Weed Management	3	2	2
AG1740	Crop Insects and Diseases	3	2	2
AG1500	Livestock Genetics	3	2	2
AC1100	Bookkeeping I	4	3	2
AG1520	Ruminant Production: Beef, Sheep & Goats	3	2	3
AG1305	Greenhouse Production	3	2	3

Semester 5

Code	Title	Cr	Le	La
AG1240	Agriculture Sales and Marketing	3	2	3
AG1540	Non-Ruminant Production: Swine, Honeybee and Fur Production	3	2	3
AG1550	Poultry and Egg Production	3	2	2
AG1800	Food Safety and Food Processing	3	2	2
AG1700	Nutrient Management	4	3	2
AG1570	Livestock Nutrition	3	2	3

Semester 6 (Intersession)

Code	Title	Cr	Le	La
AG1200	The Business of Agriculture	4	3	3
AG1530	Livestock Diseases	3	2	3
AG1760	Forage and Pasture Management	3	2	3

The Course and Lab hours per week are based on a 15 week semester. In intersession, the Course and Lab hours will be adjusted to reflect the shorter semester length. Refer to course outline.

Fish and Wildlife Technician

Start Date: September

Credential: Diploma

Program Length: Two Years

School: Natural Resources and Industrial Trades

Locations & Delivery Modes:

- Corner Brook - On Campus delivery

PROGRAM DESCRIPTION

With increasing emphasis on sustainable development, integrated resource management policy and ecosystem based management across Canada and around the world, technicians in the natural resources sector must have a foundation in matters related to biodiversity in general and fish and wildlife management issues in particular. The two-year Fish and Wildlife Technician program, which shares many courses with the Forest Resources Technician program, is designed to enable students with a specific interest in fish and wildlife to participate in studies directed towards their career goals. The program reflects the trend towards integrating a wide range of natural resources technology within government departments at Federal and Provincial levels. The requirement for the forest industry to consider wildlife in its management practices and the increased monitoring and management of freshwater and marine resources highlights the need for this program. The program provides a balance of field and classroom experiences that include a significant computer based data collection and analysis component.

OBJECTIVES

Upon successful completion of the Fish and Wildlife Technician program, graduates of the program will have the knowledge and skills to be able to:

1. Actively participate in the solution of fish and wildlife management problems and challenges.
2. Identify forest ecosystem challenges and opportunities and to undertake such assessments, preventive measures and treatments as might be associated with fish and wildlife conservation and management.
3. Utilize a wide range of field and office equipment and techniques associated with the assessment and analysis of fish and wildlife resources data.
4. Pursue continued learning experiences at the post graduate level.

EMPLOYMENT OPPORTUNITIES

Graduates of this program may obtain employment throughout Canada in a variety of fish and wildlife related fields: protection and enforcement, resource inventory and site classification, habitat protection and improvement, environmental impact assessment and parks and interpretation programs. Graduates are employed with governmental and private agencies in fields ranging from forestry technicians to fisheries observers.

PROGRAM TRANSFERABILITY

Graduates of the Fish and Wildlife Technician program, who wish to pursue additional post-secondary studies, can apply for entry with advanced standing at a number of Canadian Universities that the college has established credit transfer agreements with. Please refer to the NL Department of Education's transfer guide (www.cna.nl.ca/transfer), or contact your intended university or college.

ACCREDITATION AND RECOGNITION

To ensure a consistently high standard of training and education, College of the North Atlantic's Fish and Wildlife Technician program is accredited by the North American Wildlife Technology Association (NATWA).

CERTIFICATIONS

In addition to the formal semester courses listed in the program of studies, students in the Fish and Wildlife Technician program are required to obtain certification in the following areas over the two-year period of study:

Chainsaw Safety

Canadian Firearm Safety Course / Hunter Education

Pleasure Craft Operators Card

WHMIS/OHS

ATV Safety Training

Wilderness First Aid

Snowmobile Safety

NOTE: Students should be aware that additional fees and expenses apply for most of these certifications and for field camps, tours and On-the-Job Training. Students will be required to hold valid certifications for the above courses prior to graduation.

ENTRANCE REQUIREMENTS

Academic:

Eligibility for admission to the program requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation Certificate with a 60% overall average in the following (or equivalent):

i. English (2 credits) (minimum 60%) from: 3201 or 3202

ii. Mathematics (4 credits) chosen from:

Advanced: 2200, 3200 (50% minimum in each course)

Academic: 2201 (50% minimum), 3201 (60% minimum)

Note: Students who received a combined average of 70% in high school Academic Mathematics 2201 and 3201, or a pass in both high school Advanced Mathematics 2200 and 3200 can be exempted from Math 1100. Students must apply for the exemption.

iii. Science – (4 credits) two of which must be chosen from:

Biology: 3201

Physics: 3204

Chemistry: 3202

Earth Systems: 3209

Environmental Science 3205

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with the following courses:

i. Math : MA1040, MA1041

ii. Two Science courses chosen from one of the following three combinations:

a. Biology: BL1020, BL1021

b. Chemistry: CH1030, CH1031

c. Physics: PH1050, PH1051

Note: It is strongly recommended that CAS students who intend to enroll in the Fish and Wildlife, Forest Resources Technician, Natural Resources Technician or Northern Natural Resources Technician program complete BL1020 and BL1021.

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with Degree and Technical Profile including the following courses (or equivalent):

i. English 3101A, 3101B, 3101C or 3102A, 3102B, 3102C

ii. Mathematics 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C

iii. Science from one of the following sections:

a. Biology 1101, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C

b. Chemistry 1102, 2102A, 2102B, 2102C, 3102A, 3102B, 3102C

c. Physics 1104, 2104A, 2104B, 2104C, 3104A, 3104B, 3104C

Applicants with Adult Basic Education (Level III) Graduation with a different Profile (and appropriate grades) may be eligible for admission to the program provided the appropriate selection of courses including those outlined above

have been completed.

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, are 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

SPECIAL REQUIREMENTS

Because of the extensive field exposure incorporated in this program, students are required to acquire the following equipment and clothing: compass, axe, snowshoes, rubber boots, hiking boots, chest wader, good quality rainwear, neoprene gloves and other clothing appropriate for outdoor work.

NOTE: Participation in activities that are physically demanding will be required due to the extensive field components incorporated into this program.

Students graduating from the Fish and Wildlife Technician program can complete the Forest Resources Technician program with one additional year. Interested students must begin their studies in the First Technician Intersession of the Forest Resources Technician program.

Courses

Semester 1

Code	Title	Cr	Le	La
BL1120	Biology I	3	2	3
CM1400	Technical Report Writing I	3	3	0

Forest Resources Technician

Start Date: September

Credential: Diploma

Program Length: Two Years

School: Natural Resources and Industrial Trades

Locations & Delivery Modes:

- Corner Brook - On Campus delivery

PROGRAM DESCRIPTION

The Forest Resources Technician program provides a strong foundation in the skills and knowledge required for a career in the natural resources industry. The program strives for innovative training that reaches beyond the classroom with a strong emphasis on "real life" experiences. Students will be versed in ecosystem management opportunities and challenges and they will be able to use their acquired skills to evaluate and present sustainable management solutions. The program may also inspire individuals to pursue further studies in forestry or other related areas of concentration.

OBJECTIVES

Upon successful completion of the Forest Resources Technician program, graduates will be able to:

1. Demonstrate the knowledge, skills and attitudes required to participate in finding solutions to forest management problems and challenges.
2. Identify forest ecosystem issues, challenges and alternate solutions.
3. Demonstrate assessment and evaluation techniques involved in forest resource protection, management and utilization.
4. Identify current preventive measures, treatments and practices used in forest resource protection, management and utilization.
5. Demonstrate effective procedures and practices in the use of field and office equipment to assess and analyze natural resources data.

EMPLOYMENT OPPORTUNITIES

Graduates of this nationally accredited program may obtain employment throughout Canada in a variety of forestry related fields: protection and enforcement, forest inventory and site classification, logging and engineering, forest access road construction and maintenance, silviculture as well as parks, wildlife and environmental assessment. This program has an established reputation for supplying graduates to employers all across Canada.

PROGRAM TRANSFERABILITY

Graduates of the Forest Resources Technician program, who wish to pursue post-secondary studies, can apply for entry with advanced standing at a number of Canadian Universities that the College has established credit transfer agreements with. Please refer to the NL Department of Education's transfer guide (www.cna.nl.ca/transfer), or contact your intended university or college.

ACCREDITATION AND RECOGNITION

To ensure the benefits of a consistently high standard of education, the College of the North Atlantic's Forest Resources Technician program is nationally accredited by the Canadian Technology Accreditation Board (CTAB).

CERTIFICATIONS

In addition to the formal semester courses listed in the program of studies, students in the Forestry Resources Technician program are required to obtain certification in the following areas over the two-year period of study:

Chainsaw Safety

ATV Safety Training

Canadian Firearm Safety Course / Hunter Education

Timber Scaling

WHMIS/OHS

Snowmobile Safety

Wilderness First Aid

Note: Students should be aware that additional fees and expenses apply for certifications and for field camps, tours and On-the-Job Training. Students will be required to hold valid certifications for the above courses prior to graduation.

ENTRANCE REQUIREMENTS

Academic:

Eligibility for admission to the program requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation Certificate with a 60% overall average in the following (or equivalent):

i. English (2 credits) (minimum 60%) from: 3201 or 3202

ii. Mathematics (4 credits) chosen from:

Advanced: 2200, 3200 (50% minimum in each course)

Academic: 2201 (50% minimum), 3201 (60% minimum)

Note: Students who received a combined average of 70% in high school Academic Mathematics 2201 and 3201, or a pass in both high school Advanced Mathematics 2200 and 3200 can be exempted from Math 1100. Students must apply for the exemption.

iii. Science – (4 credits) two of which must be chosen from:

Biology: 3201

Physics: 3204

Chemistry: 3202

Earth Systems: 3209

Environmental Science 3205

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with the following courses:

i. Math : MA1040, MA1041

ii. Two Science courses chosen from two of the following three combinations:

a. Biology: BL1020, BL1021

b. Chemistry: CH1030, CH1031

c. Physics: PH1050, PH1051

Note: It is strongly recommended that CAS students who intend to enroll in the Fish and Wildlife, Forest Resources Technician, Natural Resources Technician or Northern Natural Resources Technician program complete BL1020 and BL1021.

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with Degree and Technical Profile including the following courses (or equivalent):

i. English 3101A, 3101B, 3101C or 3102A, 3102B, 3102C

ii. Mathematics 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C

iii. Science from one of the following sections:

a. Biology 1101, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C

b. Chemistry 1102, 2102A, 2102B, 2102C, 3102A, 3102B, 3102C

c. Physics 1104, 2104A, 2104B, 2104C, 3104A, 3104B, 3104C

Applicants with Adult Basic Education (Level III) Graduation with a different Profile (and appropriate grades) may be eligible for admission to the program provided the appropriate selection of courses including those outlined above have been completed.

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, are 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

SPECIAL REQUIREMENTS

Because of the extensive field exposure incorporated in this program, the student is required to acquire the following equipment and clothing: hard hat, compass, axe, snowshoes, logger boots, good quality rainwear, and other clothing appropriate for outdoor work.

Note: Participation in activities that are physically demanding will be required due to the extensive field components incorporated into this program.

Students graduating from the Forest Resources Technician program can complete the Fish and Wildlife program with one additional year. Interested students must begin their studies in the first Technical Intercession of the Fish and Wildlife Technician program.

GIS Applications Specialist

Start Date: September

Credential: Post Diploma

Program Length: One Year

School: Natural Resources and Industrial Trades

Locations & Delivery Modes:

- Corner Brook - On Campus delivery

PROGRAM DESCRIPTION

The GIS Applications Specialist is the “expert” who provides technical expertise to produce and analyze spatial information for effective planning and reporting activities in a broad range of disciplines. Specifically, a GIS Applications Specialist will help various agencies and government to effectively apply Geographic Information Systems (GIS), remote sensing, Global Positioning Systems (GPS), internet mapping solutions and data visualization technologies to support informational needs, workflows or business processes. GIS Applications Specialists can work in various Sectors; the current market for GIS Applications Specialists in Newfoundland and Labrador includes: various provincial and federal departments, crown corporations, municipalities, research agencies, post-secondary institutions and private corporations.

This post-graduate, intensive, three-semester GIS program utilizes current high-end technology tools to collect, store, manipulate, analyze, interpret, and communicate geographic information within a variety of disciplines. The students will be versed in several spatial computing technologies used in the industry today and have access to the latest in appropriate computer hardware, software, and field technology. Students will have considerable opportunities to practice their skills in a work-life setting by putting theory into practice.

OBJECTIVES

Upon successful completion of the GIS Applications Specialist (Post Diploma) program, graduates will be able to:

1. Develop and implement solutions to computational problems. Students will be exposed to problem analysis techniques and solution development using top-down development method, modular design approach, and object-oriented design concepts. To implement developed solutions, students will use Microsoft Visual Studio.
2. Develop and apply skills for the effective presentation of geographic information using software typically encountered in a GIS working environment.
3. Perform the techniques of gathering geographic related information from the field or existing maps or records and positioning them onto a framework of existing spatial data structures.
4. Apply fundamental principles of database processing with respect to GIS environments and develop skills in designing, implementing and managing databases.
5. Pursue subsequent studies in GIS applications in various program areas. As well, the techniques learned will allow students to apply the knowledge and skills to develop simple to elaborate good practice applications with some theory relating to Vector GIS technology.
6. Analyze geographic data using hypothesis testing, significance tests, descriptive and inferential statistics.
7. Design and implement a GIS application that addresses predefined objectives. During this process, the student will apply their knowledge and skills and rely on each other, with guidance from faculty, to acquire new skills to solve GIS problems.
8. Demonstrate GIS skills to include web-based GIS applications. The student will learn how to build web-based GIS applications to contribute to the world of Distributed Geographic Information.
9. Design efficient and user-friendly graphical interfaces and integrate Microsoft Windows-based software in the development of GIS applications.
10. Design GIS applications based on the integration of programming languages, database management systems and GIS software to achieve the most efficient data access, manipulation and presentation.

ENTRANCE REQUIREMENTS

Applicants must have graduated from a recognized college or university with a diploma and/or degree in a relevant program area. Related program areas include, but are not limited to forestry, natural resource sciences, engineering, environmental studies, geology, surveying, geography, business, municipal planning and law enforcement.

EMPLOYMENT OPPORTUNITIES

Program graduates are prepared to work in positions as diverse as GIS programmers/analysts, applications specialists/consultants, ecosystem IT managers, utilities managers, database managers, GIS systems operators, and land information managers.

SPECIAL REQUIREMENTS

The program incorporates a Major Geographic Information Systems Project establishing industry-student linkages. Students will have considerable opportunities to practice their skills in a work-life setting by putting theory into practice.

Courses

Semester 1

Code	Title	Cr	Le	La
GS1110	Cartographic Concepts	3	2	2
GS1210	GIS Database Principles	2	1	2
GS1320	Principles of GIS	3	2	2

Mining Engineering Technician

Start Date: September

Credential: Diploma

Program Length: Two Years

School: Natural Resources and Industrial Trades

Locations & Delivery Modes:

- Corner Brook - On Campus delivery

PROGRAM DESCRIPTION

It's elemental

Newfoundland and Labrador is among the top 10 mining jurisdictions in the world^[1], making the versatile mining engineering technician a highly-sought after employee in this industry, right here at home.

Mining engineering technicians support mining engineering and geological teams. They assist in conducting geophysical surveys and analyzing the data to identify potential mineral exploration opportunities. They collect and evaluate mineral deposits to assess contaminants in soil and groundwater, and direct and facilitate other essential geological and geophysical fieldwork.

Mining is one of the industries expected to experience the largest increase in employment during the 2015 to 2025 period. As of 2022, Mining Industry NL estimated about 8,000 jobs in the mining sector and expects to increase to 12,000 in the next couple of years, unearthing a steady demand for skills in the mining sector. The province aims to be a top producer in additional mineral commodity markets as new mineral resources are identified such as lithium, salt, and critical rare earth elements.

That means now's the time to dig into this career! The Mining Engineering Technician program will challenge you to explore why and how things work in this dynamic field and find innovative solutions to mining challenges. You will be qualified for work in the fields of mineral resources exploration, in the operations of surface or underground mines, and in mine/quarry production. Or you may discover you like specialized areas such as mine surveying, ground control, mine ventilation, mine safety, field explorations, mine geology, or mine planning.

Whatever features of mining that surface to pique your interest, you're going to rock this career!

Program Highlights

- Developed "from the ground up" to ensure alignment with Technology Accreditation Canada (TAC) requirements
- Field trips to one or more mines in the province for hands-on activities and field demonstrations
- Eligibility for membership in the Association of Engineering Technicians and Technologists of Newfoundland and Labrador (AETTNL) and similar associations across Canada
- With two years of progressive work experience, become eligible to receive the designation of Certified Technician (C. Tech) upon completion of a Professional Practice and Ethics Exam

Did You Know?

- With multiple producing mines in the province, several metal and non-metal commodities are produced, including iron ore, nickel, copper, cobalt, and gold.
- As a significant contributor to the national mineral commodity market, Newfoundland and Labrador provides over 45% of Canada's iron ore shipments and 26% of Canada's nickel shipments.
- According to the Newfoundland and Labrador Government's Labour Market Outlook 2025, over the 2019 to 2025 period, the number of workers [across industries] is expected to increase by approximately 12,000 (or 4.5 per cent). ^[2]
- The Province of Newfoundland and Labrador plans to open five (5) new mines by 2030 with a goal of boosting direct employment from 4,800 to 6,200.

- Government also aims to increase annual exploration expenditures to \$100 million to expand the NL share of annual mineral shipments from 6.4% to 10% of the Canadian total.
- The workforce is diversifying and increasing participation of women from 15% to 30%.

OBJECTIVES

Upon successful completion of the Mining Engineering Technician program, graduates will have the knowledge and skills to be able to:

1. Conduct geophysical surveys and analyze geophysical profiles and maps
2. Create and interpret geological maps and cross sections for mineral exploration, in collaboration the exploration teams
3. Perform field procedures appropriate for the acquisition of geological and geochemical data
4. Assist in the evaluation of mineral deposits
5. Collaborate to identify geologic formations, structures, and processes
6. Assist in managing the mine development and production processes for both underground and surface mines
7. Perform project management activities within a mining exploration and mine development context.

CERTIFICATIONS

Students in the Mining Engineering Technician program will be required to complete certifications in the following areas prior to Semester 3:

1. Standard First Aid/Heart Start
2. Workplace Hazardous Materials Information System (WHMIS)
3. Transportation of Dangerous Goods (for Land)
4. ATV Safety Training

EQUIPMENT REQUIREMENTS

Students in the Mining Engineering Technician program are required to purchase the following equipment at their own expense:

- Rain Gear
- Hi Visibility Vest
- Field Clothes
- Shop Coat
- Hard Hat
- Safety Glasses
- Rubber Boots
- Steel Toe Boots
- Backpack
- Sylva Compass
- Padlock
- Scientific Calculator

ENTRANCE REQUIREMENTS

Eligibility for admission to the Mining Engineering Technician program requires the applicant to meet one of the following academic criteria:

1. High School

High School Graduation Certificate with 60% overall average in the following (or equivalent):

- i. English (2 credits) (minimum 60%) from: 3201
- ii. Mathematics (4 credits) chosen from:

Advanced: 2200, 3200 (50% minimum in each course)

Academic: 2201 (50% minimum), 3201 (60% minimum)

Note: Students who received a combined average of 70% in high school Academic Mathematics 2201 and 3201, or a pass in both high school Advanced Mathematics 2200 and 3200 can be exempted from Math 1700.

Students must apply for this exemption.

iii. Science (4 credits) two of which must be selected from:

Biology: 3201

Physics: 3204

Chemistry: 3202

Earth Systems: 3209

Note: The remaining two Science credits to be chosen from the highest Science mark in level 1, 2 or 3.

2. Comprehensive Arts and Science (CAS) Transition

Comprehensive Arts and Science (Transition) Certificate with the following courses:

i. Math (60% MINIMUM) MA1040, MA1041

ii. Two Science courses chosen from one of the following three combinations:

a. Introductory Biology: BL1020, BL1021

b. Introductory Chemistry: CH1030, CH1031

c. Introductory Physics: PH1050, PH1051

Note: It is strongly recommended that CAS students who intend to enroll in Engineering Technology programs complete both of the Chemistry courses and both of the Physics courses.

3. Adult Basic Education (ABE)

Adult Basic Education (Level III) Graduation with Degree and Technical Profile including the following courses (or equivalent):

i. English (60% minimum) 3101A, 3101B, 3101C or 3102A, 3102B, 3102C

ii. Mathematics (60% minimum) 1101A, 1101B, 1101C, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C

iii. Science from one of the following sections:

a. Biology 1101, 2101A, 2101B, 2101C, 3101A, 3101B, 3101C

b. Chemistry 1102, 2102A, 2102B, 2102C, 3102A, 3102B, 3102C

c. Physics 1104, 2104A, 2104B, 2104C, 3104A, 3104B, 3104C

Applicants with Adult Basic Education (Level III) Graduation with a different Profile may be eligible for admission to the program provided the appropriate selection of courses including those outlined above have been completed.

4. Mature Student Requirements

Applicants who do not meet the education prerequisites for this program, are 19 years at the time of application and out of school for at least one year may be considered on an individual basis under the Mature Student Requirements; for more information regarding the Mature Student Requirements please refer to Procedure AC-102-PR Admission.

5. International Applicants – English Proficiency

All international applicants must meet the College's English language proficiency requirements for acceptance into regular programs. The College will accept these recognized tests of English language proficiency (TOEFL paper based 550, TOEFL Internet based 79, TOEFL computer based 213 or equivalent, IELTS Academic Test overall band score of 6.0, or Pearson PTE 53 or greater, etc.).

If a language proficiency test other than those referenced above was used, applicants can forward for assessment.

If an international applicant has attended an educational institution (high school or post-secondary) for a period of three years or more where the official language of instruction was English, the English language proficiency test will not be required.

Note: Some programs may require specific English language requirements and proficiency scores that differ from those stated above; therefore international applicants are advised to please refer to the specific program admission requirements as identified in the College Calendar.

MT2320	Mine Equipment & Safety	3	3	1
MT2450	Mine Blasting Techniques	3	3	1

Semester 5 (Winter)

Code	Title	Cr	Le	La
GE2310	Intro to Structural Geology	4	3	2
GE2410	Mineral Resource Evaluation	4	3	2
MT2700	Ground Control	3	3	1
MT2110	Industrial Hygiene for Mines	3	3	1
MT2155	Mining Ethics	3	3	0
PR3150	Project Management & Financial Analysis	4	4	0

Course Descriptions Academic Year 2023-2024

AC1100 - Bookkeeping I •

Bookkeeping I is a study of the fundamental principles and mechanics of bookkeeping, including the recording, classifying, and summarizing of financial data for a service business. The course also includes the control of cash and petty cash, banking procedures, and completing the accounting cycle. This course emphasizes the national accounting standards (private enterprise Generally Accepted Accounting Principles – GAAP).

AC1260 - Financial Accounting I •

This course introduces the student to accounting concepts, including: the basics of the double-entry accounting system including adjusting entries; financial statement preparation; accounting for payroll; accounting for a merchandising company; and the basics of the internal control of cash. This course emphasizes the national accounting standards (private enterprise GAAP).

AC1350 - Income Tax •

This course is designed to introduce students to the basic principles of Canadian Income Tax. Emphasis is placed on computing taxable income and taxes payable for individuals. The course also includes basic tax planning for individuals.

Prerequisite(s): AC2260

AC2100 - Bookkeeping II •

Bookkeeping II involves the application of accounts receivable and accounts payable, and the study and application of the generally accepted accounting principles within merchandising firms. The course involves using special journals, end-of-the-year adjustments for depreciation, accruals, bad debts, closing entries, financial statements, and payroll. This course emphasizes the national accounting standards (private enterprise Generally Accepted Accounting Principles – GAAP).

Prerequisite(s): AC1100

AC2220 - Intermediate Financial Accounting I •

This course is designed to build on the knowledge the student obtained in Financial Accounting I and II. Its focus is on the asset side of the Balance Sheet, providing an in-depth study of current assets, property, plant and equipment, and intangible assets. The recognition and measurement of revenues and expenses, the preparation of financial statements including the Statement of Financial Position, Statement of Comprehensive Income, Statement of Cash Flows, and Statement of Changes in Equity are also covered.

Prerequisite(s): AC2260, MC1242

AC2230 - Computerized Accounting I •

This course introduces the student to the elements of integrated computerized financial accounting software. The student will explore integrated software systems, general ledger, payables, receivables, payroll and inventory. The student will have the opportunity to apply the skills through various applications.

Prerequisite(s): AC1260 or AC2100

AC2231 - Computerized Accounting II

This course completes the study of computerized accounting systems started in AC2230 Computerized Accounting I. The student will learn how to use computerized accounting software to: perform bank reconciliations, enter foreign currency transactions, perform project allocations, budgeting, departmental accounting, timing and billing. Furthermore the student will learn to use spreadsheets for analyzing, planning and decision making for intermediate accounting and managerial accounting content through the use of comprehensive case studies and simulations.

Prerequisite(s): AC2230

AC2250 - Managerial Accounting I •

This course is designed to provide the student with knowledge in accounting techniques required by management for planning and control, decision making, performance evaluation and preparation of internal reports.

Prerequisite(s): AC2260, MC1242

AC2260 - Financial Accounting II •

This course introduces the student to the principles and procedures needed to account for long-term assets (including capital assets, intangible assets, and investments), liabilities, and equities, and to the concepts of financial reporting and decision making for both partnerships and corporations. In this course the student will explore property, plant, equipment & intangibles; current and long-term liabilities; partnership accounting; corporate organization, transactions and reporting; bonds as liabilities and investments; equity investments; statement of cash flows; and analyzing financial statements. This course emphasizes the national accounting standards (private enterprise GAAP).

Prerequisite(s): AC1260

AC2280 - Accounting

The course is designed to provide a working knowledge of the fundamentals of financial and managerial accounting that can be useful for the graduate industrial technologist in understanding, interpreting, and preparing financial statements. Basic principles of managerial accounting including cost behaviour, cost systems, and cost-volume relationships are investigated. The focus will be on the extraction of relevant information from accounting data and how this information can be used in engineering decision making and budget preparation.

AC2340 - Principles of Auditing

This course is designed to provide an introduction to auditing for accounting students who do not have significant auditing or accounting experience. The course is a practical guide to both auditing theory and practice.

Prerequisite(s): AC3220

AC2360 - Principles of Internal Auditing

This course is designed to provide an introduction to auditing for accounting students who do not have significant auditing or accounting experience. The course is a practical guide to both auditing theory and practice. The course will introduce students to the practice of internal audit and the auditor's decision-making process.

Prerequisite(s): AC2220

Co-requisite(s): AC3220

AC2365 - Principles of Internal Auditing •

This course is designed to introduce internal auditing for accounting students who do not have significant auditing or accounting experience. The course is a practical guide to internal auditing theory and practice. The course will introduce students to the practice of internal audit and the auditor's decision-making process.

Prerequisite(s): AC2220

AC2375 - Principles of External Auditing •

This course is designed to introduce external auditing for accounting students who do not have significant auditing or accounting experience. The course is a practical guide to external auditing theory and practice.

Prerequisite(s): AC3220

AC2540 - Oil and Gas Production Accounting

This course will provide students with an overview of the development of the oil and gas industry, from inception to modern practices and from the reservoir to refining and the role which the production accountant plays in accounting for oil and gas. This will enable students to understand and communicate effectively with professionals in the oil and gas industry and to understand and apply the accounting concepts.

Prerequisite(s): AC2260

AC2600 - Managerial Accounting for HRM •

This course is designed to introduce the student to the accounting techniques needed by management for planning and control, decision making, performance evaluation and preparation of internal reports. The student will explore basic concepts of managerial accounting; departmental, project and program cost allocation; budgeting and control; control through standard costs; flexible budgets and overhead analysis; control of decentralized operations; and pricing of products and services. The student will have the opportunity to apply their skills through practical learning.

Prerequisite(s): AC2260

AC3220 - Intermediate Financial Accounting II •

This course is a continuation of the study of the principles and procedures covered in the previous semester of Intermediate Financial Accounting I. It focuses on an in-depth study of the liabilities and owner's equity sections of

the Statement of Financial Position. Earnings per share (EPS), income taxes, accounting for leases, accounting changes and error corrections, and financial statement analysis are also covered.

Prerequisite(s): AC2220

AC3250 - Managerial Accounting II •

This course is designed to build on the knowledge gained in Managerial Accounting I by having the student apply their previous knowledge of cost behaviour to specialized areas of cost and management accounting including budgeting, standard costing, reporting for control, relevant cost analysis, pricing of products and services, and capital budgeting.

Prerequisite(s): AC2250

AC3251 - Managerial Accounting III

Managerial accounting involves the internal generation, communication, and interpretation of information for both operational and strategic decision-making purposes. This course is designed to provide the student with knowledge in accounting techniques required by management for planning and control, decision making, performance evaluation and preparation of internal reports. Increased focus on how modern cost management and cost performance measurement techniques can be used in the strategic function of business. Critical thinking and a strategic approach to cost accounting are now given greater prominence alongside the technical coverage.

Prerequisite(s): AC3250

AC3270 - Payroll and Commodity Taxes

This course introduces the basic principles of payroll administration and of commodity taxes. The student will be able to account for and file the required reports for payroll and commodity taxes.

Prerequisite(s): AC2230

AC3275 - Corporate Tax and Remittance

This course will explore the principles of the Canadian Income Tax for Corporations. Emphasis is placed on computing taxable income and taxes payable for corporations. The course includes tax planning ideas for individuals and corporations.

Prerequisite(s): AC1350

Co-requisite(s): AC3220

AC3285 - Accounting Systems

This course lays the foundation for accounting students to make decisions regarding the computerized information system. This course introduces key concepts regarding information systems, such as business processes, documentation, internal control, system development and databases. It equips them with essential knowledge to contribute value to their future employers.

Prerequisite(s): AC3220, AC2231

AD1100 - Cultural Competence •

Cultural competence is a critical component of providing effective and inclusive care for individuals from diverse backgrounds. The purpose of this course is to examine cultural competence and provide students with in-depth knowledge of the cultural, social, and psychological factors that affect individuals. This will enable students to become culturally competent mental health and addictions practitioners.

AD1105 - Ethics & Professionalism •

Ethics & Professionalism introduces students to the duties and ethical responsibilities of human service professionals. The course will cover a range of topics that are essential for professionals working in human services, including ethical principles and frameworks, codes of ethics, values and the helping relationship, confidentiality and boundaries, ethical and legal issues, negligence, and risk management.

AD1110 - Human Service Relationships •

In this course, students will focus on developing effective interpersonal skills and approaches in mental health care. Students will analyze and apply essential communication skills for successful interactions with clients and groups while enhancing their ability to recognize signs and symptoms of common mental health issues. In addition, this course is designed to support students as they build confidence in helping individuals who may experience a mental health issue or crisis.

AD1115 - Mental Health Fundamentals •

Mental health affects all facets of life including psychological, emotional, and social wellbeing. This course is designed to introduce students to mental health, mental illness, substance use disorders, effects of mental illness in different stages of life, and cultivating and maintaining positive mental health. In addition, students will analyze the process of diagnosis, intervention, and post-diagnosis while examining the Mental Health Treatment Act and certification process.

AD1205 - Interviewing & Helping Skills I •

This course introduces students to the foundations of intentional interviewing in the human services field. They will develop competencies to conduct effective interviews in helping relationships. Using a micro skills training model, students will examine a framework within which interviewing takes place. Students will analyze practical interviewing and basic counselling strategies, and will apply interviewing skills.

AD1210 - Introduction to Addictions •

This course introduces students to societal factors that influence values and attitudes towards mental health and addictions, and the effects of psychoactive drugs on individuals. Students will analyze the nature of dependency, and will examine philosophies and methods surrounding prevention, harm-reduction, and treatment.

AD1215 - Pharmacology & Dependency •

This course is designed to introduce students to the fundamental principles of pharmacology, including an overview of the central nervous system, routes of drug administration, and the effects of different drug classes on the body. Students will analyze the mechanisms of action of various drug classes, including depressants, stimulants, hallucinogens, and psychotherapeutic agents.

AD1220 - Self-Care & Wellness •

Mental and physical wellness is central to a practitioner's success in the workplace. This course introduces students to the dimensions of wellness, stress management, self-care, and achieving a work/life balance. Students will prepare for their field placements by identifying placement opportunities, creating learning contracts, and completing field placement documentation. In addition, students will earn nationally recognized credentials to prepare them for placements with human service agencies.

AD1225 - Trauma-Informed Practice •

In this course, students will be introduced to trauma-informed practice, which is an approach to working with individuals who have experienced trauma. Students will develop skills to recognize the effects of trauma by identifying its signs and symptoms. In addition, students will analyze ways to create safe and supportive environments to empower individuals and avoid re-traumatization.

AD2100 - Assessment & Case Management •

In this course, students will analyze screening and assessment tools used in the addictions and mental health field. This course will prepare students to apply case management principles and models across a range of intervention settings. Core functions of case management will be evaluated, including assessment skills and tools, professional documentation skills, linking strategies, and the purpose of advocacy. Emphasis will be on legislative and professional practice matters that accompany the responsibilities and complexities of case management.

Prerequisite(s): AD1100, AD1225

AD2105 - Human Development •

This course provides an in-depth analysis of human development across the lifespan as it relates to mental health, including physical, cognitive, emotional, and social development. Students will evaluate theories of human development, including nature vs. nurture, and will analyze how development is influenced by biological, environmental, and cultural factors. Students will examine developmental milestones and stages, and how they are related to different aspects of development, such as language acquisition, moral reasoning, and personality.

Prerequisite(s): PS1145

AD2110 - Interviewing & Helping Skills II •

This course is designed to expand on the skills and knowledge necessary to conduct therapeutic interviews in helping

relationships. Students will continue to practice interviewing and counseling strategies, and apply interviewing skills in a variety of situations through the extensive use of role-playing. Theoretical frameworks and documentation will also be discussed.

Prerequisite(s): AD1205

AD2115 - Working with Families •

In this course, students will be introduced to the structure of families and the attitudes and skills required to support individuals, families, and communities affected by mental health and substance abuse disorders. Key topics address family resilience and building on a family's strengths to positively affect family functioning and well-being. In addition, students will evaluate family development across the lifespan and will examine the effects of grief and loss on family functioning.

AD2200 - Treatment & Recovery •

This course provides a comprehensive overview of addiction treatment and recovery, including the nature and causes of addiction, and different treatment models and approaches. Students will examine relapse prevention, the effects of co-occurring mental health and substance use disorders, family involvement in the treatment process, and the role of group therapy and peer support. In addition, they will analyze aftercare and continuing care, and current issues and practices in addiction treatment and recovery.

Prerequisite(s): AD1210

AD2205 - Health Promotion •

Health Promotion focuses on promoting health and preventing mental illness within the community. This course will equip students with the knowledge and skills to design, implement, and evaluate programs and interventions aimed at improving health outcomes, reducing health disparities, and creating healthy communities.

AD2210 - Working with Groups •

In this course, students will be introduced to group skill development in the human services field. It focuses on preparing students for teamwork, leadership, effective group participation and group structures within their helping profession. In addition, students will apply reflective practices to assess their purpose and function within group situations.

AE1240 - Electronic Devices

This course will include the description, operation and application of simple electronic components with reference to semiconductor theory. The PN Junction Diode, Bipolar Junction Transistor, MOSFET, and some other devices will be introduced. Analysis techniques will be introduced for linear power supplies and transistor amplifier circuits.

Prerequisite(s): ET1101

AE1265 - Analog Electronics

This course introduces the student to solid state electronics. The purpose of this course is to provide the student with an understanding of the operation of transistor and operational amplifier circuits. The theory covered in class will be applied and validated during the laboratory periods.

AE2260 - Electronic Power Devices and Circuits

This course will include three-phase rectification and the analysis, operation and application of op amps and power amplifiers. Power MOSFETs and various thyristors will also be introduced with applications for power control.

Prerequisite(s): AE1240

AE2330 - Analog Electronics I

This course will include the description, operation, and application of simple electronic components and their use in linear power supplies, small signal amplifiers, and power amplifiers. An introduction to frequency response is also covered. Design and troubleshooting skills are emphasized.

Co-requisite(s): MP2140

AE2331 - Analog Electronics II

This course provides further study of transistor amplifiers, with emphasis on frequency response characteristics. Also included is a study of oscillators and power control using thyristors.

Prerequisite(s): AE2330

AE2360 - Analog Electronics I

This course will include the description, operation, and application of fundamental electronic components with particular emphasis on semiconductor theory. Analysis of electronic circuits utilizing diode equivalent circuits will be introduced, and expanded to bipolar transistor DC biasing and the analysis of amplifier systems.

Prerequisite(s): ET1141

Co-requisite(s): ET1146

AE2365 - Analog Electronics II

This course is a detailed examination of analog applications of advanced transistor circuits and operational amplifiers, with emphasis on circuit analysis, applications, circuit simulation, and troubleshooting. Also included is the analysis and troubleshooting of IC power supply linear and switching regulators, as well as thyristors and representative power control circuits.

Prerequisite(s): AE2360

AE3130 - Active Circuit Applications

The purpose of this course is to provide the learner with an understanding of the operation of integrated circuit amplifier circuits, active filters, and switching power supplies. The theory covered in class will be applied and validated during the laboratory periods.

Prerequisite(s): AE2330

AE3300 - Industrial Electronics & PLCs

This course is designed to introduce the student to the various types of motor and power control devices. This will provide the student with an understanding of the electronic components and systems used to control discrete industrial processes and variable speed drives. Also, it will provide the fundamental concepts and application of programmable logic controllers.

Prerequisite(s): AE2365

AE3301 - Process Control

This course will introduce the student to various types of open-loop and closed-loop feedback control and will provide the student with an understanding of the components and systems which are used to control industrial processes.

Prerequisite(s): AE3300

AF1130 - Aircraft Structures and Materials

This course will provide the student with the knowledge of aircraft structural design and the materials and processes used in their construction. The student will be introduced to stresses acting on aircraft structures and will be able to determine the urgency of repair when damaged.

AF1170 - EASA Module 11 (A) Top Up

This course is designed to cover items from EASA module 11A that were not contained in the Aircraft Maintenance Engineering Technician program. The students will receive instruction in; doors and emergency exits, air supply, cabin equipment and furnishings along with water and waste systems.

AF1180 - EASA Module 11 (A) New Technologies

This course is designed to cover items from EASA module 11A that were not contained in the Aircraft Maintenance Engineering Technician program. The students will receive instruction in integrated modular avionics and cabin systems.

AF1190 - EASA Module 11 (A) Refresher

This course is designed to prepare the student to write the EASA module exam for module 11A, through the use of practice exercises and review lessons.

AF1220 - Aircraft Structure - Wood, Tubular and Fabric

This course provides an introduction into inspection and repair procedures of aircraft wood, tubular and fabric structures. This includes their design, construction and the stresses affecting them.

AF1240 - Aircraft Structural Repair

This course will provide the student the knowledge and skill in the principles of aircraft structural repair using different types of sheet metal forming processes, materials, fasteners, and equipment.

Prerequisite(s): AF1130

AF1250 - Aircraft Stress Skin Repair

This course will develop the students' knowledge and skill to repair damaged stressed skin structures by patching and spot welding.

Prerequisite(s): AF1240

AF1270 - Composite Materials

This course will provide the students with the knowledge to identify composite materials and the skills to inspect them for damage and perform an effective repair when required.

AF1280 - Stress Skin Repair or Modification (M, E)

This M and E course will provide the student with the skill to perform a stress skin repair or antenna installation on an aircraft. The course will involve damage assessment, designing and installing a stress skin repair or installing an antenna including an internal reinforcement doubler. The student will perform corrosion preventing processes and install the stress skin repair or antenna as per standard practices.

Co-requisite(s): GM1570

AF1290 - Non Metallic Structures (M)

This M course will provide the student with the knowledge of aircraft windows and lenses and the required inspection, repair, maintenance and installation methods. The course will also provide an introduction into the construction, inspection and repair procedures for aircraft fabric and aircraft wood structures.

AF1340 - Advanced Composite Repair

This advanced level course will reinforce the students' knowledge and skill to apply advanced composite fabrication techniques, identify advanced composite structural damage, complete a full damage assessment, and perform an effective structural repair as per Canadian Aviation Regulatory or aircraft manufacturer's standards.

Prerequisite(s): AF1270

AF1400 - Specialized Processes and Fixtures

This course will provide the students with the knowledge and skill to be able to select and manufacture jigs and holding fixtures, perform special metal treatment processes and repair forgings and extrusions as per manufacturer's specifications.

AF1500 - Windshields, Windows and Lenses

This course will provide the students with the knowledge and skill to identify various types of aircraft windshields, windows and lenses, inspect them for damage and evaluate whether repair or replacement is required. The student will manufacture an aircraft window to fit aircraft structure and install it. The student will also perform proper maintenance and repairs to windshields, windows and lenses.

AF2110 - Aircraft Maintenance Fundamentals

This course is designed to provide the Aircraft Structural Repair student with the knowledge of Aircraft Maintenance fundamentals.

Prerequisite(s): GM1160

AF2200 - Corrosion Control

This is a course that will provide the student with the knowledge to identify various types of corrosion, the causes of corrosion and the susceptible locations of corrosion on aircraft structures. This course is designed to provide the knowledge to inspect aircraft structures for corrosion, assessment of damage, removal of corrosion, treatment of corroded areas and protection methods used to prevent or retard further deterioration of aircraft structural components.

AG1100 - Sustainable Agriculture & the Food System

This course will explore current agriculture issues and trends in the industry. Major topics include agriculture sustainability, farm succession, research and technology, new crops, food safety and growing the business.

AG1120 - Agriculture Safety/Field Exposure

This course will introduce students to the hazards associated with the agriculture workplace and the skills necessary to avoid injury. Major topics include workplace risk assessment, pesticide storage and handling, fire prevention, transportation of dangerous goods, flammable material storage, silo safety, agriculture equipment, transporting and trailering, loading and securing cargo, agriculture road safety and product and machinery safety.

AG1200 - The Business of Agriculture

This course will introduce the student to the overall management and operation of the farm business incorporating all aspects such as planning, organizing, and managing. Major topics include business set-up, farming regulations, farm estate planning and decision making for risk management.

AG1240 - Agriculture Sales and Marketing

This course examines the common practices of selling and marketing agriculture products. Major topics include, buying decisions, sales presentations, sales planning, marketing, online marketing platforms and leadership techniques.

AG1300 - Farm Equipment Operation

This course will introduce the student to the operation of various pieces of equipment used on the farm. Major topics include safe operation and maintenance of field equipment, farm tractor operation, farm tools, farm attachments and operation, ATV operation, trailering and field camp.

Prerequisite(s): AG1120

AG1305 - Greenhouse Production

This course introduces students plant production within a greenhouse environment. Major topics include: common greenhouse crops, aspects of greenhouse environment, greenhouse design, insects and diseases, technology and automation.

AG1350 - Farm Facilities

Students will be introduced to farm facilities. Major topics include farming facilities, farm building design, farm planning, land survey and procurement, construction materials, building types, cost estimation, farm water systems, energy systems, waste management, feed storage and ventilation.

AG1400 - General Agronomy

This course introduces the student to plant, animal and soil science. Major topics include plant morphology, plant physiology, animal science, animal husbandry, basic research, soil science and agriculture production.

AG1430 - Precision Farming

This course introduces students to precision farming techniques. Major topics include Differential Global Positioning System (DGPS) receivers, yield monitors, variable rate application equipment, field scouting computers, crop data management, Geographical Information Systems (GIS), profit maps and prescription maps.

AG1500 - Livestock Genetics

This basic genetics course will provide a background for genetics, family blood lines and the breeding of animals. Major topics include heredity traits, economic breeding, selection principles, pedigree charts and systematic breeding.

AG1510 - Animal Care

This course will introduce the student to the care of large animals in a field setting. Major topics include handler safety, humane treatment, animal housing and animal welfare and ethics.

AG1520 - Ruminant Production: Beef, Sheep & Goats

This course introduces the student to day-to-day duties, planning and strategic management of beef, sheep and goats. Topics include cow and calf management, calving, livestock management and modern herd management.

AG1530 - Livestock Diseases

Students will be introduced to livestock diseases in farm animals, including infectious disease transmission, clinical signs, and control. Major topics include immunology, vaccinations, preventative maintenance, pharmacological basics, drug handling and administration, pharmaceuticals safety and withdrawal times.

AG1540 - Non-Ruminant Production: Swine, Honeybee and Fur Production

This course deals with swine, honeybee and fur production. Major topics include nutrition basics, housing and environment, health management, husbandry, breeding, predator control, slaughter and marketing.

AG1550 - Poultry and Egg Production

This course deals with poultry and egg production. Major topics include poultry and egg production, breeding, and marketing.

AG1560 - Dairy Production

Students will be introduced to the study of dairy cattle. Major topics include the anatomy of the udder, physiology of milk production, equipment, nutrition, record keeping, dairy herd improvement, sanitation and economics.

AG1570 - Livestock Nutrition

This course will introduce students to livestock nutrition. Major topics include nutrient requirements and function, at various stages of life, nutrient formulations for beef, dairy, hog, horses, poultry, fur farming, nutrient honeybees, and goats, feeding programs and available and alternate feeds.

AG1600 - Vegetable and Fruit Production

This course introduces the student to vegetable and fruit production. Major topics include traditional vegetables, non-traditional vegetables, small fruit production, native fruit production, orchard development, controlled environment production and season extension.

AG1620 - Field Crops

This course will focus on the basics of plant taxonomy and the production of field crops including grain, silage and oil seed crops. Major topics include plant taxonomy, production, plant growth, best practices for field crops and environmental factors and influences.

AG1640 - Tillage and Planting

The student will be introduced to tillage and direct seeding. Major topics include tillage, planting, fertilization, equipment calibration and equipment operation.

Prerequisite(s): AG1120

AG1700 - Nutrient Management

This course will introduce students to nutrient requirements for field crop production. Major topics include plant nutrient requirements, nutrient sources, methods of nutrient and soil amendment applications, chemical and physical properties of fertilizers, soil amendments, nutrient availability, nutrient loss, and soil analysis and report interpretation.

Prerequisite(s): GE1310

AG1720 - Weed Management

Students will be introduced to weed management techniques. Major topics include biology of weeds, weed ecology, weed identification, cultural management of weeds, biological and chemical management practices, chemical properties and function of herbicides, application techniques and herbicide handling.

AG1740 - Crop Insects and Diseases

This course introduces students to crop insects and diseases. Major topics include crop insects, crop diseases, insect and disease life cycles, and cultural, biological and chemical methods of management.

AG1760 - Forage and Pasture Management

Students will be introduced to forage and pasture management. Major topics include forage crop varieties, plant growth requirements, forage quality, forage processing and storage, pasture plant and animal interactions, grazing

management, and costs of production.

AG1800 - Food Safety and Food Processing

This course will introduce students to bio-security, food safety, food processing and food science. Major topics include farm husbandry, food science, Hazard Analysis and Critical Control Point (HACCP) and HACCP – Based Farms, standard operating procedures, sanitation and hygiene, food-borne illnesses, animal harvesting, plant inspection, food processing and by-products.

AH1010 - Aboriginal Health Initiatives

This course has been specifically developed to examine health issues which directly affect First Nations' and northern communities. Emphasis will be placed upon person health and wellness; human body systems will be examined, as well careers in Health care and related fields.

AH1060 - Personal Skills Development I

This course is meant to examine and promote living skills necessary for aboriginal student success in post-secondary environments. This course will focus upon the creation of a healthy self-concept, sound financial sense, and an awareness of good nutrition and healthy eating habits. It shall also explore ways to manage emotions and the connection between emotional balance and general well-being.

AH1061 - Personal Skills Development II

The purpose of this course is to examine and promote the living skills necessary for aboriginal student success in post-secondary environments. This particular course will explore effective communication and decision making skills, healthy interpersonal relationships, and issues related to parenting and child development.

Prerequisite(s): AH1060

AJ1000 - Introduction to Carpenter

This course provides students with an overview of the Carpenter trade. During the course, students will learn about the safety protocols used in the Carpenter trade, and the equipment used. Students will be provided with a hands-on learning experience in order to gain a deeper understanding of the Carpenter trade and will also explore the current labour market with regards to the Carpenter trade.

AJ1020 - Carpenter

The primary goal of this course is to provide students with the basic knowledge required of a carpenter. Most of the topics discussed and the skills developed throughout the course are within the repertoire of every carpenter/framer and are in accordance with the National Building Code of Canada (NBCC). Competence in the topics covered in combination with practical experience will provide a solid foundation for anyone who wishes to master the trade. Because speed, which cannot be taught, is a critical element of the framing business, the hands-on experience provided throughout the course will increase each student's ability to anticipate next steps while being fully engaged in the task at hand. To this end, students will work on a local residential framing project determined by College of the North Atlantic to practice the proper and efficient use of framing tools and equipment and apply the carpentry and framing skills learned throughout the course.

Prerequisite(s): AJ1760, AJ1025, AJ1030

AJ1025 - Aerial Work Platforms-Scissors

This eight (8) hour course covers the operation of an aerial work platform (AWP) (also commonly referred to as an elevating work platform). It covers the principles of training and operation of AWP's that are general in nature – meaning, they are common to all types of AWP's. These include how standards and regulations govern the operation of AWP's and the importance of following manufacturer's instructions for operation and maintenance of AWP's.

The course looks at factors affecting the safe use of AWP's such as terrain, weather, stability, and other hazards associated with the operation of the aerial platform are also general topics for training and operation.

A practical component is included to reinforce the knowledge covered and give confidence in the student's ability to safely operate an AWP.

AJ1030 - Aerial Work Platforms-Boom

This eight (8) hour course covers the operation of an aerial work platform (AWP) (also commonly referred to as an elevating work platform). It covers the principles of training and operation of AWP's that are general in nature – meaning, they are common to all types of AWP's. These include how standards and regulations govern the operation of AWP's and the importance of following manufacturer's instructions for operation and maintenance of AWP's.

The course looks at factors affecting the safe use of AWP's such as terrain, weather, stability, and other hazards associated with the operation of the aerial platform are also general topics for training and operation.

A practical component is included to reinforce the knowledge covered and give confidence in the student's ability to safely operate an AWP.

AS1200 - Aerodynamics and Flight Control

This course is designed to provide the student with basic knowledge of aerodynamic forces, flight characteristics and aircraft design and the basic skills to inspect, install and adjust aircraft flight controls. Inspection and adjustments of flight controls and Installation of float and ski systems will be covered in depth.

Prerequisite(s): GM1165

AS1300 - Hydraulic and Pneumatic Systems

This course is to provide students with the basic knowledge of aircraft hydraulic and pneumatic systems design and function. This course will also enable students to perform inspections, troubleshooting principles, and repair and maintenance on Aircraft Hydraulic and Pneumatic Systems. Aircraft plumbing systems will also be covered.

AS1310 - Aircraft Landing Gear System

This course provides students with the knowledge of aircraft landing gear and associated systems, their design and operation as well as enable students to perform inspection, trouble shooting, repair and maintenance on Aircraft Landing Gear and related systems.

Prerequisite(s): AS1300

AS2120 - Aircraft Hydraulics and Pneumatics Systems (M)

This M course will enable students to perform inspections, troubleshooting principles, repair and maintenance on Aircraft Hydraulic and Pneumatic Systems. Aircraft Plumbing will also be covered.

Co-requisite(s): AS2125

AS2125 - Aircraft Hydraulics and Pneumatics Systems (M, E)

This M and E course is to provide students with the basic knowledge of aircraft hydraulic and pneumatic systems design and function. Aircraft plumbing systems will also be covered.

Co-requisite(s): AS2120

AS2130 - Aircraft Systems

This course is designed to provide the student with basic knowledge of the operation of aircraft support, environmental and safety systems.

AS2160 - Aircraft Landing Gear Systems (M)

This is an M course to enable students to perform inspection, trouble shooting, repair and maintenance on Aircraft Landing Gear and related systems.

Prerequisite(s): AS2125

Co-requisite(s): AS2165

AS2165 - Aircraft Landing Gear Systems (M, E)

This is an M and E course to provide students with the knowledge of aircraft landing gear and associated systems, their design and operation.

Prerequisite(s): AS2125

Co-requisite(s): AS2160

AS2220 - Aerodynamics and Flight Controls (M)

This M course is designed to provide the student with basic skills to inspect, install and adjust aircraft flight controls. Installation of float and ski systems will be covered in depth.

Prerequisite(s): GM1120, GM1130

Co-requisite(s): AS2225

AS2225 - Aerodynamics and Flight Controls (M, E)

This M and E course is designed to provide the student with basic knowledge of aerodynamic forces, flight characteristics and aircraft design. Inspection and adjustments of flight controls is covered in depth.

Prerequisite(s): GM1120, GM1130

Co-requisite(s): AS2220

AS2230 - Propellers and Systems

This course will provide the basic knowledge in design, construction, operation and maintenance of propellers and associated systems. Students will also test, troubleshoot, repair, adjust, remove, and replace propeller systems.

AS2330 - Aircraft Systems (M)

This M course is designed to provide the student with basic task utilizing the operation of aircraft support, environmental and safety systems.

Prerequisite(s): PE1200, GM1120, GM1130

Co-requisite(s): AS2335

AS2335 - Aircraft Systems (M, E)

This M and E course is designed to provide the student with basic knowledge of the operation of aircraft support, environmental and safety systems.

Prerequisite(s): PE1200, GM1120, GM1130

Co-requisite(s): AS2330

AS2410 - Propellers and Systems (M)

This M only course will provide the student with a basic knowledge of aircraft propeller systems and their maintenance requirements. Students will also test, troubleshoot, repair, adjust, remove and replace propeller systems.

Prerequisite(s): PT1110

Co-requisite(s): AS2415

AS2415 - Propellers and Systems (M, E)

This M and E course will provide the basic knowledge in design, construction, operation and maintenance of propellers and associated systems.

Prerequisite(s): PT1110

Co-requisite(s): AS2410

AS2520 - Reciprocating Engine Fuel Metering

This course will provide the student with the knowledge of aircraft fuel systems, fuel metering systems, their design components, function, operation, and maintenance.

AV1220 - Aircraft Instruments I

This course will give students an understanding of the requirements for operation and maintenance practices of various types of mechanical and electrical transmitters, transducers, and instruments that are used to provide operational information for most common aircraft engine associated systems.

AV1320 - Aircraft Communication Equipment

This introductory course is designed to give the learner a basic understanding of communication systems used on aircraft and the Emergency Locator Transmitters (ELT's). Basic radio theory will be studied to the block diagram level. Ramp testing, removal and replacement of various communication systems will take place.

AV1500 - Basic Navigation I (M, E)

This M and E course provides students with information about basic navigation principles and terms used in aircraft

systems. Installation practices regarding bonding, panel layouts, antenna installations and remote mounting equipment are discussed. The course will also include descriptions of some common navigation system types.

AV1510 - Navigation System Installation (E)

This E course is designed to give the students practical experience in installing Avionic Navigation equipment on aircraft. Students will gain procedural knowledge of the steps involved in designing, and implementing systems installation procedures, including associated regulatory supporting documentation.

Prerequisite(s): PE1200, GM1320

AV2120 - Basic Navigation I

This course provides students with information about basic navigation principles and terms used in aircraft systems. Installation practices regarding bonding, panel layouts, antenna installations and remote mounting equipment are discussed. The course will also include descriptions of some common navigation system types.

AV2170 - Pulse Navigation Systems (M, E)

This M and E course will provide the students with information relating to avionic systems that employ high power pulse transmitters for navigation information gathering and display. Microwave principles and properties of UHF frequencies as relating to aircraft installations are discussed.

Prerequisite(s): AV1500

AV2180 - Integrated Navigation Systems Installation (E)

This course is designed to give students practical experience in installing integrated avionics navigation equipment on aircraft. It involves designing a system that will share a navigation display. Students will gain procedural knowledge of the steps involved in designing and implementing systems installation procedures including associated regulatory supporting documentation. Students will inspect installations and report deficiencies if any.

Prerequisite(s): AV1220

AV2220 - Aircraft Instruments II

This course is designed to give the students an understanding of flight instruments, the typical panel layouts and installation practices associated with them. It covers air pressure- sensitive and gyro-stabilized systems, including Air Data and Attitude Reference systems. The course also utilizes synchronous transmitter theory. Practical labs include operation and inspections of Pneumatic gyro systems, pitot-static testing & troubleshooting, and performing a compass swing.

AV2225 - Avionic Systems Installation

This course is designed to give students practical experience in installing integrated avionics navigation equipment on aircraft. It involves designing a system that will share a navigation display. Students will gain procedural knowledge of the steps involved in designing and implementing systems installation procedures including associated regulatory supporting documentation. Students will inspect installations and report deficiencies if any.

Prerequisite(s): PE1200

AV2310 - Major Communications Radio Install

This only course prepares the student to inspect, install, troubleshoot, repair and maintain electronic communication radio equipment and their systems. A major installation will be completed including all of the required paperwork and technical records.

Prerequisite(s): AV1320

AV2320 - Auto Flight

This course of study will cover the fundamental principles of automatic flight for both fixed wing and rotary wing aircraft including servo systems, components, aircraft dynamics, pitch, roll, yaw, and speed commands.

AV2510 - Auto Flight Theory (M, E)

This M and E course of study will cover servo systems and components, aircraft dynamics, pitch, roll, yaw, speed commands, and the fundamental principles involved in the automatic flight of both fixed wing and rotary wing aircraft.

Prerequisite(s): AV2220

Co-requisite(s): AV2540

AV2540 - Auto Flight Ramp Testing (M)

This M only course will have the students ramp test the auto pilot system in a fixed wing aircraft including the associated flight director modes.

Co-requisite(s): AV2510

AV2570 - Auto Flight Troubleshooting (E)

This E only course will have the students explain aircraft systems including troubleshooting, and ramp testing of auto flight equipment. Students will locate and repair faults and defects on the College's aircraft.

Prerequisite(s): AV2510

AV3110 - Monitoring and Digital Systems

This course provides information regarding the design of data communication systems used by avionics equipment on the aircraft. Topics also include electronic systems that record and display data. Practical applications include inspecting, testing, and troubleshooting installed avionic and electrical systems.

BA1000 - Health and Safety

This course demonstrates knowledge of industry standards, safe work practices and regulatory requirements pertaining to health and safety for the baking and pastry arts industry.

BA1010 - The Professional Baker

This course will introduce students to the industry standards and baker terminology. It will explore common communication and conflict resolution models, coaching, and mentoring for bakers. The course will identify and practice forms and documentation, as well as identify the designation for baker career options.

Prerequisite(s): BA1105

BA1015 - Baker Tools and Equipment

This course will involve the selection of kitchen tools and equipment, basic maintenance and procedures for their use. The course will also explore baker specific tools and equipment, their applications, basic maintenance and procedures for their use.

Prerequisite(s): BA1105

BA1020 - Weights and Measures

This course demonstrates knowledge of weighing and measuring devices, their applications and procedures for use. It also demonstrates knowledge of increase and decrease recipe yields and portions to meet specific requirements.

BA1025 - Baking Methods and Principles

This course will demonstrate knowledge of baking methods and their characteristics, baking terminology and techniques, as well as explore seasonings and flavorings, their purpose and use.

Prerequisite(s): BA1105

BA1030 - Bread Products

This course requires the use of baking utensils, equipment, and baking supplies. It involves preparing bread products. It includes information on yeast fermentation, bread formulas, chemical leavening and production methods used for yeast dough and quick breads.

Prerequisite(s): BA1010, BA1025, BA1105

BA1035 - Cakes I

This course requires the use of baking utensils, equipment, and baking supplies. It involves preparing cakes and icings. It will include the background information on ingredients, mixing methods, baking methods, icing, decorating and storing cakes.

Prerequisite(s): BA1010, BA1025, BA1105

BA1040 - Cookies

This course requires the use of baking utensils and equipment, and baking supplies. It involves preparing specialty

cookies and squares. It includes information on types mixing methods and the necessary makeup methods and preparation techniques for cookies and squares.

Prerequisite(s): BA1025, BA1105

BA1050 - Artisan Breads

This course requires the use of baking utensils, equipment, and baking supplies. It involves preparing artisan breads, rich breads, and laminated breads. It will include information on ingredients, pre-ferment, mixing methods, baking methods, icing, and storing products.

Prerequisite(s): BA1010, BA1025, BA1030, BA1105

BA1055 - Cakes II

This course requires the use of baking utensils, equipment, and baking supplies. It involves preparing specialty cakes and advanced assembly and decorating.

Prerequisite(s): BA1035, BA1061, BA1105

BA1061 - Pastry, Fillings and Creams

This course is an overview of basic skills needed to produce various baked goods and dessert items. Fundamental baking techniques and methods are applied to produce products in an industry-like environment. Students will also learn to create different types of creams, custards, fillings and dessert sauces.

Prerequisite(s): BA1010, BA1025, BA1105

BA1070 - Advanced Pastries

This course is an application of advanced skills needed to produce premiere quality baked goods. Students will apply these advanced baking techniques and methods to produce products in an industry-like environment.

Prerequisite(s): BA1061, BA1105

BA1075 - Creams, Custards, Fillings and Dessert Sauces

This course provides students with the knowledge, understanding and ability to produce different types of creams, custards, fillings and dessert sauces that require advanced technical skill and knowledge.

Prerequisite(s): BA1061, BA1105

BA1080 - Dietary Baking

This course is an application of advanced skills needed to produce baked goods requiring adaptations due to dietary restrictions. Students will apply fundamental baking techniques and methods to produce products in an industry-like environment.

Prerequisite(s): BA1105

BA1085 - Laminate Dough

This course is an application of advanced skills needed to produce premiere quality baked goods featuring laminate dough methods. This course will apply these fundamental baking techniques and methods to produce products in an industry-like environment.

Prerequisite(s): BA1030, BA1050, BA1105

BA1090 - Frozen Desserts

This course is an application of advanced skills needed to produce premiere quality frozen products. This course will apply fundamental baking techniques and methods to produce products in an industry-like environment.

Prerequisite(s): BA1061, BA1105

BA1095 - Chocolate and Sugar

This course is an application of advanced skills needed to produce premiere quality baked goods. Apply fundamental baking techniques and methods to produce products in an industry-like environment.

Prerequisite(s): BA1010, BA1025, BA1105

BA1100 - Workplace Exposure Baking and Pastry Arts

Students will gain an appreciation of the real work environment through a three (3) week job placement experience directly related to the area of training. This experience will be required in addition to all academic requirements of the

Baking and Pastry Arts program. Students will be able to develop employability skills such as working independently, team building, customer service, work ethic, attitude, accountability, and further enhancing their personal growth.

Prerequisite(s): BA1025

BA1105 - Food Safety and Sanitation

This course is designed to provide students with a comprehensive understanding of the regulations, principles and best practices in food safety and sanitation. This course is essential for individuals working in the food industry to ensure proper food handling, personal hygiene and safe food preparation, service and storage.

BK1100 - Banking Operations I

This course is designed to familiarize students with the main principles and guidelines that characterize the banking industry and then provide them with a basic understanding of the operations and transactions conducted in a bank setting.

BL1020 - Introductory Biology I: Biology at the Microscopic Level •

This is a Biology course designed for students who have not completed high school Biology or who require upgrading in Biology for College and College-University Transfer Biology courses. Students will learn the microscopic levels of Biology that will lead them into the macroscopic levels covered in Introductory Biology II. A combination of both Introductory Biology I and II will achieve better understanding of basic concepts that are required for success in various Biology courses in Health Sciences, Natural Resources and/or University programs. Students will be expected to complete assignments and labs to show their understanding of the concepts.

BL1021 - Introductory Biology II: Biology at the Macroscopic Level •

This is a Biology course designed for students who have successfully passed Introductory Biology I. Students will carry over their knowledge from Introductory Biology I to gain a thorough understanding of Biology at the macroscopic level. A combination of both Introductory Biology I and II will achieve better understanding of basic concepts that are required for success in various Biology courses in Health Sciences, Natural Resources and/or University programs. Students will be expected to complete assignments and labs to show their understanding of the concepts.

Prerequisite(s): BL1020

BL1060 - Biology for Aboriginal Students

The purpose of this course is to provide aboriginal students with a broad survey of the discipline of Biology. Topics will be explored using both traditional First Nation's and scientific frameworks, emphasis being balanced between Traditional Ecological Knowledge (TEK), as well as the scientific method. This course will introduce students to the study of plants, animals and food systems; ethno-botany will be introduced to complement the 'system of scientific classification'. A laboratory component will allow students to conduct experiments that will further their understanding of plant and animal life.

BL1070 - Anatomy and Physiology •

This course incorporates applied anatomy and physiology of domestic animals. Students will study the relationship between structure and function beginning at the cellular level and working through all organ systems. Learning is enhanced using models and the dissection of preserved animals.

Co-requisite(s): TM1150

BL1100 - Biology

This is an introductory course in the first semester of the Natural Resources cluster designed to prepare the student for further biology related studies. Emphasis in labs and field trips will be directed to gaining an appreciation of natural ecosystems and associated life processes.

BL1120 - Biology I

This is an introductory course in the first semester of the Natural Resources cluster designed to prepare the student for further biology related studies. Emphasis in labs and field trips will be directed to gaining an appreciation of natural ecosystems and associated life processes.

BL1175 - Principles of Biology I

This is the first of two introductory courses developed for credit transfer to Memorial University of Newfoundland. The course is intended to be equivalent to MUN's Biology 1001. The course is an introduction to the science of biology, covering the fundamentals of biological concepts for successive courses including: basic biochemistry, introduction to cells and cellular organization, an introduction to cellular transport, an introduction to metabolism and enzymes, nucleic acid structure, replication and its functions, viruses and an introduction to prokaryotic organisms, Protists and Fungi. Transferable to MUN Biology 1001.

BL1176 - Principles of Biology II

This is the second in a series of two introductory courses developed for credit transfer to Memorial University of Newfoundland. The course is intended to be equivalent to MUN's biology 1002. This course concentrates on the structure and function of the Plant Kingdom and the Animal Kingdom using the flowering plant and various invertebrates and vertebrates as examples. Transferable to MUN Biology 1002.

Prerequisite(s): BL1175 or BL1500 or MUN Biology 1001

BL1180 - Anatomy and Physiology

This course is designed to enable learners to acquire a comprehensive knowledge of gross anatomy and physiology of the major systems of the human body. In addition, learners will be instructed on the general principles of pathophysiology to facilitate understanding of the body's reaction to trauma and illness.

BL1300 - Anatomy & Physiology

This course is an introduction to the science of normal functions and phenomena of living things from the cellular to the whole body levels of organization. Emphasis will be placed on the principles of the functioning of the organisms and body systems in order to facilitate the understanding and relationship of biomedical instrumentation.

BL1330 - Anatomy •

This course is an introduction to the science of normal functions of living things from the cellular to the whole body levels of organizations.

BL1400 - Fish and Wildlife Biology •

This course requires the use of resource references, laboratory equipment and a suitable environment. It involves the study of the natural history of birds, fish and mammals, and a theoretical and practical understanding of the anatomy of birds, fish and mammals. It includes information on population biology, reproductive biology, feeding biology, ecology, behaviour of fish, birds and mammals; anatomical charts, species charts, storage of specimens and dissection procedures.

Prerequisite(s): BL1120

BL1600 - Human Biology

This course will provide an introduction to human biology, including a brief review of biochemistry, cellular biology, infectious processes, and human tissues. The primary emphasis will be an overview of the anatomy and physiology of the human body using a systematic approach. It is designed to provide a foundation for health science students to help the student understand the variety of medical tests, procedures, and/or drugs available for diagnosis and treatment. The fundamental concepts covered in this course will form the basis for further studies in allied health sciences.

BL1605 - Human Biology

This course will provide an introduction to human biology, including a brief review of biochemistry, cellular biology and human tissues. The primary emphasis will be an overview of the anatomy and physiology of the human body using a systematic approach. The fundamental concepts covered in this course will form the basis for further studies in allied health sciences.

BL2425 - Clinical Microbiology 1

This course builds on the general concepts of disease and basic microbiology outlined in BL2601 (Intro to Microbiology). Students study clinically relevant bacteria with emphasis on the techniques utilized to isolate and identify common pathogens in the laboratory setting. Students perform various biochemical, cultural, and chemical tests on selected non-fastidious bacteria and report test results at an introductory level.

Prerequisite(s): BL2601

BL2431 - Clinical Microbiology 2

This course consists of a systematic study of the pathogenicity, epidemiology, morphology, and laboratory identification of various common microbes associated with infectious disease. Major emphasis will be on bacteria with a brief study of clinically important yeast-like fungi.

Prerequisite(s): BL2425

BL2441 - Clinical Microbiology 3

In this course, students continue building knowledge and skills of microbiology techniques exploring some of the organisms and specimens less frequently isolated in the laboratory. Knowledge will be further reinforced by an exploration of the routine set-up and isolation of microorganisms using a body systems approach. Emphasis will be placed on microbiology laboratory techniques, practices, standards and quality control. An introduction to advanced microbiology techniques including molecular biology, parasitology, and virology will also be explored.

Prerequisite(s): BL2431

BL2601 - Intro to Microbiology

This course introduces students to the principles and methods of microbiology in the health sciences and provides an overview of the safety aspects of a level II microbiology laboratory. Selected topics include an introduction to the classification, structure, and cultivation of bacteria in the health science disciplines, an overview of the significant role microbiology plays in the health of the public, and an introduction to a routine microbiology laboratory.

BL3410 - Clinical Microbiology Sim 1

This course is an introduction to the isolation, identification and reporting of microorganisms isolated from clinical specimens originating from the head and neck, the genito-urinary system and other miscellaneous sources. It is at an intermediate level and is intended to introduce the process of standard techniques and methodologies used to identify common pathogens in a routine clinical microbiology laboratory. Standardization of laboratory techniques, terminology, methods, and reporting will be emphasized. Quality control is incorporated.

Prerequisite(s): BL2441

BL3411 - Clinical Microbiology Sim 2

This course involves laboratory isolation, identification and reporting of microorganisms from clinical specimens originating from the head and neck, the gastro-intestinal tract, and other miscellaneous sources. It is at an advanced level of understanding and interpretation. It is intended to introduce standard techniques and methodologies used to identify common pathogens in a routine clinical microbiology laboratory. Standardization of laboratory techniques, terminology, methods, and reporting will be emphasized. Quality control and quality assurance is incorporated.

Prerequisite(s): Successful completion of Semester 6

BL4410 - Microbiology Practicum

This course allows the student to develop technical competence while reviewing theoretical material from previous semesters. The three week hospital rotation will emphasize clinical procedures and acquaint the student with the hospital operation and administration.

Prerequisite(s): Successful completion of Semester 7

BU2120 - Building Codes and Services

This course will provide learners with the knowledge and skills to address questions regarding public safety, fire safety, plumbing systems and ventilation systems. Learners will use various codes and standards to solve design problems for new and existing structures.

Prerequisite(s): DR1220

Co-requisite(s): None

BU2130 - Service Learning

This course is an introduction to service learning. It explains the purpose and structure of the service learning approach to education. It also presents an overview of health and safety as it relates to building construction sites. Students will learn about the key components needed in the delivery of formalized service learning, and proper health and safety practices while working on community projects.

BU2250 - Electrical Systems

This course is comprised of lectures and labs designed to introduce the learner to building electrical systems. Design concepts and procedures are studied, with direct applications in the preparation and production of electrical systems drawings.

Prerequisite(s): PH1101, ET1101

Co-requisite(s): DR3110

BU2260 - Plumbing Systems

Plumbing Systems is a course designed to introduce students to terminology and design methods used in the plumbing and fire protection aspects of building services. The course begins with an introduction to hydraulics, piping and the associated terminology, and the advances to areas of water supply and distribution, sanitary drainage, storm drainage and fire protection. The course includes a detailed study of code requirements and the preparation of computerized working drawings.

Prerequisite(s): PH1101, DR3111

Co-requisite(s): CG1800

BU2270 - HVAC

This course is designed to introduce the student to building heating, ventilation and air conditioning (HVAC) systems. The course begins with an introduction to historical and contemporary HVAC systems emphasizing current energy conservation. Climate, comfort, passive and active design strategies are discussed, with a detailed study of building heat gain and building heat loss.

Prerequisite(s): BU2260

Co-requisite(s): DR4120

BU2300 - Building Codes I

This is the first of two architectural building codes courses. The course gives a brief examination of the purpose and contents of building codes in general. It also gives an overview of how the National Building Code of Canada is formatted and how it is to be used. The course concentrates on the code requirements given in the National Building Code of Canada for houses and small buildings. Emphasis is placed on selecting and sizing building components.

Co-requisite(s): DR3110

BU2301 - Building Codes II

This course is a continuation of BU2300 - Building Codes I and concentrates on the safety requirements of buildings covered by Part 3 in the National Building Code of Canada. It is designed to help the student interpret and apply regulations through a series of practical exercises.

Prerequisite(s): BU2300

BU2410 - Building Science I

This is the first of two building science courses. The course studies how heat and air/water flow through a building envelope particularly from the inside to the outside of the enclosure. It also investigates steps to reduce/prevent the negative results which may result from this movement. Emphasis is placed on the selection and arrangement of building components.

Co-requisite(s): DR3110

BU2411 - Building Science II

This is the second of two building science courses. The course deals with heat, air and water movement through the building envelope particularly from outside to inside the enclosure. It examines the way different wall and roof assemblies perform. Students are required to solve technical problems based on building science theory. Emphasis is placed on the "barrier" concept of enclosure design. Special emphasis is placed on the barriers in roofs.

Prerequisite(s): BU2410

Co-requisite(s): DR3111

BU3300 - Building Specifications

This course deals with the interpretation and writing of specifications for building projects. A study is made of specification writing theory and procedures. Students are expected to analyse specifications for form intent. Projects

include identifying technical and legal requirements and translating them into written form. Subject material includes contracts, master format, specification types, and specification writing.

Prerequisite(s): CG3230, DR4120

CA2110 - Structures I

This is the first of two courses in the application of fundamental design concepts in structural design using Canadian design standards. This course prepares the learner to analyse and design basic steel and timber structural elements. Topics include: material properties, design of tension and compression members, beams, columns, and connections.

Prerequisite(s): CF2531

CA2111 - Structures II

This is the second of two courses in the application of fundamental design concepts in structural design using Canadian design standards. This course prepares the learner to analyse and design basic cast-in-place reinforced concrete structural elements including beams and one-way slabs, columns, foundations and walls. Flexural behavior, shear, compression, serviceability and bond and anchorage requirements are considered.

Prerequisite(s): CA2110

CA2120 - Butchery I

This course will encompass basic and advanced butchery concepts. Students will learn about the structure and composition of a variety of livestock and game used for meat production, the inspection process, and fabrication of various cuts used in the culinary industry.

CA2125 - Meat and Poultry I

This course will explore the basic and advanced techniques in the processing and cooking methods of beef, veal, pork, and poultry. Dry, moist, and combination cooking methods will be practiced. Students will also learn about selection criteria for meats, marinades, rubs, and garnishes.

CA2130 - Seafood I

This course examines the fundamentals of seafood cuisine and its integration into the North American diet and restaurant industry. Students will butcher, prepare, and plate seafood. Two major classes of seafood covered in this course include shellfish and fin fish.

CA2135 - Charcuterie I

In this course students will acquire theoretical and practical skills required to make classical and modern charcuterie items. Processes used to produce charcuterie items will be explored including curing, brining, and fermentation. Students will also learn about condiments and accompaniments used to enhance charcuterie preparations.

CA2140 - International Cuisine I

This course explores the world of international cuisine and flavor and how they are integrated into North American diet and restaurant industry. Cuisines from France, Spain, Italy, United Kingdom, Mexico, and the Caribbean are examined. Topics covered include factors that influence regional cuisine, common ingredients, and signature dishes.

CA2145 - Saucier I

This course explores the foundations of saucier work. Preparation procedures and quality ingredients are key topics within Saucier I. Students will learn to prepare stocks, soups, and sauces.

CA2150 - Pastry Arts I

This course is an overview of advanced skills needed to produce various baked goods and dessert items. Students will learn about ingredients used in baking and how to perform calculations to determine amounts required for recipes. Some of the prepared items in this course include chocolate, creams, custards, pastries, and glazes.

CA2155 - Menu Planning

This course will examine the basic principles of menu development. Standardized recipes and service styles to consider when planning a menu will be explored. Students will also learn to adjust planning based on dietary restrictions.

CA2160 - Nutrition for Culinary Professionals

This course teaches the language of nutrition and the key concepts of healthy eating, nutrients, food labelling, allergies and special diets. There will also be a significant focus on the selection of ingredients, recipes substitutes and menu development to suit the needs of individuals in various food service settings.

CA2170 - TrainCan BASICS.fst

The TrainCan BASICS.fst course builds food safety competence for culinary professionals. Content within this course was developed by Canadian Food Retail and Food Services Regulation and Code, Health Canada, and the Canadian Food Inspection Agency. Upon completion of this course students will receive nationally recognized food safety certification.

CA2230 - Butchery II

This course will involve learning about advanced butchery techniques. Whole animal butchery and fabrication of specialty cuts are covered. Students will gain practical experience working with beef, veal, pork, lamb, poultry, and game.

Prerequisite(s): CA2120

CA2235 - Meat and Poultry II

This course explores advanced processing and cooking methods of lamb, veal, wild game and specialty poultry. Dry, moist, and combination cooking methods will be practiced. Students will also learn about marinades, rubs, and garnishes.

Prerequisite(s): CA2125

CA2240 - Seafood II

This course is an exploration of advanced seafood techniques utilized throughout world cuisine. Students will butcher, prepare, and plate specialized seafood. Major topics include raw seafood applications, sushi, and sous vide cooking.

Prerequisite(s): CA2130

CA2245 - Charcuterie II

In this course students will learn advanced skills required to make classical and modern charcuterie items and explore the food preserving technique of smoking. Charcuterie products that students will learn to prepare include sausages and forcemeats. Aspics and jelly preparation will also be examined.

Prerequisite(s): CA2135

CA2250 - Saucier II

This course explores advanced techniques for saucier work. Students will learn to prepare glace, specialty soups, derivative and non-traditional sauces. Service and finishing techniques are also covered.

Prerequisite(s): CA2145

CA2255 - Pastry Arts II

This course is an overview of advanced skills needed to produce various baked goods and dessert items. Students will learn to prepare various frozen desserts, specialty cakes, artisan breads and confections. Specialty requirement baking is also examined.

Prerequisite(s): CA2150

CA2260 - Cost Control

In this course the student will learn advanced mathematical skills used to determine costs associated with food establishments, food yields, budgeting, scheduling, and procurement.

CA2265 - Cuisine of Canada

This course is an exploration of Canadian cuisine. Flavors, regional cuisine, and the Canadian food industry are examined. Students will prepare and plate Newfoundland and Labrador and indigenous food products.

CA2310 - International Cuisine II

This course explores the world of international cuisine and flavor and how they are integrated into North American

diet and restaurant industry. Cuisines from Scandinavia, Russia, Asia, the Eastern Mediterranean, India, and Germany are examined. Topics covered include factors that influence regional cuisine, common ingredients, and signature dishes.

Prerequisite(s): CA2140

CA2315 - Garde Manger

This course covers advanced skills required to make classical and modern cold cuisine items. Sandwiches, salads, hors d'ouerves, and the practical applications of these products are covered. Plating techniques and styles of service are also examined.

CA2320 - Urban Development I

This course is designed to provide the learner with an opportunity to apply learned theory to the design of an actual subdivision for given lot sizes, dwelling standards, zoning, and other internal and external site factors. This course also includes identification of local design regulations and the preparation of computerized drawings.

Prerequisite(s): SU1210

CA2321 - Urban Development II

This course is designed to provide the learner with an understanding of municipal water and wastewater distribution systems. Water quality parameters and piping network systems will be examined in detail. This course also includes identification of local design regulations and the preparation of computerized drawings.

Prerequisite(s): WA1230, CA2320, WA1160

CA2325 - Food and Beverage Pairing

This course explores the pairing of food and beverages to enhance the dining experience. Non-alcoholic and alcoholic beverages are examined and students will prepare nonalcoholic beverages such as coffee and tea. Pairing wine products with different types of food serves as a major topic in this course.

CA2330 - Holistic Assessment

The Holistic Assessment course reviews major topics from the Culinary Management program. The aim of this course is to assess the culinary knowledge of students and provide constructive feedback. Students will also learn about topics pertaining to the Interprovincial Red Seal examination.

CA2340 - Culinary Business Management

Students will review topics in the culinary business world as an introduction to general business management practices. Students will be introduced to general culinary business accounting and marketing practices and principles. This course provides students with the fundamental tools of financial analysis and culinary marketing.

CA2500 - Highway Technology

This course enables the learner to plan and design highway transportation systems according to local standards. Learners will be required to complete a major highway design project utilizing design software. The project comprises of route selection, design of horizontal and vertical alignment including super-elevation, preparation of plans, profiles and cross-sections, calculation of earthwork quantities, and environmental protection measures using current civil design software.

Prerequisite(s): CB2420

Co-requisite(s): WA1160

CA2810 - Soils & Foundations I

This is an introductory course in soil mechanics in which learners will acquire knowledge about the various types of soils used in the design and construction of civil projects. Identification, classification, and formation of soils will be addressed and learners will become familiar with the standard tests and procedures used to evaluate soils and their engineering properties.

Prerequisite(s): CF2711

CA2811 - Soils & Foundations II

This course will build on the knowledge acquired in CA2810 and will introduce the learner to the field of Geotechnical Design. Learners will be required to determine and analyse the effects of soil properties on bearing capacity, slope

stability of soils, consolidation, and settlement. Aspects covered include: shallow foundations, pile capacity and design, foundation settlement, and slope stability.

Prerequisite(s): CA2810

CA2900 - Municipal Engineering

An introduction to zoning bylaws and zoning in general. Criteria are examined for the design and construction of roads, curb and sidewalks, width or right of way, storm and sanitary sewer collecting systems, water distribution systems and layout of utilities (electrical, phone, cable TV). Lectures are supplemented by labs in which related problems, field trips, and the actual lot layout, design of roads, water mains, sanitary sewer and storm sewer for an urban subdivision is carried out.

Prerequisite(s): SU1321

CB2420 - Construction Methods

Construction methods will help learners to estimate construction costs and productivity rates of various types of equipment and apply previous knowledge from economics to Heavy Equipment. The course will deal with methods and operations utilized in heavy and marine construction, with emphasis placed on specifying the best equipment or process for the situation.

Prerequisite(s): MA1101

CE2280 - Modulation and Encoding

This course is designed to provide learners with a foundation in the fundamental methods of modulating or encoding analog and digital signals for transmission over a modern communication system. The methods for the transmission of analog and digital signals across an analog medium are covered as well as the methods for transmitting analog and digital signals across a baseband digital medium. The impact of noise on these methods is also discussed.

Prerequisite(s): MA1101, CI1110, AE2330 or AE2360

CE2730 - RF Transmission & Antennas

This course provides a comprehensive study of the basic principles of electromagnetic wave propagation as they are applied to transmission lines, waveguides, and antennas with applications in wired and wireless communications systems.

Prerequisite(s): MA1101, MP2140 or ET2100 or ET1146

CE2810 - Industrial Communication Systems

This specialized course introduces the student to industrial communication protocols and systems for process control and automation systems in an industrial environment. The lab component is designed to enhance the theoretical lecture component by implementing communication methods, networks, and troubleshooting skills.

Prerequisite(s): CE1210

CE2940 - HMI & SCADA

The course provides learners with a comprehensive analysis of Human Machine Interface (HMI) development using commercial HMI software for monitoring and controlling automated machines and processes from custom designed graphical user interfaces. Learners will be introduced to the Supervisory Control and Data Acquisition (SCADA) system for process and utility industries.

Prerequisite(s): CE2810, DP3110

CE3110 - Wireless Communications Systems

This is an advanced electronic communications course focusing on modern wireless communication systems. It provides a background in radio wave propagation. A systems-level approach to the architecture, design, and operation of VHF and UHF mobile radio systems, cellular telephone systems, microwave and satellite-based communication systems is presented.

Prerequisite(s): CE2280, CE2730

CE3430 - Network Cabling

This course will provide the learner with the necessary skills to design and implement high performance cabling systems. The performance level of the system determines the type of cabling and hardware to be used, the rules to be followed and the type of testing and documentation required to certify performance and trouble-shoot the

installation.

This course focuses on the physical layer of the OSI Network Model and includes the electrical and mechanical aspects of interfacing to the transmission medium and the impact on performance they may have. This includes analysis of copper cabling, fibre optics, connectors and interconnection hardware, electrical code requirements for installation, performance certification, and documentation best practices.

CF1100 - Materials and Processes I

The purpose of this course is to provide students with knowledge of the behaviour and characteristics of common engineering materials and an understanding of basic industrial processes. This will enable students to select suitable materials and fabrication methods for the design and manufacture of parts to ensure successful service.

CF1101 - Materials and Processes

The purpose of this course is to familiarize the learner with production and fabrication processes and practices used in the industrial environment. The course provides an overview of welding processes, non-destructive testing, corrosion, and casting-processes. An introduction to plastics and other engineering materials is provided.

Prerequisite(s): CF1100

CF1120 - Materials and Processes II

The purpose of this course is to familiarize the student with production and fabrication processes and practices used in industrial environments. A continuation of CF1100 – Materials and Processes I, this course will give an overview of non-metal materials used in engineering processes and an understanding of surface treatments, coatings and corrosion. Manufacturing processes include metal removal, joining processes, and casting processes.

Prerequisite(s): CF1100 or CF1160

CF2100 - Mechanics of Solids: Statics

This is a core engineering course in the Mechanical Engineering Technology program. This course introduces students to the fundamentals of problem solving using engineering analysis. This first course in Solid Mechanics deals with Newton's First Law where forces are in equilibrium. Solutions to the problems presented involve drawing free body diagrams, resolving force vectors into components, and solving equations to find reactions. The concept of internal stress is introduced and related to bending moments, simple shear and torsional shear. The lecture portion of the class will consist of the introduction of the engineering problem solving process, the conceptual material and interactive demonstrations of the engineering concepts. The lab portion will provide an opportunity to engage students in experimental methods and comparison of experimental data with theoretical values.

Prerequisite(s): PH1101, MA1101

CF2511 - Strength of Materials

This course expands on previously studied concepts of CF2100 Mechanics of Solids: Statics and provides a basis for calculations in engineering design as per complex stress and strain systems.

Prerequisite(s): CF2100

CF2530 - Strength of Materials I

This is the first of two courses in the study of statics and strength of materials in preparation for further study in design-oriented courses. Learners will learn to analyze forces in structures and basic requirements to ensure safety of structures under applied loads. Major topics include: statics, basic concepts in strength of materials, centroids and moments of inertia, design properties of materials, direct stress, deformation and design, and torsional shear stress and torsional deformation. Laboratories include tensile, compression and shear testing of various engineering materials.

Prerequisite(s): MA1101; PH1101

Co-requisite(s): MA2100

CF2531 - Strength of Materials II

This is the second of two courses in the study of statics and strength of materials in preparation for further study in design-oriented courses. Learners will learn to calculate and plot shearing forces and bending moments in beams, analyze shear stress, bending stress and deflections in statically determinate and statically indeterminate beams, analyze stresses in columns and connections, calculate combined stress in members subject to bending and direct

stresses, and calculate stresses in welded and bolted connections. Laboratories include testing of beams, columns and connections under applied loads.

Prerequisite(s): CF2530

CF2545 - Mechanics of Solids

This course is included in the Petroleum Engineering Technology programs' curriculum as an Engineering science. It is part of a core of courses that introduce students to the fundamentals of applied problem solving. It enables the economical and safe selection of materials for engineering components, which are subjected to loads when in service. Theoretical work, supplemented by problem sessions, is carried out in multiple topic areas that are relevant to the petroleum engineering field of practice.

Prerequisite(s): PH1101 or PH1150, MA1101

CF2610 - Building Materials I

This course examines the properties, limitations, and application of wood and concrete as it relates to building design and construction.

CF2611 - Building Materials II

This course examines the properties, limitations, and applications of a number of different building materials. It is designed to help students assess and select suitable materials for a variety of situations found in buildings.

Prerequisite(s): CF2610

CF2710 - Materials and Testing I

This course has been designed to provide the learner with a working and hands on knowledge of common building materials, so that he/she will be better able to function as a technologist in the building and heavy construction field. This course will provide the learner with a basic knowledge of the characteristics, uses and application of common construction materials and the general specifications associated with each material. Materials such as concrete and aggregate; their properties, components, uses, production and construction methods will be studied. Basic theory will be supplemented by laboratory testing of aggregate and concrete done to CSA Standard. Emphasis will be placed on decision-making for the proper selection and use of the various components discussed in each material. Course work will be supplemented by field trips and in shop demonstrations.

Prerequisite(s): CM1401, DR1220

CF2711 - Materials and Testing II

This course has been designed to provide the learner with the working and hands on knowledge of common building materials, so that he/she will be better able to function as a technologist in the building and heavy construction field. This course will be a continuation of CF2710 - Materials and Testing I. It will provide the learner with a hands-on approach to the testing, selection, use and application of common building materials, such as asphalt and aggregate; and tested under laboratory conditions. Wherever possible, in lab work, will be supplemented with field trips, videos and guest lectures.

Prerequisite(s): CF2710

CF3100 - Mechanics of Solids: Dynamics

This second Mechanics course expands on previously studied concepts of Statics specifically Newton's 1st Law introducing Newton's 2nd Law, kinematics, work-energy concepts, as well as relative motion and vibration. The lecture portion of the class will consist of the introduction of the engineering problem solving process, the conceptual material and interactive demonstrations of the engineering concepts. The lab portion will provide an opportunity to engage students in experimental methods and comparison of experimental data with theoretical values.

Prerequisite(s): CF2100

CF3201 - Materials and Corrosion

This course provides the learner with an introduction to physical and mechanical properties of common materials used in the petroleum and chemical processing industry. It will examine the production of steel and effects of pressure and temperature on steel alloy systems. It is designed to familiarize the learner with the major factors that influence industrial material selection. Learners will also examine corrosion and means by which corrosion is controlled and monitored in industry.

Prerequisite(s): CH1121

CF3205 - Materials and Corrosion

This course provides the student with an introduction to physical and mechanical properties of common materials used in the petroleum and chemical processing industry. It will examine the production of steel and effects of pressure and temperature on steel alloy systems. It is designed to familiarize the student with the major factors that influence industrial material selection. Students will also examine corrosion and means by which corrosion is controlled and monitored in industry.

Prerequisite(s): CH1121

CF3440 - Structural Design

This course is an introduction to structural design and strength of materials. Emphasis is placed on calculations leading to the selection of structural members based on shear forces, bending moments, and deflection produced by static loads, with an application towards architecture and building construction.

Prerequisite(s): MA2100, PH1101

CF3620 - Building Materials III

This course examines the properties, limitations, and application of a number of different building materials. It is designed to help students assess and select suitable materials for a variety of situations found in buildings.

Prerequisite(s): CF2611

CG1205 - Health Care and Safety

This course serves as an introduction to the hospital environment, its organization and management. Learners will be familiarized with the health care system of Canada. The application of safety in the hospital environment, with a special emphasis on the concepts of electrical safety, will be stressed. The learner will also be familiarized with the equipment control systems and procedures utilized by biomedical engineering departments. The concepts of quality assurance as well as standards involved in the safe use of electricity in health care institutions will be addressed. This will be done in the context of an overall quality management system. Learners will also become familiar with fire, micro-biological, infection control and environmental safety issues as they relate to the hospital environment.

CG1400 - Production Fundamentals

This course will expose students to the operation of a production room. Students will learn about artistic and technical illustrations and how to transfer them to flat patterns for production. They will delegate the industrial straight stitch, the four-thread overlock, the five-thread finishing machine, the industrial blind hemming machine, the double needle machine, the industrial walking foot machine, industrial fur sewing machine and the industrial gravity feed steam iron for specific aspects of the production. Product label design and fibre content label design will be covered. Students will learn to perform multi-colour screen printing on products. They will also perform costing for production jobs and apply lean manufacturing techniques to produce a product according to industry standards. Finally, students will develop skills in employee-employer relations.

Prerequisite(s): TX1400

Co-requisite(s): TX1210

CG1500 - Work Methods and Measurement

This course is designed to introduce the student to the basics of time and motion study. It will provide the student with a basic understanding of time study techniques. It comprises various topics in pre-determined motion time and work measurement systems. The intent is to develop in the student a full understanding of the elements of these systems and the capability to create and implement them. It also provides the student with the basic tools used in a lean manufacturing enterprise.

Prerequisite(s): EG1430

CG1700 - Environmental Design

This course will introduce students to the fundamentals of architectural design with emphasis on applying basic architectural principles, conventions and sustainable building practices. It will also further develop the student's understanding of architectural practice.

CG1800 - Building Site Development

This is a two part course that teaches students the requirements of building site development. The first section is an

introduction to surveying while the second section deals with the actual site development. Knowledge of each major topic will be gained through both theory and practical work, including field work.

Prerequisite(s): DR3111

Co-requisite(s): BU2260

CG2110 - Supply Chain Management

This course analyzes the principles of Supply Chain Management by bringing together all of its major components. It covers the movement of materials and services from point of origin to point of use, involving suppliers, manufacturers, intermediaries, stores, and service enterprises.

CG2160 - Lean Methods

This is an introductory course that provides the learner with the basic tools used in a lean manufacturing enterprise. It lays the foundation for many of the topics that are done in detailed applications within the Industrial and Manufacturing disciplines. The course provides an overview of quality, production systems, operation designs and applications of the lean manufacturing philosophy of identifying and eliminating waste through continuous improvement of products and services.

Prerequisite(s): CG1500

CG2330 - Planning & Estimating I

This course is an introduction to the disciplines of cost estimating, project management, scheduling and planning for construction purposes.

Prerequisite(s): CB2420

CG2331 - Planning & Estimating II

This course is a continuation of CG2330 - Planning & Estimating I. Learners will use commercially available computer software to prepare construction cost estimates and schedules. This course will also provide the learner with the opportunity to apply technical material studied in earlier courses of the Civil Engineering Technology (Co-op) Program to the construction management process.

Prerequisite(s): CG2330

CG3230 - Procurement & Contract Administration

This course examines the fundamentals of economics, types of businesses, and the administrative process as it relates to design construction projects. It is designed to help students understand their role in the economics and administration of the design and construction industry.

Prerequisite(s): DR3111

CG3320 - Estimating for Buildings

This course is designed to provide students with a basic understanding of the various types of estimates commonly used in the building design and construction industry. This course addresses both elemental cost analysis and building construction estimating. Computer-generated spreadsheet applications are used.

Prerequisite(s): DR4120, BU2270

Co-requisite(s): PR2751

CG3501 - Production Planning

This course analyzes the principles of production management by bringing together topics of planning and approaching them as an integrated production plan, interpreting various components such as master scheduling, resource planning, manufacturing control and flexible manufacturing.

Prerequisite(s): CG1500

CH1030 - Introductory Chemistry I

Introductory Chemistry I is a Comprehensive Arts and Science (CAS) Transition course. It is the first of two Chemistry courses designed to prepare students for entry into a number of technical programs at the College level as well as CAS Transfer: College-University. The purpose of this course is to give students an introduction to basic chemical principles and laboratory procedures.

CH1031 - Introductory Chemistry II

Introductory Chemistry II is a Comprehensive Arts and Science (CAS) Transition course. It is the second of two Chemistry courses designed to prepare students for entry into a number of technical programs at the College level as well as CAS Transfer: College-University. Continuing the introduction to fundamentals of Chemistry started in Introductory Chemistry I, the main emphasis of this course is on solving mathematical chemical problems.

Prerequisite(s): CH1030

CH1060 - Chemistry for Aboriginal Students

The purpose of this course is to provide aboriginal students with an introduction to the discipline of chemistry. First, the role of chemistry in modern society will be examined from a First Nations' perspective. Then, introductory concepts will be introduced. These will include: matter, atomic structure, the periodic table, chemical bonding, and nomenclature.

CH1080 - Chemistry and Microbiology •

This course introduces students to organic compounds and biochemical pathways which are important in understanding the chemical reactions that occur in the body. Students will study antimicrobials and antimicrobial resistance while developing safe laboratory skills, preparing chemical solutions, and analyzing acid-base reactions as relevant to the veterinary field.

CH1120 - Chemistry

This is an introductory course designed to give students a knowledge and understanding of the fundamental chemical concepts which will form the basis for further studies in science and technology.

CH1121 - Chemistry

This course will develop further the fundamental concepts of chemistry, with emphasis on those relevant to the chemistry of materials and to the processes of polymer chemistry, thermochemistry, chemical reaction rates and equilibrium, electrochemistry, metals and alloys.

Prerequisite(s): CH1120

CH1135 - Chemistry

This is an introductory course in chemistry dealing with the fundamental laws of chemistry, physical and chemical changes, the quantum mechanical model of the atom, the electronic structure and the periodic table, the significant figures and scientific notations, measurements and units, writing and balancing chemical equations including redox equations, stoichiometry and stoichiometric calculations, gases and gas law calculations and thermochemistry and thermochemistry calculations. This course is transferable to MUN Chemistry1010.

Prerequisite(s): None, but high school chemistry is recommended. However, mathematical skills are required, and students with low marks in high school Level III academic mathematics (less than 70%) are strongly recommended to upgrade their mathematics background before undertaking this course

Co-requisite(s): None, but a mathematics course is strongly recommended

CH1140 - General Chemistry I

This course is designed for students who have previously studied chemistry, either in high school or university. It is designed to give students a knowledge and understanding of the fundamental chemical concepts which will form the basis for further studies in the field of science. Major topics are: matter - its properties and measurement, atoms and atomic theory, chemical compounds, chemical reactions, introduction to reactions in aqueous solution; gases; thermochemistry; the quantum mechanical model of the atom; periodic properties of the elements; chemical bonding I –basic Concepts; chemical bonding II additional aspects, valence bond theory and molecular orbital theory; liquids, solids and intermolecular forces. Transferable to MUN Chemistry 1050.

Prerequisite(s): CH1135 with a grade of at least 60% or at least 65% in HS Chemistry 3202. Students must have a strong background in pre-university chemistry. The main objective of this course is not to re-teach core chemical concepts but to build on them. Students with a weak chemistry background are advised to register for Chemistry 1135

CH1141 - General Chemistry II

This course is designed for students who may have career interests in chemistry or other fields of science. The course will develop further the fundamental concepts of chemistry with emphasis on practical applications. Major topics are: chemical kinetics, principles of chemical equilibrium, acids and bases, aqueous ionic equilibrium, solubility equilibrium, free energy and thermodynamics, electrochemistry and properties of solutions. This course is

transferable to MUN Chemistry1051.

Prerequisite(s): CH1140

CH1165 - Applied Chemistry for Mining

In this course, students will be introduced the fundamental of atoms, elements, and compounds and how they relate to crystal structure of rocks and minerals. Students will be exposed to practical applications of chemistry to mining, mineral processing, and refining techniques. Laboratory work will be linked to the mining and mineral processing sector.

CH1350 - Urinalysis

This course will explore laboratory safety and urinalysis procedures. Students are introduced to the theoretical and practical aspects of Clinical Chemistry as related to routine urinalysis. Manual testing, using safe work practices and quality control are also studied.

Prerequisite(s): BL1600, ML1070, CH2340

CH2252 - Clinical Chemistry 1

This course is an intermediate level course in clinical chemistry that introduces students to the theoretical and practical aspects of the analysis of body fluids. It explores laboratory safety, quality control procedures, and basic principles of analytic techniques used in routine clinical chemistry. This course requires students to apply prerequisite knowledge and skills in laboratory sessions in the application of analytical procedures and clinical correlations for specific analytes including carbohydrates, lipids, lipoproteins, proteins, and NPNs. Quality control and its application are also studied.

Prerequisite(s): CH2340, CH1350, ML1090, MA1021

CH2330 - Petroleum Organic Chemistry

The course provides a foundation in organic chemistry that is required by petroleum technologists working in the upstream oil and gas industry. It also covers many of the standard chemical tests used in the oil and gas industry for analyzing crude oils.

Prerequisite(s): CH1121

CH2335 - Petroleum Chemistry

This course is designed to provide petroleum technology learners with a foundation of physical, inorganic and analytical chemistry as applied to the petroleum industry. Emphasis will be placed on the development of analytical and laboratory skills.

Prerequisite(s): CH2330

CH2340 - Biochemistry

This is an introductory course in biochemistry for Medical Laboratory Technology students. The organic chemistry framework includes the study of the carbon atom, chemical nomenclature and the structure of organic compounds. Major focus is on the structure, properties, and metabolism of carbohydrates, proteins, lipids, nucleic acids, non-protein nitrogen compounds, and acid-base balance, body water/electrolyte balance and enzymes.

CH2451 - Industrial Chemistry I

This course introduces students to industrial chemistry and concepts and terms used in industrial chemistry. The focus of this course is industrial chemistry as it applies to the use and analysis of water. Scale formation, industrial chemical metallurgy, NORM, and hydrogen production are explored. Students use pH, conductivity, dissolved oxygen and other analyzers – both laboratory and process.

Prerequisite(s): CH1121

CH2513 - Clinical Chemistry 2

This course is a continuation of CH2252 – Clinical Chemistry 1, and consists of a study of the theoretical and practical aspects of the analysis of the body fluids. This course will complete the study of the various chemistry analytes. Emphasis is on safe work practices and quality control as manual and automated methods are explored.

Prerequisite(s): CH2252

CH2715 - Analytical Chemistry

This is an introductory course in Chemical Analysis. It consists of classical methods of quantitative chemical analysis such as gravimetry and titrimetry, as well as simple instrumental techniques used for field measurement (pH, colorimetry, conductivity, and dissolved oxygen). Learners are also exposed to sampling and statistical treatment of data.

CH3450 - Industrial Chemistry II

This course is designed to provide students with the basics of organic chemistry as it is applied to the oil and gas industry. Oil refining, sweetening and treating processes are discussed. It also covers many of the standard chemical tests used in the oil and gas industry for analyzing crude oils and refinery products.

Prerequisite(s): CH2451

CH3510 - Clinical Chemistry Sim 1

This course builds upon previous topics in clinical chemistry. It requires students to apply their pre-requisite knowledge and skills in a simulated hospital laboratory setting. Emphasis is on safe work practices, automated analysis, quality control principles and result interpretation.

Prerequisite(s): CH2513

CH3511 - Clinical Chemistry Sim 2

This is a comprehensive course in clinical chemistry that requires students to apply their pre-requisite knowledge and skills in a stimulated hospital laboratory setting. Using appropriate safety guidelines, students practice the pre-analytical, analytical and post-analytical phases of the testing process for clinical specimens. Emphasis is on development of technical competence, use of quality assurance principles and application of critical thinking skills to data interpretation and instrument troubleshooting. It is designed to prepare students to enter the clinical phase of the program at an affiliated hospital.

Prerequisite(s): Successful completion of Semester 6

CH4510 - Clinical Chemistry Practicum

This course allows the student to develop technical competence while reviewing theoretical material from previous semesters. The three week hospital rotation will emphasize clinical procedures and acquaint the student with the hospital operation and administration.

Prerequisite(s): Successful completion of Semester 7

CI1110 - Signals & Measurements

This course will introduce the learner to the fundamental concepts of signals and measurements. Learners in the course will learn how to identify different types of signals, select the appropriate test equipment, take measurements, and interpret and report results.

Prerequisite(s): ET1101 or ET1140

CI1125 - Process Instrumentation and Control Systems

This course provides an introductory treatment of sensors and methods of measuring automated process variables. The student will be introduced to the underlying operating principles of industrial measurement devices, programmable logic controllers, and distributed control systems, from an operational perspective in the Oil & Gas industry.

CI1130 - Process Control I

This course provides the student with an introduction to process control terminology and diagrams as well as an introduction to process control strategies and signal transmission. It is designed to familiarize the student with the operating principles of measuring devices for pressure, level, flow, and temperature, as well as control valves used in industry.

CI1150 - Process Control II

The purpose of this course is to familiarize students with the various elements necessary in the design and implementation of process control in chemical process industries. It is designed to provide students with the basics of proportional, integral, and derivative (PID) controls as well as an overview of more advanced systems and control strategies. An overview of process automation, distributed control systems (DCS), SCADA system, and communication protocols is presented. Boiler control system will also be covered.

Prerequisite(s): CI1130

CI1210 - Instrumentation Controls & Automation

This course provides a comprehensive treatment of sensors and methods of measuring automated process variables. The learner will be introduced to the underlying concepts and operation of industrial measurement devices and control systems.

CI1221 - BET Electromechanical Systems

This course is intended to introduce the learner to the basic building blocks of pneumatic and electromechanical systems and assemblies used in biomedical diagnostic and therapeutic devices. Although most of these primary devices will be discussed in relation to health care instrumentation, they have application and use in many commercial and industrial systems. This course will provide the learner with information needed to better understand the complex pneumatic and electromechanical systems utilized in medical devices.

Prerequisite(s): CI1110, AE2331

CI1313 - Fabrication Techniques/Network Cabling

This is a practical electrical/electronics course for students entering the primary electrical / electronics technical intercession. This course enables the student to obtain practical knowledge in soldering, wiring, network cabling, fabrication and proper use of test equipment as related to accepted procedures found in industry.

Prerequisite(s): ET1101

CI1321 - Electrical/Electronic Fabrication Techniques

This is a practical electrical/electronics course for students entering the primary electrical / electronics technical intercession. This course enables the student to obtain practical knowledge in soldering, wiring, fabrication and proper use of test equipment as related to accepted procedures found in industry. As well, students receive an introduction to environmental citizenship and ethics from an electronics industry perspective.

Co-requisite(s): ET1141

CI1360 - Basic Process Automation

In this course the participants will run existing processes to determine the types of the devices used to measure level, flow and other parameters within a plant and how the final control elements interact with the automation control system.

CI1520 - Process Analyzers I

This course examines the role of chemical analyzers in monitoring and controlling industrial processes. Statistical principles are applied to process analyzer systems and the validation of process analyzers. The operating principles of electrochemical analyzers and physical property analyzers are studied and students learn to calibrate, install and troubleshoot these analyzers as well as perform routine maintenance on them. Factors affecting corrosion and the use of analyzers in the prevention and measurement of corrosion is also studied.

Prerequisite(s): CH1121, CI2230

CI2110 - Pressure and Level Measurement and Control

This is the second core instrumentation course designed to reinforce the basic instrumentation concepts previously covered. The various types of transmitters used to measure pressure and level will be covered in detail. The control section of the course will show how the transmitters are used in a control loop.

Prerequisite(s): CI1360

CI2120 - Final Control Elements and Instrument Air Systems

This course focuses on the various types of control valves and damper operators as well as the auxiliary devices used to position and supply power to the actuator. The final section of the course covers how Instrument Air is produced for an industrial plant.

Prerequisite(s): CI1360

CI2230 - Flow and Temperature Measurement and Control

This course develops further understanding of types of control strategies and introduces students to the principles

and operation of flow and temperature control systems, with an introduction to cascade and feed forward control systems.

Prerequisite(s): CI2110

CI2250 - Hydraulics

This introductory course is designed to acquaint the learner with the design and operation of industrial hydraulic systems. It includes a review of the selection and integration of the components used to build and control hydraulic circuits. Operational control and troubleshooting of basic circuits are an integral component of the course.

CI2310 - Advanced Control Strategies

This course covers advanced PID control strategies with an emphasis on boiler control.

Prerequisite(s): CI2230, MP3170, MA2100

Co-requisite(s): CI3860

CI3120 - Safety Shutdown and Machine Monitoring Systems

This course covers basic shutdown systems on boilers and then covers the safety shutdown systems found in the oil and gas industry. The course also introduces software that can be used for process and optimization.

Prerequisite(s): CI2310, CI3860

CI3200 - Statistical Process Control

This course provides the student with an introduction to statistical concepts as they relate to the chemical process industry. It is designed to familiarize the student with quality and statistical process control, descriptive and inferential statistical concepts, probabilistic methods, normally distributed data, control charts, and process capability analysis. These concepts are examined to enable the student to understand how chemical processes are controlled and improved in industry.

Prerequisite(s): MA1101

CI3400 - Biomedical Instrumentation I

This course will introduce learners to the fundamental principles inherent in the collation of bioelectric signals and familiarize them with aspects of electrodes, filters, amplifiers and transducers. Learners will also be introduced to instrumentation related to cardiac measurement and defibrillation, non-invasive blood pressure monitoring, medication infusion systems, physiotherapy modalities, and electroencephalograms. Laboratory exercises will incorporate extensive investigation of the sub-assemblies used in selected biomedical equipment. This will also include site visits to local health care facilities.

Prerequisite(s): AE2301 or AE2331, CI1110, Certificate of completion of Government of NL PHIA course, Signed and witnessed Confidentiality Agreement, Current letter of conduct and vulnerable sector clearance

CI3412 - Biomedical Instrumentation II

This course is intended to broaden the learners' knowledge of medical instrumentation by introducing more sophisticated systems such as multi-parameter patient monitoring systems, central station monitoring, instrumentation, operating room systems such as electrosurgery units and laser surgical tools, as well as an introduction to medical imaging devices.

Prerequisite(s): CI3400, CG1205, Certificate of completion of Government of NL PHIA course; Signed and witnessed Confidentiality Agreement, Current letter of conduct and vulnerable sector clearance

CI3510 - Advanced Medical Systems

This course is intended to broaden the learners' knowledge of medical instrumentation by introducing more sophisticated systems such as: hemodialysis systems, respiratory instrumentation, pulmonary function equipment as well as water treatment and oxygen generation systems.

Prerequisite(s): CI3400, Certificate of completion of Government of NL PHIA course, Signed and witnessed Confidentiality Agreement, Current letter of conduct and vulnerable sector clearance

CI3600 - Industrial Process Control

This is an introduction to Process Control Systems, designed to provide students with the basics of PID Control as well as an overview of more advanced systems.

Prerequisite(s): CI1210

CI3821 - Process Analyzers

This course will examine the role of chemical process analyzers in monitoring and controlling industrial chemical processes. The course examines the study of electrochemical, spectroscopic, chromatographic and physical property analyzers that a chemical processing technologist would be expected to routinely manage in industry. The basic operating principles, and the most common problems associated with their use, will be studied. An overview of the sampling systems associated with process analyzers and the maintenance of these systems will be covered.

Laboratory work will involve calibrating, using and troubleshooting a variety of laboratory and process analyzers.

Prerequisite(s): CI1130

CI3822 - Process Analyzers II

The operating principles, calibration and limitations of various types of oxygen, flammable and toxic gas sensors are examined. The principles of operation of various compositional and light based analyzers are studied. Utilizing a variety of analyzers, the various interactions of materials and electromagnetic radiation as applied to analysis are studied. The roles of the sampling handling and conditioning system as part of analysis are examined.

In laboratories students set up, calibrate and trouble shoot various gas, compositional and spectroscopic analyzers detectors.

Prerequisite(s): CI1520

CI3860 - DCS

The purpose of this course is to familiarize the learner with the distributed control systems (DCS) and Safety Instrumented System (SIS) used by the processing industries. Learners will also learn Functional Block Diagram (FBD) programming language that is widely being used in DCS as well as Process Automation Systems (PAS).

Prerequisite(s): CE2810, CI2230, DP3110, CE2940

Co-requisite(s): CI2310

CJ2110 - Canada's Justice System

This course provides students with an overview of Canada's Criminal Justice System. The course gives students an understanding of the philosophy and principles underlying the Canadian system and then provides them with knowledge of the entire criminal process from arrest to criminal procedures to sentencing to punishment to community reintegration.

CJ2210 - Youth Justice in Canada

This course introduces the student to the specific components and functions of the youth justice system in Canada. Following a review of legislation dealing with youth crime, the course will trace the movement of the young offender through the justice system, from the commission of the offence through to the disposition and sentencing.

CL1110 - Material Balancing

This course places a strong emphasis on developing problem solving skills. Students work in a variety of engineering units. Students solve material balance problems. The stoichiometry of industrial chemical reactions is examined and calculations associated with these are performed. Properties of steam are introduced.

Prerequisite(s): CH1121, MA1101

CM1010 - Communications I for Aboriginal Students

This course has been developed for aboriginal students using culturally relevant materials. The academic focus of this course will be the advancement of reading and writing skills. The writing process will be covered in detail, as will basic grammar and structural mechanics. To develop a variety of reading strategies, students will examine and interpret a number of culturally relevant texts, including informational, graphic, and literary texts (poetry, short fiction and a novel) written by aboriginal writers.

CM1011 - Communications II for Aboriginal Students

This course has been developed for aboriginal students using culturally relevant materials written by First Nations' writers. In this course, reading comprehension will continue to be enhanced through an exploration of dramatic and non-fictional texts (including aboriginal life-writing/memoir). The essay will be examined in detail and the writing process applied to its structure.

Prerequisite(s): CM1010

CM1012 - Communications III for Aboriginal Students

This course has been developed for aboriginal students using culturally relevant materials. Its focus will be the development of research paper writing and oral presentation skills. The emphasis will be upon the processes involved in the critical analysis of contemporary aboriginal culture, as well as the effective presentation of findings. Students will learn skills relevant to research, exposition and speaking publicly.

Prerequisite(s): CM1011

CM1020 - English I

English I is the first of two English courses in the Trades Bridging program. The course is designed to introduce reference skills, to develop fundamental reading skills, and to introduce fundamental writing skills. Students will apply reading strategies including reading in context, skimming, and scanning.

CM1021 - English II

English II is the second of two English courses in the Trades Bridging program. Students will continue an introduction to fundamental writing skills including punctuation, mechanics, sentence construction and paragraph development. As well, this course will further develop trades-related reading and writing fundamentals and introduce technical documents applicable to the trades' field.

Prerequisite(s): CM1020

CM1030 - Essay Writing for EASA Exams

This course will provide the student with a knowledge of essay writing that will enable them to write accurate technical essays as answers for exam questions.

CM1060 - Essential English I •

Essential English I is a Comprehensive Arts and Science (CAS) College Transition course. It is the first of two English courses designed to give students a solid foundation in writing skills and to prepare them for success in subsequent post-secondary studies. Through varied writing assignments and revisions, students will achieve a college level of proficiency in English. Students may also meet the admission requirements for CAS Transfer: College-University and other post-secondary programs through the successful completion of Essential English I and II.

CM1061 - Essential English II •

Essential English II is a Comprehensive Arts and Science (CAS) College Transition course. It is the second of two English courses designed to give students a solid foundation in writing skills and to prepare them for success in subsequent post-secondary studies. Through varied writing assignments, revisions and numerous grammar exercises, students will achieve a college level of proficiency in English. Students may also meet the admission requirements for CAS Transfer: College-University through the successful completion of this course.

Prerequisite(s): CM1060

CM1070 - Communications I

The academic focus of this course will be the advancement of reading and writing skills. Students will examine the writing process including basic grammar, structural mechanics, and paragraph writing.

CM1090 - CRW I: Telling Stories

CRW I: Telling Stories focuses on the language encountered in reading and the language we use to record our reading experiences. This course is transferrable to MUN English 1090 or English 1000 and is recognized as a Critical Reading and Writing (CRW) course at Memorial University. All sections of this course follow CRW course content guidelines of Memorial University.

Prerequisite(s): Minimum of 60% in English 3201 or in the former combination of Language 3101 and a minimum of 60% one of Thematic Literature 3201 or Literary Heritage 3202. Adult Basic Education graduates must have a minimum of 60% in IC3112 and IC3321 or English 3101A, 3101B, and 3101C (to meet MUN's admissions requirements)

CM1100 - Writing Essentials •

Writing Essentials is an introductory course designed to review writing fundamentals including grammar,

punctuation, spelling, and usage. Students will apply principles of writing in sentence and paragraph construction.

CM1115 - Communications for TV & Film

Writing and communicating in the television & film industry are critical skills for success. In this course, students will be applying effective writing skills, and will be provided a foundation in speaking, listening, and nonverbal communication in addition to developing their teamwork and organizational meeting skills. The course will emphasize script breakdown, interpreting schedules and daily sheets, and accurately interpreting and completing job-related documentation. Students will examine a variety of documents and applications that will familiarize them for working within the industry.

CM1145 - CRW II: Rhetoric

This course is an introduction to the writing and analysis of prose. Students will analyse prose writing and practise a number of writing strategies that consider a variety of audiences and purposes. The course furthers the development of writing and analytical skills acquired in CM1090 – CRW I: Telling Stories, and introduces the student to writing intended to critique, persuade, and analyze. This course is transferable to MUN English 1110 and is recognized as a Critical Reading and Writing (CRW) course at Memorial University. All sections of this course follow CRW course content guidelines of Memorial University.

Prerequisite(s): CM1090 or MUN English 1090

CM1170 - Essentials for Communication & Documentation

This course is designed to provide knowledge and skills necessary to communicate and document information effectively in the health care setting. It explores the concepts of selfawareness, culturally sensitive care, the communication process, communication techniques, and potential barriers to communicating effectively. Students will be familiarized with introductory writing skills, medical terminology, and abbreviations. There is an emphasis on the care planning process and the importance of documentation from professional, legal and employer perspectives.

CM1180 - College English I (Reading Across the College Curriculum)

This is an English course designed for Comprehensive Arts and Science students who need to improve their reading skills and strategies in order to successfully complete the reading requirements of their chosen post-secondary program. The course focuses on the common elements of successful reading across all curriculum areas, as well as the ways in which various areas require the use of different reading skills and strategies. The principal focus of this course is reading to learn. Students will strengthen reading skills and develop strategies appropriate to their areas of study through working with selected course materials and exercises in various curriculum areas (including math and laboratory sciences) at the introductory level of their chosen post-secondary program.

CM1191 - CRW II: Self and Society

This course studies a variety of texts that explore the interaction between individual desires and social identities. This course is transferable to MUN English 1191 and is recognized as a Critical Reading and Writing (CRW) course at Memorial University. All sections of this course follow CRW course content guidelines of Memorial University.

Prerequisite(s): CM1090 or MUN English 1090

CM1192 - CRW II: Imagined Places

This course aims to increase the learner's sensitivity to language through examination of the role of setting in imaginative writing. This course is transferable to MUN English 1192, and is recognized as a Critical Reading and Writing (CRW) course at Memorial University. All sections of this course follow CRW course content guidelines of Memorial University.

Prerequisite(s): CM1090 or MUN English 1090

CM1200 - Oral Presentations

This is a seminar course in oral presentations which attempts to blend theory and practical skills. In addition to considering how oral communications affect group and interpersonal relationships, the student will analyze techniques in the preparation and delivery of oral presentations and will practice these techniques in prepared and impromptu presentations.

CM1215 - Personal & Career Development Seminars

These seminars are designed to help students develop the essential knowledge and skills necessary for career

development. The seminars aim to prepare students for the transition from the academic setting to the workplace setting. Emphasis will be on leadership, goal setting, job searching, interview process, and skills development. Students will also reflect on personal attributes, values, and experiences that may impact their careers.

Prerequisite(s): Successful completion of semester one courses

CM1220 - Communications II

This course introduces students to writing organized and well-defined essays. Building on the skills developed in Communications I, students will develop a thesis statement, outline, and essay structure, while sourcing materials and analyzing and applying a documentation style. In addition, students will create and deliver an oral presentation on an approved topic.

Prerequisite(s): CM1070

CM1240 - Business Communications I •

Clear and effective communication is essential for success in the business world. In this course, students will be introduced to the necessary skills and knowledge to communicate in a variety of business settings. Through interactive lectures and practical exercises, students will develop skills in positive and informative workplace communication, audience analysis and message composition.

CM1241 - Business Communications II •

Business Communications II is designed to further students' knowledge and competence in preparing business documents for the workplace. Throughout the course, they will develop practical skills in writing messages that communicate ideas and information to a wide range of audiences. In addition, students will be introduced to the fundamentals of informal reports including their purpose, structure, and format and will gather and analyze information, cite sources, and make recommendations.

Prerequisite(s): CM1240

CM1250 - Communications in the Workplace

This course will provide students with essential workplace communication skills. Topics covered include the communication process, effective writing, business correspondence, informal reports, oral presentations and job search techniques.

CM1270 - Communications in Health Care •

This course is designed to enable the student to communicate clearly, concisely, and correctly in both written and oral forms in the health care setting. Emphasis is placed on medical documentation and oral communication with healthcare professionals, clients, and families.

CM1400 - Technical Report Writing I •

This course is designed to teach technology students the fundamentals of technical reporting. Emphasis is on strategies of technical reporting, research techniques and organizational skills.

CM1401 - Technical Report Writing II •

This course is designed to help students formulate criteria for structuring informal and semi-formal reports. Various report formats will be examined with emphasis on statistical data analysis, documentation and illustration methods. Oral reporting techniques will be enhanced through problem-solving reports and the technical sales presentation.

Prerequisite(s): CM1400 or equivalent

CM1450 - Writing Fundamentals

This course is designed to introduce students to written communication in the workplace. It provides considerable practice in constructing and editing effective sentences and paragraphs as well as writing clear, concise summaries that are properly documented.

CM1460 - Writing for the Workplace

This course is designed to introduce students to written communication in the workplace and provide considerable practice in writing clear, concise summaries that are properly documented. The intent is to provide ample in-class opportunities to review writing fundamentals and improve writing skills using workplace applications.

CM1520 - Writing for the Arts •

This course will introduce students to the writing of artistic critiques, appreciations, and proposals. Emphasis will be placed on applied writing exercises that require philosophical reflection and that will expand students' vocabulary and increase their effectiveness as communicators in their field.

CM1521 - Writing for the Arts •

This course will introduce students to the practice of effective research, writing of artistic critiques, appreciations, and proposals. Emphasis will be placed on applied writing exercises that require philosophical reflection and that will extend students' vocabulary and increase their effectiveness as communicators in artistic fields.

CM1530 - Proposal Writing

In this course students will learn the necessary skills to write successful proposals. Students will formally research funding sources, identify personal areas of interest, and complete an actual proposal for submission. Students will also be expected to present, defend, and critique their proposals.

CM1550 - Creative Writing

This course provides an opportunity for students who are interested in writing poetry, short fiction, or drama to share ideas and innovations. Students will examine a variety of themes, styles, and techniques which can broaden their own creative explorations. The course encourages students to discover and develop styles appropriate to their own literary aspirations.

CM1680 - Writing for the Screen

Students will acquire advanced skills in critical narrative development, formal presentation, and the screenwriting craft. It expands on previously covered material on film direction, pre-production and narrative fundamentals to create a detailed creative synopsis or "treatment" and a screenplay in a prescribed format.

CM2100 - Workplace Correspondence •

Students will study the principles of effective writing and use technology to communicate effectively. This course includes topics that explore sentence and paragraph construction, effective workplace communications, informal reports, professionalism and technology in the workplace, and job search communications.

CM2110 - Business Writing Fundamentals •

Business Writing Fundamentals gives students the opportunity to apply the principles of effective business writing. Applications include letters, memos, e-mail and informal business report writing. This course also allows students to explore job search techniques.

Prerequisite(s): CM1100

CM2125 - Communications in the Workplace

This course will provide students with essential workplace communication skills. Topics covered include the communication process, effective writing, industry correspondence, informal reports, oral presentations and job search techniques.

CM2130 - Workplace Writing •

Students will be introduced to the principles and practices of effective written communications applicable to their program of study. They will understand the importance of well-developed writing skills; the purpose of various types of correspondence; examine the principles of effective writing; examine standard formats for letters and memos; write effective letters and memos; examine the fundamentals of informal reports and the report writing procedure, and develop an effective resumé.

CM2160 - Communication Essentials

This course is designed to introduce learners to the principles of effective communication including letter, memos, short report writing, oral presentations and interpersonal skills. Learners will apply the principles using trade specific examples.

CM2200 - Oral Communications • ®

Oral Communications is a comprehensive course designed to equip students with the skills necessary to become

effective communicators. The course introduces students to the fundamentals of oral communication, including verbal and nonverbal communication, active listening, and public speaking. Students will identify and overcome common communication barriers as well as create effective presentations and deliver them with clarity.

CM2201 - Oral Communications

In this course, students will develop interpersonal, oral communication, and presentation skills in a team-based environment.

CM2215 - Client Relation Communication •

This course explores the communication process and focuses on effective communication in verbal and written form. In addition, students will learn workplace techniques relating to professionalism, management and job search skills.

CM2300 - Report Writing •

Report writing introduces students to the application of the skills and knowledge required to produce high-quality formal reports suitable for a variety of audiences, while providing an in-depth examination of the principles and practices of formal report writing. Students will develop their writing skills to produce clear, concise, objective reports suitable for a variety of contexts including professional and technical settings.

CM2800 - Oral/Written Communication Skills

This course will provide students with instruction in the areas of writing technical reports and the delivery of oral presentations. Emphasis will be placed on the processes involved in effective writing and effective presentations as they pertain to specific technologies. Students will learn relevant skills for researching, organizing, writing and presenting technical information.

Prerequisite(s): CM1401 or CM1460

CM3020 - Evidenced Based Practice & Oral Communications •

This course will provide students with a basic understanding of medical research methodologies and an appreciation of the value of research in developing best-practice health-related guidelines. It will also provide the learners with the opportunity to conduct and evaluate research, and to present findings to an audience of peers and supervisors. Working in a team-based environment, learners will develop interpersonal, oral communication, and presentation skills.

Prerequisite(s): PA2025 or equivalent

Co-requisite(s): PA3110, PA3115

CP1010 - File Management and Security •

This course introduces the student to file management, cloud computing and computer security. Students will first perform file management utilizing a Microsoft Windows operating system using both the graphical user interface and command line. File management will then be examined utilizing cloud technologies. Students will subsequently look at overall security for a corporate and home network environment exploring how to secure data and personal information.

CP1210 - JavaScript

This course introduces the student to the fundamentals of JavaScript programming and the use of JavaScript as the third pillar of modern web page/web site design. The student will use the basic programming constructs to add functionality to a page and to manipulate the Document Object Model (DOM). Finally, the student will use AJAX and JSON to perform data transfers from the client to the backend server and vice versa.

Prerequisite(s): CP1190 and CP1120 or CP1850 and CP1520

CP1211 - JavaScript

JavaScript is among the most powerful and flexible programming languages available and one of the most popular languages used in web development. This course will introduce students to the programming fundamentals of the JavaScript language, where students will learn basic programming constructs to add various functionality to webpages. Topics will include an introduction to HTML and CSS, JavaScript programming structures, the manipulation of the Document Object Model (DOM), and the use of AJAX and JSON to perform data transfers between the client and server.

CP1212 - Introduction to JavaScript •

JavaScript is among the most powerful and flexible programming languages available and one of the most popular languages used in web development. This course will introduce students to the programming fundamentals of the JavaScript language, where students will learn basic programming constructs to add various functionality to webpages. Then the student will explore jQuery one of the most popular libraries used to help in JavaScript development.

CP1270 - Programming Fundamentals

The course introduces the fundamental concepts of problem solving and procedural programming techniques used to design and implement computer solutions to problems in engineering and mathematics.

CP1291 - Advanced JavaScript

JavaScript is one of the world's most popular programming languages, and one of the major components of building web applications. This course is designed to expand on topics covered in CP121X JavaScript and will continue to enhance student skills and knowledge of the JavaScript programming language. Students will learn effective approaches to develop JavaScript applications and master advanced features of the language such as objects, closures, callbacks, modules, and the use of JavaScript Object Notation (JSON).

Prerequisite(s): CP1211

CP1292 - JavaScript and NodeJS •

JavaScript is one of the world's most popular programming languages, and one of the major components of building web applications. This course is designed to expand on topics covered in CP1212 Introduction to JavaScript and will continue to enhance student skills and knowledge of the JavaScript programming language. Node.js is introduced building on the students JavaScript skills enabling web application development for the front and back-end. Students will learn effective approaches to develop applications and master advanced features such as objects, closures, callbacks, modules, and the use of JavaScript Object Notation (JSON).

Prerequisite(s): CP1212

CP1295 - Advanced JavaScript

This course is designed to provide students with an advanced understanding of JavaScript programming, including its principles, concepts, and best practices. The course will cover a range of topics including advanced language features, asynchronous programming, and front-end web development frameworks. Through lectures, hands-on exercises, and project work, students will learn how to write efficient and effective JavaScript code for a variety of applications.

Prerequisite(s): CP1210

CP1340 - Object Oriented Programming

The course is designed to give the learners a thorough grounding in the principles of object oriented programming. Additional topics include exception handling design and implementation of Java applications with Swing graphical user interface and multithreading in the Java programming environment.

Prerequisite(s): CP1270

CP1410 - E-Commerce Web Analysis and Design •

This course introduces students to the concepts of systems analysis and design for the Web. It gives a fundamental overview of the Web site development process, and details the iterative cycle of planning, analysis, design and development, and testing. Emphasis is placed on designing an effective, user-centered, accessible commerce based Web site.

Prerequisite(s): CR1511

CP1420 - Web & Mobile App Development

This course will provide the student with a basic understanding of the online technologies and tools available to create professional looking web sites, mobile web sites and mobile apps. It uses simple free on line content provided by the web hosting company to quickly develop a web site, a mobile web site and a mobile app. It will give the student an appreciation and understanding of the types of sites and applications that they will learn how to develop in the program.

CP1461 - Operating Systems

This course introduces students to a broad range of operating system concepts that cover both Windows, Linux, and mobile environments. It provides students with the knowledge and skills required by that of a developer to utilize various operating systems effectively, including installation, maintenance, management, and security considerations.

CP1465 - Windows Server Administration

The first of two Microsoft Server Courses, upon completion the student will have the skills and knowledge necessary to implement a core Windows Server infrastructure in an existing enterprise environment. The student will be able to implement and configure Windows Server core services, including Active Directory and networking. The student will be able to complete the tasks necessary for designing, managing, maintaining, and provisioning server services in an infrastructure.

Prerequisite(s): CR1107

CP1501 - Business & E-Commerce •

This course provides the student with an overview of business, e-commerce, business models, virtual value chains, social innovation, and marketing strategies. The course includes some of the major issues associated with business and e-commerce including security, privacy, intellectual property rights, authentication, encryption, acceptable use policies, and legal liabilities. Upon completion of this course, the student will understand the basics of business and e-commerce, social and mobile marketing, and how to develop a digital presence.

Prerequisite(s): EP1130

CP1505 - Designing Effective E-Commerce Sites •

The Designing Effective E-Commerce Sites course provides students with an opportunity to utilize and demonstrate the tools, knowledge, and skills developed during the first year of the program. Students will design and create a multimedia-rich E-Commerce Site using WordPress based on a given set of criteria. Emphasis is placed on creativity of design and effective use of technology.

Prerequisite(s): CM1401, CR1511, CP1410

CP1520 - Web Development

HTML, CSS, and JavaScript serve as the cornerstone technologies in the field of web development. Proficiency in the use and implementation of these essential tools is crucial for creating web pages and websites. This course covers essential topics in web development, focusing on HTML, Cascading Style Sheets (CSS), Forms, and JavaScript. Students will acquire the practical skills and theoretical knowledge to create and enhance web pages, develop responsive layouts, build interactive forms, and implement dynamic functionality using JavaScript.

By the end of this course, students will be able to utilize HTML, CSS, forms, and JavaScript, enabling them to develop engaging, interactive, and dynamic websites.

CP1555 - Database Management Systems I

This course will provide the student with the necessary general understanding of Databases and Relational databases. The student will learn the basic structure of a relational database management system, how they are implemented, basic queries / SQL statements to properly and successfully retrieve, add, edit and delete the data based on given criteria.

CP1580 - Using Internet APIs •

Including content and services from other providers is an important aspect of web development. In this course, the student will focus on how to use the APIs of other service providers to develop a web application. Topics will include an introduction to the APIs, and OAuth. Working with third party APIs and working with E-Commerce APIs. At the end of the course students will be able to create web applications that utilizes content provided through third party API's and will perform E-Commerce transactions utilizing payment processors APIs.

Prerequisite(s): CP1292

CP1640 - Visual Basic Applications for ACAD

This course is designed to give the student exposure to programming logic and data linking between graphics information and text/numerical data. The student will develop the ability to reduce an algorithm into linear

components for solution by computer. The course will concentrate on utilizing Visual Basic algorithms to perform surveying functions which automate the drafting process. Menu customization will also be covered to complete the ACAD customization.

Prerequisite(s): SU1321

CP1850 - Procedural Programming

This course is designed to give the student the logic involved in the computing process and the ability to develop an algorithm to describe the solution to a given problem, with implementation using a programming language of choice. The student should also be able to analyze, design, develop, code and debug a solution to a programming problem based on the introductory programming concepts introduced in this course.

Co-requisite(s): MA1900

CP1855 - Introduction to Programming with Python

This course will introduce students to Python programming. Python is a widely used programming language in fields such as web development, data science, and artificial intelligence. Students will begin with the basics of writing and running python scripts, and advance through concepts such as conditional code and flow control, functions, loops, modules, testing, debugging and exception handling. Upon completion, students will be able to analyze, design, develop, code, and debug a solution to a programming problem based on provided scenarios.

CP1856 - Programming with Python

Python is a widely used programming language in fields such as web development, data science, and artificial intelligence. Students will begin with the basics of writing and running python scripts, and advance through concepts such as conditional code and flow control, functions, loops, modules, testing, debugging and exception handling. Upon completion, students will be able to analyze, design, develop, code, and debug a solution to a programming problem based on provided scenarios.

CP1890 - Object-Oriented Programming

This course is designed to give the student intermediate skills in the computing process and the ability to develop an algorithm to describe the solution to a given problem, with implementation using an object oriented programming language. This course uses object oriented technologies using a selected development environment to aid the student in developing a GUI solution to business problems.

Prerequisite(s): CP1850 or CP1120 or CP1855

CP1895 - Advanced Python Programming •

In this course, students will learn advanced Python programming concepts and features, expanding upon the fundamental skills acquired in the Introduction to Programming with Python. Core concepts include a variety of structures such as dictionaries, stacks, queues, sets, trees and algorithmic complexities and the application of object oriented design principles to build software using the appropriate data structures. Content will focus on the applied use of python to solve modern day problems utilizing one or more popular frameworks.

Prerequisite(s): CP1855 or CP1856

CP1923 - Computer Hardware and Troubleshooting I

This course is designed to expose the students to the basic components of a computer system, operating system, and methods of troubleshooting. The student will learn how to: evaluate, install, configure, troubleshoot and specify all basic computer components such as CPUs, Memory, and Storage Devices. It will also cover such topics as: Operating systems, computer repair fundamentals, chipsets, buses and expansion slots. Students will gain a complete, step-by-step approach for learning the fundamentals of supporting a computing infrastructure and for learning the fundamentals of supporting and troubleshooting computer hardware and software.

CP1927 - Computer Hardware and Troubleshooting II

This course focuses on the installation, configuration, security, and maintenance of a Windows operating system on a computing device. Topics also include the Windows startup sequence and customer service strategies. The student is also introduced to the MacOS and Linux operating systems.

Prerequisite(s): CP1923

CP1935 - Systems Analysis I

This course introduces students to the concepts of Systems Analysis and Design utilizing an object-oriented approach. The aim is to provide the student with a practical, hands-on skill set of the latest object-oriented design method using the Unified Modeling Language (UML) using the Unified Process. The course is laboratory oriented allowing the student to develop real design for use with Object Oriented programming languages. It reviews all phases from an object oriented approach but concentrates on the various types of UML modeling.

Co-requisite(s): CP1850* or CP1855* or CP1856 *These courses may have been completed as prerequisites

CP1945 - Systems Analysis II

This course covers the activities required to successfully build an information system. It introduces students to Project Management, managing programming, testing and documenting. This course also covers how to make use of common design patterns using Java or C# to aid in creating standardized and efficient solutions in software design and programming.

Co-requisite(s): CP1935, CP1890 or CP1895

CP2000 - Embedded Linux

This course will provide the student with an introduction to the Linux operating system and its use in electronic instrumentation. The student will be instructed in the use of the command line environment as well as the maintenance and support of embedded Linux.

CP2010 - Frameworks •

Frameworks speed up the development process. They have the added benefit of helping teams work with standardized workflows and notations. Students will learn to use the JavaScript framework VueJS to build fast responsive web applications. Students will also use the CSS framework TailwindCSS to style their websites so that it has a unique look and feel.

Prerequisite(s): CP1292

CP2030 - AWS Cloud Development •

The Amazon Web Services (AWS) Cloud Development course is designed to give students the technical knowledge and skills required for building secure, reliable cloud-based applications using the AWS technology. The students are introduced to AWS and will use the broad range of tools available such as global compute, storage, databases, analytics, application and deployment products and services. With these tools, students will be able to help businesses scale and build applications with increased flexibility, scalability, and reliability.

Prerequisite(s): CP1895 or CP1292

CP2070 - Social Media Management •

This course is designed so that students will use digital/social/mobile marketing's true value to enhance business for consumers, managers, and other corporate stakeholders. It will provide students with the relevant knowledge, perspectives, and practical skills required to develop marketing strategies that leverage the opportunities inherent in social media and consumer-to-consumer social interactions for achieving business and marketing goals. Students will learn the use of social media to increase brand awareness, identify key audiences, generate leads, and build meaningful relationships with customers. Students will be equipped with general theories and knowledge when it comes to social media marketing; and how to utilize new and constantly updated social media marketing strategies for businesses. By the end of the course, students will know how to implement a successful content strategy for Facebook, Instagram, Twitter, Snapchat, Pinterest, LinkedIn, HootSuite and YouTube.

Prerequisite(s): None

CP2075 - Digital Analytics •

This course exemplifies how marketing analytics are the foundation to digital marketing. Students will learn how analytics is the language used to optimize and connect results across all digital marketing tactics (search, social media, email, display, video, etc.). The technical and soft skills of analytics will be highlighted through theory and practical application to better understand data analysis. Upon completion of the course, the student will be able to explain and apply the logic of optimization and attribution in business analytics. The student will be able to apply the practical tools and techniques of business analytics and run field experiments in digital environments using A/B testing. The student will also practice web analytics for better business decision-making.

Prerequisite(s): CP1850, CP2070

CP2080 - Salesforce Development •

This course will introduce the student to skills and concepts that are essential to develop in the Salesforce ecosystem. Upon completion of this course, the student will be able to create business to consumer ecommerce websites quickly using Salesforce B2C Commerce.

Prerequisite(s): CP2010

CP2085 - Orientation to the EWeb Work Exposure •

The work exposure is an integral part of the Enterprise Web Development program's curriculum. Work exposure opportunities are arranged by the Work Exposure Coordinator for the program but ultimately must be secured by students in competition with all applicants for the position. This course focuses on content that will assist students in finding a meaningful placement and prepare students for a career in enterprise web development by fine-tuning the skills cultivated throughout the program.

CP2110 - Advanced Electronic Spreadsheets •

This course allows students to build on the basic concepts and applications of electronic spreadsheets. Students will create, format and print advanced worksheets and graphs and will incorporate advanced functions and macros into their spreadsheets. They will summarize, consolidate, and analyze data using a variety of spreadsheet features. They will also use tables and data tools features to manipulate data. They will be able to create and format new professional business document using a variety of spreadsheet features and analyze the data to make appropriate business decisions.

Prerequisite(s): CP2310

CP2115 - Computer Applications

Production tools throughout many industries benefit from the use of digital software. Common software integrations that help create an organized and productive work environment include file management, word processing, spreadsheets, and online and mobile applications. Providing students with digital literacy knowledge, and how these production tools work, is important to promote successful academic studies throughout the college experience and provide essential skill sets that can be applied in the workplace.

CP2205 - Advanced PHP Laravel •

This course will introduce the student to skills and concepts that are essential to develop and maintain a web application using the Laravel PHP framework. Upon completion of this course the student will be able to create powerful database-driven websites quickly in a scalable, re-usable, repeatable way.

Prerequisite(s): CP2426

CP2280 - Object-Oriented Programming in Java •

This is a course in object-oriented programming for students with no experience with Java but some knowledge of a strongly typed language. Examples and assignments typify standard business applications. The course stresses key object-oriented design concepts and their implementation rather than exhaustive coverage of the Java language itself.

Co-requisite(s): CP1120 or CP1850 or CP1855

CP2285 - Big Data Programming with Java

This course is designed to give the students experience with understanding, and using Hadoop to work with Big Data. It will introduce the Hadoop Ecosystem, set up of Hadoop, and explain storage and how to access data. It introduces the student to Hadoop's ecosystem and framework of open and closed source tools, libraries and methodologies for "Big Data" analysis.

Prerequisite(s): CP2275 or CP2280, CP1461

CP2290 - Advanced Windows Enterprise Server

Building on the skills developed in CP1465 Windows Server Administration, this course enhances the student's ability to administer a Microsoft Server. It focuses on the skills and knowledge necessary to administer an infrastructure in an enterprise environment.

Prerequisite(s): CR1105, CP1465

CP2310 - Electronic Spreadsheets •

This course will introduce students to the concepts and applications of electronic spreadsheets. Students will create, format and print enhanced worksheets and graphs, and will incorporate functions into their spreadsheets. They will also use table features to format and analyze data.

CP2426 - PHP •

This PHP programming course uses open source software, PHP, and a database, to provide the student with the applied skills to build professional-quality, database-driven Web sites. By integrating PHP and the database with HTML and CSS frameworks, the student will develop the skills to build interactive Web sites with authentication and security.

Prerequisite(s): CR1511, CP1292, CP3510

CP2530 - Data Structures & Algorithms

This course builds on the foundation provided by Programming Fundamentals and Object Oriented Programming. It introduces the fundamental concepts of algorithm analysis and design as well as dynamic data structures.

Prerequisite discrete mathematics concepts are introduced as appropriate.

Prerequisite(s): CP1340

CP2561 - Java Programming II

This is a second course in Java for students who have already completed a one-semester course in object-oriented programming in Java. Examples and assignments typify standard business applications. The course stresses using object-oriented design concepts to develop relatively sophisticated applications in Java. Topics include but are not limited to:

Installing the Java Development Kit (JDK), String Processing; Graphics and Java2D components; Event-handling; Exception Handling; Multithreading; File and Stream I/O; Internet Networking; Multimedia; Utilities Package and Bit Manipulation; Collections API.

Prerequisite(s): CP2275 or CP2280

CP2640 - Desktop Publishing •

Using desktop publishing software, students will prepare newsletters, flyers and other publications which require professional design elements such as columns, boxes, tables, various font faces and styles, rules, and graphic pictures.

Prerequisite(s): DM1200 or MC1240

CP2730 - Project Management and Analysis

This course is designed to help the student understand the workings of project management/analysis and understand its importance to improving the success of information technology projects. The student will complete a major project that concentrates on project management/analysis as it applies to the infrastructure support area. Project management software, such as Microsoft Project, will be used throughout the course to complete coursework.

Prerequisite(s): CR1107

CP2845 - Database Programming with .NET

This course is designed to give the student advanced skills in the computer programming process. This course uses the .NET framework to aid the student in developing solutions to business problems. It incorporates skills required in the programming field such as: using collections, XML, and data access and reporting using the .NET framework.

Prerequisite(s): CP1890, CP3416

CP3000 - Emerging Trends in Applied SD

The goal of this course is to solidify the student's understanding of the latest advancements in the field of applied software development. Students will build upon the material covered in the first emerging trends course by applying that knowledge in developing applications that resemble the real-world software development industry.

Prerequisite(s): CP4471

CP3010 - Server Side Programming

The course is designed to build upon existing JavaScript skills and to provide a comprehensive overview of web application development using Node.js by focusing on the core competencies required to develop Node.js applications for the enterprise. Students will learn the fundamentals of server-side web development using MongoDB (a NoSQL

database), Express.js (for building web servers), and Node.js. These tools and concepts will introduce students to models of software development that can apply to any web development environment, including the application server (node.js), Model View Controller (MVC) frameworks using Express.js, front-end frameworks (e.g. Angular), and databases (MongoDB). The course includes setting up a node.js environment, building web APIs and full-stack JavaScript applications, and following good application development practices.

Prerequisite(s): CP1890, CP1520, CP1295

CP3105 - WordPress •

WordPress is the most popular content management system in use on the web today. There are millions of webpages served by WordPress each day. WordPress allows sites to include web content like forums, media galleries, e-commerce stores and much more. Students will install WordPress, WordPress themes and WordPress plugins. Students will also create custom themes and custom plugin to add functionality to a WordPress site.

Prerequisite(s): CP1410, CP2426

CP3125 - Command Line and PowerShell

Interacting with the operating system without using a GUI requires the use of text commands in a shell environment; this is called a command line. Navigating the command line is an essential skill for the computing professional. In this course the student learns to interact with, configure and troubleshoot the operating system using command line processes and PowerShell. The student will learn by the “hands-on” application of the commands and procedures.

CP3155 - UI/UX Design •

This hands-on course enables the students to develop a strong foundational understanding of user interface (UI) and user experience (UX). Students will avail of user research and User-Centered Design (UCD) approaches and utilize them to design common user-interface elements in custom interactive functionalities. Students will also learn what UX is as well as the fundamentals of UX design and how to include in all digital products and services. Students will demonstrate successful practices in User-Centered Design (UCD) and use personas, user research and user stories. Discussion of issues surrounding usability on the Web including knowledge management and web strategies. Emphasis is placed on adherence to Web standards and accessibility guidelines and how to effectively use Web analytics to refine site design.

Prerequisite(s): CR1511, CP1580, CP1505

CP3416 - Database Management Systems II

This course builds on the first course of database management systems (DBMSs) and introduces concepts common to all DBMSs. Students will apply database designing processes using entity relationship (ER) diagrams and normalizing the database. Students will implement “stored program development” utilizing multiple SQL statements enhancing database productivity and work with the data definitions of SQL. The role of the Database Administrator will be explored enabling the securing of the database and assignment of privileges. Finally, this course introduces big data and NoSQL databases.

Prerequisite(s): CP1555, CP1856 or CP1850

CP3470 - IM Systems Analysis and Design •

Business systems and applications provide the foundation for the completion of transactions and management of case files. Increasingly, the organization’s record of authority is being held in databases or combined with unstructured data in Electronic Records Management Systems. The IM Systems Analysis and Design course prepares students to participate in the complete system development life cycle (SDLC) of IM related projects. It gives a fundamental overview of the effective analysis and design of business-related problems. It also concentrates on requirements definition, feasibility and design considerations utilizing the traditional SDLC methodology and methodology that is unique to IM.

Prerequisite(s): OP1390, CR1050

CP3490 - Software Engineering

The course introduces learners to the principles of software engineering, object oriented modeling and analysis of large software systems using unified modelling language (UML) and different phases of software life cycle: requirements, analysis, design, implementation and testing. Development of a significant software system is a crucial part of the course.

Prerequisite(s): CP2530

CP3510 - Relational Database Design •

This course introduces concepts common to all database management systems in such a way that the student can function in a meaningful and knowledgeable manner in any data processing environment where database concepts are implemented. The theoretical concepts are put into practice using current database architectures and technology.

CP3520 - Databases

The course introduces learners to the principles of database design and implementation as well as administration of database management systems. Discrete mathematics prerequisites are introduced as appropriate. Development of significant database system is a crucial part of the course.

Prerequisite(s): CP2530

Co-requisite(s): CP3490

CP3521 - Web Programming

The course is designed to give learners a thorough understanding of Web technologies. Topics include client-server architecture and protocols. Server side topics include JavaScript and PHP scripting languages, AJAX, Java servlets and security.

Prerequisite(s): CP3490; CP3520; CE1210

CP3540 - Applied ASD Project

This project course enables students to demonstrate the application of knowledge and skills developed throughout their program of studies. Students taking this course will work in teams on a project, under the supervision of a faculty supervisor, and will perform the following:

1. an in-depth analysis of a problem that requires a software solution developed
2. a design and implementation of the problem solution
3. presentation of their solution

The focus of this course is on presenting a clear concise solution with brief supporting documentation. This project can be one from industry or one assigned by the College. If it is an industry-driven project, prior faculty approval must be provided to ensure it meets the scope, depth and focus required to meet the course outcomes.

Prerequisite(s): CP1935, CP2561, CP1291

CP3566 - Applied Java Programming

This is the third course in the Java sequence and will extend a student's Java knowledge to include web applications. Many of today's popular Java web frameworks are built on top of the Servlet and Jakarta Server Page specifications and base libraries. To fully understand how these frameworks, operate, and to be able to take full advantage of the facilities they offer, students will learn the foundations that these frameworks are built on. This course will explore how it is possible to build a web application using these fundamental technologies, as well as learning techniques to manipulate databases using Java Database Connectivity (JDBC), and the creation of web components utilizing the latest Java web frameworks (examples may include Spring, Struts, Java Server Faces, GWT, etc.). Students will demonstrate deploying web-based frameworks that are secure and stable and fully support API and web services.

Prerequisite(s): CP2561, CP3416

CP3810 - iPhone Application Development

This course introduces students to applications development for iOS devices and is structured around tools, frameworks and programming language(s). Topics include Model-View-Control paradigm, Objective-C, storyboards, constraints and layouts, outlets and actions, navigation controllers, segues, UIView, UITableView, UIScrollView, UIPickerView, UICollectionView, UITabBar and UISegmented controllers, networking, telephony, maps and webview, persistent data, SQLite and Sprite kit.

Prerequisite(s): CT2530, CP3490

Co-requisite(s): CP3831

CP3831 - Computer Graphics Game Development

This course introduces students to computer graphics using OpenGL libraries and professional game engine to

develop 2D/3D games.
Prerequisite(s): CT2530

CP4281 - Programming for Mobile Devices

This course is designed to give students an introduction to building Android applications for mobile devices. It is designed for first-time mobile developers. A knowledge of the Java programming language is required for this course.

Prerequisite(s): None
Co-requisite(s): CP2561

CP4305 - Orientation to the ASD Work Exposure

The work exposure is an integral part of the Accelerated Software Development program's curriculum. Work exposure opportunities are arranged by the Work Exposure Coordinator for the program but ultimately must be secured by students in competition with all applicants for the position. This course focuses on content that will assist students in finding a meaningful placement and prepare students for a career in IT by fine-tuning the skills cultivated throughout the program.

CP4450 - Research and Statistics

This course introduces generalized research skills along with an introduction to the basic principles of quantitative statistics commonly encountered in the Information Technology environment. Coursework will assist students in finding credible topics typically found in Information Technology related published research. In addition, students will be exposed to statistical topics that will enable the interpretation of descriptive statistics and develop confidence in the analysis of quantitative and qualitative research.

CP4470 - Emerging Trends in Industry

Through directed research, students will explore emerging trends in the digital animation field. The topics covered are selected from an information technology area that has not been fully explored in the student's program to date. The aim of this course is to complement or supplement previous training or to augment training in response to current trends or an unseen deficiency in student knowledge of specific topics.

CP4471 - Emerging Trends in Software

This course covers trends in software development that arise from the natural evolution of the field. Topics are selected with the aim of exposing the student to the new and/or evolving techniques and/or technologies used in software development.

Prerequisite(s): CP3416, CP2275 or CP2280, CP1945 or CP1950

CP4475 - Emerging Trends and Innovation •

Technology is constantly changing and evolving. This course explores trends and innovation that arise from the natural evolution of the field. Topics are selected with the aim of showing the student new and/or evolving techniques and/or innovations used in enterprise web development.

Sample topics of discussion and examination could include:

- Mobile Commerce
- Enterprise computing
- Social E-Commerce
- Collaborating and project management
- Leadership and technology
- Artificial intelligence
- Augmented reality
- Interactive product visualization

- Big data
- Analytics

Examples of assignments and projects could include:

- Case study on a new technology in an organization
- Industry needs analysis
- Implementation plan for new technologies
- Utilization of the new technology
- Industry technology presentation
- Industry driven project

Prerequisite(s): CP2030, CP1505, CP1292, CP1895, CP1501, CP3155, CM1401, MA1900, CR2800, CR1355, CP1580 and CP2075, CP2080 or CP2205, CP3105

CP4477 - Emerging Trends & Innovation in ASD

Technology is constantly changing and evolving. This course explores trends and innovation that arise from the natural evolution of the field. Topics are selected with the aim of showing the student new and/or evolving techniques and/or innovations used in software development.

Sample topics of discussion and examination could include:

- Artificial intelligence
- Augmented Reality
- Virtual Reality
- Interactive product visualization
- Big data
- Analytics
- Computer and Network Security
- Cloud Systems
- Game Programming
- Machine Learning

Examples of assignments and projects could include:

- Secure a full stack web application from a variety of security threats through a framework of penetration testing.
- Develop Web based multiplayer online game
- Develop Unity Game Engine video game
- Develop an Augmented Reality / Virtual Reality entertainment application
- Develop an Augmented Reality / Virtual Reality medical application

- Develop applications which analyze data sets to make predictions using a MachineLearning model
- Develop a Music Recommendation Engine based on Data Analytics
- Build a Data Portal app using Twitter Data
- Industry driven project

Prerequisite(s): CP3416, CP1895, CP1291, CP1935, CP2561

CP4485 - Emerging Trends in DB and Web Dev

Technology is constantly changing and evolving. This course explores trends and innovation that arise from the natural evolution of the field. Topics are selected with the aim of showing the student new and/or evolving techniques and/or innovations used in modern database design and integration with the rest of the web development stack.

Sample topics of discussion and examination could include:

- Frameworks: Flask, Django, Node.js
- SQL DBMS: MySQL, PostgreSQL, SQLite
- NoSQL databases such as: MongoDB
- Front-end: HTML/CSS/JavaScript
- User authentication: OAuth
- Deploying backend code from local machine to servers
- Automated management

Examples of assignments and projects could include:

- Front end web development using HTML/CSS and JavaScript
- Bridging SQL and NoSQL
- Server-less cloud-based databases
- Developing a web server which reads and writes data from and to a database server and allows user interaction using a front-end website
- Building a user authentication system using the OAuth framework to authenticate users and store user specific data
- Building a fully featured web application that includes the following components:
 - A front-end website using HTML/CSS and JS
 - A database server
 - A user-authentication system
 - A back-end server to server the website and interacts with the database server

Co-requisite(s): CP1890*, CP3416*, CP1210 - *These courses may have been completed as prerequisites

CR1020 - Desktop Application Support

Desktop applications are the user's primary interface to information in a networked business environment. Information Technology support personnel are required to configure and support user applications to provide highly available and secure data access, manipulation and storage. This course provides support personnel

with the skills to install and configure application software and support individuals in using the most common desktop applications deployed in a typical business environment.

CR1030 - Linux Server Administration

Linux runs everywhere; devices such as desktop computers, smartphones, routers, web servers, supercomputers, TVs, refrigerators, and tablets to name a few. This course deals with the use and administration of a Linux based system. Students will explore the various tools and techniques commonly used by Linux system administrators and end users to carry out their day-to-day work in a Linux environment. The course is designed for computer users who have limited or no previous exposure to Linux. Upon completion of this course students should have a good working knowledge of common Linux tools, from both a graphical and command line perspective, allowing them to easily navigate through any of the major Linux distributions.

CR1050 - IM Computer Technologies

This course focuses on the concepts, tools and technologies commonly used to manage the information life cycle in today's business environment. Through this course, students will apply concepts related to file/form creation and management, organization and storage, data analytics and presentation and reporting. Technologies include Microsoft Excel, Adobe, and Treesize. Subjects include Productivity Software, Email Management, Forms and Templates, Document Imaging, Electronic Signatures, Search and Management Processes and Tools, Virtual Work, Data Management, File Disclosure Management and Presentation and Communication Tools.

CR1107 - Network Fundamentals

This course introduces the technology, configuration, and skills required to connect individuals, devices, and corporations in an efficient and secure manner to share information and ideas and collaborate on a regional and global scale. It will provide an overview of networking technologies using international connection standards and will introduce network numbering, protocols, security, and capacity planning.

CR1120 - Introduction to the Field of IT and Ethics

This course will provide the student with an information technology industry overview, information on both Occupational Health and Safety and the Workplace Hazardous Materials Information System (WHMIS) as well as an introduction to ethics and best practices in the Information Technology field.

CR1130 - Intro to the Field of SD

This course will allow the student to obtain basic college information, an information technology industry overview, and an introduction to ethics and best practices in the Information Technology field.

CR1260 - Client Service for the IT Industry

This course focuses on the role of an information technology employee in providing quality technical client service in any given situation. Students will develop the skills they need to interact effectively with clients, either face-to-face, on the telephone, in writing or on the web. Some of the topics covered will be Quality Client Service; Communicating with Clients; Handling Difficult Clients; Solving and Preventing Problems; Working as a Team; and Managing Stress and Burnout.

CR1350 - Computer and Network Technologies

This course provides the student an introduction to computer components and network technologies. Students will gain an understanding of computer systems and mobile device functional components, characteristics, performance and interactions in order to make the best use of tools and languages they use to create programs. Networking and cloud computing technologies and processes will be introduced so the learners are able to recognise the impact that distributed infrastructures have upon application development. Students will learn to document and research their computing requirements and be able to apply those skills in a software development environment to enhance performance, reliability and security.

CR1355 - OS and Network Technologies •

This course provides the student an introduction to operating systems and network technologies. Students will gain an understanding of Networking and cloud computing technologies and processes will be introduced so the learners are able to recognise the impact that distributed infrastructures have upon application development. Students are introduced to a broad range of operating system concepts that cover both Windows, Linux, and mobile environments.

Students will learn to document and apply the skills in a software development environment to enhance performance, reliability and security.

CR1510 - Website Development •

After completing this course the student will be trained in the essential concepts of XHTML and JavaScript. The student will begin with developing a basic web page and move on to developing a basic website. Then the student will create web page forms, and work with cascading style sheets. Next, the student will work with JavaScript to create dynamic web pages and websites.

CR1511 - Website Development •

This course will introduce students to the key concepts of HTML and CSS. The student will begin creating basic web pages and move on to creating full websites. The student will then enhance web pages with more advanced layouts, embedded fonts, audio, video and responsive design. The student will use basic web design principles and create a website using the content management system WordPress.

CR1531 - Web Design II

Students will gain the skills necessary to modify and develop client-side websites. Students will focus on design issues as opposed to programming skills and will be introduced to intermediate programming in HTML and basic CSS and will learn how to develop sophisticated page layouts and images for websites.

Prerequisite(s): CR1535

CR1535 - Web Design I

Students will gain the skills necessary to design and develop a basic website, with an emphasis on design issues over programming skills. Students will be introduced to basic programming in HTML and will learn how to develop sophisticated page layouts and images for websites.

CR2130 - Enterprise Client Management

Enterprises, regardless of size, require the appropriate tools necessary to manage the potentially large numbers of variations of clients and server systems within the organization. In this course, the student will utilize Microsoft's Configuration Manager to increase IT productivity and efficiency through the use of features such as secure and scalable applications, software updates, operating system deployments, compliance settings management, and inventory management. At the end of the course, students will be able to plan, install, use and troubleshoot Configuration Manager for enterprises.

Prerequisite(s): CR1107, CP2290

CR2231 - Microsoft Exchange Server

Since its inception as a text messaging service for locally-connected computers, email has evolved into a globally-connected information sharing and collaboration system. Understanding the interconnection between clients, servers, and other networked email systems is vital to maintaining business communications.

This course focuses on the planning, installation, configuration, and support of a Microsoft Exchange Mail Server. This would include mail concepts, server installation, client configuration, server management and configuration message of delivery in a multiple-site environment, troubleshooting, and security.

Prerequisite(s): CR1105; CP1465

CR2241 - Information Systems Security

Information systems have become mission-critical storehouses of information, and in many cases, the only storage medium for this information. These systems must be secured from accidental and intentional loss of data. This course introduces the concepts and configuration tasks required to create a secure network infrastructure.

Prerequisite(s): CR1107, CP1465, CR1030

CR2252 - Intro to Amazon Web Services

Introduction to Amazon Web Services (AWS) is intended for students who seek an overall understanding of cloud computing concepts independent of specific technical roles. It provides a detailed technical overview of what the AWS cloud is, its basic global infrastructure and architectural principles. Students will explore core characteristics of deploying and operating in a cloud platform as well as basic security operations, compliance aspects and working with

the shard security model.

Prerequisite(s): CR1107, CR1030, CP1465

CR2265 - Virtualization

Current business environments are more dependent than ever on highly-available, secure, scalable, and cost-effective platforms to support datacenter requirements. Virtualization maximizes hardware cost effectiveness and is now part of every corporate datacenter, and support personnel are required to provision these services on a daily basis.

This course features intensive hands-on training that focuses on installing, configuring, and managing VMware vSphere® 7, which includes VMware ESXi™ 7 and VMware vCenter Server® 7. This course prepares you to administer a vSphere infrastructure for an organization of any size.

Through a mix of lecture and hands-on labs, students will configure and optimize the VMware vSphere® 7 features that build a foundation for a truly scalable infrastructure, and you discuss when and where these features have the greatest effect.

Prerequisite(s): CP2290, CR2511

CR2270 - CSN WT Orientation

Work terms are an integral part of the CSN program's curriculum. Work term opportunities are arranged by the Work Term Coordinator for the program, but must be secured by students in competition with all applicants for the position. This course focuses on fine-tuning the skills learned throughout their program of studies and aids them in finding a meaningful placement and becoming an asset to that organization.

CR2402 - Switching, Routing & Wireless

Using the concepts learned in CR1107 – Network Fundamentals, this course provides the skills required to securely configure switches, routers, and wireless connection points to deliver fault-tolerant, scalable, and efficient connections to the network fabric. These skills will include, VLANs, Inter-VLAN Communication, Spanning Tree, Switch Security, EtherChannel, DHCP, FHRP, WLAN, and Static Routing.

Prerequisite(s): CR1107

CR2511 - Advanced Linux Server Administration

This is the second of two courses in Linux server administration and is intended for system administrators and users who already have at least some basic exposure to Linux. This hands on Linux administration course teaches students how to install, configure and maintain a Linux system in a networked environment. Students will not only learn to perform basic administrative tasks such as adding and managing users, creating and maintaining file systems, developing and implementing a security policy, and performing software installation and package management, but will also learn to perform Linux network-related tasks, including installing and supporting NFS, Samba, DNS, DHCP, mail, and the Apache Web server. Comprehensive hands on exercises are integrated throughout to reinforce learning and develop real competency.

Prerequisite(s): CR1030

CR2530 - Web Design III

Students will gain the skills necessary to work as part of a team and develop more advanced websites. Students will be working on more complex projects where the role of the designer is to work with clients, audiences and team members to develop more sophisticated design solutions.

Prerequisite(s): CR1531, GA1351

CR2805 - Application Security

As a programmer or developer, the importance of creating secure applications cannot be overstated. Software security deals with the management of malicious attacks by identifying potential vulnerabilities in software and taking the necessary precautions to guard against them. This course will provide the student with a general understanding of application security and how to apply the concepts to their coding workflow.

CR2903 - Enterprise Network Security & Automation

Building upon the skillset obtained in CR2402, this course describes the architectures and considerations related to designing, securing, operating, and troubleshooting enterprise networks. The course covers wide area network

(WAN) technologies and quality of service (QoS) mechanisms used for secure remote access. Software-defined networking, virtualization, and automation concepts that support the digitalization of networks are introduced. Students will gain the skills required to configure and troubleshoot enterprise networks and learn to identify and protect against cybersecurity threats. They are introduced to network management tools and learn key concepts of software-defined networking, including controller-based architectures and how application programming interfaces (APIs) enable network automation.

Prerequisite(s): CR2402

CR2950 - Emerging Trends in IT Infrastructure

This course covers new trends in IT infrastructure that arise from the natural evolution of the field. Topics are selected with the aim of exposing the student to the new and/or evolving techniques and/or technologies used in the design and maintenance of the IT infrastructure.

Prerequisite(s): CP1927, CR3456, CR2241, CP2290, CR2903, CR2511

CR2970 - Capstone Project

The Computer Support and Networking program provides the student with a broad knowledge base in the design, implementation and support of modern computer network infrastructures. The Capstone Project is a culminating, performance-based assessment that incorporates major disciplines of the program and focuses on critical thinking, problem solving, teamwork, research skills, oral communication and literacy.

Working in a team and under the supervision of a faculty member the student will perform an in-depth analysis of a given computer systems infrastructure and develop a design or re-design plan that meets the goals identified in the analysis. The student will develop a document that incorporates a complete network design configuration and present his/her findings.

Projects will be selected in consultation with a faculty member and may include an industry partner.

Prerequisite(s): CP2730, CP2290, CR2903, CP1927, CR2511, CR2241, CR3456

CR2980 - Capstone Project

The capstone project course enables students to demonstrate the application of knowledge and skills developed throughout their program of studies. Students taking this course will work in teams on a project, under the supervision of a faculty supervisor, and will perform the following: 1) an in-depth analysis of a problem that requires a software solution developed, 2) a design and implementation of the problem solution and 3) full documentation and presentation of their solution. This project can be one from industry or one assigned by the College. If it is an industry driven project, prior faculty approval must be provided to ensure it meets the scope, depth and focus required to meet the course outcomes.

Prerequisite(s): CP1945, CP2561, CP3416, CP1210, CP1520, CM2200

CR3456 - Scripting with Bash

System configuration and maintenance is a primary responsibility for support personnel. Many of the required tasks are repetitive and can be time consuming and error-prone. Scripting provides support personnel with the tools to automate processes; saving time and reducing configuration errors. This course provides the requisite skills to create and maintain complex scripts to manage computer systems using the Linux Bourne Again SHell (BASH).

Prerequisite(s): CP3125, CR1030

CR3540 - Capstone Project •

The capstone project course enables students to demonstrate the application of knowledge and skills developed throughout their program of studies. Students taking this course will work in teams on an IM project, under the supervision of a faculty supervisor, and will perform the following:

1. an in-depth analysis of a business case that deals with an information management issue in an organization or a work integrated learning project with an industry partner
2. the creation and presentation of an analysis document
3. the creation and presentation of a project plan

4. the creation and presentation of a design document
5. a presentation of their solution

Prerequisite(s): CP3470, OP1600, OP1410, PR2700, OP1401, IM2100, IM2110

CR4100 - Foundations of InfoSec

This course will cover a range of baseline security topics, including the basics of computer networks, vulnerabilities, attacks, security policies, and cryptographic principles. Security fundamentals that form the foundation of modern information security practices will be discussed, including Confidentiality, Integrity, and Availability (CIA), the principle of least privilege, and layered security models. Topics will include a broad introduction to computer security, cyber-attacks and techniques, encryption, security policies and data classification, and network and vulnerability scanning.

CR4105 - OS Security: Windows

This course focuses on new risks, threats, and vulnerabilities associated with the Microsoft Windows operating system, placing emphasis on the most recent versions of Windows (both desktop and server variants). Content will encompass the use of tools and techniques to decrease risks arising from vulnerabilities in Windows operating systems and applications. Students will gain hands-on experience related to Windows OS hardening methods, application security, and incident management procedures, comprised of the latest Windows security strategies and techniques.

CR4110 - OS Security: Linux

This course takes a comprehensive, hands-on, look at the security challenges that can affect a Linux server or workstation. Students will learn how to assess security risks in an enterprise Linux environment and choose the best techniques, approaches, and tools to increase security and harden systems. Course content will explore best practices associated with the deployment and monitoring of attack detection tools and examine the process of developing Linux security policy and response strategies.

CR4115 - Network Security I

The network is the front line in the cyber security war, and network administrators need to be ready to defend it. In this course, students will learn the tactical skills necessary to design and manage a secure network and gain a solid understanding of defensive security. This includes the development of a hands-on capability to handle all types of network defense. Topics covered ensure a comprehension of data security, properly configure networking technologies, and the ability to install defensive software to enhance confidentiality, integrity, and availability. The course covers all major domains in such a manner that the student will be able to appreciate the way network security mechanisms have evolved over time, as well as gain insight into the fundamental workings relevant to each domain. It is a blend of academic and practical wisdom, supplemented with tools that the student can readily access and will provide a comprehensive hands-on experience. Upon completion students will demonstrate a solid foundation of network security and the tactical expertise to secure data and build defenses in an enterprise network.

CR4120 - Management of InfoSec

This course focuses on the key managerial aspects of information security and assurance. Students will develop both the information security skills and practical experience that organizations are looking for, as they strive to ensure more secure computing environments. Coursework will prepare a student to become an information security management practitioner, able to secure systems and networks in a world where continuously emerging threats, ever-present attacks, and the success of criminals, illustrate the weaknesses in current information technologies. Topics covered include access control models, information security governance, and information security program assessment and metrics. Reflecting on the most recent developments and up-to-date information in the field, the course addresses national and international laws and international standards like the ISO 27000 series. Students will also be familiarized with the latest information on NIST, ISO and security governance as well as emerging concerns like Ransomware, Cloud Computing and the Internet of Things.

CR4200 - Wireless & Mobile Security

Mobile devices have jumped to the forefront of the corporate business world. With the current trends of Bring-Your-

Own-Device (BYOD) and telecommuting, smart phones, tablets, and other mobile computing devices have become irreplaceable tools in the business environment. Students will investigate the evolution of wired and wireless networking and explore the mobile revolution that took users from clunky analog phones to smart devices that people, and organizations depend upon. Although most view the resulting changes as a net positive, both wireless and mobile networking have introduced significant security vulnerabilities to networking in general.

Students will analyze network security threats, considerations, and the implications of the always on, ever-present aspect of these devices, with a particular emphasis on wireless and mobile security. Using case studies and real-world applications and examples, the course will explore risk assessments, threats, and vulnerabilities of wireless networks, as well as the security procedures that should be put in place to mitigate breaches. Students will examine the strategies and procedures currently in place and look ahead at the future of wireless and mobile device security. Content will include basic security measures that satisfy the needs of small office/home office (SOHO) networks, as well as more advanced concepts in wireless security unique to the needs of larger organizations.

Prerequisite(s): CR4115

CR4205 - Virtualization and Cloud Security

This course focuses on the planning, implementation, configuration, and support of a security model for a cloud-based environment. Many organizations are now utilizing virtualization to deploy their own private clouds in which to run their internal shared services. As organizations migrate to the cloud, and become increasingly reliant on cloud-based IT, malicious threat actors are continuously engineering ways to access valuable data by manipulating safeguards and breaching the security layers of cloud environments. Accessing files and applications over a cloud will prompt a revision of current security architecture, policies, and processes, as using a cloud environment, while convenient, can pose additional security challenges. Content will enable students to establish skills and learn tools that will contribute to the development of a cloud security skillset and prepare them to apply those skills in a real-world setting.

Prerequisite(s): CR4100

CR4210 - Network Security II

The computer network has increasingly become more and more complex and so has the threats to its security. This course is focused on helping the network defenders understand how to effectively deal with issues that challenge the security of a network by presenting a defensive stand to network security. Continuing with the progression of topics covered in Network Security I, subject matter will enhance the skills of a network defender. These abilities include: how to analyze the internal and external network security threats, how to proactively minimize threats by developing necessary security policies, designing appropriate defense strategies, the implementation of effective security mechanisms, and responding to security incidents in a timely manner. The emphasis is on the understanding of various network security elements, updating the already deployed security mechanisms, spotting any known or possible vulnerabilities, and hardening security implementations using various tools. This includes a thorough understanding of the defense mechanisms that are most widely used such as firewalls, IDS, digital signatures, the secure configuration of various every-day applications, and a comprehensive set of policies that are to be enforced in the network to secure it from network breaches.

Prerequisite(s): CR4115

CR4215 - Defensive/Offensive Strategies I

Computers around the world are systematically being victimized by rampant hacking. This hacking is not only widespread but is being executed so flawlessly that attackers may compromise a system, steal everything of value and completely erase their tracks. As technology advances and organizations increasingly depend on technology, information assets have evolved into critical components of survival.

This course is an introduction to defensive and offensive cybersecurity strategies. Students will learn active defense strategies that require organizations to anticipate attacks before they happen by detecting and responding to threats in real-time. Reactive defense strategies (also known as incident response) will also be explored, with a focus on limiting the damage caused by an attack while also collecting information to understand and prevent against similar future attacks.

Concepts will be re-enforced by practical work utilizing current software and security techniques.

Prerequisite(s): CR4100, CR4105, CR4110

CR4220 - Incident Response

Today, many organizations are concerned about data breaches that occur due to targeted cyberattacks, malware campaigns, zero-day vulnerabilities, and ransomware attacks. This course addresses various underlying principles and techniques for detecting and responding to both current and emerging cyber security threats. Students will learn how to handle various types of incidents, risk assessment methodologies, and the assorted laws and policies related to incident handling. After completing the course, students will be able to create incident handling and response policies and deal with different types of security issues such as malware, email security, network security, web application security, cloud security, and insider threat-related incidents. In addition, students will learn about computer forensics and its role in handling and responding to incidents. The course also covers incident response teams, incident reporting methods, and incident recovery techniques in detail.

Prerequisite(s): CR4100, CR4105, CR4110

CR4305 - Defensive/Offensive Strategies II

The most damaging incidents occur when organizations lose control of information and when they must make critical decisions based on finite intelligence while also focused on limiting damage. This course is the second of two courses that focus on defensive and offensive strategies and will continue from where Defensive/Offensive Strategies I ended.

Emphasis will be placed on gaining a practical knowledge of how to protect and defend an organization. Common attacks and techniques will be explored, with the inclusion of a thorough examination and use of the popular tools used by attackers, and how such attacks can be carried out using ordinary and readily available resources.

Prerequisite(s): CR4215

CR4310 - Applied Cybersecurity Project

This project course enables students to demonstrate the application of knowledge and skills developed throughout their program of studies. Students taking this course will work in teams on a project, under the supervision of a faculty supervisor, and will perform the following:

- a. an in-depth analysis of a problem that requires a cybersecurity infrastructure solution
- b. a design of the problem solution
- c. implementation of the problem solution
- d. presentation of their solution

The focus of this course is on presenting a clear concise solution with brief supporting documentation. This project can be one from industry or one assigned by the College. If it is an industry driven project, prior faculty approval must be provided to ensure it meets the scope, depth and focus required to meet the course outcomes.

Prerequisite(s): CR4215, CR4200, CR4205, CR4210

CS2311 - Research Methods and Statistics

This is an introductory course intended to cover general research reading and writing found in published research along with an introduction to the basic principles of quantitative statistics commonly encountered in the health care environment. The overall intent is to help students find and begin to understand health research literature, begin to perform and interpret descriptive statistics, and develop confidence in the interpretation of quantitative research. The course has two main goals: to help students make sense of the research they can be expected to encounter in their professional practice, and to develop a deeper understanding of the commonly encountered descriptive statistics within the clinical environment.

CS2340 - Introduction to Social Research

This course provides students with an introduction to social research. Students explore the meaning, value, ethics, and steps of social research. Various types of social research are reviewed and students actively partake in the research process through the completion of a research project.

CS2500 - Project Management

This course focuses on planning projects and on acquiring and utilizing the resources necessary to complete these projects. Students use project management and budgeting software to apply planning and management principles to a particular project.

CS2630 - Wilderness Survival

This course is designed to teach the student the necessary skills required to travel and survive in a wilderness setting. It includes practical and theoretical information on wilderness survival basics, trip planning and management, emergency survival skills and wilderness hazards. Students will successfully complete a 3-day field practical simulating a wilderness emergency scenario.

Prerequisite(s): SU1150, Standard First Aid

CT2300 - Applied Programming

This is a course designed to introduce the technology learner to the concepts of problem solving using computer programming. The course will be taught using a high level language such as C or C++. Learners will write programs to solve problems within their related disciplines and will learn the concepts of troubleshooting and problem solving. The course covers the following areas: structured programming concepts, data types, decision statements, loop and iteration procedures, Input/Output procedures, and files.

Prerequisite(s): MA1101 or CE1140

CT2530 - POSIX Operating Systems

The course introduces learners to the fundamentals of operating systems including process, memory, I/O management, file system and virtualization. Examples will be taken from UNIX. C programming language is overviewed as well as shell scripts.

Prerequisite(s): CP1340

Co-requisite(s): CE1210

CY1010 - Intro to Mental Health Issues

This course introduces students to the various aspects of mental health and encourages steps that can be taken to promote and maintain positive mental health. It explores what mental illness has meant across time and cultures, examines the major groups of mental illnesses, and gives learners a chance to understand what their perceptions of mental illness are by addressing the concept of stigma.

CY1011 - Intro to Child & Youth Care

This course is an introductory course to the field of child and youth care. Students will explore the professional tasks of a child and youth care practitioner and the challenges as well as the rewards of being a member of this profession. An overview of the needs of children and youth, the types of agencies providing service, governing legislation, professional roles, and future trends and issues will be studied.

CY1041 - Mental Health & Addictions

Students will be introduced to adolescent development and other risk and protective factors associated with substance and mental health problems in youth. They will learn to identify substance use, mental health issues and concurrent disorders in youth and to apply appropriate treatment approaches effective for youth with substance and mental health problems.

Prerequisite(s): PS1140, PS1145, LD2220

DB2100 - Intro to Disability Studies

This course is designed to provide students with an overview of the history of disability, as well as an understanding of current human rights legislation, which provides a context and a value base for students to explore the field and refine a personal value system. The course also provides a general understanding of various types of disabilities, and allows students to explore the types of support that may be needed by individuals and families, as well as the various roles they may choose to take in order to facilitate inclusion and citizenship of persons with disabilities.

DB2110 - Disability Studies

This course explores many of the issues and challenges which are faced by persons with disabilities and their families as they attempt to participate in their communities as equal citizens. Students will analyze the issues, explore alternatives, and develop a vision of the changes needed for full participation. Furthermore, students will examine strategies which can be used in building inclusive communities.

Prerequisite(s): DB2100

DE1110 - Applied Research

The course is designed to provide a good understanding of a model for definition, analysis, and solution of technical problems; and to develop the student's ability to (i) apply diverse methods and strategies in project analysis, (ii) prepare and deliver effective oral technical presentations, and (iii) define and plan a major applied research project.

Prerequisite(s): CM1400, CM1401

DE1200 - Operations Research

This introductory course is designed to provide basic understanding of certain concepts of operations research and the role that these analyses play in decision making.

Prerequisite(s): MA1101

DE2350 - Project Management

This is an introductory course that provides the student with a basic foundation in the concepts, tools and techniques of formal project management.

DE3110 - Project Controls

This course analyzes the principles of Project Controls by bringing together all of its major components. It covers the control of projects from project conception to commission. Specifically, it incorporates cost engineering, total cost management, cost estimating, planning and scheduling, and cost control. This course is intended to demonstrate how good cost controls afford a company influence over cash flows and profits.

Prerequisite(s): DE2350

DE3300 - Information Systems Design

This course covers the application of computer information systems to industrial engineering problems, with particular emphasis on computer network resource management, database management and application software.

DE3505 - Decision Making in Engineering

This course covers the role of decision making in engineering as an integral part of the broader topic of project management. This course is an extension of earlier courses where skills in information management are introduced. The lectures cover some theories and tools used in decision making while assignments and a project will be used to apply these tools in practice.

DM1200 - Document Production I •

This course includes keyboarding, file management and basic document formatting. Keyboarding speed on unseen straight copy material is developed using three (3) minute timings. Students will use word processing software to produce the following documents: notices, announcements, signage, basic correspondence, basic tables, and basic reports. Students will also use presentation software to prepare basic presentations.

DM1210 - Document Production II •

This course develops keyboarding speed and accuracy. Keyboarding speed on straight copy material is developed using five (5) minute timings. This course further develops proficiency in document production using intermediate word processing applications and presentation applications. Students will also apply skills in the production of intermediate business correspondence, tables, forms, reports, and presentations, and reinforce their skills in file management.

Prerequisite(s): DM1200

DM1300 - Transcription •

This course introduces skills in machine transcription and/or using transcription software and reinforces grammar and punctuation skills. Emphasis is placed on applying proofreading and language skills: grammar, punctuation, and spelling. Decision-making skills are introduced through the transcription of basic business documents.

Prerequisite(s): DM1200, CM1100

DM1310 - Legal Transcription I

This course helps students increase their competency in machine transcription and/or using transcription software. Emphasis is placed on accuracy and speed of transcription as well as on grammar, punctuation, and word usage competency. Decision-making skills are enhanced through the transcription of legal documents for general legal

procedures, civil litigation and incorporation.

Prerequisite(s): DM1300

Co-requisite(s): DM2210, OF2500

DM1311 - Legal Transcription I

This course develops competency in transcribing documents and using transcription software. Emphasis is placed on transcription accuracy and on grammar, punctuation, and word usage competency. Students' decision-making skills are enhanced through the transcription of legal documents for general legal procedures, adult criminal matters, civil litigation, and incorporation.

Prerequisite(s): DM1300

DM1400 - Medical Transcription I •

This course introduces the student to the use of transcription and word processing software to prepare accurate medical reports. Focus is placed on the correct use of medical vocabulary to edit for clarity, conciseness, and accuracy while applying industry standards in health documentation. Development of a personal reference library will enable the student to apply advanced decision making skills.

Prerequisite(s): DM1300, DM1210

Co-requisite(s): TM1100

DM1405 - Medical Transcription II •

This course further develops the ability of students to transcribe medical documentation, correspondence, and specialized reports accurately and efficiently for a variety of medical specialties. Transcription drills will be used to enhance proficiency in medical transcription with speed and accuracy.

Prerequisite(s): DM1400, TM1100

Co-requisite(s): TM2100

DM2200 - Document Production III •

This course combines keyboarding development, document production, word processing, and presentation software to improve proficiency in document production. Keyboarding speed on unseen straight copy material is developed using five minutes timings. Students will reinforce their skills in the production of advanced business correspondence, tables, reports, specialized business documents, and presentations.

Prerequisite(s): DM1210

DM2220 - Legal Document Production I

This course combines keyboarding development, word processing concepts, and legal document processing for general legal procedures, adult criminal procedures, civil litigation, and incorporation. Keyboarding skills are developed for five-minute timings with an emphasis on accuracy.

This course teaches students the format and function of various legal and business documents including correspondence, memoranda, accounts, contracts, court documents, and corporate papers. Documents are produced with speed, efficiency and accuracy to create a precedent folder to use as a guide to legal documentation in both the classroom and the workplace.

Prerequisite(s): DM1210

DM2240 - Document Production IV •

This course combines keyboarding development and document formatting using a project/simulation approach. Keyboarding speed is developed using five (5) minute timings. Students will be expected to develop and use critical thinking and decision-making skills, and to process and produce documents at an advanced level using Microsoft Office. Students will also perform tasks that require the integration of various software packages i.e. word processing, spreadsheets, presentations, electronic mail and calendar.

Prerequisite(s): DM2200, CP2310

DM2421 - Legal Transcription II

This course increases students' transcription competency by building on concepts learning in Legal Transcription I. Emphasis is placed on accuracy and speed in the transcription of business correspondence and legal documents. Decision-making skills are refined through transcription of legal documents including real estate, wills

and estates, and family law.

Prerequisite(s): DM1311

DM3251 - Legal Document Production II

This course builds on the basic legal format learned in Legal Document Production I. Students are introduced to documents required when handling real estate transactions, youth criminal matters, wills and estates and family law matters. Using a case approach, students follow and interpret instructions to produce documents. Keyboarding skills are further developed for five-minute timings with emphasis on speed and accuracy. Students continue to develop a precedent folder for use in the classroom and the workplace.

Prerequisite(s): DM2220

DP1110 - Digital Systems I (Logic)

This course introduces learners to the field of digital electronics. They will be taught design and diagnosis techniques applicable to digital electronics.

Prerequisite(s): ET1101 or ET1141

Co-requisite(s): ET1146 (ESET program only)

DP1310 - Introduction to Programmable Logic Controllers

This is an introductory course in programmable logic controllers (PLC) covering the fundamental concepts of digital, numbering systems, logic, gates, circuits, simplification, arithmetic elements, latches, flip-flops, counters, the components in a typical PLC system, configuring, addressing and programming. The laboratory component will develop understanding and skills related to circuit construction & operation and ladder logic programming & troubleshooting.

Prerequisite(s): ET1101

DP1840 - Motors, Generators and Starting Systems

This course will give the student an overview of the principles of AC and DC motors. The student will be able to differentiate between AC/DC motors. AC/DC generators and alternator theory will also be covered, including construction and maintenance of engine starters (electrical). The inspection and servicing procedures for starting systems will also be covered in this course.

DP2110 - Digital Systems II (Interfacing)

This course provides the student with knowledge of the hardware and software associated with digital systems and interfacing requirements for communication from a PC to external environments. Advanced FPGA technologies will be used to interface hardware devices. Interfacing using pneumatics will be used to expand the knowledge of interfacing from electronics to mechatronics.

Prerequisite(s): DP1110, CT2300 or CP1270

DP2120 - Digital Systems II (Interfacing)

This course provides the student with knowledge of the hardware and software associated with digital systems and interfacing requirements for communication from a PC to external environments. Advanced FPGA technologies will be used to interface hardware devices. Interfacing using pneumatics will be used to expand the knowledge of interfacing from electronics to mechatronics.

Prerequisite(s): DP1110, CT2300 or CP1270

DP2435 - Digital Systems II

This course provides the student with knowledge of the hardware associated with digital systems and interfacing requirements for communication from a PC to external environments. Interfacing to pneumatic systems will also be introduced.

Prerequisite(s): DP1110, AE1265

DP2540 - Advanced Programmable Logic Controllers

This is an advanced course in programmable logic controllers (PLC) covering timers, counters, data manipulation, comparison, conversion, arithmetic instructions, word logic instructions, shift registers, rotate registers, sequencers, analog inputs and outputs, communications protocols and an introduction to human machine interface concepts. The

laboratory component will further develop and strengthen the understanding and skills related to circuit construction & operation and ladder logic programming & troubleshooting.

Prerequisite(s): DP1310

DP3110 - PLC

This course introduces the learner to the general concepts and programming techniques for digital, analog and peer to peer communications associated with programmable logic controllers (PLC) used in the instrumentation applications.

Prerequisite(s): DP1110, CI1360

Co-requisite(s): CE2810

DP3200 - Embedded Controller Applications

The course will reveal why microcontrollers exist in so many products today. It explains the basics in microcontroller design through actual applications and will describe the differences between microcontrollers and microprocessors. Instruction is given in different techniques for making the best use of the microcontrollers' resources. Hands-on experience is provided in the lab environment.

Prerequisite(s): CT2300 or CP1250 or CP1270, DP2410 or DP2110 or DP2120

DR1220 - Engineering Drawing

Through participation in this course, learners will acquire drafting and design skills that will enable them to design a basic wood-frame structure to the requirements of the National Building Code, Part 9. Learners will acquire the ability to sketch floor plans, main sections, and elevations. Furthermore, learners will be expected to produce a partial set of working drawings of a wood-frame construction (residential) structure using AutoCAD.

Prerequisite(s): EG1110, EG1430

DR1250 - CADD Drawings

This course is a continuation of the DR1220 course and will build upon the skills learned in the DR1220 course. Through participation through this course, learners will acquire skills in the use of Revit and Civil 3D by producing working drawings for small commercial building and site development. This will be accomplished through expanding on topics covered in DR1220 and covering topics specific to structural steel and concrete structures, as well as site plans and parcel development.

Prerequisite(s): DR1220

DR1400 - Wood Frame Construction

This course is an introduction to wood frame practices and materials with emphasis on foundation, floor, wall and roof construction of residential buildings.

Prerequisite(s): EG1430

DR1770 - Basic Drawing and Sketching for NDT

This course provides an introduction to orthographic projections sketching, sectional and primary views. It also introduces the techniques of plan reading and drawing. This course provides training for a NDT Technician Certification. This will include both in class and practical training.

DR2150 - Architectural Drawings

This course is an introduction to Architectural Drawing conventions and applications which focuses on the rationale used in producing the technical drawings needed for conventional wood-frame construction. Emphasis is placed on general drawings such as floor plans and elevations in this course.

Prerequisite(s): EG1430

Co-requisite(s): DR1400

DR2320 - Engineering Graphics for Electrical

This course follows the Engineering Graphics course completed in the first year of Engineering Technology. It covers the more advanced commands used in the AutoCAD drafting package, with application examples from across the electrical engineering technology curriculum that require the use of AutoCAD.

Prerequisite(s): EG1430

DR2350 - Engineering Graphics for Instrumentation

This course follows the Engineering Graphics course completed in the first year of Engineering Technology. It covers the more advanced commands used in the AutoCAD drafting package, with application examples from across the Instrumentation and Controls Engineering Technology curriculum that require the use of AutoCAD.

Prerequisite(s): EG1430

DR3110 - Working Drawings I

This course is an introduction to building construction techniques, architectural working drawings and detailing. It is designed to enable the learner to become involved in the creation and proper use of working drawings. Course material takes the form of lectures, projects, and analysis of such projects.

Prerequisite(s): EG1240, DR2150

Co-requisite(s): BU2300, BU2410

DR3111 - Working Drawings II

This is a course dealing with larger buildings of masonry construction. It is designed to enable the student to become a functional part of a group involved in the creation and proper use of working drawings. Course material takes the form of lectures, group projects, and group analysis of such projects.

Prerequisite(s): DR3110, BU2300, BU2410

Co-requisite(s): BU2301, BU2411

DR3310 - CAD/CAM

This is an introductory course in manufacturing technology. In this course, learners are introduced to fundamentals of computer-aided design and manufacturing (CAD/CAM). Emphasis is placed on theory and practice in the metal fabrication industry through computerized numerical control (CNC) shape cutting.

Prerequisite(s): EG1310, WD1450

DR3720 - Tool Design I

This course is an introduction to tool design and tool making practices. It will provide the student with the basic knowledge required to design simple types of tooling required within the Manufacturing industry.

Prerequisite(s): CF1120

Co-requisite(s): EG2130

DR3721 - Tool Design II

The continuation of DR3720 Tool Design I, this course will expand on tool designing methods used in the sheet metal and plastic industries. The course will allow students to create tool design drawings for sheet metal and plastic components. Hands-on lab application will use a Vacuum Former, Injection Molder and Rapid Prototyper.

Prerequisite(s): DR3720, EG2130

DR3810 - Advanced Processes

This is an advanced course using equipment available at the Manufacturing Technology Centre. The course uses the Project Engineering approach to manage all aspects of the production run for a assembled component. Production planning, production scheduling, Machine allocation, Documentation control and Quality Control are used to deliver a hands-on, project-based team approach to emulate working environment similar to industry.

Prerequisite(s): SP1731

Co-requisite(s): DR3720

DR4111 - Working Drawings IV

This is the fourth in a series of working drawing courses. The course uses the same building as in Working Drawings III. Students are required to solve technical problems based on theory and knowledge gained in other courses. This course focuses on details of technical design problems not incorporated in previous working drawing courses.

Prerequisite(s): DR4120

DR4120 - Working Drawings III

This is the third course in a series of working drawing courses. The focus is on larger structures with a variety of building envelopes including glass and metal curtain walls and composite metal panel systems. Students are required to solve technical problems based on theory and knowledge gained in other courses. More emphasis is placed on

details than in other courses.

Prerequisite(s): DR3111, BU2301, BU2411, EG2250

DT1100 - Drone Technology

In this course, students will explore current and future technology, uses and the legal and ethical ramifications of using unmanned aerial vehicles.

EC1110 - Microeconomics •

The course objectives are to develop an understanding of the economic institutions and environment under a market system of exchange and the response made to decisions arrived at by individuals, businesses, and governments. Specifically, the course examines business organizations and why the attitudes of buyers and sellers determine the prices, quantities, and distribution of the output of goods and services.

EC1120 - Understanding the Economy

Students learn how the provincial, national and global economies function and how they are connected. Once they have completed this course, students will be able to explain major economic theories and how they affect fiscal and monetary policies – and how, in turn, these policies affect individuals, households, businesses and communities. They will be able to relate a solid base of economic knowledge to current economic affairs.

EC1125 - Economic Fundamentals

Students will be introduced to fundamental micro and macroeconomic theory with a focus on Canadian issues. Microeconomic topics include scarcity, demand, supply, and markets. Macroeconomic topics include national output, inflation, unemployment, economic policies, and international trade. Students will be prepared to interpret and communicate economic information.

EC1140 - Microeconomics

This is a course in Microeconomics that is intended to prepare the student to take additional courses in economics which make use of Microeconomics tools of analysis. In addition, the subject matter of this course will help in understanding some of the concepts, problems, and arguments that are presented in other courses or in the public press. When new projects or changes are announced by the government or private sector, you will have a set of tools of analysis that will allow you to be more informed as to what is involved in the decision making process; your tool kit will allow you to see some implications that may not be readily apparent to the general public. This will place you in a better position to ask relevant questions, whether you like or dislike the initiative. The course will cover the following topics: Scarcity and Opportunity Cost, Demand and Supply, Elasticity, Household Demand, Marginal Utility, Indifference Curves, Production Functions, Short-Run and Long-Run Cost Functions, Perfect competition in the short-run and in the long-run monopoly.

Prerequisite(s): Preferably High School Level III Academic Mathematics or Advanced Mathematics and acceptable score on Mathematics Placement Test or MUN Mathematics 1090.

EC1150 - Introduction to Macroeconomics

This course is designed to introduce students to macroeconomics. Topics that will be covered include national income accounting, aggregate income analysis, money, banking and foreign trade. The course examines the physical and monetary aspects of international trade, money, banking and monetary policy, the gross national product, national expenditure components, business cycles and fiscal policy. The emphasis is on Canadian examples where possible. Transferable to MUN Economics 2020.

Prerequisite(s): High School Level III Academic Mathematics or Advanced Mathematics and acceptable score on Mathematics Placement Test or MUN Mathematics 1090.

EC1210 - Macroeconomics •

This course is designed to introduce students to the principles of macroeconomics, including the physical and monetary aspects of international trade; money, banking, and monetary policy; the gross national product, national expenditure components, business cycles, and fiscal policy. The emphasis is on a problem solving approach and Canadian examples where this is possible.

EC1700 - Economics

This course covers the basic principles of engineering economy with application to engineering economic decision

making. The various methods for economic analysis of alternatives are investigated as well as depreciation methods and income tax consequences.

Prerequisite(s): MA1101

EC1750 - Construction Economics

This course will give the learner the knowledge necessary to make decisions based on economic alternatives. It will introduce the learner to the fundamentals of cash flow equivalences and methods of comparison for different alternatives. It will take into account depreciation and the effect of inflation on the evaluation of alternatives. The learner will also be able to compare public sector projects based on benefit-cost analysis.

Prerequisite(s): MA1101

EE1180 - Curriculum I

This course offers an in-depth exploration of play as an integral component of quality early learning and child care programs. Students will learn about the theory, function and value of play. There will be an emphasis on developing and refining basic skills that help the adult engage in quality play experiences with children. Students will explore play with sand, water, blocks, and manipulatives. Students will also be introduced to the management of time, routines and transitions to ensure quality play experiences for children.

EE1181 - Curriculum II •

The student will develop knowledge of the major theoretical models and approaches currently being used in early learning and child care curriculum. In accordance with provincial standards, the students will develop a working knowledge of the emergent curriculum approach. Students will learn to develop and maintain a developmentally appropriate learning environment as the basis of the emergent curriculum. The student will develop basic skills in the planning, facilitation, documentation and reflection of experiences within an emergent curriculum. A child-centred, active learning approach to curriculum is emphasized. Throughout this course the unique learning styles, individual differences and interests among children will be emphasized and used as a basis for individualizing the curriculum.

Prerequisite(s): EE1180

EE1290 - Positive Behaviour Guidance •

This course provides a foundation for understanding and guiding children's behaviour. Students will learn the principles of guidance and strategies needed to guide behaviour in positive ways. The focus will be on understanding behaviour and implementing techniques that foster positive relationships and self-esteem, and create opportunities for learning.

EE1340 - Child Development I •

This is an introductory course in child development. Students will learn terminology related to child development as a foundation for advanced exploration of developmental stages in childhood. Students will also explore the basic principles of child development and learning. An introduction to the concept of child observation is provided as a foundational concept for the study and practice of early childhood education.

EE1341 - Child Development II •

This is a course in child development that focuses on increasing students' understanding of developmental milestones and growth patterns in toddlerhood and early childhood (2 to 6 years of age).

Prerequisite(s): EE1340

EE1360 - Observation •

The early childhood education student must be committed to the goal of supporting and enhancing children's development. Becoming a skilled observer is a reliable way to collect valid information about each child's skills, abilities, and their interests and needs. Students will develop knowledge and skills to purposefully observe, record, and interpret child behaviour. Through practical application of a variety of methods to gather observational data, the student's knowledge of children's development, interests, and needs will be enhanced. Students will be able to select appropriate observation methods, interpret and analyze their findings, and apply this knowledge to planning a developmentally appropriate program.

Prerequisite(s): EE1340

EE1420 - Creative Experiences I •

This introductory course will provide students with a foundation for creating early learning and child care curriculum. Students will learn about developmentally appropriate experiences in creativity, art, literature and dramatic play. Using a hands-on, participatory approach, students will be provided with opportunities to explore and experiment with related mediums and materials. Students will cultivate a personal sense of wonder and inquiry. The goal is for the student to develop practical play skills that can be applied throughout the early learning environment.

EE1421 - Creative Experiences II •

This introductory course will provide students with a foundation for creating early learning and child care curriculum. Students will learn about developmentally appropriate experiences in music, movement, outdoor play, science, and numeracy. Using a hands-on, participatory approach, students will be provided with opportunities to explore and experiment with music, movement, nature, science, and numeracy. Students will cultivate a personal sense of wonder and inquiry. The goal is for the student to develop practical play skills that can be applied throughout the early learning environment.

EE1440 - Family Studies I •

This introductory course in family studies provides students with a basic understanding of the modern Canadian family as a foundation for learning about partnerships between parents and early childhood educators. It stresses the significance of positive relationships. Students will become familiar with strategies that promote parent-educator partnerships and communication to create and maintain family-centered and culturally sensitive early childhood education.

EE1441 - Family Studies II •

Effective responses to families' needs require an understanding of the demands and stresses on families. Students will learn about a number of family stressors, methods families use to cope, and supports that may be provided for children and families.

Prerequisite(s): EE1440

EE1480 - Inclusion I •

This is an introductory course on the philosophy, principles, and appropriate practices of inclusion in early childhood programs. Students will learn about the characteristics of inclusive environments, the roles of those involved, and the use of Individual Support Service Plans.

Prerequisite(s): EE1360, EE1340

EE1481 - Inclusion II •

This course will discuss variations in developmental ability as a foundation for developing and implementing strategies for supporting all children in an inclusive early learning environment. Students will have an opportunity to learn about atypical or delayed cognitive, speech/language, physical/motor, sensory, and social/emotional development as well as health impairments. The causes, red flags and developmental impact of developmental deviations will be explored. There is a focus on identifying strategies that the early childhood educator can use to create developmentally appropriate learning environments, activities and materials.

Prerequisite(s): EE1480, EE1181, EE1341

EE1870 - Community Resources •

Strong connections with the community are essential to quality early learning and child care programs. Students will reflect on the importance of community to the health and wellbeing of children and their families. The concept of empowering families to utilize community supports is introduced. Students will identify a broad range of community resources, with opportunities for in-depth examination of specific community resources such as health care professionals, family resource centres, and non-profit organizations. Students will develop the competencies necessary to utilize these resources to support their work as early childhood educators.

EE2040 - Family Child Care •

This course is designed to equip students with the knowledge and skills necessary for providing child care in a home-based setting. Students will learn about child development and well-being, health, safety and nutrition, guiding children's behaviour, self-care and wellness, as well as the business of family child care. In-depth discussions and practical assignments will provide opportunity for students to become competent in providing quality family child care.

EE2180 - Curriculum III •

This advanced curriculum course provides students with the opportunity to participate in an in-depth exploration of approaches to curriculum. Students will be able to explain the primary theories related to development and learning, as well as advanced curriculum models. Students will have an opportunity to relate this knowledge to advanced planning, facilitation and documentation strategies, including webbing, the Project Approach, and learning stories.

Prerequisite(s): EE1181

EE2255 - Advanced Behaviour Guidance

This course offers a more in-depth exploration of guidance theory and its application to the study of children with emotional and behavioural challenges. Students will learn about possible causes and resulting challenges for children. Students will develop practical skills in the prevention and management of challenging behaviour in a team approach. The goal is to develop the skills and an inventory of resources so that educators are able to effectively support children with behavioural challenges.

Prerequisite(s): EE1290; EE1360

EE2260 - Introduction to Child Care Administration •

This is an introductory course in early childhood education program administration. The aim of this course is to provide an overview of administrative principles and procedures needed to successfully operate high quality, inclusive early childhood education programs. Knowledge of provincial legislation and regulations, and factors which contribute to quality provide the foundation for developing practical skills related to governance, development and evaluation of quality programs, financial and staff management, menu planning, and working in partnership with parents and the community.

Prerequisite(s): EE2180

EE2340 - Child Development III •

This is an advanced course in child development. Students will examine primary theories related to child development and learning as a foundation for advanced curriculum planning. Students will have an opportunity to examine the sequential progression of primary developmental skills from birth to age 12 years. The focus is on developing a working knowledge of the theories, principles, and stages of child development for application in early learning and child care curriculum.

Prerequisite(s): EE1341

EE2350 - Professional Practice •

This course bridges the student to the profession of Early Childhood Education. Students will examine the roots of the early childhood education field as a basis for the study of the current state of early childhood education in Newfoundland and Labrador, Canada and internationally. Students will develop a strong sense of professionalism as an early childhood educator. The goal is to enhance the student's capacity to envision and advocate for advances in the sector as an early childhood educator.

EE2470 - Infant Development & Care •

This is an introductory course in infant care. It focuses on the unique needs of infants and how these needs can be met through a developmentally appropriate approach to programming and responsive care during the first two years of life. This approach takes into consideration the developmental needs and individual and cultural differences among infants, as well as the critical role of the infant-educator relationship. Particular attention is paid to the various roles of the educator in the design, planning, implementation, and evaluation of a developmentally appropriate physical, social-emotional, and cognitive environment for infants. The importance of establishing positive relationships and open communication patterns with parents will be highlighted in the course.

Prerequisite(s): EE2340, EE1360

EE2500 - School-Age Development & Care •

This is an introductory course in school-age care. Students will develop knowledge and skills for working with children ages five through twelve. The course focuses on the unique needs of school-age children and how these needs are met through a developmentally appropriate approach to programming. Students learn about child development patterns and milestones in middle childhood and early adolescence as a foundation for understanding the principles of inclusive school-age care. Particular attention is paid to the various roles of the early childhood educator in the

design, planning, implementation, and evaluation of developmentally appropriate physical, social-emotional, and cognitive environments for school-age children.

Prerequisite(s): EE1341, EE1181

EE3010 - Leadership •

This course explores team building and leadership within the field of early childhood education (ECE). Students will gain a thorough understanding of the responsibilities of the administrator in addition to skills that are necessary to lead in early learning and child care environments.

EE3015 - Relationship Building •

In this course, students will discuss strategies to build trusting relationships by engaging family, culture, traditions and community into the program. In addition, ethical approaches in the workplace will be addressed.

EE3020 - Culture & Diversity •

Students enrolled in this course will develop an in-depth understanding and respect for culture, diversity, and inclusion. Throughout this course, students will gain knowledge, skills, and tools that will support them in promoting and supporting culture, diversity, and inclusive practices within child care environments. The knowledge, skills, and tools presented in this course will assist early childhood educators create a more inclusive and respectful environment for children, families, and employees. In addition, issues such as access, equality, and social justice will be explored.

EE3025 - Mentoring in ECE •

Mentorship within the field of early childhood education is defined as a reciprocal, relationship-based and process-oriented professional learning experience between two individuals. The purpose of the relationship is to learn and improve professional practice through reflection, self-directed learning and collaboration. This course will explore aspects of mentorship with a particular emphasis on provincial legislation, early childhood learning framework, and curriculum design and implementation.

EE3030 - Governance in ECE •

Governance in early childhood education is the establishment of policies and continuous monitoring of their proper implementation by the licensee, administrator, and/or board of directors. In this course, students will explore the role of government, social policies relating to child care, program organization, and the role of licensee and administrator as they relate to accountability, decision making, risk management, and supervision.

EE3035 - Financial Management in ECE •

This course provides students with an overview of the financial responsibilities of an administrator in early child care environments. Combining theory with hands-on learning, students will learn about the importance of financial management, and will have the opportunity to work on financial management tasks such as budgeting, record keeping, and payroll.

EE3040 - Human Resources in ECE •

Human resource management in the early childhood education field includes hiring and mentoring early childhood educators so that they become more valuable to the organization. This course explores many aspects of human resource management, including recruitment, employee selection, facilitation, professional development, retention, and performance appraisals.

EE3045 - Conflict Resolution •

The goal of this course is to provide administrators with practical conflict resolution skills. Students will learn techniques and strategies that will help resolve conflict. Understanding and utilizing these techniques and strategies will help administrators manage types of conflict in the early learning environment.

EE3050 - Current & Emerging Trends •

In this course, students will examine current and emerging trends affecting young children, families, and the profession. Students will explore professionalization, emerging curriculum trends, the use and effects of technology in the field, programming, shifting demographics, government initiatives, and the benefits and challenges of assessment.

EE3055 - Reflective Practice in ECE •

This course is intended for students to reflect on previous learning and explore opportunities for further studies. Students will select and complete an independent learning project on a relevant topic of interest. Examples could include (but are not limited to) the development of a portfolio, addressing a gap that currently exists in the early childhood education workplace, or in-depth research of a topic covered in a previous course. It is highly recommended that students complete this course at the end of the program.

EE4005 - Play With(in) Nature •

Outdoor play is an integral part of early learning programs. Through hands-on experiences and reflective practice students will explore pedagogical approaches to supporting outdoor experiences, such as risky and adventurous play and all-season, all-weather play. Topics will also include examining equity, inclusion, and sustainability in relation to outdoor play, place-based inquiry learning, and the role of documentation in supporting and extending child-nature connections and play.

EE4010 - Social Justice in ECE •

This course examines inequity through a social justice framework. Students will be introduced to critical theory, build an understanding of the ways power and privilege create and perpetuate inequality, and examine pedagogical and relational approaches to supporting and examining equity and justice in early childhood education (ECE) curriculum and practice. Ethics in relation to social justice will also be explored.

EE4015 - Pedagogical Documentation •

This course introduces pedagogical documentation as a tool for critical reflection, supporting intentionality in ECE practice, and making learning visible. Students will examine approaches to analyzing and making meaning of documentation, translating pedagogical documentation into curriculum making with colleagues, children, and families, and explore documentation as a tool for supporting relationship building, advocacy, and innovation in ECE.

EE4020 - Research in Early Childhood Education •

Interpreting, analyzing, and conducting research are integral to being a reflective educator. Through reading and evaluating research in the field of early childhood education, students will gain an understanding of the design and analysis process of research with an emphasis on qualitative methodologies. Validity, reliability, trustworthiness, ethics, and involving children in research will also be covered. Students will begin to frame a research question and proposal.

EE4025 - Supporting Well-being and Belonging •

Well-being and belonging are essential to social-emotional development in the early years. This course examines factors that contribute to infant and child social-emotional wellness and the significance of using trauma-informed and anti-bias lenses in creating a sense of belonging. Students will gain insight on self-regulation, the relationship between physical literacy and emotional wellness, impacts of adverse experiences on children and families, and the role of responsive relationships. An emphasis is placed on designing, planning, and implementing environments that promote social-emotional wellness and belonging. Students will also develop strengths-based strategies and collaborative teaming practices to support the resilience and well-being of children and families.

EE4030 - Policy, Ethics, and Advocacy •

This course examines current political and theoretical perspectives in ECE (Early Childhood Education), and their influence on the sector. Topics include exploring global and local narratives in Early Childhood Education; discourses shaping conceptualizations of childhood, family, and ECE pedagogy and practice; and early childhood as spaces for reconceptualizing dominant discourse through the practice of democratic politics and approaches to ethical practice. Advocacy will also be explored as a tool for community dialogue and for highlighting a localized vision of child care based on the values and perspectives of children, families, and early childhood educators.

Prerequisite(s): EE4010

EE4035 - Inclusion III •

The effectiveness of inclusive early childhood education (ECE) is dependent on building collaborative relationships within a child's community of care. Using principles of family-centered and culturally responsive practice, this course explores multiple perspectives of inclusion, assessment, and intervention in early childhood education. Students will

also examine the significance and complexity of building partnerships with children, families, and other professionals to support meaningful participation, equity, and inclusion.

EE4040 - Indigenous Peoples and Education •

Framed by the *Truth and Reconciliation Commission of Canada: Calls to Action* and the *United Nations Declaration on the Rights of Indigenous Peoples (UNDRIP)* this course examines Canada's colonial history and legacy, and approaches to engaging with these documents in early childhood education practice. Indigenous created media and resources will be explored to support educator professional learning and for developing culturally appropriate curriculum and practice. Students will also examine individual and collective responsibility for reconciliation *with* Indigenous children, families, colleagues, and community.

Prerequisite(s): EE4010

EE4045 - Educator as Researcher •

In this course students will carry out capstone project that may take the form of (though not limited to) action-based research or a pedagogical inquiry. Classes will be discussion based. Students will share their final project in a public presentation. This course should be completed in the student's final semester.

Prerequisite(s): EE4015, EE4020

EE4050 - Multiliteracies in ECE •

This course explores literacy beyond reading and writing, and includes the oral/auditory, visual, and gestural ways that meaning is created, communicated, and interpreted through play, the arts, curriculum, and classroom design. Through hands-on experiences and reflective practice, students will critically examine the role of multiple literacies in creating and interpreting meaning through creative expression, experimentation, and literacy-based experiences. Documentation and using Multiliteracies to support inquiry-based learning will also be touched on.

EG1110 - Engineering Graphics

This course focuses on basic engineering graphics principles and standards to effectively communicate technical graphical design and also provides the foundation for more advanced engineering graphics concepts.

Engineering graphics is the predominant means by which accurate information is communicated within industries pertinent to all engineering technology disciplines. From the simplest in-the-field sketch to the most advanced 3-D model, each may constitute a legal document.

EG1160 - Technical Graphics

This course focuses on basic engineering graphics principles and standards to effectively communicate technical graphical design and also provides the foundation for more advanced engineering graphics concepts. Engineering graphics is the predominant means by which accurate information is communicated within industries pertinent to all engineering technology disciplines. From the simplest in-the-field sketch, to the most advanced 3-D model, each may constitute a legal document.

EG1235 - Engineering Graphics & CAD

In this course, students will be introduced to the reading, understanding and production of engineering sketches and drawings in two dimensions. Focus will be on the production of drawings using standards from civil and mining engineering industries. Topics will include file management, converting sketches to engineering drawings, drawing setup, drawing construction and modification, scaling, creating dimensions, using area fills, symbol creation, drawing documentation and presentation. This course uses a current release of computer-aided design software commonly used in industry.

EG1240 - Architectural Graphics I

This course is taken concurrently with DR2150 - Architectural Drawings and is a continuation of EG1430 - AutoCAD Essentials. It is designed to provide the student with a greater knowledge of CAD and architectural graphic standards and drawing conventions through the use and compliance of the Office Manual. It will also provide an introduction to 3D visualization basics related to Architectural Working Drawings and introduce the student to Building Information Modeling (BIM) software.

Prerequisite(s): EG1110, EG1430

Co-requisite(s): DR2150

EG1250 - Architectural Graphics II

This course is a continuation of more complex Building Information Modeling (BIM) concepts. Students will use 3D design visualization to incorporate all building related information into multi-level models. From these modeling techniques, students will focus on the development of presentation graphics, working with shadows and sun studies and completing simple photorealistic renderings.

Prerequisite(s): EG1240

Co-requisite(s): DR3110

EG1310 - Applied CAD

This is an applied CAD-based drafting course designed to provide learners with the ability to interpret and prepare mechanical and structural drawings which extend the principles presented in EG1110 and EG1430.

Prerequisite(s): EG1430

EG1321 - Drawing Interpretation

This course is designed to provide the learners with the ability to interpret and prepare drawings used in specialized areas of mechanical engineering. Learners will prepare and interpret assembly, piping, welding drawings and P&ID.

Prerequisite(s): EG1110

EG1430 - AutoCAD Essentials

Computer Aided Drafting software is a tool that enables you to produce engineering drawings more accurately and with greater efficiency. It also facilitates the ability to share files with other software programs. This course is designed in a pedagogical format by presenting the fundamental concepts at the beginning and moving toward the more advanced and specialized features of AutoCAD. It is also designed with the understanding that the student has the engineering graphics fundamentals necessary to apply the AutoCAD software. Applications and examples have an inclination towards many different technology disciplines.

Prerequisite(s): EG1110

EG2120 - Applied Engineering Drafting

This course will cover drafting and design skills enabling students to design basic circuit components, apply them to circuit analysis and interpret blueprint drawings for Electronic System Engineering Technologists. Students will design a Printed Circuit Board using electronic CAD simulation software.

EG2250 - Architectural Graphics III

This is the third course in a series of Architectural Graphics courses that allow the student to explore advanced topics in both CAD and BIM. Students will customize features of CAD and BIM software to improve efficiency. Students will explore advanced modeling techniques, overriding graphic views, 2D detailing and preparing construction documentation. Students will also use advanced concepts and procedures in the presentation of animated drawings (walk-throughs) and virtual images which are used for client presentations/ drawings.

Prerequisite(s): EG1250

Co-requisite(s): DR3111

EL1150 - Introduction to Folklore

The role that tradition plays in communication, art and society will be discussed through an examination of folklore materials from Newfoundland and Labrador and the English-speaking world. Through assignments, students will identify and reflect on folklore in their own lives and the lives of others. Transferable to MUN Folklore 1000.

EL1320 - Folklore Studies

This course is an examination of the traditional cultures of Europe and North America with special reference to Newfoundland and Labrador. A selection of the following areas will be covered: settlement patterns, architecture, work and leisure patterns in the folk community, calendar customs, rites of passage, folk religion, folk medicine, language and folk culture, folk costume, foodways and folk art. Transferable to MUN Folklore 2401.

Prerequisite(s): Normally Folklore 1000: Introduction to Folklore is the prerequisite for this course; this can be waived with special permission of the head of the Folklore Department.

EL1360 - Introduction to Anthropology

This course is an introduction to the field of social and cultural anthropology. Taking a cross-cultural approach to the study of society and culture, the focus of this course will be on the global issues of ecology, technology, economy, politics, kinship and ideology. This course will also examine linguistic anthropology, but the emphasis will be on how we use language for human communication rather than on formal linguistics. We will consider how human societies go about solving some of the fundamental problems of human existence. How do we make a living? What forms of social organizations do we take part in and why? How do we think about the universe and our place in it? We will compare some of the social and cultural systems we have in our society with those found in other societies. In this manner we can hope to learn valuable lessons about how people from other cultures attempt to solve existential problems and at the same time see our own social and cultural formations in a new and more critical light. Transferable to MUN Anthropology 1031.

EL1420 - Introductory French I

This is an introductory course designed for students with little or no previous knowledge of French and for those who wish to review basic vocabulary and structure. The course uses mainly the present tense, but also includes an introduction to the past tense (passé composé with "avoir"). EL1420 has a 500-word vocabulary, and covers the most common situations of daily life. Transferable to MUN French 1500.

EL1430 - Introductory French II

This course teaches the use of past tenses and more advanced structures. Students begin to read short texts which are faithful to the original, to write longer compositions, and to explore more complex situations. Transferable to MUN French 1501.

Prerequisite(s): EL1420 or MUN French 1500 or High School French 3200

EL1440 - Introductory French III

In EL1440, it is assumed that students already have a knowledge of basic vocabulary, grammar and constructions of French, in particular the use of the present tense in regular and irregular verbs, and the use of past tenses. This course continues to practice those tenses, but concentrates on the forms and uses of the future, the conditional and the subjunctive tenses. Students are expected to achieve and maintain a high level of accuracy in spelling, grammar and pronunciation. The work of composition and intensive vocabulary building continues, and students are expected to engage in more advanced oral practice. Transferable to MUN French 1502.

Prerequisite(s): EL1430 or MUN French 1501

EL1530 - Fine Art Printing

Students will gain an understanding of the relationship between a digital photographic file and an electronic printer. Particular attention will be paid to the relationship of the file and a final presentation print.

EL2414 - Aboriginals of North America

This course will examine the diversity and similarities of Aboriginal cultures in North America. The course will also look at the role that acculturation has had on the social fabric of Aboriginal people and how they have adapted to this social change. Some of the key focal points of this course will be on economic, kinship, political and religious changes that have occurred and evolved throughout the years. The course will focus on a number of specific case studies from the regions of the sub-arctic, northwest coast, the plains and eastern areas of North America. (This course is transferable to MUNs Anthropology 2414.)

Students who complete this course should be able to demonstrate some understanding of;

1. The complexities of social life of Aboriginal Peoples of North America.
2. The effects of acculturation on the social life of Aboriginal Peoples of North America.
3. The adaptation and rebirth of Aboriginal Peoples of North America

EN1110 - Soil Fundamentals

This is an introductory course in soil science and hydrogeology designed specifically for the Environmental Engineering Technologist. This course exposes the students to the basic concepts of soil science, soil sampling and

analysis, and soil classification. Students learn about soil types, soil properties, soil classification, and standard tests and procedures used to evaluate soil properties. Students learn how to conduct site and subsurface investigations through introductory concepts of hydrogeology where they learn to measure and calculate hydraulic conductivity, soil permeability, bore hole sampling, and elements of erosion control encompassing Darcy's Law. Emphasis is placed on an understanding of the occurrence and movement of groundwater in a variety of geologic settings and the effect of human activity on that movement. Other topics include types of aquifers, properties of porous media, groundwater flow, and pump testing of aquifers. The laboratory component of the course explores soil testing methods and analytical problems related to lecture topics.

EN1120 - Environmental Management

This course is environmental management for Geomatics/Surveying Engineering Technology Students. This course gives the student knowledge of how humans can live, develop, and properly use the earth's resources while understanding the many environmental issues. The solving of various environmental problems, identifying and discussing how related provincial and federal regulations apply as well as steps to improve and conserve our natural and urban environments, will form the bases of this course.

EN1210 - Geomatics I (Practical)

This course is designed to expose students to concepts of field navigation. This field oriented course introduces students to navigational skills using map, compass and GPS.

EN1220 - Industrial Hygiene

This course will introduce the student to the fundamentals of Industrial hygiene. It will provide the student with an understanding of the methods of recognition, evaluation, and control of health hazards involving toxic chemicals and dusts in the workplace. This course prepares students to apply industrial hygiene techniques to monitor air quality, and conduct Hazardous Materials Assessments in the HSE (Health, Safety and Environment) field.

Prerequisite(s): EN2321, EN1520

EN1230 - Geomatics II (GIS)

This course is designed to provide students with an overview of Remote Sensing and Geographic Information Systems (GIS) technology. It is designed to introduce basic principles and skills associated with remote sensing; orthophotography interpretation and GPS technology are addressed through lectures and practical applications. Students are exposed to satellite imagery, processes and products and the role of GIS technology in natural resources applications. Students will gain valuable skills and hands-on experience to support resource-based GIS projects typical in the workforce. Using vector-based GIS data models, students will create databases, manage spatial and attribute data, generate map-based and tabular outputs, and perform geographic analysis. The course culminates with a major GIS project designed to reinforce the skills covered in the course.

Prerequisite(s): EN1210

EN1520 - Environmental Sampling Techniques

This course provides the student with the fundamentals of environmental sampling techniques pertaining to procedures, protocol, equipment, and standardized procedures. "Fate and Effects" monitoring will be used as a practical approach to determine the effects of pollution impacts on our environment.

EN1531 - Water Quality

This course will introduce students to various aspects of water quality and will provide an in-depth review of the Canadian Water Quality Guidelines. This course expands upon the students' knowledge of analytical chemistry techniques and emphasizes introductory microbiology and toxicology techniques including exposure to the parameters of a local water treatment plant. Students are introduced to the diversity of microorganisms, their relationship to environmental technology and the basic lab techniques used to identify and enumerate them. This course prepares students to apply their technical knowledge to monitor water quality, domestic and industrial water and wastewater treatment systems and site remediation projects and prepare water quality reports.

Prerequisite(s): CH2715, EN1520

EN1600 - Environmental Assessment

This course, oriented to the needs of the environment industry, introduces the student to the local, provincial and federal environmental legislation, regulations, guidelines and policies that apply to environmental site assessment. The site assessment process is introduced with emphasis on case studies involving a range of projects. It will focus on the CSA/CCME phased approach with projects including a Phase 1 assessment of a local facility.

EN1601 - Environmental Assessment II

This course will introduce students to the concepts, principles, methods and techniques involved in reclamation of a site that has been abandoned, accidentally contaminated or requires a clean-up to conform to environmental standards. This comprehensive course will allow students to make use of course work previously completed in other courses to execute a site remediation plan and supervise contractors performing work, ensuring they complete the project according to the specifications in the contract.

Prerequisite(s): EN1600, EN2300, EN1110

EN2120 - Environmental Citizenship

This course is designed to foster environmental awareness and promote sustainable development. It provides an opportunity for students to discuss, debate, analyze and study current topics related to the use and management of natural resources. Students will be encouraged to consider various perspectives, and offer potential solutions to local, national and global environmental challenges.

EN2300 - Environmental Law

This course is oriented to the needs of the environmental industry and introduces the students to Municipal, Provincial, and Federal Environmental Policy, Legislation, Regulations and Guidelines. The Canadian Justice System framework is introduced with emphasis on case studies involving Environmental Law. Courtroom terminology, proceedings, legal documentation, environmental protection, due diligence and personal and corporate liability will be reviewed in detail.

EN2321 - Occupational Health and Safety

This course enables students to demonstrate knowledge of basic environmental principles and legislation and/or regulations governing the protection of the environment and workplace, together with understanding hazardous materials, how to control them, and learning the necessary skills to work safely.

EN2410 - Environmental Sustainability

This course is designed to foster environmental ethics and sustainable development. It provides an opportunity for students to discuss, debate, analyze and study, current controversial issues related to the use and management of natural resources. Students will be encouraged to consider various perspectives, and offer potential solutions to local, national and global environmental challenges.

EN2545 - Water and Waste Water Treatment

This course deals with water and wastewater management and treatment. The first part of the course focuses briefly on water and wastewater collection and measurement. The second part of the course focuses on water treatment and in-plant abatements and treatment of wastewater flowing from industrial settings. The course will include characteristics of primary and secondary wastewater treatment processes as it relates to overall plant operations. Monitoring procedures and methods of analysis is covered in theory and laboratory sessions. Current and innovative water and wastewater treatment processes will be discussed and evaluated with special attention focused on provincial and federal environmental acts and regulations and how it is related to decision making.

Prerequisite(s): MA1100, EN1520

EN3110 - Environmental Engineering

This course is designed to acquaint the learner with the major areas of pollution control and mitigation. Learners will gain an appreciation of the issues concerning sustainable development, gain familiarity with environmental legislation and risk management systems, as well as various environmental hazards in the workplace. Environmental concerns due to air pollution and noise pollution will be discussed, as well as solid waste management and wastewater treatment.

EN3111 - Environmental Engineering I

This is a combined theory/laboratory course dealing with mass and energy transfer and water resources. The first part of the course focuses briefly on mass and energy. The second emphasis of the course is an introduction to knowledge, practices, theories and applications relevant to hydraulics and hydrology. The characteristics of pressure, flow, and energy in both closed conduits and open channels will be studied. The Hydrological Cycle and the different forms of precipitation along with the surface and groundwater movements of water are studied and methods of analysis are covered in theory and laboratory sessions. Special attention is focused on best management practices, in particular how these relate to decision making.

Prerequisite(s): MA1100

EN3120 - Environmental Engineering II

This course deals with air pollution and solid waste management. The first part of the course focuses briefly on the principles of meteorology. The second part of the course places emphasis on practices, theories and applications relevant to air pollution. The third section of this course concentrates on the management of municipal, industrial and hazardous solid waste. All topics are studied and methods of analysis are covered in both the theory and laboratory sessions. Special attention is focused on best management practices and how they are related to decision making.

Prerequisite(s): EN3111, EN1520

EN3200 - Environmental Impact Assessment

This course, oriented to the needs of the environment industry, covers the basics of the environmental assessment procedure. The course carries on from the Environmental Law course where a broad overview of the legislation is presented. Students review the assessment legislation in detail and develop the tools needed to perform an environmental impact assessment. Students then perform a case study to assess a small local project.

Prerequisite(s): EN2300

EN3300 - Environmental Auditing

This course will enable the student to: assure compliance with relevant Federal, Provincial, and Municipal requirements; identify, evaluate and reduce environmental risks and liabilities; and conduct an environmental audit of a local industrial operation.

Prerequisite(s): EN2300

Co-requisite(s): EN1600

EN3400 - Environmental Management and Protection

This course introduces students to the fundamentals of resource management. It examines common pollutants found in industries in Newfoundland and Labrador. It explores the various pieces of legislation that apply to industrial pollutants in the province. Pollution reduction and treatment are also studied.

Prerequisite(s): CH3450 or CH2330

EP1100 - Entrepreneurial Studies •

Students will acquire the necessary skills and techniques to develop a sound business plan. This course is designed to develop an appreciation of small business, particularly as it relates to understanding the entrepreneurial process. Areas covered will include: market assessment, financing alternatives, organizational structuring, and planning techniques. In addition, a feasibility study will be required to establish the demand for a particular growth sector in the economy.

EP1110 - Introduction to Business •

This course will introduce students to business systems, forms of business ownership, production, marketing, finance, personnel and labour relations, international business and small business ownership. Students will describe and compare aspects of business, economics, and finance, including the functional areas of a business.

EP1130 - Business for Information Systems •

This course will provide students with an overview of business principles and practices relevant to the IT industry. Students will be introduced to the functional areas of business and the processes within each function. Emphasis will be placed upon awareness and literacy of each functional area as they apply to the local and national markets.

EP1320 - Entrepreneurship •

Working in small teams, students will develop a new business idea for either a private sector for-profit business, or a social enterprise. Ideas for this business opportunity will be generated through an ideation process. Students will prepare a 'lean canvas' for their business idea and will present this one-page business pitch early in the semester for feedback. Students will use secondary research and apply the skills and knowledge gained from their prior learning to complete a secondary research assignment and a business proposal report. Students will formally present their business idea to a simulated independent panel of industry experts. The course includes co-circular entrepreneurship events. Guest lecturers will share their entrepreneurial experiences with students.

EP2000 - Entrepreneurship in Practice

Students will acquire the necessary skills and knowledge to assess and determine their potential as an entrepreneur. This course is designed to assist students in developing an understanding of the importance of small business in our economy; in exploring new business ideas and opportunities; and in developing and understanding the tools available for planning a business. Areas of study will include the entrepreneurial mindset and process, feasibility studies, marketing plans, market assessment, financing alternatives, legal considerations and business plans.

EP2010 - Business of Journalism

In this course, students will assess their potential as journalism entrepreneurs. They will analyze start-ups and examine platforms, delivery models, ideas, and opportunities. Students will evaluate methods of monetization and explore ways to maximize their reach and profitability. Areas of study will include the entrepreneurial mindset and process, feasibility studies, market assessment, financing alternatives, and business plans.

EP2150 - Entrepreneurship •

This is an introductory course that analyzes aspects of entrepreneurship and the link between entrepreneurs and small business. It presents a fundamental approach to planning and operating a firm incorporating basic steps in business management and explains how each step can best be accomplished.

Prerequisite(s): CP2310 or MC1242

EP2200 - Business Planning •

This is an advanced-level course in developing a comprehensive business plan. The student will identify a business idea, product or service, conduct an industry analysis, and develop plans for operational and human resources, marketing, and finance. The student will also conduct a risk assessment and present their plan to a panel of industry experts. The student will apply knowledge from previous terms in a practical manner.

Prerequisite(s): EP2250

EP2250 - Market Feasibility •

This is an advanced course in the use of primary and secondary research techniques and analysis. The student will explore secondary research analysis, competition and demand analysis, project site and area evaluation, and estimates of operating results. The student will be required to produce and present a research report establishing the feasibility for an opportunity or a particular growth sector in the economy. Topics for this report will be based on personal selection or on a mentoring process with a potential or present business owner. This plan is developed based on two prior years of Business Management education and is intended in part to prepare the student to own or operate a small business.

Prerequisite(s): AC2260, CM2300, EC1110, MA1670

EP2410 - Business Solutions for App Developers

This course will introduce students to the ways that organizations improve their business practices through the use of computer technology. The course emphasizes the concepts that guide ebusiness and explains the business strategies and models that have emerged.

Prerequisite(s): CP1935

EP4000 - Entrepreneurship

Working in small teams, students will develop a new business idea for either a private sector for-profit business, or a social enterprise. Ideas for this business opportunity will be generated through an ideation process. Students will prepare a 'lean canvas' for their business idea and will present this one-page business pitch early in the semester for feedback. Students will use secondary research and apply the skills and knowledge gained from their prior learning to

complete a secondary research assignment and a business proposal report. Students will formally present their business idea to a simulated independent panel of industry experts. The course includes co-circular entrepreneurship events. Guest lecturers will share their entrepreneurial experiences with students.

Prerequisite(s): CP4450, MN1520, CR4120

ER1000 - Intro Const/Indus Electrician

This course is designed to provide students with an overview of the construction/industrial electrician trade. In the course, students will be given an overview of the trade and learn about trade safety requirements. Students will also learn about the tools and equipment associated with the trade as well as the types of computations that Electricians perform to successfully complete their work. Students will also have an opportunity to engage in hands-on experience.

ER1010 - Const/Indus Electrician

In this course students will learn the basic knowledge required of an industrial electrician. Most of the topics discussed and the skills developed throughout the course are within the repertoire of every industrial electrician and are in accordance with the National Building Code of Canada (NBCC). Competence in the topics covered in combination with practical experience will provide a solid foundation for anyone who wishes to master the trade. The hands-on experience provided throughout the course will increase each participant's ability to anticipate next steps while being fully engaged in the task at hand. To this end, students will work on a project determined by CNA to practice the proper and efficient use of industrial electrician tools and equipment and apply the industrial electrician skills learned throughout the course.

Prerequisite(s): HE1621

ET1100 - Electrotechnology

This is an introductory course in electrical theory covering the basic concepts of electricity, circuit analysis and magnetism. The laboratory work is designed to develop skills in the construction of electrical circuits and use of electrical measuring instruments as well as reinforcing theoretical concepts.

ET1101 - Electrotechnology

This is a continuation of the Electrotechnology course taken in the first semester. It covers the basics of A.C. theory and the application of this to solve circuits containing resistance, capacitance and inductance. An introduction to transformers and polyphase A.C. circuits is also included.

Prerequisite(s): ET1100

ET1120 - Electronics for Audio

Electronics for Audio is a Sound Recording & Production course. It is designed to prepare students for entry into work in the sound recording and production industry. It will provide the basic knowledge needed to perform circuit analysis and, more importantly, allow the student to design, modify, and test circuit designs necessary in their field. In addition, once completed, students should be able to troubleshoot existing electronic devices and connect them correctly and safely.

Co-requisite(s): MA1100

ET1140 - AC/DC Fundamentals

This is an introductory course in electrical theory covering the fundamentals of Direct Current (D.C.) and Alternating Current (A.C.) electricity. Students will be exposed to basic electrical quantities, basic electrical circuits, and circuit analysis techniques for circuits containing resistance, capacitance, and inductance. An introduction to transformers is also included.

The laboratory work is designed to develop skills in the construction of electrical and electronic circuits, use of electrical measuring instruments and reinforce theoretical concepts.

Co-requisite(s): MA1101, PH1140

ET1141 - Introductory Electric Circuit Analysis

This is an introductory course in electric circuit analysis covering the fundamentals of Direct Current (D.C.) and Alternating Current (A.C.) electricity. Students will be exposed to fundamental electric quantities, fundamental electric circuits, and analysis techniques for circuits containing resistance, capacitance, and inductance. The laboratory work is designed to develop skills in the construction of electric circuits, use of electric measuring instruments and

reinforce theoretical concepts. An introduction to transformers is also included.

Co-requisite(s): MA1101, PH1140

ET1146 - Advanced Electric Circuit Analysis

This course in electric circuit analysis covers advanced theoretical network concepts. An introduction to polyphase A.C. circuits is also included.

Prerequisite(s): ET1141

ET2100 - Electrotechnology

This course covers advanced topics in AC and DC circuit analysis as well as an introduction to DC machines and transformers. It will provide the necessary background for students to enter second year Electrical and Electronics programs.

Prerequisite(s): ET1101, MA1101

ET2150 - Advanced Circuit Analysis

In this course, learners will review techniques of differential equations, first order and second order: integral combinations; growth and decay problems; the analysis and solution of source free RL and RC circuits; driven RL and RC circuits using differential integral calculus; sinusoidal analysis; the concept of phasors, and steady state response. The learner will learn mathematical techniques and apply these to the concepts to analyze and solve differential equations.

Topics include waveform analysis and synthesis, time domain analysis, solution of differential equations using LaPlace transforms, application of LaPlace transforms to solve electric circuits, and derivation of transfer functions. In addition, the following topics will be covered in this course: Fourier expansion of periodic function, even and odd, Fourier analysis of waveforms and their application to electrical signals, and impulse response.

Prerequisite(s): MA2100, ET1151 or MP2140

EY1200 - Ecosystem Ecology

This course investigates the ecological relationship of a variety of ecosystems that occur in Newfoundland and Labrador. This course will examine the ecological components and focus on identification of these components and the structure, function and adaptations of specific organisms.

Prerequisite(s): BL1400

EY2110 - Ecology

This course focuses on basic ecological principles and concepts, ecological sampling techniques and field and laboratory exercises carried out in an appropriate environment. It involves significant and relevant field work, as well as the preparation of a report on terrestrial and aquatic ecosystems, populations, species interactions and ecological communities.

EY2210 - Silvics/Dendrology I

This is an introductory course to trees and shrubs both native and introduced to Newfoundland and Labrador. Species identification, classification and distribution are studied in detail. The influence of the environment upon the growth and reproduction of trees, stands, and forests are explored. Forest site analysis and classification are introduced and studied in detail.

Prerequisite(s): BL1120

EY2211 - Silvics/Dendrology II

This is an advanced course of study in Forest Ecology. Forest site analysis and classification are studied in detail. The influence of forest genetics, the physical and biotic environment, upon the forest ecosystem are covered. Native and exotic tree/shrub identification is a key component within the course.

Prerequisite(s): EY2210, FR1330

Co-requisite(s): FR2360, FT1401

EY2510 - Population Ecology

Concepts of population dynamics and modeling and applications in fish and wildlife management.

Prerequisite(s): BL1400, RM1401, RM1500

FH1200 - Principles of Physical Fitness

This course provides an introduction to principles of physical activity. Students will study the human anatomy with particular reference to skeletal and muscular systems of the human body, principles of training, exercise and weight control, fitness theory and active living and use of pedometers in physical activity. The course is designed for potential fitness leaders and active living programmers.

FH1230 - Physical Activity Programming for Older Adults

This course provides students with an introduction to physical activity programming for the older adults. It is designed to enable students to plan and evaluate a variety of programs for older adults based on current knowledge and trends.

FH1340 - Health & Safety •

This course will address the attitudes and knowledge early childhood educators must have in order to support the health and safety needs of children and themselves. Students will develop a working knowledge of policies and practices that adhere to provincial legislation and standards with regards to the health and well-being of children, and the establishment of positive habits and attitudes toward health and safety. Students will recognize symptoms of ill health and determine appropriate care for a sick child in a group setting. Students will recognize safety hazards and plan to minimize risk. Students will explore the issue of child maltreatment and recognize their responsibilities as early childhood educators with regards to recognition and reporting.

FH1360 - Childhood Nutrition •

This introductory course addresses the fundamental concepts of nutrition. Students will study the basic nutrients and learn about the recommended intake for children. Students will develop a working knowledge of Canada's Food Guide and utilize this knowledge in the planning and preparation of healthy snacks and meals for children. Students will examine food allergies, intolerances, and other special dietary concerns for children along with addressing nutritional issues in childhood. There will be a focus on nutrition education and creating a positive eating atmosphere. In addition, students will have become familiar with kitchen safety and sanitation.

FH1500 - Personal Wellness •

Optimal wellness is critical to a student's success in the workplace and in life. Students will be introduced to the eight dimensions of wellness: physical, mental, social, spiritual, intellectual, environmental, occupational and financial. Students will determine their own 'wellness level' and be encouraged to make healthy lifestyle choices. The goal is for the student to achieve a sense of balance in life which is attained through high levels of understanding and being active in each dimension of wellness.

FM2100 - Fluid Mechanics

This is an introductory course in fluid mechanics designed to develop knowledge of the laws and principles governing fluid mechanics and the ability to apply this knowledge in analyzing related engineering applications. The course also provides a base for advanced courses in piping design, ducting design, and fluid power systems.

Prerequisite(s): PH1100

FM2102 - Fluid Mechanics

This is an introductory course in fluid mechanics designed to develop knowledge of the laws and principles governing fluid mechanics and the ability to apply this knowledge in analyzing related engineering applications. The course also provides a base for advanced courses in piping design, ducting design, and fluid power systems.

Prerequisite(s): PH1101 or PH1150

FM2200 - Mechanics

This course provides the fundamental concepts required for the understanding and development of basic engineering sciences and builds on the principles developed in Physics PH1100. This first course in mechanics concentrates on relevant concepts of statics and how these concepts may be applied for conducting stress analysis of simple structures and components.

Prerequisite(s): MA1700, PH1100

FM2340 - Fluid Dynamics

This is an intermediate Fluid Mechanics course designed to develop both the knowledge and the laws and principles governing Fluid Mechanics and the ability to apply this knowledge in analyzing related engineering applications. The course extends on Fluid Mechanics FM2100 and provides the foundation for advanced courses in piping design, ducting design and fluid power systems.

Prerequisite(s): FM2100

FM3100 - Fluid Power

This is an intermediate level course designed primarily for students in the Electrical and Mechanical Engineering Technology Programs.

Prerequisite(s): PH1101, EG1520 or TM1310 or DR2320 or DR2350

FM3200 - Machine Design I

This course is an introduction to the primary considerations in the design of machines as they relate to each other, to their operators and to the environment. Machines will be seen as converters of energy and as the extension of human power. The composition and characteristics of machines will be presented. The underlying principles of mechanics of machines and strength of materials will be demonstrated enabling the student to participate in the design of machinery. The student will gain practical manufacturing exposure and experience.

Prerequisite(s): CF2540 or CF2100

FM3220 - Machine Design

Machine design concepts extended by introducing students to typical industrial application components used for machine design. The ability to follow accepted industry practice in the design, specification and selection of standard machine design components is emphasized.

Prerequisite(s): FM3200

FN1140 - Introduction to Finance

This course develops the concepts for the financial foundation of all upper-level finance courses. The course is designed to provide an introductory level of finance concepts and their use in business decisions. In this course the student will explore the importance of finance in business. Topics include simple and compound interest, debt amortization, annuities, bonds, and capital budgeting. Students will use a financial calculator or spreadsheet to make financial management decisions.

FN2110 - Business Finance •

This course is an intermediate course in the complexities of business financial management. The learner will explore financial analysis and planning, working capital management, capital budgeting, and long-term financing. The course will integrate both short-term and long-term financial considerations, as well as concepts from accounting, statistics, and economics.

Prerequisite(s): AC2260, FN1140

FN2111 - Business Finance II

The purpose of this course is to extend knowledge and understanding of finance principles by focusing on various problems and decisions confronting the financial manager. Specific topics include sensitivity analysis, corporate planning models, financial statement analysis and forecasting; short and long-term financing; capital budgeting; dividends and dividend policy; options, swaps, futures, forwards, firm valuation; and mergers and acquisitions. The student will conduct an in-depth study of issues and tools that financial managers use in financial planning and strategic management. The course will use real-world cases to teach the material.

Prerequisite(s): FN2110

FN2160 - Investments - An Overview

Students are expected to be familiar with the different investment avenues available to investors who are interested in optimizing their return on their investments. This course will address the concept of risk management and its application to the average investor and will provide an overview of the different investment strategies and their potential risks and returns.

FR1230 - Forest Fire Management

This introductory course will cover topics on all aspects of forest fire management from prevention, pre-suppression

preparedness, detection, to suppression. Throughout the course students will study historical forest fire reports and legislation to prepare a forest fire prevent plan. Fundamental information on fire behaviour, forest fire weather indices and the Canadian Forest Fire Danger Rating System will be covered to build requisite knowledge for wildland fire operations. Basic knowledge on fire suppression will be covered and supported with practical field exercises to expose students to typical duties of wildland fire fighters. Portions of this course will be delivered online through CIFFC, under the direction of the NL Forest Service. The CIFFC course modules will provide students with course certificates to support the building of the student's forest fire training portfolio. The CIFFC course modules also serve as prerequisite courses for the S-131 Crew Member Course required for students and graduates pursuing Wildland Fire Fighting employment with the NL Forest Service. Knowledge and skills gained in this course will be applied to a wildland fire simulation project in FT1400 (Spring Camp).

Co-requisite(s): FT1400

FR1330 - Natural Resource Measurements I

This course is designed to introduce basic principles, skills and techniques in the sampling and measurement of natural resources with emphasis on forests and wildlife. Students will become competent in the use of the various tools and equipment used in the measurement and evaluation of natural resources. The application of map and compass, GPS, and aerial photographs through field exercises, in the evaluation of natural resources, is a key component of the course.

Prerequisite(s): SU1150, MA1100

FR1331 - Natural Resource Measurements II

This advanced-level course in the principles of natural resources measurements places emphasis on the design, conduct and application of a variety of survey methods to assess forest characteristics. The application of statistical analysis to timber cruises, forest inventories, growth prediction and site classification is the central focus. Students will use GIS and GPS technologies to support cruise design and field-sampling activities throughout the course. The measurement of forest products is addressed, as is the assessment of non-timber values of the forest ecosystem.

Prerequisite(s): FR1330, MA1670, FT1400

Co-requisite(s): FR1560

FR1400 - Wood Products

This course deals with the importance of the wood products industry in our society. The identification characteristics and uses of Canadian woods are studied. As well, the fundamental wood properties and the technical requirements for various wood products are studied.

FR1560 - Timber Harvesting I - Roads

This second-year course uses skills learned in Forest Surveying for the collection of field notes for various labs - especially road location. Students are introduced to forest road construction terms, environmental guidelines, and planning and operating practices. Students plan, map, conduct a reconnaissance, and lay out a forest road.

Prerequisite(s): SU1710, FT1400

Co-requisite(s): FR1331, FT1401

FR1561 - Timber Harvesting II

This course is a follow-up to Timber Harvesting I course that covers road construction in the woods. This course deals mostly with harvesting and trucking forest products. Emphasis is on environmental management of woodlands operations as well as logging system productivities and costs.

Prerequisite(s): FR1560

FR2340 - Hydrology

This course has been designed to provide students with principles and application methods related to water resources. The content extends from a review of hydrological processes and principles in general, through detail analysis of the water cycle in particular, and finally to linking of theory to practical applications. The applied aspects of this course center on field and office methodology use to assess water resources from the perspective of input, storage and output at the watershed level. The relationship between water, forests and humans is a central theme.

Prerequisite(s): FR1330

FR2350 - Forest Entomology/Pathology

This course involves the study of the major forest enemies of North America (excluding fire). Emphasis will be placed on insects which damage or benefit the forest and on biotic and abiotic causes of forest disease. Prevention and protection measures of above are covered. Field collection and diagnosis are emphasized, stressing the importance of signs leading to early detection.

Prerequisite(s): EY2210 , FR1330

FR2360 - Silviculture

This course involves a study of a wide range of silviculture practices as applied to the establishment and tending of forest stands. This includes the design, conduct and monitoring of operational programs in planting, seeding, site preparation, tree seed procurement and improvement, and nursery production as well as stand manipulation including pre-commercial thinning, commercial thinning, pruning, and other vegetation control methods.

Prerequisite(s): FR1330

Co-requisite(s): EY2211, FT1401

FR2430 - Wildlife Management

An introduction to the basic Wildlife Management principles, concepts and techniques as they relate to big game, fur bearers, small game, waterfowl, inland fishing, non-game and endangered species. Lectures concentrate on principles and concepts while labs are designed for students to apply techniques and learn identification and life history.

Prerequisite(s): FR1330

FT1235 - Mineral Resources Field Camp

In this course, students will work individually, and in groups, to apply a broad range of problem-solving skills learned during the first two semesters of the program. All first year mining students must attend this eight (8) to ten (10) day intensive field exercise in the two weeks following the end of the Winter semester - attendance at all projects is mandatory. Students will complete a variety of projects related to mine safety, geologic mapping, mining, surveying, mine ventilation and/or geophysics, both on and off campus. Safety aspects will be of utmost importance to consider during completion of all related projects.

Prerequisite(s): GE1210, MT1210, SU1230

FT1240 - Surveying Field Camp

This is a one week field camp to immerse the student in the field applications of Geomatics data gathering, mensuration and presentation. The work is done in a group setting where team play is essential for successful completion of assigned projects. The planning, execution, checking and successful completion of the group projects is emphasized.

Prerequisite(s): SU1320, SU1500

Co-requisite(s): SU1321

FT1260 - Multidisciplinary Field Camp

This camp is a hands-on session where the data gathering skills learned throughout the Geomatics/Surveying Engineering Technology (Co-op) program are reinforced by practical field work. The camp will involve different projects with each project involving a different aspect of the program. The projects will be designed to gather and process data and compile the data into maps and a report. Maps and reports will be submitted to instructor(s) and are produced based on industry standards.

Prerequisite(s): SU2330, SU1540, SU3500

Co-requisite(s): SU1541, SU3300

FT1400 - Forestry Field Camp

A two-week field camp is conducted at the end of the Intersession Semester. This camp is designed to enable students to take part in major practical exercises using standard practices of measurement and data collection in an operational setting. Throughout the two-week period, the proper care of equipment, safety practices, and basic skills such as map interpretation, compassing, vegetation identification, ecosystem analysis, etc. are emphasized. Major topics reinforce prior learning from the second semester and intersession. This camp is conducted in Central NL to broaden the learning environment, within the program, by exposing students to natural ecology and unique for types of this region.

Prerequisite(s): SU1710, SU3210, FR1330

Co-requisite(s): FR1230

FT1401 - Forestry Tour/Camp

This one-week field tour is designed to provide students the opportunity to visit and study a number of special forestry facilities and operations across the province. Throughout this study tour students will gain valuable first-hand information on business intelligence and technical knowledge applied throughout the forest sector. Students will also gain knowledge on the diversity of career opportunities for forest technicians. The experiences gained on the tour will enrich classroom studies in multiple courses during the final year of the program. Visits include a number of unique facilities and operations including NL Provincial Tree Nursery at Wooddale, NL Forest Fire Protection Centre, Thomas Howe Demonstration Forest, large-scale industrial sawmill sector, value-added forest products business sector, industrial forest harvesting operations, and silviculture operations.

Co-requisite(s): EY2211, FR2360, FR1560

FT1410 - Fish and Wildlife Field Camp

This course is an 8-day field camp conducted at the end of the Intersession semester. This camp is designed to enable students to take part in major practical exercises using standard practices of measurement and data collection in an operational setting. Throughout the 8-day period the proper care of equipment, safety practices, and basic skills such as map interpretation, compassing, vegetation identification, trapping, and other fish and wildlife techniques are emphasized. Major topics reinforce prior learning from the second semester and intersession.

Prerequisite(s): FR1330, SU3210

Co-requisite(s): RM1400, RM1500

FT1430 - Fish & Wildlife Camp II

A one-week camp conducted during the third semester. This camp is designed to enable students to participate in research/project being undertaken by a major external agency (National parks, Canadian Forest Service, Provincial Wildlife and DFO). Students are involved in the accumulation of field data for these projects.

Co-requisite(s): RM2200

FV1110 - History of Cinema

This course offers an examination of the history of provincial, national and international cinema from its beginnings to the present. Through lecture, observation, and critical examination, students will be exposed to the evolution of styles, cinematic techniques and the institutional culture of film providing students with a background in the general history and development of the medium.

FV1210 - Digital Filmmaking Techniques I

This is a technical course for Digital Filmmaking students. The course is designed to give students the knowledge and skills needed to use and understand the equipment required to produce professional films. The focus is on the camera as a tool while learning how to manipulate it to create and design a professional quality image.

Co-requisite(s): FV1260

FV1221 - Short Film Production I

This Intersession will constitute an intermediate practicum in the course work covered in the first and second semester. Each student will be given one of the many different positions found on a film crew and will be responsible to complete all tasks associated with that position for the purpose of producing a film. At the end of the semester, the film produced will then be presented to an audience.

Prerequisite(s): FV1230; SN2420; FV1210; FV1235; CM1680; FV1280; FV1285

Co-requisite(s): FV1290

FV1230 - Overview of the Film Industry

Students will learn about the operations of filmmaking and digital production from pre-production through delivery. Students will also have opportunity to gain a greater understanding of the fundamental processes, personnel, job descriptions and role responsibilities within a complex industry. These fundamentals such as set etiquette, protocols and safety practices are explored along with professional expectations while working as a member within a competitive and hierarchical structure.

FV1235 - Director Studies I

This course will give students the knowledge needed to produce their own films. They will learn techniques on how to work with crew members and actors to convey their creative vision as well as an understanding of all the different documentation needed to plan a film shoot. Each student will produce their own narrative film.

Co-requisite(s): FV1285; CM1680

FV1260 - Introduction to Post Production

This course will introduce students to the practical exploration of editing options and theoretical knowledge required when using a post-production suite to perform picture and sound editing.

Co-requisite(s): FV1210

FV1280 - Lighting & Grip

Students will learn the practical skills associated with the lighting and grip department and their operation in the motion picture environment. Students will explore basic electrical theory, different types of light fixtures and connections, cable management, rigging techniques, camera support equipment, light shaping equipment and techniques as well as reading and creating lighting schematics.

FV1285 - Picture & Sound Editing

This is an intermediate editing course designed to expand upon the post-production workflow and software. Students will complete a number of editing assignments designed to encourage creativity and technical skill development.

Prerequisite(s): FV1260

Co-requisite(s): FV1235

FV1290 - Digital Filmmaking Techniques II

Students will become familiar with professional digital cinema cameras and camera accessories associated with cinematic production techniques. Through practical exercises, students will gain a working knowledge of the capabilities, limitations and technical issues of modern digital filmmaking.

Prerequisite(s): FV1210

FV2000 - Art Direction & Production Design

This course will provide students with an understanding of the Art Department on a film production. Students will learn the basics of design, costuming, set construction, decorating and props. They will be expected to read scripts and research time periods while designing a look.

Prerequisite(s): HY1130

Co-requisite(s): FV2010

FV2010 - Digital Cinematography

This course will cover the digital cinematography aspects of filmmaking. This includes the technical application of industry standard digital filmmaking equipment along with the theoretical language of cinema.

Prerequisite(s): FV1280

FV2020 - Live TV & Webcasting

Students will use industry-standard television production studio equipment to create single and multi-camera programming and webcasting.

Prerequisite(s): FV1290, FV1280

FV2030 - Director Studies II

This is an intermediate course where students learn the roles and responsibilities of the film producer: script selection, director and crew recruitment, actor negotiations, pitching investors, director-producer collaboration, publicity and distribution.

Prerequisite(s): FV1235

FV2040 - Film Industry & Certifications

This course will prepare students to fully understand the film industry and all the "key players" within it as well give students a collection of short-form courses that will supply sanctioned certifications required for film production union referral status.

Prerequisite(s): FV1230

FV2050 - Advanced Documentary

This is an advanced “project-oriented” course that will teach students the demands of development, funding, distribution, legal and copyright issues. Students will also learn the advanced techniques used in a documentary film production.

Prerequisite(s): FV2210; FV1285

FV2060 - Colour Correction/Sound Design

Designed for intermediate to advanced studies, this course will help students learn how to put the finishing touches to their work. Colour correction, grading, sound design and mixing are all necessary skills accompanied with the avid suite. Students will develop a greater understanding of colour theory and how to use it properly in the development of a film as well as learning how to design a sound mix for their films with the ultimate goal of giving their final films a professional look and sound.

Prerequisite(s): FV1285

Co-requisite(s): FV2070

FV2070 - Director Studies III

This course is designed to give students a better understanding of how the Director works with the post-production crew as well as how to promote and present a finished film to an audience. Each student will be responsible for completing their own individual final film projects while working together to present during the Final Film Festival.

Prerequisite(s): FV2030; MM1400

Co-requisite(s): FV2060

FV2080 - Short Film Production II

This is the second and final Intersession of the program and will constitute an advanced practicum. Students will apply acquired technical skills and theoretical knowledge to plan and shoot a short narrative film.

Prerequisite(s): FV1221

Co-requisite(s): PD1110

FV2210 - Documentary Filmmaking

This “project-oriented” course will introduce students to the world of documentary filmmaking. Students will practice research techniques and write treatments while obtaining necessary skills required for producing high-quality documentaries.

Prerequisite(s): FV1210

Co-requisite(s): FV1285

FW1130 - Field Placement I

This field related course is designed to assist students in obtaining occupational experience. This course is a six-week field placement for students pursuing a Tourism & Hospitality Services Certificate or a Tourism & Hospitality Management Diploma. The purpose is to provide students the opportunity to apply the knowledge and skills acquired in class to a position in the tourism industry. Most field placements will be in entry level positions in food and beverage, front desk and housekeeping or in other tourism businesses or organizations.

The supervising program instructors will assist students in securing a suitable placement within the tourism and hospitality industry. The instructors will evaluate the student’s progress in conjunction with the field placement supervisor. Arrangements and expenses for transportation, lodging, and meals are the sole responsibility of the student.

Prerequisite(s): HS1131, HS1340, HS1740, MR1270, TR1110, TR1120, TR1610

FW1140 - Field Placement II

This field related course is designed to assist students in obtaining additional occupational experience at the management level with a supervisor or manager. This course is a six-week field placement for students pursuing a Tourism & Hospitality Management Diploma. The purpose is to provide students the opportunity to apply the additional knowledge and skills acquired in year two to a position in the tourism industry.

The supervising program instructors will assist students in securing a suitable placement within the tourism and hospitality industry. The instructors will evaluate the student's progress in conjunction with the field placement supervisor/manager. Arrangements and expenses for transportation, lodging, and meals are the sole responsibility of the student.

Prerequisite(s): Successful completion of FW1130 and all courses in Semesters 4 and 5

FW1180 - Field Placement Preparation

Students will prepare for their field placement experience and will gain the necessary information to help them benefit from the field placement experience.

Prerequisite(s): Successful completion of all Semester 1 and 5 courses

FW1210 - Journalism Internship

Students will pursue learning objectives related to their individual career goals while receiving four weeks of on-the-job training within a professional news organization. They will have the opportunity to apply and build upon the training they received in previous semesters and in conjunction with a field supervisor (who is an employee in the placement agency), the instructor supervises and evaluates the student's progress.

Prerequisite(s): JL2210, JL1010, JL1420

FW1235 - Field Placement Preparation

This course helps students prepare for field placement. In the course students will identify and pursue possible field placement opportunities, prepare learning contracts, and receive direction on completion of field placement documentation. Faculty will work with community stakeholders and students to help secure a field placement option and determine the most appropriate means for completing the field placement requirements. In addition, students will review ethical and legal guidelines to prepare them for placements with human service agencies.

FW1320 - Field Placement (Post Diploma)

Post-Diploma Journalism students are placed for four weeks with a professional news organization, applying and building upon the training they received in their first two semesters. Students pursue learning objectives related to their individual career goals while receiving field work training. In conjunction with a field supervisor (an employee in the placement agency), the instructor supervises and evaluates the student's progress. Students learn to produce journalism in a professional atmosphere through a combination of hands-on assignments and job shadowing. Post-Diploma students will produce a major piece of public service journalism during the field placement.

Prerequisite(s): JL1851

FW1330 - Field Placement I •

Field Placement I is a six-week placement with a human services agency. In collaboration with the instructor, students will obtain their own placements and are encouraged to seek one that meets their interests and goals. Each student will be assigned a supervisor who will monitor and evaluate their progress. Students are responsible for completing and submitting field placement documentation for evaluation and grading.

(Please note: under extenuating circumstances wherein an external field placement is not secured, an equivalent industry-related project approved and supervised by the instructor is acceptable.)

Prerequisite(s): Successful completion of all courses in semesters 1 and 2; clear certificate of conduct; vulnerable sector check; updated immunization record

FW1445 - Field Placement I

This course consists of a five-week placement with a human services agency in a voluntary capacity. Students are responsible for obtaining their own placements while working in collaboration with their field placement instructor. Students are encouraged to seek field placements which allow them to meet personal interests and goals. Each student will be assigned a field placement supervisor who will monitor and evaluate the student's progress. Students are responsible for completing and submitting field placement documentation for evaluation and grading.

Prerequisite(s): CM1100, HR1120, LD1200, CM2100, LD1120, FW1235, LD1300

FW1451 - Field Placement II

This course consists of a five-week placement with a human services agency in a voluntary capacity. Students are responsible for obtaining their own placements in collaboration with their field placement instructor. Students are

encouraged to seek field placements which allow them to meet personal interests and goals. Each student will be assigned a field placement supervisor who will monitor and evaluate the student's progress. Students are responsible for completing and submitting field placement documentation for evaluation and grading. (Please note: under extenuating circumstances wherein an external field placement is not secured, an equivalent industry-related project approved and supervised by the instructor is acceptable.)

Prerequisite(s): FW1445, LD2510

FW1600 - Field Placement I

During field placement, students begin to link theory to practice. Students will participate in seminars to learn basic knowledge and skills necessary for a successful placement experience, and spend a block of time at a field placement site. In this first supervised placement, the focus will be on students becoming familiar with the role of the early childhood educator and the program itself. Students will practice interacting and responding in positive ways to children, and engage in developmentally appropriate play with individual and small groups of children. Please note that time will be spent in the College's demonstration child care centre as part of the series of block placements. Opportunities to work with a variety of age groups across the series of field placement courses will be provided where possible.

Prerequisite(s): Valid First Aid Certificate

Co-requisite(s): EE1180, EE1340, EE1290, EE1420, FH1340; these courses may be completed as prerequisites

FW1601 - Field Placement II

During this second supervised field placement students will continue to link theory to practice, participating fully and assisting with all aspects of the program. It is expected that confidence and competence is increasing in interacting with and guiding children's behaviour, and working with staff, families and community members. Students will begin to add developmentally appropriate materials to the learning environment to support children's play, and will plan and implement a variety of developmentally appropriate activities for individual and groups of children. The importance of an inclusive, child-centred, active learning approach will be reinforced. Please note that time will be spent in the College's demonstration child care centre as part of the series of block placements. Opportunities to work with a variety of age groups across the series of field placement courses will be provided where possible.

Prerequisite(s): EE1180, EE1340, EE1420, FH1340, EE1290, FW1600

Co-requisite(s): EE1181*, FH1360*, EE1421*, EE1360* These courses may have been completed as prerequisites

FW1605 - Field Placement I •

During field placement, students begin to link theory to practice. Students will participate in seminars to learn basic knowledge and skills necessary for a successful placement experience, and spend a block of time at a field placement site. In this first supervised placement, the focus will be on students becoming familiar with the role of the early childhood educator and the program itself. Students will practice interacting and responding in positive ways to children, and engage in developmentally appropriate play with individual and small groups of children. Please note that time will be spent in the College's demonstration child care centre as part of the series of block placements. Opportunities to work with a variety of age groups across the series of field placement courses will be provided where possible.

Prerequisite(s): Valid First Aid Certificate

Co-requisite(s): EE1180, EE1340, EE1290, EE1420, FH1340

FW1610 - Field Placement II •

During this second supervised field placement students will continue to link theory to practice, participating fully and assisting with all aspects of the program. It is expected that confidence and competence is increasing in interacting with and guiding children's behaviour, and working with staff, families and community members. Students will begin to add developmentally appropriate materials to the learning environment to support children's play and will plan and implement a variety of developmentally appropriate activities for individual and groups of children. The importance of an inclusive, child-centred, active learning approach will be reinforced. Please note that time will be spent in the College's demonstration child care centre as part of the series of block placements. Opportunities to work with a variety of age groups across the series of field placement courses will be provided where possible.

Prerequisite(s): EE1180, EE1340, EE1420, FH1340, EE1290, FW1605

Co-requisite(s): EE1181, EE1341, FH1360, EE1421, EE1360

FW1710 - Field Placement I

Field Placement I provides students with the opportunity to apply knowledge and training in a real-world setting. The field placement also provides the student with a strong basic preparation for a wide range of professional practice. Using continuous assessment, students will be placed in a variety of approved settings such as long-term care facilities, hospitals, municipal recreation departments, and community agencies for a four-week (140 hours) period following course training. Throughout the semester, students will review field placement requirements and documentation, types of placements, and professional conduct. The student's progress will be evaluated in conjunction with a field supervisor (normally an employee in the placement agency).

Prerequisite(s): First Aid/CPR Certificate, Clear Certificate of Conduct, Vulnerable Sector Check, Updated Immunization Record, Host site documentation as required

Co-requisite(s): RS1100, RS1280, RS1451

FW1711 - Field Placement II

Field Placement II is an integral part of the curriculum allowing students to build on the knowledge and experiences gained from practical assignments and FW1710. It provides students the opportunity to apply knowledge and training gained from the Fall and Winter semesters in a work environment. Students will be prepared for placements based on accepted industry standards. Preparation in interview skills, resume writing, professional skills, and best practices will also be covered in the course.

Prerequisite(s): FW1710, RS1280, RS1100, RS1451, Documents required: Valid First Aid/CPR Certificate, Clear Certificate of Conduct, Vulnerable Sector Check, Updated Immunization Record, Additional host site documentation as required

Co-requisite(s): RS1250

FW2320 - Field Placement II •

This course consists of a six-week placement with a human services agency. In collaboration with the instructor, students will obtain their own placements and are encouraged to seek one that meets their interests and goals. Each student will be assigned a supervisor who will monitor and evaluate their progress. Students are responsible for completing and submitting field placement documentation for evaluation and grading.

(Please note: under extenuating circumstances wherein an external field placement is not secured, an equivalent industry-related project approved and supervised by the instructor is acceptable.)

Prerequisite(s): Successful completion of all courses in semesters 1 to 5; clear certificate of conduct; vulnerable sector check; updated immunization record

FW2600 - Field Placement III

During this third supervised field placement the focus is on students working in teams along with staff to implement the program. Students will plan cumulative play experiences and utilize webbing as a tool for planning of the curriculum. Students are expected to demonstrate initiative with regards to independently facilitating spontaneous and pre-planned play experiences for individual children, small groups, and large groups. Students are expected to demonstrate an inclusive approach to curriculum and interactions with families. Please note that time will be spent in the College's demonstration child care centre as part of the series of block placements. Opportunities to work with a variety of age groups across the series of field placement courses will be provided where possible.

Prerequisite(s): EE1181, EE1341, EE1421, FH1360, EE1360, EE1440, EE1480, EE2500, FW1601

FW2601 - Field Placement IV

During this fourth supervised field placement, students are expected to demonstrate increased competence in planning and implementing the routines and schedule, preparing and implementing a cumulative curriculum to meet the needs of all the children, and interacting with parents and community service providers. With guidance, students will implement specific supports for children with challenging behaviours. Students will promote the philosophy of inclusion in all aspects of their interactions with children, families, and the community. Please note that time will be spent in the College's demonstration child care centre as part of the series of block placements. Opportunities to work with a variety of age groups across the series of field placement courses will be provided where possible.

Prerequisite(s): EE2180, EE2255, FW2600

FW2605 - Field Placement III •

During this third supervised field placement the focus is on students working in teams along with staff to implement the program. Students will plan cumulative play experiences and utilize webbing as a tool for planning of the

curriculum. Students are expected to demonstrate initiative with regards to independently facilitating spontaneous and pre-planned play experiences for individual children, small groups, and large groups. Students are expected to demonstrate an inclusive approach to curriculum and interactions with families. Please note that time will be spent in the College's demonstration child care centre as part of the series of block placements. Opportunities to work with a variety of age groups across the series of field placement courses will be provided where possible.

Prerequisite(s): EE1181, EE1341, EE1421, FH1360, EE1360, EE1440, EE1480, EE2500, FW2610

FW2610 - Field Placement IV •

During this fourth supervised field placement, students are expected to demonstrate increased competence in planning and implementing the routines and schedule, preparing and implementing a cumulative curriculum to meet the needs of all the children, and interacting with parents and community service providers. With guidance, students will implement specific supports for children with challenging behaviours. Students will promote the philosophy of inclusion in all aspects of their interactions with children, families, and the community. Please note that time will be spent in the College's demonstration child care centre as part of the series of block placements. Opportunities to work with a variety of age groups across the series of field placement courses will be provided where possible.

Prerequisite(s): EE2180, EE2255, FW2605

FW2710 - Field Placement III

This course provides students with a four-week placement at an approved community-based agency/organization such as long-term care facilities, hospitals, youth serving agencies, government, provincial sport and recreation departments, and municipal recreation departments. During the placement, students will demonstrate their leadership skills while gaining invaluable experience in administrative practices and procedures in various areas including financial management, staff and public relations, program development, organization and government structures and functions, and facility operations. Prior to the placement, students will review previous placement experience documentation, type of placements available, and placement documentation issues and concerns.

Prerequisite(s): FW1711, RS1451, Documents required: Valid First Aid/CPR Certificate, Clear Certificate of Conduct, Vulnerable Sector Check, Host site documentation as required, current resume

Co-requisite(s): RS1320

FW2711 - Field Placement IV

Field Placement IV provides second-year students with experience in administrative practices and procedures with an approved community-based agency/organization. Through classroom and individual assessments, students will practice leadership skills and work independently in areas such as financial management, staff and public relations, program development, organizational administration and facility management. Students will be either physically or virtually assigned to a partnering agency, and design, plan, implement, and present a final product to the agency. Examples of community agencies that the student may be assigned to include long-term care facilities, hospitals, youth-serving agencies, government, provincial sport and recreation departments, and municipal recreation departments.

Prerequisite(s): FW2710, RS1320, Documents required: Valid First Aid/CPR Certificate, Clear Certificate of Conduct, Vulnerable Sector Check, Host site documentation as required, current resume

Co-requisite(s): MN1410

FW2800 - Field Placement

Students will work in the graphics industry under the direct supervision of an employer, with their progress being monitored and evaluated by faculty in the Graphics programs. The supervised field placement is an integral part of the total curriculum in the Graphic Design and Graphic Communications programs, and provides students with direct experience in the industry that can lead to a wide range of professional practice. (Please note: under extenuating circumstances wherein an external field placement is not secured, an equivalent industry-related project approved and supervised by the instructor is acceptable.)

Prerequisite(s): Successful completion of all program courses in Semesters 1 to 5, FW1180

FW2801 - Field Placement Reflection

Students will reflect upon and evaluate their field placement experience. Based upon this reflection and evaluation, students will have an opportunity to revisit skill-sets and areas for development.

Prerequisite(s): FW2800 or FW1451

FW2810 - Field Placement

Students will work in the graphics industry under the direct supervision of an employer, with their progress being monitored and evaluated by faculty in the Graphics programs. The supervised field placement is an integral part of the total curriculum in the Graphic Design and Graphic Communications programs, and provides students with direct experience in the industry that can lead to a wide range of professional practice. (Please note: under extenuating circumstances wherein an external field placement is not secured, an equivalent industry-related project approved and supervised by the instructor is acceptable.)

Prerequisite(s): Successful completion of all program courses in Semesters 1 to 5, FW1180

FW2811 - Field Placement Reflection

Students will reflect upon and evaluate their field placement experience. Based upon this reflection and evaluation, students will have an opportunity to revisit skill-sets and areas for development.

Prerequisite(s): FW2810

FX1010 - VFX Fundamentals

This course introduces students to the world of visual effects. Students will learn the concepts and language of visual effects through an analytical and practical approach. The pre-production and production stages of the visual effects pipeline will be explored and practiced.

FX1015 - 2D Digital Production

This course introduces students to the fundamentals of 2D image creation and manipulation. Students will learn how to operate 2D production software while learning the processes and techniques of creating 2D assets for visual effects productions.

FX1020 - VFX Photography

In this course, students will be taught the principles, mechanics, and techniques of digital still photography. Students will learn how to operate a digital camera to capture appropriate photos and panoramas for use in visual effects productions.

FX1025 - VFX Compositing I

This course introduces students to 2D digital compositing for visual effects. Students will learn the fundamental concepts required for the assembly of visual effects. Digital image and video manipulation will be practiced.

FX1030 - 3D for VFX I

In this course, students will be taught the fundamentals of the 3D pipeline in visual effects productions. Students will operate 3D production software while learning the processes and techniques of creating 3D assets and final renders for visual effects.

FX1035 - 3D Simulations & FX I

Students will learn how to create authentic 3D simulations and effects with tools and techniques used in the visual effects industry. Topics include particles, forces, rigid bodies, soft bodies, cloth, hair, fluids, and ocean simulations.

FX1210 - Digital Matte Painting

Students will be taught the processes and techniques of creating and integrating digital images in footage. Particular attention will be on the use of digital painting and photo manipulation techniques to create matte paintings for use in a visual effects production. Students will learn how to integrate matte paintings by making use of 2D, 2.5D, and 3D methods.

Prerequisite(s): FX1025, FX1030

FX1215 - Procedural Animation

Procedural animation is a technique to automatically generate movement that allows for more diverse actions opposed to keyframe animation. This course explores the processes and techniques of creating procedural animations for use in a visual effects production. Particular focus will be on motion graphics, visualizations, and crowd simulations.

Prerequisite(s): FX1030, FX1035

FX1220 - VFX Compositing II

Continuing from VFX Compositing I, this course is designed to teach students advanced compositing skills such as 3D compositing, camera tracking, deep compositing, and 3D particles in the compositing software.

Prerequisite(s): FX1025

FX1225 - 3D for VFX II

Students will be taught the process of 3D digital sculpting and painting along with 3D environment creation that includes advanced animation, lighting, and rendering techniques.

Prerequisite(s): FX1030, FX1035

FX1230 - 3D Simulations & FX II

In this course, students will be taught advanced techniques of creating realistic procedural simulations in a node-based framework. Students will explore the creation of phenomena such as fire, smoke, explosions, rain, snow, sand, advanced fluids and cloth.

Prerequisite(s): FX1035

FX1235 - Independent VFX Project

In this course, students will be given the opportunity to explore current and emerging techniques and practices in the creation of visual effects. Students will focus their learning and skill development through building upon personal aptitudes in a chosen area of visual effects.

FX1310 - VFX Portfolio

In this course, students will be taught how to create an effective portfolio to assist in obtaining employment in the visual effects industry. Students will develop skills of objective, critical self-assessment that are required to create a portfolio that best represents their proficiencies.

Prerequisite(s): FX1235

FX1315 - VFX Capstone Project

The course allows students to demonstrate the application of knowledge and skills acquired throughout the program. Students will be involved in the creation of visual effects from concept to completion while participating in a professional visual effects production environment.

Prerequisite(s): FX1225, FX1230, FX1220

GA1120 - Typography I

Students will be introduced to the history of the graphics industry and will study the historical evolution of typography from its beginning to its application in today's industry.

GA1121 - Typography II

Students will address contemporary issues in typography as they apply to print, web, and mobile devices. Students will develop design solutions for common typographic issues such as readability, legibility, navigation and coherence.

Prerequisite(s): GA1120

GA1130 - Digital Design Fundamentals

Students are introduced to digital design tools including vector and bitmap image manipulation, as well as digital layout fundamentals. Students will also learn to work independently on basic creative tasks using digital tools.

GA1140 - Vector Graphics

Students will gain an introduction to the basics of Vector Graphics used on dual platforms within graphic communications.

GA1170 - Graphics Problem Solving

Students will gain an understanding of practical and relevant mathematics specific to disciplines within the graphics industry and learn to directly apply relevant mathematics concepts. Students will learn about topics which emphasize problem-solving skills that apply practically to printing and design.

GA1180 - Graphic Design History

Students will gain a clear understanding of the history of the graphics industry. Students will study the historical evolution of typography from its beginning to its application in today's industry.

Co-requisite(s): GA1121

GA1220 - Color Management

Students will learn to effectively manage and use color in a digital graphic arts environment. Students will learn effective color management principles on both Apple Macintosh and PC platforms, and cover color systems and translations between color gamuts in detail. Students will also gain a clear understanding of the elements and principles of color theory, and how color can be used to create more effective images for the graphics industry.

Prerequisite(s): GA1170

GA1230 - Finishing & Bindery I

Students will gain an understanding of the background and methods used for finishing and bindery and how they apply to graphic communications.

GA1231 - Finishing & Bindery II

Students will gain an understanding of the advanced methods used for finishing and bindery as it applies to graphic communications.

Prerequisite(s): GA1170, GA1230

GA1320 - Digital Printing I

Students will receive hands-on skill development in printing to digital devices. Students are required to become proficient in the skill areas involved in providing short run, full-color documents and on-demand printing.

GA1321 - Digital Printing II

Students will gain an understanding of the principles of digital practices. The focus will be on advanced machine operation and quality control.

Prerequisite(s): GA1320, GA1421

GA1350 - Motion I

Students will be introduced to the principles and elements of motion design through studio practices at beginning and advanced levels. Students will be exposed to the first phase, "type in motion", which emphasizes the relationship between typography principles and animation fundamentals. Students will then gain knowledge during the second phase when an advanced applied approach to the language and principles of motion is explored. Students will also develop skills in digital creativity throughout this course.

GA1351 - Motion II

Students will expand upon the principles and elements of motion design studied in Motion I. Students will continue with studio lessons and practices at an advanced level and implement a practical demonstrable skill set in motion graphics.

Prerequisite(s): GA1350

GA1420 - Digital Page Layout I

Students will learn the basic technique of assembling visual elements.

GA1421 - Digital Page Layout II

Students will learn electronic page assembly using the techniques of page layout software on the computer. Students will learn about the flexibility of the page layout software as it applies to production for graphic communications.

Prerequisite(s): GA1420

Co-requisite(s): GA2570

GA1430 - Page Composition I

Students will gain an understanding of basic page composition as it applies to the graphics industry. Students will explore topics which emphasize developing digital layout skills using industry-standard software tools, while exploring different types of graphic design projects for traditional and digital printing processes.

GA1431 - Page Composition II

Students will gain an understanding of intermediate page composition as it applies to the graphics industry by working on long document design and production. Students are exposed to topics which emphasize developing digital layout skills while using industry-standard software tools, and exploring different types of graphic design projects for traditional and digital printing processes.

Prerequisite(s): GA1430

GA1470 - Web Processes

Students will be introduced to the basic skills in web processes. Students will be required to collect and process data from web-based applications, and this collected data will be processed and managed through software applications.

GA1520 - Image Manipulation I

Students will gain foundational skills required to use equipment and software to record, store, and manipulate digital images. Students will also gain an understanding of the hardware and skills required for the graphics industry.

Prerequisite(s): GA1170

GA1521 - Image Manipulation II

Students will gain advanced skills required to use equipment and software to record, store, and manipulate digital images. Students will also gain an advanced understanding of the hardware and skills required for the graphics industry.

Prerequisite(s): GA1170, GA1520

GA1625 - Print Technology I

Print technology allows for the reproduction of text and images on paper and other materials. This course introduces different methods that enables the printing of digital files. Students will prepare and print files using a digital printer, vinyl cutter, and through alternate methods of printing.

GA1626 - Print Technology II

Building on the skills and knowledge from Print Technology I, this course advances into innovative and trendy methods of print and application. Topics that will be covered are dye sublimation printing, laser engraving and cutting, and 3D sign application.

GA1640 - Illustration I

Students will be introduced to the basics of illustration as it is used in the graphics industry, and will develop traditional and digital illustration skills. Observation and experimentation with current traditional and digital graphic communications drawing tools, and an emphasis on both print- and screen- based graphic design projects are the focus of this course.

GA1641 - Illustration II

Students will further develop their illustration skills using vector-based drawing software current in the graphics industry. An emphasis will be placed on complex projects that incorporate vector and bitmap illustration, as well as typographic and layout skills.

Prerequisite(s): GA1640, GA1120

GA1740 - Textiles Graphics & Imaging I

Students will gain an understanding of the techniques and methods of transferring digital images to a variety of textile products. The emphasis will be on creation, output, and production of graphic images.

Prerequisite(s): GA1140, GA1420

GA1741 - Textiles Graphics & Imaging II

Students will gain advanced computer and production skills in the program area. Students will focus on the development of professional skills acquired through a selection of self-directed projects.

Prerequisite(s): GA1740

GA1750 - Display Graphics & Assembly I

Students will be introduced to the techniques and methods of applying digital images to a variety of materials used in the sign and display advertising industry. Emphasis will be on creation, output and assembly of graphic images.

Prerequisite(s): GA1140, GA1421

GA1751 - Display Graphics & Assembly II

Students will gain advanced skills in display graphics and assembly. Student focus will be on equipment maintenance, team building, and productivity.

Prerequisite(s): GA1750

GA1880 - Business Practices

Students will develop an understanding of common business practices in the graphics industry. Students will be introduced to the business requirements of freelance graphic design work, including pricing, estimating, specification-writing, subcontracting, contract and copyright law, time management, taxation and self-promotion.

GA1890 - Business Practices

Students will develop their understanding of common business practices in graphic communications. Students will focus specifically on the business requirements of graphic communication work, including pricing, estimating, specification-writing, subcontracting, contract and copyright law, time management, taxation and promotion.

GA2320 - Digital Printing III

Students will gain the skills required to ensure the equipment is functioning to equipment manufacturers' specifications. Students will focus on efficient machine operation and maintenance.

Prerequisite(s): GA1321

GA2350 - Motion III

Students will be introduced to the principles and elements of motion design through studio practices at beginning and advanced levels. Students will be exposed to the first phase, "type in motion", which emphasizes the relationship between typography principles and animation fundamentals. Students will then gain knowledge during the second phase when an advanced applied approach to the language and principles of motion is explored. Students will also develop skills in digital creativity throughout this course.

Prerequisite(s): GA1351

GA2380 - Production for Designers

Students will receive a basic overview of production methods and equipment used in the graphics industry. After completion of this course, students will have an understanding of the equipment with supervised operation.

Prerequisite(s): GA1170, GA1431, GA1641

GA2420 - Digital Page Layout III

Students will learn the techniques of page layout using advanced electronic page assembly software on the computer. They will work with advanced features of the software plus the explore different types of software for page layout. Students will also develop electronic documents that will be published to mobile devices.

Prerequisite(s): GA1421, GA2570

GA2430 - Page Composition III

Students will gain an understanding of advanced layout as it applies to the graphics industry by working on electronic document design and production. Students will explore topics which emphasize enhancing digital layout skills while using industry-standard software tools, and while exploring different types of graphic design projects for screen-based documents.

Prerequisite(s): GA1431

GA2570 - Production Workflow

Students will gain the skills required to develop workflow methods while maintaining quality control. Students will develop estimate sheets, quotation sheets, job dockets, and a tracking system while using computer software and workflow devices developed by the student.

GA2640 - Illustration III

Students will further develop their illustration skills using vector-based and bitmap-based drawing software current in the graphics industry. Students will be working on advanced projects that incorporate vector-based and bitmap-based illustration, typographic and layout skills for both print and screen-based (static and motion-based) graphic design projects.

Prerequisite(s): GA1641

GA2720 - Design Management Identity

Students will gain advanced understanding of and experience with managing and developing complex identity systems for the private, governmental and non-profit sectors.

Prerequisite(s): MR1340, VA1231

GA2750 - Advanced Graphics Imaging

Students are required to research new technologies in graphics imaging and will choose to either develop their research or merge the data with current imaging methods. After a combination of lectures, students will conduct and document a self-study exercise which includes ongoing consultations with the instructor. Based on their research, each student will complete three projects and will present their findings to faculty and the remainder of the class.

Prerequisite(s): GA1740, GA1750, GA2420, GA1321, GA1520

GD1120 - Storytelling in Games I •

The game industry is comprised of many artistic and technical disciplines. As games evolve, storytelling is becoming a leading factor in the development of an immersive and engaging gaming experience. Like movies and books, games support much of the common literary and cinematic forms of narrative. Games provide the opportunity to take these storytelling tools deeper through interactivity and involving the player as an active member of the storytelling experience. Students will learn the influence classic storytelling has in games and examine the modern day narrative processes and experiences that entertain gamers today.

GD1130 - Game Design Theory •

Games and the concept of play are an important part of human culture from the prehistoric age through modern times. They serve purposes such as teaching basic survival skills, provide engaging entertainment, and promote education, health, and fitness. Effective game design determines the purposes that each game will serve, and how audiences will respond through the act of play. This course will explore how games influence culture, past and present, discuss the principles of basic game design, and examine the psychological, and sociological aspects of games.

GD1140 - Serious Games Theory •

Inspiring young minds to learn, exploring the depths of the ocean and outer space, saving lives, increasing personal wellness: these are examples of areas where games go beyond pure entertainment and expand into education and training for people of all ages and roles in society. Students will explore the history, key designers, industry, and career opportunities of serious games. Various types and categories of serious games will be analyzed and discussed. Games for education, vocational training, simulation, health, and wellness, as well as art games, will be explored in more depth.

GD1150 - Game & Level Design I

Game and Level Design I introduces students to the basic practices of creating games through procedural design practices. From the stages of conceptualizing a game idea to delivering a fully functional game, students will explore the structured elements of making games, create game design documentation, prototype game concepts, and playtest a game's functionality. Game and level design practices will be applied to developing original 2D digital games with custom art and audio assets.

Prerequisite(s): GD1130

Co-requisite(s): GD1160, GD1170

GD1160 - Art for Games I

This course covers traditional and digital concept art for games. Students will also be introduced to skills and techniques for creating 2D game art and pixel art. Participation in critical analysis and discussion provides feedback for improving work.

Prerequisite(s): VA1120, VA1110

Co-requisite(s): GD1150

GD1170 - Sound Design for Games

Sound is an important element that helps bring a game to life, communicate with the player, and deepen the immersive experience. Building an effective soundscape for a game is a creative process that involves several areas of focus such as sound effects, ambience, character dialogue, and music. Each one of these elements blend together to create a game atmosphere which might provide interactive feedback to the player, or pull them into an emotional, audible world. Students will be introduced to, and practice, the process of creating and editing sounds for implementation into game projects.

Co-requisite(s): GD1150

GD1180 - Game Industry Professionalism

Professional behaviour is important to having a successful career in the game industry, including interpersonal and online interactions. Students will learn about the uniquely casual yet intense workplace environment of game studios. This course covers topics such as teamwork, diversity, conflict resolution, and attitudes for success in the game industry.

GD1600 - Business of Game Development

The game industry has grown to be a major economic force in the global market. It is an exciting time for start-up game companies and large studios alike. Accessibility to game engines and tools, and an enormous player base on a variety of platforms has lowered barriers to entry into the game industry. This course will explore elements of business for game developers with examples pertaining to the game industry. Items such as trends, game pitches, intellectual property, and marketing will be covered.

Prerequisite(s): GD1150

GD2110 - Game & Level Design II

Casual and serious games are popular genres in game design. Easy-to-play but difficult-to-master games are what defines a casual game while serious games can offer a player more than casual entertainment, providing educational and informational experiences. Students will examine and discuss various types of casual and serious games and apply game design practices to develop a serious game based on task-based team development.

Prerequisite(s): GD1150, GD1140

GD2121 - Art for Games II •

This course introduces the design and creation of 3D art and animation for games. The basics of 3D modelling and texturing for game art will be introduced. Participation in critical analysis and discussion provides feedback for improving work.

Prerequisite(s): GD1160

Co-requisite(s): GD2110

GD2130 - Storytelling in Games II

Creative writing skills are an essential element of storytelling in games. Through developed story arcs, deep characters, and meaningful writing, games can provide unique narrative experiences that go beyond traditional writing by incorporating the element of choice. Choice driven stories allow participants to feel a sense of control and freedom over how their experience will unfold. In this course, students will utilize writing fundamentals to engage in practices of creative writing, detailed character development, and create an original story-based game featuring branching narrative.

Prerequisite(s): GD1120

Co-requisite(s): GD2110

GD2140 - Game & Level Design III

Good level design can draw a player into an immersive game experience. 3D level design reflect how people assess the space around them in the real world. By creating levels that deliver a sense of believability, based on perspective, games can be created that provide deeper engagement for the player. Multiplayer levels offer a sense of collaboration, competition, and a community element to game play. In this course, students will be introduced to early 3D game and level design practices, and become familiar with using a 3D level editor to build basic, multiplayer game levels.

Prerequisite(s): GD2110

Co-requisite(s): GD2150, GD2160

GD2150 - Art for Games III

As a continuation of Art for Games, this course will focus on research and design practices for a specific theme. Students will build skills in 3D modelling and texturing for game art asset creation for 3D game levels. Participation in critical analysis and discussion provides feedback for improving work.

Prerequisite(s): GD2121

Co-requisite(s): GD2140

GD2160 - QA & Playtesting for Games

This course explores quality assurance and testing for the game industry from a professional viewpoint. Test planning, documentation and bug reporting are taught and practiced as a playtesting feedback mechanism for Game and Level Design III. Careers in quality assurance and testing are also covered.

Co-requisite(s): GD2140

GD3100 - Game & Level Design IV

Interactions within a level allow a player to engage with the game through active participation. Interaction design can introduce diversity in navigational exploration and involve deeper elements of challenge. By combining basic game mechanics in a level with original asset implementation, students can create unique, interactive game experiences. Elements such as physics and particles can add to the theme and atmosphere of the level. In this course, students will continue the practices of 3D level editing to begin creating a single player game experience.

Prerequisite(s): GD2140

Co-requisite(s): GD3110, GD3130

GD3110 - Art for Games IV

As a continuation of the Art for Games series, this course covers advanced art asset creation for implementation into 3D game levels including environments, props, particles, and effects. Students will also design and create game props with basic animation. Participation in critical analysis and discussion provides feedback for improving work.

Prerequisite(s): GD2150

Co-requisite(s): GD3100, GD3120

GD3120 - 3D Game Character Design

This course covers 3D game character design including concept, modelling, texturing, rigging, posing, introduction to animation, and presentation. Tools and techniques are utilized with a focus on application for game art. Participation in advanced critical analysis and discussion provides feedback for improvement of work.

Prerequisite(s): VA1140

Co-requisite(s): GD3110

GD3130 - Visual Narrative for Games

A picture is worth a thousand words and game stories can be intensified through the use of visual narratives. With the basic nature of human gestures and expressions, storytelling can come to life with dramatic influence. Students will examine the historical relevance of cinematography as it relates to game design. Incorporating visual elements into games and media begins with the preproduction process of storyboards and animatic design. Students will apply these preproduction processes and utilize video editing software to create animated storyboards as well as use in-game camera systems to create basic scripted events in a game level.

Prerequisite(s): GD2130

Co-requisite(s): GD3100

GD3140 - Game & Level Design V

A game experience can be improved when the action and environment facilitate good storytelling. The game world along with interface elements provide a canvas for delivering a game story. Revision and refinement are important processes when seeing a project through to completion. This course will focus on the completion of student single player levels from the previous Game and Level Design course. Through playtesting, revision, and refinement, students will complete and deliver a short single player game experience.

Prerequisite(s): GD3100

Co-requisite(s): GD3170, GD3150

GD3150 - Interactive Storytelling

Games as storytelling devices is a popular and growing trend in game development, and drawing attention to the narrative possibilities of interactive entertainment. Storytelling is an important element of game design that can deliver a narrative context to the events and actions of game play. Environments and interfaces also have the power to influence a story experience and can be used to guide a player throughout the events of the game. In this course, students will develop in-game artifacts and utilize various literary, auditory, and visual forms of interactive narrative, providing deeper storytelling experiences to compliment game play and level design.

Prerequisite(s): GD3130

Co-requisite(s): GD3140

GD3160 - Portfolio for the Game Industry

Students will research current roles and opportunities within the game industry to conduct an organized, targeted job search. Refined and fully developed work samples specific to roles within the game industry will be selected and critically assessed for inclusion in a body of work. Using skills and knowledge learned in Visual Narrative for Games, students will create supporting media for job application and create an online portfolio to present samples and media in an industry standard convention.

Prerequisite(s): GD3130

Co-requisite(s): GD3170, GD3140

GD3170 - Art for Games V

This course is a continuation of developing game art assets for 3D game levels, including interface and artifact design, level décor, and polishing elements to bring a high-quality project to completion. Students will focus heavily on art production for the project combined with Game and Level Design V. Participation in advanced critical analysis and discussion provides feedback for improving work.

Prerequisite(s): GD3110

Co-requisite(s): GD3140

GD3180 - Game Design Capstone Project

The capstone project enables the learner completing a Video Game Art & Design diploma, in the final semester, to demonstrate the application of skills and knowledge developed throughout the program. This course incorporates comprehensive project development simulating industry practices.

Prerequisite(s): GD3140, GD3170, GD1180

GD3190 - VR & AR in Games & Simulation

Virtual and augmented reality technologies continue to emerge as exciting platforms for entertainment products as well as efficient and necessary resources for simulation training in various industries. Modern game engines are often used to develop virtual and augmented reality products, which apply game design theory and practices. In this course, students will examine the uses of these modern technologies and apply previous Video Game Art & Design studies and practices to create a virtual reality prototype.

Prerequisite(s): GD3100, GD3110

GE1110 - Geology I

In this course, students will be introduced to mineralogy; igneous, sedimentary, and metamorphic rocks; weathering and erosion; and the earth's internal structure. Field and lab exercises will provide students with opportunities to gather samples and practice identifying rocks and minerals.

GE1210 - Geology II

In this course, students will be introduced to geologic time, structural geology, topographic and geologic maps, earth structure, and the area geology for Newfoundland and Labrador. The lab component of this course includes lab and field exercises related to the identification of igneous, sedimentary, metamorphic rocks, and embedded mineralization.

Prerequisite(s): GE1110

GE1240 - Geology for Geomatics/Surveying ET

This is an introductory course in physical geology and exploration geophysics designed for students in the Geomatics/Surveying Engineering Technology program. The course will begin with an introduction to physical geology and continue with an overview of tectonics and structure and will include weathering and erosion. The second component will be an overview of geophysical exploration tools. Laboratory work will relate directly to in class lectures.

GE1300 - Forest Soils

This course is designed to expose students to the basic concepts of soil science, soil sampling and analysis, and soil classification. These concepts are then utilized to allow the student to investigate forest soils in detail and to investigate the role of forest soils in forest site classification and productivity and the impact that forest practices have on soil properties and its implication to forest management.

Prerequisite(s): EY2210

Co-requisite(s): EY2211

GE1310 - Soil Fundamentals

This course is designed to expose students to the basic concepts of soil science, soil sampling and analysis, and soil classification.

GE1420 - Physical Environments

This is an introductory course designed to provide students with basic knowledge in both terrestrial and aquatic environments.

GE1502 - Petroleum Geology I

This course is a continuation of Physical Geology. It covers geologic processes occurring in and on the earth, structural geology and geological resources. Laboratory work includes the study of topographic maps and profiles, earthquakes and tectonics, construction of sub-surface geology maps and sections and field trips to places of geologic interest on the Avalon Peninsula.

Prerequisite(s): GE1520

GE1520 - Physical Geology

This is an introductory course in physical geology designed for students in the Petroleum program. It covers origin, distribution and deformation of igneous, metamorphic, and sedimentary rocks. Laboratory work includes the study of minerals and rocks with emphasis on identification and classification of sedimentary rocks.

GE2100 - Geological Fieldwork

In this course, the student will acquire skills necessary for field and underground mapping: use of Brunton and Silva compasses, pacing, plotting, sketching, layout and use of a field grid, use of maps and/or photos for control, and use of GPS for navigation and location. Students will draw finished maps and interpret sections manually, prepare simple geological reports, interact with NL GeoScience Online Database, and explore the use of drones for aerial photogrammetry.

Prerequisite(s): GE1210

GE2210 - Exploration Geophysics

In this course, students will be introduced to the application the most common types of geophysical surveys and equipment, including magnetic, gravity, and electromagnetic. Each technique will be covered using a combination of lecture, lab, and fieldwork.

Prerequisite(s): GE1210, SU1230

GE2310 - Intro to Structural Geology

In this course, students will recognize, classify, interpret, and analyze folds, faults, and fractures. In this descriptive study of the structural deformation of rocks, the applied use of structural geology is emphasized. Lab work involves the solution of three-dimensional problems related to mineral exploration and mine development.

Prerequisite(s): GE1210

GE2410 - Mineral Resource Evaluation

In this course, students will be introduced to the role of the Mining Engineering Technician in the process of mineral

resource evaluation. Students will design drilling programs - laying out drill holes - using standard guidelines. Hands-on lithologic and geotechnical core logging, interpretation, and presentation of data will also be covered. Students will utilize field data to classify and estimate mineral resources following standard industry practices.

Prerequisite(s): GE1210, EG1235

GE2510 - Petroleum Geology II

This course covers the generation of oil/gas and the movement of oil/gas from source to reservoir. Further, the course will look at the exploration procedure and the methods of exploration for oil and gas both geological and geophysical. The main geophysical exploration tool "seismic exploration" will be looked at in detail.

Prerequisite(s): GE1502

Co-requisite(s): CH2330

GE2520 - Digital Map Making

In this course, students will convert geological field maps to digital maps using scanning and digitizing technology, software, and techniques, complete and integrate geological interpretation into digital maps and sections and prepare digital components of a simple geological field report. Multiple methods of creating digital maps will be introduced, including manual scanning and editing, use of AutoCAD, and use of GIS software.

Prerequisite(s): GE1210

GM1105 - Aircraft Plumbing (S)

This S course will enable the student to identify and manufacture the different types of pressure and vacuum lines and hoses used on the various aircraft systems.

Prerequisite(s): GM1120

GM1120 - General Maintenance Procedures (M, E, S)

This M, E, and S course is to inform the student of the responsibilities and safety requirements when working in an aircraft environment. This course will also enable the student to select materials and instructions so they can successfully complete a maintenance task.

GM1130 - Aircraft Servicing (M,E)

This M and E course will enable the student to work safely and efficiently in an aviation maintenance environment. This is to enable students to position aircraft, select materials and instructions that will provide for the safe completion of a maintenance task. Students will perform servicing checks on both fixed and rotary wing aircraft.

Prerequisite(s): GM1120

GM1140 - Standard Work Shop Practices

This course is designed for students entering the Aviation Programs. This course enables the student to obtain the knowledge and skills required to select and use hand and power tools, precision measuring instruments, shop equipment and the knowledge to be able to identify different types of aircraft hardware.

GM1160 - Maintenance and Plumbing

This course is to inform the student of the responsibilities and safety requirements when working in an aircraft environment. This course will also enable the student to select materials and instructions so they can successfully complete a maintenance task as well as enable the student to identify and manufacture the different types of pressure and vacuum lines and hoses used on the various aircraft systems.

GM1165 - Maintenance and Service

This course covers the responsibilities and safety requirements when working in an aircraft environment. This is to enable students to position aircraft, select materials and instructions that will provide for the safe completion of a maintenance task. Students will perform servicing checks on both fixed and rotary wing aircraft. This course is to inform the student of the responsibilities and safety requirements when working in an aircraft environment.

GM1210 - Corrosion Control

This course will provide the student with the knowledge to identify various types of corrosion, the causes of corrosion and the susceptible locations of corrosion on aircraft structures. This course is designed to provide the knowledge to inspect aircraft structures for corrosion, assessment of damage, removal of corrosion, treatment of corroded areas

and protection methods used to prevent or retard further deterioration of aircraft structural components.

GM1230 - Human Factors EASA Module 9

This course will provide the student with the knowledge of human performance in aviation maintenance. This course will also examine various models and theories that are attributable to human errors and review strategies to help either manage or avoid these errors to prevent or reduce the risk of accidents. The course is designed to meet all the requirements for EASA module 9A at the B1 level.

GM1320 - Aircraft Weight and Balance

This course is designed to provide a student with an in depth knowledge of Aircraft Weight and Balance. Students will be required to differentiate between fixed wing and rotary wing weight and balance, as well as longitudinal and lateral center of gravity. Students will interpret manufacturers' specifications and procedures for weighing aircraft and compute a weight and balance report.

GM1340 - EASA Module 6 Top Up

This course is designed to cover items from EASA module 6 that were not contained in the Aircraft Maintenance Engineering Technician program. The students will receive instruction in springs, bearings, transmissions, belts and pulleys, chains and sprockets.

GM1350 - EASA Module 7 (A) Top Up

This course is designed to cover items from EASA module 7A that were not contained in the Aircraft Maintenance Engineering Technician program. The students will receive instruction in the maintenance of springs, bearings, transmissions, belts and pulleys, chains and sprockets along with aircraft lubrication requirements.

GM1360 - EASA Module 6, 7 (A), 8 Refresher

This course is designed to prepare the student to write the EASA module exams for modules 6, 7A & 8 through the use of practice exercises and review lessons.

GM1420 - Non-Destructive Testing

This course is designed to provide the student with an in depth knowledge of Non-Destructive Testing (NDT) techniques. Materials and equipment will also be discussed.

GM1525 - Sheet Metal Fabrication

This course is designed to provide the student with the knowledge of aircraft structural fabrication and replacement. The student will utilize the knowledge and skills learned in previous aircraft structural repair courses. They will use aircraft technical drawings, follow guidelines and specifications to fabricate and replace aircraft structural component. The student will produce the certification as required by the Canadian Aviation Regulations for the completed projects.

Prerequisite(s): AF1240

GM1550 - Maintenance Regulations

This course will provide the student with the regulatory guidelines to be followed while performing maintenance on aircraft or aeronautical products as a requirement of the Canadian Aviation Regulations (CARs). Human performance in aviation maintenance will also be covered.

GM1570 - Corrosion Control (M, E, S)

This is an M, E and S course that will provide the student with the knowledge to identify various types of corrosion, the causes of corrosion and the susceptible locations of corrosion on aircraft structures. This course is designed to provide the knowledge to inspect aircraft structures for corrosion, assessment of damage, removal of corrosion, treatment of corroded areas and protection methods used to prevent or retard further deterioration of aircraft structural components.

GM1580 - Corrosion Control (S)

This S course will provide the student with the skills to inspect aircraft structures for corrosion, assess damage,

remove corrosion, treat corroded areas and apply protection methods used to prevent or retard further deterioration of aircraft structures.

Co-requisite(s): GM1570

GM1600 - Structural Damage Repair and Assembly

This advanced course in aircraft sheet metal repair will further develop the student's knowledge and skill to assess damaged structures, procure a repair scheme, and embody a certified repair that meets airworthiness standards.

Prerequisite(s): AF1240

GM1700 - Legislation EASA Module 10

This course will provide the student with the knowledge of aviation legislation and regulatory framework for all operators in the European Union that operate under the EASA regulations. The course is designed to meet all the requirements for EASA module 10 at the B1 level.

GS1110 - Cartographic Concepts

This course will engage students in the exploration of the cartographic communication process. By introducing concepts and processes that are central to cartography, the course will enable the student to build a broad cartographic foundation for concurrent and subsequent studies. Through a series of lectures, exercises, deliverables, and presentations the students will compute and maintain geographic accuracy while encoding real world phenomena using specific cartographic communication concepts.

GS1210 - GIS Database Principles

This course presents principles of database processing in a GIS environment; lab exercises and project work provide opportunities for students to develop skills in implementing and managing databases. Students will use Database Software and Structured Query Language (SQL) to build databases and manipulate data in preparation for future work in data processing and GIS analysis.

GS1320 - Principles of GIS

This course will enable students to explore the principles and fundamental concepts and types of Geographic Information Systems (GIS) and apply them in simple projects. Students will be introduced to the five main technical components of a GIS: input, storage, pre-processing, analysis and output using both the raster and vector spatial data models. A series of laboratory and mini-project exercises provide students with hands-on experience using current software applications.

GS1410 - Problem Solving and Programming

Geomatics software systems include programming capabilities to enable technical users to build specialized applications to process data and automate repetitive tasks. Using these facilities, a few well-placed lines of code can save days of tedium or can accomplish tasks that would otherwise not be feasible. In this course students will prepare to utilize these capabilities by: (1) developing problem solving and algorithm design skills, (2) implementing solutions in a high-level programming language. This course also serves as the foundation to the other programming and technical courses covered later in the GIS specialist program.

GS1510 - Remote Sensing and Image Analysis

This course introduces detection, delineation, interpretation, and measurement of physical/biological/cultural features on remotely sensed imagery. Students will acquire an understanding of critical remote sensing techniques and their application in a variety of sectors.

GS1610 - Surveying and Mapping

This course emphasizes geomatics principles as they apply to spatial databases. Building on the skill sets associated with measuring for maps and land type surveys, students will develop expertise in the use of equipment such as: total stations, GPS receivers, and data loggers to locate features and attach the attribute information. Through project work in the lab and field, students will gain practical experience in equipment use, maintenance and troubleshooting. Once collected, features will be placed in a GIS / Land Information System and appended to existing digital maps and plans. The resulting maps and GIS databases will be used to solve spatial queries related to land parcels.

GS2100 - Open Source GIS and Data Management Tools

This course will provide an introduction to open source tools for spatial and non-spatial data management. Particular emphasis will be on data summary and presentation of results. Students will use open source GIS software to reproduce commercial off the shelf software techniques to solve GIS problems and manage GIS data. Python and the Pandas Module will be used for data summary and manipulation. Pandas is a core module in the Data Scientist's tool box and has numerous applications for GIS.

GS2110 - Customization of GIS Applications

As GIS software packages become more sophisticated, there is a greater need for GIS specialists who not only perform GIS analyses, but also are highly skilled in automating GIS applications, and workflows. Automation may be done within the application itself, or by developing stand-alone programs that integrate GIS capabilities. This course introduces students to the basics of designing programs to facilitate the repetition of tasks and to perform unattended GIS workflows. Students will also learn how to develop customized GIS applications to meet specific user needs and how to link these applications to other programs.

Prerequisite(s): GS1410

GS2210 - Database Design and Development

This course builds on GIS Database Principles to introduce advanced relational database topics that are increasingly important for GIS and mapping professionals. Through application of the basic principles of relational database design, students will learn how to design a model of the users' view of their data and express it as an entity-relationship model. Core concepts of database development will also be explored, including normalizing tables, establishing appropriate relationships between data, establishing metadata, determining domains, and capturing business rules. The course includes topics in data processing with SQL and procedural extensions in industry-standard client server environments. The course also provides a detailed exploration of the Geodatabase.

Prerequisite(s): GS1210

GS2310 - Project Planning and Management

The skills developed in this course will help students select, design, build, and implement a complex GIS application in response to an industry defined problem, using a business project management model. The course will assist students in negotiating the complexities of project management unique to this sector, as well as issues such as client relations, time management and scheduling, costing and budgeting, data acquisition, negotiating intellectual property rights and copyrights and managing teamwork and interactions. Project design principles and cartographic standards, together with guest lectures, will provide a foundation for the iterative process of planning, establishing schedules, and writing a GIS project proposal. Project Planning and Management will act as an introduction to the major GIS project in the final semester, and develops a skill set critical to its success.

Prerequisite(s): GS1110, GS1210, GS1320, GS1410, GS1510, GS2512, GS2100

GS2410 - Spatial Analysis and Applications

This course will provide the opportunity to conduct advanced GIS analysis applications. The course is designed to deliver competencies related to spatial analysis techniques available within a GIS environment, and within the context of a variety of application areas. In addition, this course will apply methods for determining appropriate use of GIS within organizations. Conceptual material presented in lectures will be placed in an applied context through lab exercises and mini projects designed to strengthen practical understanding and awareness of GIS methods and methodologies.

Prerequisite(s): GS1320

GS2512 - Spatial Statistics

Following a review of basic statistics, this course introduces the student to the fundamentals of geostatistical methods relevant to geographic data and spatial analysis. The course begins with a brief review of descriptive and inferential statistics and their application to geographic data as a precursor to conducting applied statistical analysis focusing on spatial distribution of data, trend analysis, geographically weighted regression, machine learning techniques, CART analysis, and data mining.

GS2710 - Web GIS Development

This course introduces GIS students to the broad possibilities of the single greatest impetus for change in the GIS industry - the Internet. Web GIS Development provides an overview, and develops a conceptual understanding of,

existing Web-based applications for GIS and the innovations that will affect the shape of the industry's future. Students will create web GIS sites using the built-in capabilities of ArcGIS Server, and create applications using the ArcGIS Online Platform. Planning and development stages for a GIS website will also be covered, with practical work in accessing, displaying, querying, and analyzing GIS data over the Internet.

Prerequisite(s): GS1320

GS2911 - Advanced Remote Sensing

Airborne/space borne imagery will be analyzed using current imaging and GIS software(s). Increasing utility of the data from space-borne sensors will also be conducted, and in parallel, students will perform advanced fully automated (as well as semi-automated) data extraction.

Prerequisite(s): GS1510

GS3110 - Advanced Topics in Geomatics

Advanced Topics in Geomatics is designed to ensure that students are exposed to emerging issues and trends in the field as well as the most current technologies. Course topics will be selected through the input of advisory committee members, departmental faculty and students as well as through assessment of the professional literature and publications. Activities will include guest lectures, demonstrations of new technologies, applications and software, workshops, student presentations, field trips and, where possible, attendance at an external conference or workshop. The course is an important transition for students as they move from program graduates to entry level practitioners, helping them to begin professional networking, develop a career path and explore avenues for future professional development and areas of specializations.

Prerequisite(s): GS1320

GS3210 - GIS Capstone Project

This course provides the student with an opportunity to finalize the design, development and implementation of a GIS project initiated in the Project Planning and Management course. This team-based project will address a variety of GIS issues and use mapping techniques to promote the research, development, testing, and analyzing of real-world information in a real world environment. Students will be challenged to assign responsibilities, create and maintain satisfactory working relationships with the client, accept feedback, meet project deadlines, manage the production of deliverables to industry standard, and formally present their findings. The team consists of students, instructors, and industry sponsors.

Prerequisite(s): GS2110, GS2210, GS2410, GS2310, GS2710, GS2911, GS3410

GS3410 - Spatial Database Applications

Through labs, mini-projects, and a collaborative class major project, students will gain competencies related to the functionalities and applications of ESRI ArcGIS geodatabases. This course will provide students with an extensive knowledge-base and skillset necessary to conduct high-level analysis in research and industry projects.

Prerequisite(s): GS1320

HC1300 - Hydrogen Safety

The physical and chemical properties of hydrogen create hazards that can potentially cause injury or death. Hydrogen workplaces require safety practices to protect workers. The Hydrogen Safety Practices course focuses on the identification of hazards relating to hydrogen. Safety precautions such as safety zones and personal protective equipment are examined. Emergency response procedures for hydrogen related incidents and evacuations are also covered.

HC1310 - Introduction to Process Operations

This course provides the students with knowledge of the common duties assigned to process operators across many types of industrial plants. The types of equipment and their related maintenance requirements and troubleshooting procedures are also introduced.

HC1320 - Hoisting, Rigging, and Lifting

This course will enable students to discover safe protocols and requirements for hoisting, lifting, and rigging equipment; its applications, limitations and procedures. Students will determine hoisting and lifting calculations, and apply safe standard procedures utilized to perform hoisting and lifting.

HC2110 - Ammonia Safety

The physical and chemical properties of ammonia create hazards that can potentially cause injury or death. Ammonia workplaces require safety practices to protect workers. The Ammonia Safety Practices course focuses on the identification of hazards relating to ammonia. Safety precautions such as safety zones and personal protective equipment are examined. Emergency response procedures for ammonia related incidents and evacuations are also covered.

HC2115 - Process Diagrams

In this course, students will gain practical experience in reading, interpreting, and drawing process block diagrams, process flow diagrams, and process and instrumentation diagrams (P&ID).

Prerequisite(s): HC1310

HC2120 - Final Control Elements

This course will explore the language and applications of final control elements, their accessories, components, and operation. Student will apply basic troubleshooting final control elements, accessories, and components in a simulated and/or industrial plant-based environment.

HC2125 - Storage of Liquids and Gases

This course introduces students to the storage of liquids and gases in the oil and gas industry, specific to vessels and storage tanks. Students will gain the necessary knowledge base and apply hands-on skills to perform the purging, bleeding, and venting of vessels.

HC2130 - Green Hydrogen Industry

The drive towards a sustainable green economy is becoming a reality due in part to the emergence of the green hydrogen industry. In this course the occupations and production facilities involved in producing green hydrogen are examined.

HC2135 - Pollution and Control

This course examines the measurement and management of different types and sources of pollution. It emphasizes three major types of pollution: air, water, and land. Methods to prevent and control pollution and the complexities associated with waste management and environmental effects are also learned in this course.

HC2140 - HMI and Process Control Systems

This course will provide students with an overview of how process control systems and Human Machine Interfaces (HMI), SCADA, PLCs, function and integral to ensuring a management mechanism in processing.

HC2145 - Process Instrumentation

This course is designed to introduce students to the basic instruments used for process variable measurement in the process industry. Topics covered in this course include pressure, level, flow rate and temperature measuring instruments.

HC2150 - Asset Maint. & Reliability

Development and application of preventive and predictive maintenance programs for industrial equipment and facilities is emphasized. Condition monitoring of equipment, predictive techniques including vibration analysis and fluid sampling are explained with practical applications and related exercises. A preventive and predictive maintenance program is developed as a project, using industry-recognized methods.

HC2200 - Hydrogen Production

This course provides an introduction to hydrogen and the fundamentals of hydrogen production. The student will learn about the uses and application of hydrogen in process plants including the operation of hydrogen units.

HC2215 - Ammonia Production

This course provides an introduction to ammonia and the fundamentals of ammonia production. The student will learn about the uses and application of ammonia in process plants including the operation of ammonia units.

HC2220 - Basic Process Control

This course will enable students to discover basic process control and its purpose. The course will determine how basic controllers, their components and operations are configured, calibrated, maintained, tuned, commissioned, and troubleshoot.

HC2225 - Advanced Control Systems

This course will provide the student with an overview of programmable logic controller (PLC) systems, distributed control systems (DCSs), human machine interfaces (HMI) software and hardware. The student will delve into how each control interacts with process systems and to develop applied skills.

HC2230 - Advanced Process Control

In this course students will review advanced process control and its purpose and the procedures used to, configure, tune, maintain, and troubleshoot process control systems. Students will perform procedures used to commission and optimize process control systems.

HC2235 - Work Planning

Work planning follows a similar process as project management. As such, the student is introduced to the practical aspects of project management and a workflow that ensures management oversight and 'closes the loop' so future jobs of a similar nature can be optimized.

HC2240 - Troubleshooting Techniques

Students will learn to establish and apply a general troubleshooting methodology to chemical process equipment. Definitions of good/normal performance will be discussed for each process/equipment type covered. Criteria to use when evaluating possible problem solutions will be examined. Students will practice troubleshooting real-world chemical process equipment malfunctions.

HC2245 - Hydrogen Fuel Cells

This course provides an introduction to hydrogen fuel cells. The structure and underlying electrochemical principles are examined. Students will learn procedures pertaining to production, operation, and maintenance of hydrogen fuel cells.

HG1110 - Applied Science for Allied Health

In this course, principles of chemistry, biochemistry, and physics are studied as they apply to the practice and study of several allied health sciences, including but not limited to respiratory therapy, medical laboratory technology, ultrasonography, and medical radiography. Major topics include bonding, matter, solutions, equilibrium, and electrochemistry. The fundamental concepts covered in this course will form the basis for further studies in allied health sciences.

Co-requisite(s): MA1700

HG1300 - Professional Practice

This course provides an awareness of key professional aspects of health care settings as expected in a rapidly evolving clinical environment. Before beginning a clinical rotation, students must be cognizant of the personal, operational, and behavioral issues affecting the clinical practicum and the broader health care environment, which involves both patients and other health care professionals. This course will allow students an opportunity to develop basic skills related to health care professionalism, interprofessional collaboration, and teamwork in the health care setting before beginning their first clinical rotation.

Prerequisite(s): CM2201 or CM2200

HG1500 - Working in Healthcare

Students will examine the concepts of working in healthcare with a contemporary lens. Historical aspects of the Canadian Health Care System and recent changes to the system are explored. The significance of these changes to Canadians and to the roles of employees in the field will be considered. Areas to be addressed include: health and the individual, group behaviour, management and employee decision making, conflict and negotiation, motivation, and organizational culture. Application of these concepts to related work settings provide an employee's perspective to working in a rapidly changing field.

HG1681 - Ethics in Health Care •

This is an introductory course in health care ethics, legal issues, and workplace concerns. The student will be aware of, understand, appreciate and evaluate commonly encountered ethical, legal and professional problems in the workplace. Through course content, lectures, selected readings and student discussion, ethical and legal theories will be examined, together with what constitutes professional behaviour, values and practical wisdom. These concepts will be applied to current issues related to healthcare professionals.

HG2050 - Professional Practice & Ethics

This course provides an awareness of current trends and the healthcare industry as expected in a rapidly evolving clinical environment. The student will learn the legal considerations, professionalism, patient care, teamwork and interprofessional skills pertaining to the clinical practicum. Emphasis will be placed upon preparing the student for their practicum experience. The student will learn the aspects of the personal, operational, and behavioral issues that affect communication with patients and professionals. This course will allow the students to learn interprofessional communication skills to enhance the clinical experience.

HM1121 - The Culinary Manager

In this course, students will become exposed to the world of the Culinary Manager, and learn the skills required to join this growing profession. More than just cooking, culinary managers must be able to manage employees, understand legislation and accommodate the special requirements of their customers.

HM1141 - Culinary Tourism Business

This course is focused on the relationships between the cultural and culinary sectors of the tourism industry. During the course, students will explore the opportunities that are created when these two sectors come together to create partnerships. While participating in this course, students will learn how to successfully develop partnerships in order to build a culinary tourism product.

HM1160 - Culinary Tourism Experiences

Students will find their passion for Culinary Tourism through participating in workshops and living lab excursions, as well as culinary events like Roots Rants and Roars and Eat The Hill. Students will have the opportunity to work and learn from local chefs, sommeliers, hunters and fisherpersons which will provide the students with a unique cultural outlook on food and its history.

HM1260 - The Business of Food

Foodservice operations are complex businesses. In this course, students will learn the skills of cost control, food costing, and how to create profitable menus. Using a combination of classroom and culinary lab time, students will be able to put their knowledge and skills into practice.

HM1330 - Creating Cultural Menus

This course involves researching the history and culture of a region to identify culturally significant cuisine. The student will identify culturally significant local ingredients and use them to create dishes and cultural menus.

HM2150 - Food & Beverage Management

This course introduces the student to the management functions necessary to successfully operate a food and/or beverage facility in the hospitality industry.

HM2160 - Cost Control

This is an introductory course in the concepts of cost control. The course deals specifically with the food and beverage control skills and techniques, labour cost control and staff scheduling as practiced in food service.

Prerequisite(s): MA1160

HM2210 - Tourism Marketing

This course is an introduction to the concepts and techniques of hospitality and tourism marketing. Students study marketing concepts, market segmentation, the marketing mix, service marketing, and destination marketing. Factors that affect the marketing environment will also be covered.

HM2280 - Supervision

This course explores practical and effective management skills for the tourism workplace. Emphasis is placed on the technical and human relations skills considered essential for today's managers.

HM2420 - Facilities Management

This course provides tourism and hospitality students with information they need to know to manage the physical building and grounds of a tourism or hospitality property and work effectively with the engineering and maintenance department.

HM2521 - Events Management

This course is designed to give students an introduction to developing, planning and executing events. The course examines practical information on all aspects of creating, organizing and managing events, such as selecting the event; choosing the venue; preparing and managing budgets and promotions; scheduling and staffing; coordinating programs and entertainment, food and beverage, décor, technology, media and security; risk management and evaluating after the event. The economic impact of events will also be discussed.

HN1100 - Industrial Relations •

This course provides an introduction to the theory and practical application of industrial relations in Canada. Through the course, students will gain an understanding of various industrial relations models, the structure of the Canadian Labor movement, the process of union organization and recognition, the collective bargaining process, administration of collective agreements, and various methods for dispute resolution and industrial dispute tactics. In addition to theoretical learning, students will engage in case studies and research on current topics in industrial relations to reinforce their understanding.

HN1200 - Human Resource Management •

This is an introductory course in the theory and practice of human resource management which affects every aspect of the workplace. The course focuses on the fundamentals of human resource management in the Canadian milieu.

HN1230 - Human Resource Management I •

This is an introductory course in the fundamental principles and practices of strategic human resource management today. The student will explore the law and human resource management, human resource planning, job analysis and job design, recruitment, selection, socialization and employee onboarding, training, development, and career planning. Theoretical learning will be reinforced with case studies and current article reviews.

HN1240 - Human Resource Management II •

This is an introductory course in the fundamental principles and practices of strategic human resource management. The student will explore performance management, direct compensation, indirect compensation (employee benefits and services), communication and employee relations, workplace safety and occupational health, industrial relations framework, workforce diversity and international human resource management, and human resource metrics. Theoretical learning will be reinforced with case studies and current article reviews.

Prerequisite(s): HN1230

HN1400 - Occupational Health and Safety •

This is an introductory course in the fundamental principles and practices of occupational health and safety (OH&S). Students will examine the legislative framework regulating OH&S. Students will learn about hazard recognition, assessment, and control techniques, as well as the physical, biological, chemical, and psychological hazards in workplaces. The topics of workplace compensation, the costs of accidents, injuries and workplace illnesses, accident investigation, and disability management will be examined. Current OH&S issues will be explored. Students will have the opportunity to apply various OH&S practices and techniques with all students obtaining WHMIS certification.

HN2100 - Collective Agreement Administration •

This course will examine in depth the issues involved in the interpretation, application, and administration of a collective agreement. The student will explore the legal requirements and issues in interpreting and administering collective agreements, the collective bargaining rights of the employer and union, collective agreements clauses and terms, the negotiating of a collective agreement, and the administration of a collective agreement. The impact of a

collective agreement on human resource management will be examined throughout the course. Students will have the opportunity to examine and interpret collective agreements and apply their knowledge through the use of case studies and application assignments.

Prerequisite(s): HN1100

HN2110 - Dispute Resolution •

This course examines dispute resolution in the workplace, both union and non-union environments. Students will develop a deeper understanding of the nature of conflict and how it may be effectively managed. A foundational understanding of how grievances, as well as other disputes emerge, and how they are effectively handled is examined.

A continuum of approaches to managing and resolving formal grievances and other disputes are explored - ranging from adversarial resolution processes to more cooperative alternative dispute resolution approaches. These approaches are examined as part of an organization's larger conflict management system to resolve disputes and promote effective worker voice. As these dispute resolution practices are examined, emphasis is placed upon the development of practical skills in conflict resolution. Aside from conflicts that arise from daily work, conflict that may emerge during the negotiation of collective agreements are explored along with associated dispute resolution options.

Forms of employer and worker cooperation are also examined in the course, including the activities related to labour-management committees, worker participation programs, and labour -management partnerships.

Prerequisite(s): HN1100, LW1225, HN2100

HN2130 - Recruitment and Selection •

This course will examine the current process, practices, and issues involved in the human resource function of recruitment and selection. Students will examine theories and best practices in talent acquisition, specifically, how recruitment and selection links to organizational strategic goals. Students will learn all aspects of the recruitment process, including job analysis, attraction and recruitment of candidates, the employee selection process, decision-making methodologies, recruitment and selection metrics, and current and emerging trends in recruitment and selection. Students will have the opportunity to apply various staffing techniques and practices using case studies and application assignments.

Prerequisite(s): HN1240

HN2140 - Attendance and Disability Management •

This course will examine in some depth the current processes, issues and practices involved in attendance and disability management. The student will explore the various laws and regulations affecting the practice of attendance and disability management; attendance management systems/procedures; disability management programs; best practices in disability management; legal and ethical issues in disability management; disability management in a unionized environment; and attendance management and disability management policy/plan development. Students will have the opportunity to research various attendance management and disability management practices and procedures.

Prerequisite(s): HN1240, HN1400

HN2150 - Training and Development •

This course will examine the role and the importance of training and development in our workplaces. It will explore current processes, issues, and practices involved in the training and development activities in organizations. The student will examine training needs analysis, training design and development, training methods, training delivery, training evaluation, management development, and emerging trends in the field. Students will have the opportunity to apply various training and development techniques and practices using case studies and application assignments.

Prerequisite(s): HN1240

HN2195 - Inclusion, Diversity, and Equity •

In today's global and interconnected world, it is essential to embrace diversity and foster human connections. This course provides an in-depth exploration of inclusion and diversity, with a focus on cultivating a sense of belonging and well-being for all individuals. The course emphasizes the importance of creating an inclusive culture that values diversity and promotes human connections to support total health and wellness, including mental health.

Students will delve into the critical importance of total health and wellness, including mental health, in fostering

inclusion and diversity. They will learn about the role of employers in creating a supportive and healthy workplace and explore ways to promote mental health and well-being. Students will be able to create an inclusive culture and learn practical strategies for promoting human connections and well-being in their personal and professional lives.

HN2200 - Strategic Compensation and Benefits •

This course will explain in some depth the key issues, processes and techniques involved in planning, designing, and administering a compensation and benefits strategy. The student will explore internal alignment; external competitiveness; performance management; administration/budgeting; role of government and pay discrimination; and employee benefits. Students will have the opportunity to apply various compensation practices and techniques with case studies and application assignments.

Prerequisite(s): HN1240

HN2210 - Human Resource Planning •

This course will examine in some depth the fundamental issues, principles and practices of strategic human resource planning. The student will explore human resource strategies and plans; environmental influences/issues; staffing strategies; forecasting techniques; managing performance and employee expectations; and managing and measuring the human resource function. Theoretical learning will be reinforced with application assignments.

Prerequisite(s): HN1240

HN2215 - Human Resource Planning •

This course will examine in some depth the fundamental issues, principles, and practices of strategic human resource planning. The student will explore human resource strategies and plans; environment influences/issues; staffing strategies; forecasting techniques; and managing and measuring the human resource function. Theoretical learning will be reinforced with application assignments.

Prerequisite(s): HN1240

HN3110 - Current Topics in Human Resource Management •

This student-led seminar-based course will examine issues, topics, and trends in human resource management that are of recent and current concern to human resource professionals today. Students will research, develop, and present a seminar/paper on selected issues/topics/trends from among the following areas explored in this course: the field/practice of human resource management; industrial relations; recruitment and selection; occupational health and safety; employment and labour law; collective agreement administration; attendance and disability management; compensation and benefits; human resource planning; and dispute resolution. In addition, students will have the opportunity to research and critique a current journal article or create a blog based on current topics in Human Resource Management.

Prerequisite(s): HN1100, HN1400, HN2100, HN2130, HN2140, HN2200

HR1120 - Human Relations

This course is designed to create an awareness of the importance of effective interpersonal skills in personal and professional environments, and to provide an opportunity for students to learn and practice these skills. The student will examine the basic elements of interpersonal communication and practice effective communication skills in personal and professional relationships. The course emphasizes interpersonal skill development through the process of experiential learning; students will practice these skills by writing reflective essays, identifying their skill development progression and participating in role-plays, skits and presentations.

HR1300 - Communications & Human Relations •

Students will develop communication skills associated with effective human relations. Knowledge and skills will be developed in effective listening, and oral and written communications.

HR2121 - Public Relations

This course concentrates on the skills necessary to develop public relations for music business purposes. A combination of theories/concepts and practical illustrations are used to explain the application of public relations.

HR2200 - Human Relations

This course is a study of the basic principles of human relations, and the behaviour of the people in organizations as they strive to achieve both personal and organizational goals.

HR2210 - Human Relations

This course is designed to create an awareness of the importance of effective interpersonal skills in personal and professional environments, and to provide an opportunity for students to learn and practice these skills. The student will examine the basic elements of interpersonal communication and practice effective communication skills in personal and professional relationships. The course emphasizes interpersonal skill development through the process of experiential learning; students will practice these skills by writing reflective essays, identifying their skill development progression and participating in role-plays, skits and presentations.

HR2230 - Human Relations

This course is designed to provide the learner with an introduction to the complexities of human interaction with respect to the work place. The course material will contribute to a better understanding of subject matter studied in other courses.

This basic course in human relations emphasises the role of the individual within an organization. Topics include, but are not limited to: self analysis, including attitudes, self-concept, communication style, motivations and organizational values; improving human relations, constructive self-disclosure, emotional control, positive reinforcement and first impressions; leadership and supervision, considering conflict resolution and management, prejudice, discrimination, and sexism. Learners will be required to attend and participate in weekly workshops, and submit a structured, reflective journal.

HR2410 - Professional Development

This course is designed to prepare the students for the workplace. The focus is on acquiring the skills of a successful professional employee. The students will learn how to assess and refine their own skills and to match these skills with employment opportunities.

HS1131 - Dining Room Operations

This course provides the student with an introduction to all aspects of Dining Room Operations. Students will focus on the basic principles of professional service and the standards that such service must meet or exceed. The course stresses a practical application of these food and beverage service skills. The student receives hands-on practical training in scheduled labs in the college's training dining room.

HS1171 - Winter Grow & Cook Local

Students will be introduced to basic techniques of growing your own seasonal vegetables. Students will use the skills they are acquiring in Intermediate Cultural Cuisine to prepare dishes and preserve the products they have grown.

Prerequisite(s): HS1370

Co-requisite(s): HS1361

HS1340 - Bar & Beverage Operations

This course introduces the student to the basic principles and techniques of bartending. Theory is combined with practical labs to ensure the student is given opportunity to practice the skills learned. Responsible service of alcohol and guest contact techniques are stressed.

HS1360 - Intro to Cultural Cuisine

In this course, students will build on their existing basic cooking skills, normally acquired through the completion of a recognized one-year cook program. Students will begin to apply these skills to culturally significant ingredients, dishes, and cuisines. Students are evaluated at an introductory level on each prepared dish with emphasis on presentation, flavor, taste and texture.

HS1361 - Intermed Cultural Cuisine

In this course, students will refine their skills built in HS1360 - Intro to Cultural Cuisine. Students will continue to develop their culinary repertoire while integrating culturally significant ingredients, dishes, and cuisines. Students will be evaluated at an intermediate level on each prepared dish with emphasis on presentation, flavor, taste and texture.

Prerequisite(s): HS1360

HS1370 - Fall: Grow & Cook Local

Students will be introduced to gardening tools and basic techniques while discovering the benefits of growing their own vegetables. Students will use their existing cooking skills, as well as the skills they are acquiring in Intro to Cultural Cuisine, to prepare dishes and preserve the products they have grown.

Co-requisite(s): HS1360

HS1380 - Food & Beverage Service for Chefs

This course explores communication with co-workers and industry partners as well as customers. It also focuses on the role of quality customer service while teaching the basic skills of dining room service and bartending. Students will use the skills acquired in this course to provide a consistent, high level of service to customers in the culinary tourism industry.

HS1530 - Tourism Trends & Issues

The aim of this course is to complement or supplement previous training, or to augment training in response to current trends or an unseen deficiency in student knowledge of specific topics. Emerging or new trends or issues are selected each time this course is offered. The course may be delivered through lectures or self-directed research or a combination of methods. The course will contain practical projects and applications.

HS1741 - Hotel Operations •

This course introduces the student to the operations, procedures, and responsibilities of front desk and housekeeping in hotel operations. Students will acquire the skills and knowledge that will enable them to effectively work as front desk personnel and housekeeping personnel.

HS2170 - Spring: Grow & Cook Local

Students will be introduced to basic techniques of growing seasonal vegetables. Students will use the skills they have acquired in Advanced Cultural Cuisine to prepare dishes and preserve these products.

Prerequisite(s): HS1370

Co-requisite(s): HS2360

HS2360 - Advanced Cultural Cuisine

In this course, students will refine the skills developed in HS1361 - Intermediate Cultural Cuisine. Students will create innovative dishes with a strong integration of culturally significant ingredients, dishes, and cuisines. Students will be evaluated at an advanced level on each prepared dish with emphasis on presentation, flavor, taste and texture. Students will also learn the skills to assess their own cuisine and the cuisine of their peers, and provide constructive feedback.

Prerequisite(s): HS1361

HY1105 - Art History

This course covers western art history to the twenty-first century. Students are introduced to the basic art-historical concepts with topics including major art movements and artists, the cultural and social meanings and relevance of art, and exploring period costume and jewelry while also discussing crucial terminology such as quality and beauty.

HY1110 - Canada Since 1982

Students will trace the history of Canada since the patriation of the Constitution in 1982. They will explore major political, economic, cultural and sociological changes the country has undergone since then, as well as major milestone events. In one section, they will examine major events and developments in recent Newfoundland and Labrador history.

HY1120 - Prehistory to Renaissance •

This is a survey course of the history of Western art from prehistory to the early Renaissance period. It will examine the importance of historical context in the development of visual culture and its relationship to the interpretation of art. Students will be introduced to art historical concepts and develop an understanding of works of art as aesthetic objects and cultural artifacts.

HY1130 - Renaissance to 20th Century •

This is a survey course of the history of Western art from the late Renaissance to the 20th century. It examines art historical concepts, the significance of the social, religious and political context for the development of visual culture and the interpretation of ideas in art. Students will develop skills in critical thinking, visual communication and an understanding of how art history informs contemporary art practices.

HY1200 - Craft History

This course is designed to introduce students to both traditional and contemporary craft. Topics covered include concept, functions and origins of craft; techniques, technologies, and culture of craft; major craft movements; and historic craft works. Students will be given an opportunity to appreciate craft by participating in field trips.

Prerequisite(s): HY1105

IA1010 - Indigenous History of NL

Indigenous History of Newfoundland and Labrador will provide an Indigenous perspective of the historical and cultural diversity of Canada's Indigenous peoples with special emphasis on Indigenous peoples of Newfoundland and Labrador, from pre-contact to Confederation to contemporary challenges.

IA1200 - Indigenous Arts & Culture

This course has been developed for students to explore Indigenous arts and culture by using a variety of materials. The course will emphasize Indigenous cultural expression and artistic creation through various mediums. Students will examine oral tradition, storytelling, memoirs, literature, dance, and other art forms.

IM1370 - Information Analysis & Communication

This course focuses on the techniques required to effectively gather information for the purpose of developing communication tools to support an information management (IM) program. Topics include the effective use and management of email and messaging technologies, researching IM requirements, survey development design, delivery and analysis, interview techniques and document design. Students apply their research to the development of an IM-specific policy, procedure which will form the basis of a workshop based on adult learning principles.

IM2100 - IM Business Principles & Practices

Digital workplaces rely on accurate, complete and timely information flow to meet operational, legal and regulatory requirements. This course focuses on information handling as integral to effective and compliant business processes. Concepts include the need for good records creation and the Duty to Document, Business Process Analysis (BPA) fundamentals, Unstructured versus Structured Records, Managing Database Records, Business Systems and ERP Systems. Students will review requirements for standard administrative lines of business including Human Resources, Financial, Facilities as well as functional/operational processes. Students will apply BPA techniques to analyze and document business requirements and make recommendations for improved case file management.

IM2110 - Information Privacy and Security

This course provides students with an understanding of the need for privacy and security in the IT environment. The course includes the following aspects of privacy and security: history of privacy and security, core concepts, the IT environment, policy and program requirements, considerations through the information life cycle, systems and applications, common risks, techniques, online issues, incident response management and education and awareness.

Prerequisite(s): CR1050

IM2115 - IM Strategic Documentation

Planning and assessing Information Management (IM) program components, processes and requirements are essential to an organization's ability to demonstrate due diligence in meeting compliance requirements, identifying and mitigating risks and to communicating goals and performance. This course requires students to combine their knowledge of IM requirements and practices with tools and techniques to gather, analyze and present findings or recommendations. Topics include IM Program Planning and Reporting, IM Capacity/Maturity Assessment, Privacy Audit, Investigations, Request for Proposal (RFP) and Training.

Prerequisite(s): IM1370, OP1401

IM3010 - Orientation to the IM Work Exposure

The work exposure is an integral part of the Information Management program's curriculum. Work exposure

opportunities are arranged by the Work Exposure Coordinator for the program but ultimately must be secured by students in competition with all applicants for the position. This course focuses on content that will assist students in finding a meaningful placement and prepare students for a career in enterprise web development by fine-tuning the skills cultivated throughout the program.

JL1010 - Journalism Ethics

Students will apply journalistic ethical standards characterized by truthfulness, compassion, transparency, accountability, and independence. They will examine cases in which the duty to tell the truth might conflict with the duty to minimize harm. In so doing, they will apply principles of ethical reasoning to resolve such dilemmas. Students will discuss ethical issues in journalism. They will examine the philosophical foundations of journalism ethics, the pressures exerted upon journalists to act unethically, and the qualities of character and intellect needed to withstand such pressures.

JL1110 - Introduction to Journalism

This course introduces the theory and practices of professional journalism. Students will obtain a foundation in reporting and news writing skills, including the fundamentals of research, interviews and news article writing. They will discuss accuracy and deadlines, conceive story ideas, and research and report the news. The function of journalism and the journalist in society will be examined in depth.

JL1120 - Reporting Essentials

Students will cover a variety of general assignment stories as entry-level reporters. They will develop the rational, analytical, editorial, and reflective skills required of all journalists. Students will also write short profile features while incorporating elements of narrative.

Prerequisite(s): JL1110

JL1130 - Audio Journalism

This course emphasizes the rudimentary skills in delivering effective radio news storytelling, including professional formatting, writing conventions and presentation. Students will use professional broadcast tools for radio including digital audio recorders, a Digital Audio Workstation (DAW) with non-destructive audio editing software, and a radio sound board for live broadcast. The course will provide the theoretical and technical foundation students require to effectively craft, record, and execute radio news stories.

JL1140 - Current Affairs

Through class discussions and presentations, students will develop the ability to relate current affairs to their own lives and to the communities they serve. Students will devise strategies for following major issues and events at local, provincial, national, and international levels. They will research the background of major current issues and events, as well as provide context and draw connections between them.

JL1160 - Video Journalism

In this course, students will demonstrate how to produce news and current affairs videos. They will apply principles and practices of news video production common to both TV and online consumption including visual storytelling principles, script writing, presentation, composition, lighting, audio, and editing.

JL1170 - Broadcast Journalism

In this course, students will further develop the principles and practices of broadcast journalism, including writing for television and radio; producing video and radio news clips; producing radio news programs, producing TV news programs, and speaking on radio and television. Students will apply the technical and editorial knowledge acquired in both Audio and Video Journalism to create longer broadcast pieces that achieve greater depth with higher production values.

Prerequisite(s): JL1130, JL1160

Co-requisite(s): JL2120, JL1841

JL1180 - Reporting & News Writing IV

Students will produce a major piece of enterprise journalism that provides a public service. The resulting product must meet professional standards and be suitable for publication, broadcast, podcast or website posting. The project may be completed with an outside agency or as an independent project, subject to the instructor's approval.

Prerequisite(s): JL2120

JL1190 - Newsroom III

Newsroom III is primarily a practical course in which students apply the journalistic principles they have learned in theory. Students will put into practice storytelling using various platforms such as print, broadcast and the Internet. The course seeks to mirror as closely as possible a newsroom setting, complete with story meetings, assignments and tight deadlines which are reinforced. The students help produce a website, a provincial magazine, a weekly radio show and various video projects. Emphasis is placed on establishing good journalistic habits such as meeting tight deadlines and meeting editors' expectations. Students are expected to apply the principles they have learned/are learning in Reporting & News Writing I, II, III and IV, Photojournalism I and II, and Advanced Broadcast Journalism to develop and deliver in-depth news stories in accordance with the modern 24-hour news cycle.

Prerequisite(s): JL1841

Co-requisite(s): JL1180

JL1210 - Freelance Journalism

Students will attain skills essential to the freelance journalist including how to pitch and market freelance stories for different platforms, manage their freelance careers as businesses, negotiate payments, and uphold their legal rights. They will also examine opportunities to market their work directly to the public. Each student will produce and sell at least one print, broadcast or multimedia piece to a professional news organization.

Prerequisite(s): EP2010

JL1220 - Professional Wellness

This course provides students with the knowledge and skills to help promote their health and wellness while working. Through the completion of workshops, quizzes and/or certifications, they will be provided with tools to help identify and minimize physical and mental health risks in journalism workplaces.

JL1230 - Multiplatform Journalism Project

Working in close contact with instructors, students produce a significant multiplatform project. Using the skills learned in print, broadcast, photojournalism and online journalism, students will produce a multiplatform project.

Prerequisite(s): JL1840

JL1250 - Covering Indigenous Communities

Student journalists will gain a better understanding of Indigenous history, culture and current issues. They will equip themselves to cover Indigenous communities with a balance of open-mindedness, insight, empathy, respect and fairness. Student journalists will examine the history of Indigenous peoples within Canada, particularly within Newfoundland and Labrador. Topics will include treaties and Indigenous rights; Indigenous law; Indigenous-Crown relations; the history and legacy of residential schools; intergenerational trauma; and the United Nations Declaration on the Rights of Indigenous Peoples. Student journalists will examine diverse cultural values and practices within Indigenous families, communities, and groups. Finally, they will apply sound principles in reporting about Indigenous peoples, communities and issues.

JL1340 - Digital Reach and Engagement

Students will use social media to report the news, reach audiences, engage people, and attract them to content. They will experiment with social media platforms and apply methods to reach and engage audiences. Students will apply principles of search engine optimization (SEO) to achieve high search-engine rankings to expose content to a wider audience. They will use various analytics tools to measure and improve the performance of their online content.

JL1345 - Mobile Journalism

Students will use mobile devices as audio and video journalism tools. With audio and video applications, students will record, edit, and upload content using mobile devices. They will gain experience by practicing mobile journalism in the field.

JL1355 - Podcasting

Students will create podcasts by applying audio and video journalism principles. They will analyze and emulate professional journalism podcasts and apply methods to grow an audience. The principles of conducting long-form interviews along with strategies for running a financially successful podcast will be examined.

Prerequisite(s): JL1130

JL1420 - Journalism Law

This course analyzes legal issues common in journalism. Students will examine the foundations of Canadian law and how the Canadian legal system functions. They will investigate the reporter's role in safeguarding both freedom of expression and the integrity of the legal system. Students will discuss legal concepts including defamation and contempt of court and will apply ethical standards of journalism when covering criminal and civil cases.

Prerequisite(s): JL1010

JL1430 - Workplace Professionalism

This course is designed to provide students with the skills and knowledge necessary to prepare for the professional journalism workplace and to effectively work in a team environment.

JL1581 - Digital Journalism

Students learn how to use the tools and techniques required in a "digital first" news environment. Once they have successfully completed this course, they will know how to use social and mobile media to gather news, tell stories, develop sources and converse with an audience. They will create multimedia projects such as audio slideshows and interactive graphics using user-friendly software and apps. Students will also shoot and edit video using mobile media, stream audio and video and employ a variety of mobile apps as journalistic tools. They will apply Canadian Association of Journalists guidelines for social media activity.

JL1840 - Newsroom I

Newsroom I is a practical course in which students apply journalistic principles acquired in previous courses. Students will utilize platforms such as print, broadcast and the Internet. The course seeks to emulate a professional newsroom setting, complete with story meetings, assignments, and strict deadlines. The students will maintain a website, and produce a weekly radio show and various video projects. Emphasis is placed on developing sound journalistic skills such as effective time management and producing quality work.

Prerequisite(s): JL1110, PY1330, JL1130

Co-requisite(s): JL1120, PY1331, JL1160

JL1841 - Newsroom II

Newsroom II is a practical course in which students apply journalistic principles acquired in previous courses. Students will utilize platforms such as print, broadcast and the Internet. The course seeks to emulate a professional newsroom setting, complete with story meetings, assignments, and strict deadlines. The students will maintain a website, produce a weekly radio show and various video projects. Emphasis is placed on developing sound journalistic skills such as effective time management and producing quality work. Students are expected to apply the principles developed in other courses.

Prerequisite(s): JL1840

Co-requisite(s): JL2120, JL1170

JL1850 - News Production I (Post Diploma)

News Production I (Post Diploma) is primarily a practical course in which the Post-Diploma students apply the journalistic principles they have learned in theory. Students will put into practice storytelling using audio broadcast techniques and the Internet. The course seeks to mirror as closely as possible a newsroom setting, complete with story meetings, assignments and tight deadlines which are reinforced. The students help produce a website and a weekly radio show. Emphasis is placed on establishing good journalistic habits such as meeting tight deadlines and meeting editors' expectations. Students are expected to apply the principles they have learned/are learning in Reporting & News Writing I, News Photography I, and Audio Storytelling in accordance with the modern 24-hour news cycle.

Co-requisite(s): JL1110, PY1330, JL1130 *These courses may also be completed prior to JL1850

JL1851 - News Production II (Post Diploma)

News Production II (Post Diploma) students apply the journalistic principles and practices they have learned in theory. Students work as part of a team in producing a provincial news publication, a news website, a weekly radio show and various video assignments. They tell stories via text, audio, video, photographic, social and mobile media. They become accustomed to storytelling in accordance with the modern 24-hour news cycle.

Prerequisite(s): JL1850

Co-requisite(s): JL1120, PY1331, JL1581, JL1160 *These courses may be completed prior to JL1851

JL2120 - Beat Reporting

Students will learn how to cover major beats such as politics, business, sports, entertainment, and lifestyles. The course also covers advanced principles of feature writing.

Prerequisite(s): JL1120

JL2210 - Advanced Newsroom

In this course, students will apply investigative journalism techniques and skills. In collaboration with others, they will produce a news website and a regular broadcast/webcast while meeting strict deadlines. In addition to daily and weekly deadline stories, the students will produce one major story incorporating accumulated knowledge and experience.

Prerequisite(s): JL1010

JL2215 - Internship Preparation

This course will prepare students for internships by explaining the structure of newsrooms and how they work. Students will also discuss professionalism with management, staff, and the public; conflict resolution; and their responsibilities as an employee. Students will arrange internships for the spring semester.

JL2220 - Public Relations

In this course, students will be introduced to journalism as it relates to public relations. Students will write news releases, set-up and participate in news conferences, analyze the duties and responsibilities of a public relations specialist, and evaluate the strategies used in public relations to both access information and respond to media.

JL2225 - Data Journalism

In this course, students will find, scrape, clean, analyze, and clearly present data that is important to the public interest. They will use spreadsheet, data scraping and data cleaning applications as reporting tools. Students will create interactive graphics using data visualization software. They will produce a multimedia story about an important public issue, relying upon both data and the people behind the numbers to tell that story.

Prerequisite(s): JL1120, JL2120

LD1120 - Leadership Theory

This course is the first of three leadership courses, and introduces the concepts of group dynamics, team and goal development, and group structure. Exploring effective methods for communicating within groups and identifying strategies for problem solving and collaborating are also included. Students develop and practice these skills through various experiential learning opportunities.

LD1121 - Leadership Practice

This course is the second of three leadership courses designed to help students work effectively with various community groups. Community organizational structure is studied. Students are introduced to fundraising concepts and strategic planning and will develop and implement a fundraising activity to apply their knowledge. These opportunities provide students with initial connections and contacts in the community which are vital for demonstrating competencies in planning and organizing a community project. Decision making, meeting management, facilitation, recruitment, motivation, fund-raising, board development, supervision, mediation and planning are the major topics. Case studies, simulations, role play and formal exams are part of the instruction and evaluation process.

Prerequisite(s): LD1120

LD1200 - Intro to Human Services

This course introduces the student to the human service field and profession. The principles that underlie the delivery of human services will be examined and the knowledge, skills and values relevant to human service work will be identified and analyzed. Through practical and applied opportunities, students will explore and experience the environment in which human services are delivered. Personal suitability for human services will be determined through a systematic approach to examining human service practice while providing current examples of human service work. Students will identify critical components and approaches to helping and empowering others through a

human service model of delivery and will also examine the importance of self-care and self-awareness. Finally, students will identify methods and processes of supporting individuals and communities through advocacy and organizing.

LD1210 - Media & Public Relations

This is an applied media and public relations course designed for students intending to work in the human service field. Students will explore how best to develop strategies and campaigns that fit the needs of individual non-profit agencies and will learn how the concept of public relations and the types of media have changed in the 21st century. Applying new concepts and strategies will teach students to prepare a public relations strategy for an organization and demonstrate use of various forms of media, including social media, as a way to address the needs of individual organizations. Upon completion of the course, students will be able to address the media through interviews, give presentations, develop a public relations strategy, and use social media to market an organization as well as fulfill requirements such as recruitment and fundraising.

LD1220 - Effective Leadership •

This course is designed to develop effective leadership capabilities within organizations. Topics include effective leadership, equity, diversity, and inclusion, effective communication in organizations, meeting management and facilitation, supervision, and conflict management.

LD1300 - Professional Certifications I

This course provides students with the knowledge and skills to identify and assess crisis development in human service agencies and to implement appropriate strategies for prevention and intervention. Students will acquire the appropriate knowledge and skills through the completion of a series of workshops and certifications.

LD2100 - Community Development

This course introduces students to the major concepts, principles and challenges of the community development field. It allows students to take a critical look at conventional approaches to development, as well as theoretical influences on current community development practice. Students are further encouraged to examine best practices in international development and discover the common framework where these two intersect. Through the examination of both community and international development, students will learn about the diverse roles and occupations within the field.

LD2110 - Change Leadership

This course is the third and final leadership course designed to provide students with the opportunity to work extensively with an identified community partner. Students practice and develop their leadership skills by responding to a community needs assessment. Students learn what it takes to become change agents by developing and implementing a sustainable project from beginning to end. In true partnership with a community agency or organization, students will develop a strategic plan, implement that plan, and evaluate the learning process.

Prerequisite(s): LD1121

LD2220 - Interviewing Skills

This course is designed to develop the basic skills and knowledge necessary to conduct effective interviews in helping relationships. Using a micro skills training model, students will examine a framework within which interviewing takes place. Students will identify practical interviewing and basic counseling strategies, and apply interviewing skills in a variety of situations, through the extensive use of role-playing, case studies and report-writing.

Prerequisite(s): HR1120

LD2250 - Diverse Populations

Diverse Populations will position students to explore the social/cultural context of helping relationships as guided by the population groups. Students will gain a greater understanding of working with diverse populations by examining topics around immigration, settlement, and integration into society. Students will learn to view these groups in a more holistic way by reading, studying and discussing a selection of essays, articles, and stories written by or in cooperation with members of these populations. Students will grasp the impact stereotypes have on individuals and groups within Indigenous, Immigrant and Refugee, and the lesbian, gay, bi-sexual, transgender, queer and two-spirit (LGBTQ2S) community. Students will learn to think, reflect, and develop appropriate practice strategies for working

with individuals, groups, and the community.

Prerequisite(s): SC1110, SC1130

LD2300 - Intro to Social Research

This course is an introduction to social research. Students will learn to approach research as a process which takes place in three phases and each phase has specific steps to follow. On completion of this course students will be able to do the kinds of research required for jobs in marketing, social policy, social work, politics, communication, or community work.

LD2400 - Voluntary Non-Profit Sector

This course introduces students to the non-profit volunteer community sector and various strategies for building and financing community development ventures. Students will identify techniques for creating innovative solutions to meeting community challenges. With a focus on the management of human and other resources in the volunteer and non-profit (VNP) sector, students will be introduced to management instruments, financial concepts, proposal writing, revenue generation, and fundraising. An experiential learning approach will help to establish skills through projects and assignments.

LD2500 - Project Management

This course focuses on project management. Students will work through the process required for taking a project from the creative phase to project completion. Students will create a project, monitor the budget, identify staffing and work through other requirements for the successful completion of a project. Microsoft Excel will be used to develop spreadsheets and to create charts and tables to enhance the appearance of the project proposal report. Independently, students will research, develop, and write a project report.

LD2511 - Professional Certifications II

This is the second Professional Certifications course and offers further development opportunity for students to gain the knowledge and skills necessary for identifying and assessing crisis development in human service agencies. Students will learn to implement appropriate strategies for prevention and intervention while acquiring the appropriate knowledge and skills during the completion of a series of workshops and certifications.

Prerequisite(s): LD1300

LW1070 - Ethics, Sustainability & Law

This course introduces learners to the legal and ethical rights, obligations and responsibilities of the engineering technician profession in the work place. Learners will gain an understanding of the intent and application of professional codes of ethics, Torts, Contract Laws, and environmental protection regulations.

LW1100 - Business Law

This course is an introduction to the Canadian legal system. Topics covered include federal and provincial judicial systems, dispute resolution, civil law, tort law, and contract law. Students will learn how law impacts business environments and will increase their awareness in managing personal legal affairs.

LW1130 - Tourism Law

This course explores the legal responsibilities, obligations, and liabilities which may be encountered in the tourism industry. Students will gain valuable and practical insights into the nature of the relationships between innkeeper and guest, restaurateur and diner, and private host and guest. Pertinent legislative acts relevant to the hospitality industry on both Federal and Provincial levels will be examined. The focus of this course is preventive in nature as emphasis is placed on building the students' awareness of the legal issues in the tourism industry.

LW1210 - Labour and Employment Law •

This course will examine the ever changing subordinate legislation, statute and common law in Canada that deals with union-management relations and interactions, as well as the relations and interactions between individual (non-unionized) employees and their employers. The course is designed to provide students with a current overview of the Canadian system of labour and employment law. The student will explore employment law; labour law; and statute/subordinate legislation for labour and employment law. Students will have the opportunity to apply and research various employment and labour law legislation and cases.

Prerequisite(s): HN1100, HN1240

LW1225 - Employment Law •

This course is designed to provide an insight into the laws affecting employment in Canada. It will examine the legal framework through which employment-related laws are created, interpreted, and enforced in Canada. Students will review both the common law and statutory requirements as they relate to the employment relationship. Key employment topics such as the employment contract, employment standards, human rights, equity, and dismissal will be examined. Common law topics include the rules governing the creation and interpretation of the employment contract, as well as the law of wrongful dismissal. Students will become familiar with the legal issues relating to the employer-employee relationship and how common law and employment legislation impact human resources management. Students will have the opportunity to apply and research various employment case law and legislation.

Prerequisite(s): HN1100, HN1240

LW1230 - Business Law •

This course will examine the fundamental principles of the Canadian legal system. The student will explore the Canadian legal system, torts, contracts, business law, employment law and property law. Students will have the opportunity to apply and research various business law cases.

LW1235 - Business Law II

This course builds on Business Law concepts and methods learned in LW1100 - Business Law I and introduces students to methods of carrying on business, property and information technology, and commercial transactions. Topics covered include partnerships, corporations, intellectual property, and consumer protection.

Prerequisite(s): LW1100

LW1280 - IM Legal & Regulatory Framework •

Effective and consistent Information Management (IM) practices are critical to legal and regulatory compliance. This course introduces the IM legal framework including the need for acceptable evidence, the Duty to Document, the structure of the federal and provincial legal system, legal discovery standards and processes, the language of law and identifying IM requirements within legislation. Provincial and federal legislation impacting IM in government, health and private industry are reviewed including Access to Information and Protection of Privacy, the Management of Information Act, The Personal Health Information Act (PHIA) and The Personal Information Protection and Electronic Documents Act (PIPEDA) Finally, students study industry best practices for legal compliance, process access to information requests and analyze the role of contracts and agreements in managing information.

LW1500 - Law & Ethics

This course comprises various aspects of law and ethics as they apply in an industrial/business setting. The intent is to develop an understanding of fundamental concepts and a frame of reference guiding the application of these principles.

LW1540 - Law, Ethics & Sustainability

This course comprises various aspects of law and ethics as they apply in an industrial/business setting. The intent is to develop an understanding of fundamental concepts and a frame of reference guiding the application of these principles. Within the course, sustainability concepts are introduced as a subset of what constitutes an ethical practice.

LW1600 - Construction Law

This is an introductory course dealing with the application of tort and contract law as applied to the construction environment. Topics covered include but are not limited to a study of various federal and provincial acts that affect the construction phase of project development; the law of contract, insurance and bonding, the law of torts, construction claims, construction contract documents and ethics.

Prerequisite(s): CM1401

LW1610 - Management & Construction Law

This is a course dealing with management principles, professional relationships, and various laws applicable to the design and construction industry. It is designed to enable the student to become familiar with a number of generic management systems and the specific laws and codes of ethics which govern this industry.

Co-requisite(s): BU3300

LW2210 - Natural Resources Policy and Law

This course is designed to address the principles and processes related to the establishment and implementation of policies and laws for the management and protection of natural resources. Topics critical to the comprehension of Canadian law, including the Charter of Rights and Freedoms, the Criminal Code, resource policies, regulations and relevant acts will be addressed.

LW2211 - Law Enforcement

This course requires the use of legal documentation and enforcement equipment. It involves the role of a peace officer and the proper investigation, recording and reporting of natural resource infractions. It includes information patrolling, covert operations, use of decoys, powers of arrest, search and seizure, and interviewing techniques, as well as preparation for court proceedings and sentencing.

Prerequisite(s): LW2210

LX1010 - Apparatus & Accessories •

The student will develop a comprehensive knowledge of the production of x-radiation that will be useful for medical purposes, including the use of the x-ray tube, its components, and characteristics that will allow the proper control of the x-ray beam. The student will have a basic knowledge of the electrical circuits that are essential for the production of the type of x-radiation that will result in high quality radiographic imaging. The effective use of grids and collimators to reduce patient dose and improve image quality will be covered while gaining knowledge of methods employed to facilitate heat dissipation during the production of x-radiation, as well as practical skills employed to conserve tube life. Finally, the student will be able to identify signs of tube failure.

LX1020 - Radiographic Anatomy & Pathology •

Students will study human anatomy as it relates to performing diagnostic radiographic examinations. Identification of anatomical structures on the radiograph as well as differentiation between the normal and abnormal radiographic images will be studied. Students will use their knowledge of tissue densities (either normal or pathological) to accurately locate structures.

LX1050 - Radiographic Technique •

Students are introduced to the fundamental practices involved in the performance of radiographic positioning and procedures and the analysis of the resultant image. Instructional areas include: terminology, IR identification, patient/technologist relationship, examination procedures and protocol, image analysis and critique, radiation protection and technologist responsibility. Emphasis will be placed on routine and trauma imaging.

Prerequisite(s): LX1020

LX1060 - Patient Care & Safety •

Students will gain the necessary knowledge to provide patient care in a variety of situations which they might encounter in the hospital environment. This course emphasizes basic concepts in general patient care, body mechanics, basic nursing skills, as well as caring for patients with special needs.

LX1070 - Simulated Practical Radiography •

Students will complete seven weeks of simulated general radiography preparing them for their upcoming clinical experience. The course utilizes simulated patients, including manikins, x-ray phantoms, and fellow students and focuses on skill development in radiographic positioning, image recognition (normal and abnormal) and equipment operation, assisting the student to correlate theory learnt in previous courses to patient situations. Students will be required to demonstrate their ability to prioritize, organize and implement procedures in general radiography including, routine, pathology and trauma skills necessary to image skeletal (including skull), and respiratory, digestive and urinary anatomy. Professional practice will be stressed to provide patient care while emphasizing safety. Students will be expected to adhere to and provide radiation protection, optimize image quality and utilize a quality assurance program with special attention to performing quality control procedures and mitigating potential risks.

Prerequisite(s): LX1050, LX2000

LX1080 - Clinical Radiography •

Students will apply knowledge of anatomy, radiographic technique, pathology, radiation protection and patient care and safety in a clinical setting. Emphasis will be placed on intensive demonstration and application of clinical skills in

professional practice. Throughout the entire clinical component of the X-Ray Skills for Medical Laboratory Technologists program, the student will maintain documentation which demonstrates both the quality and quantity of clinical experience acquired, thus ensuring on-going maintenance of competencies acquired.

Prerequisite(s): LX1110, LX1010, LX1020, LX1100, LX1050, LX2000, LX1060, LX1070

LX1100 - Digital Imaging & Quality Management •

Students will gain a comprehensive knowledge of the process involved in the formation of a diagnostic x-ray image generated through the use of radiant energy. Students will learn digital methods of image capture and will become familiar with the many factors that affect the quality of the radiographic image. This course will also provide students with knowledge of quality assurance processes associated with image quality management. The student will be able to describe and explain specific quality control procedures necessary to maintain a high standard of image quality in a digital imaging environment.

LX1110 - X-Ray Physics & Radiation Protection •

This is a radiation physics course designed for x-ray skills students to give them an understanding of: (1) x-ray physics: the nature of x-rays, the production of x-rays, the interaction of x-rays with matter; (2) radiation dosimetry: radiation exposure, absorbed dose, dose equivalent, effective dose equivalent, detection of radiation and dosimeters. Combined with their knowledge of radiobiology, students will learn how to utilize radiation to provide maximum diagnostic information with minimal biological damage to the patient. Students will become familiar with national and provincial standards. They will learn how to maintain these standards by the correct use of equipment, accessories and other relevant factors. Students will also learn how to provide maximum protection from ionizing radiation for the patient, general public, co-workers and themselves.

LX2000 - Clinical I •

This clinical course is designed to reinforce in a practical manner, the theoretical knowledge the student acquired during the didactic segment of their training program. Under the direction and supervision of a clinical preceptor, students participate in a variety of basic routine radiographic procedures in accordance with their level of training. Students are also afforded the opportunity to enhance their knowledge of radiographic equipment used in today's modern diagnostic imaging departments. Finally, students are able to apply their understanding of the concepts used in providing quality patient care and radiation protection by observing radiographic procedures in a "real life" setting.

Prerequisite(s): LX1110, LX1010

MA1010 - Mathematics I for Aboriginal Students

This course has been developed for aboriginal students using culturally relevant readings, examples, and problems. It emphasizes a study of number theory, basic arithmetic, and problem solving skills. Fractions, decimals, and percents will be reviewed in detail, and basic concepts of geometry will be introduced. Students will become proficient in the use of Systems International (SI) measurements.

MA1011 - Mathematics II for Aboriginal Students

Building upon the skills, and using culturally relevant materials akin to those mastered in Mathematics I for Aboriginal Students, this course seeks to emphasize algebraic and geometric concepts. The translation of linear algebraic expressions and inequalities, and the solving of equations using the multi-step method are introduced, along with the geometric notions of perimeter, area, and volume. The Imperial measurement system is examined and students learn conversions between the metric and imperial systems

Prerequisite(s): MA1010

MA1012 - Mathematics III for Aboriginal Students

This course has been developed for aboriginal students using culturally relevant readings, examples, and problems. Emphasis will be placed upon an exploration of positive and negative exponents, polynomials, and the graphing of linear equations upon a coordinate plane. Primary trigonometric ratios will be discussed in relation to real-life situations, and students will analyze and create common types of graphs.

Prerequisite(s): MA1011

MA1021 - Basic Laboratory Calculations

This course will provide students with the skills to perform math calculations to ensure accurate patient results. It includes a review of basic mathematical principles; calculations associated with dilutions, solutions, molarity and

normality; calculations specific to areas of the clinical laboratory; and basic statistical calculations associated with quality assurance and quality control.

MA1030 - Mathematics I

This course in basic mathematics presents knowledge of general mathematical concepts to prepare learners for success in the trades. The course also provides knowledge of mathematics related to on-the-job skills and practices. It utilizes shop problems to help learners relate mathematics to job situations. Upon successful completion of this course, learners will be able to apply mathematical concepts to trade practices and view mathematics as a critical component of workplace success. Topics include whole numbers, problem solving, fractions, decimals, ratio, proportion, percent, and measurement. Since the emphasis is on learning basic mathematical concepts, it is recommended that Mathematics I be completed without the use of a calculator.

MA1031 - Mathematics II

This course presents knowledge of general mathematical concepts to prepare learners for success in the trades. It uses shop problems to help learners relate mathematics to job situations. Upon successful completion of this course, learners will be able to apply mathematical concepts to trade practices and view mathematics as a critical component of workplace success. Topics include geometry, pre-algebra, and basic algebra. Since the emphasis is on learning basic mathematical concepts, it is recommended that Mathematics II be completed without the use of a calculator (with the exception of 6.0 Numerical Trigonometry).

Prerequisite(s): MA1030

MA1040 - Math Fundamentals I •

Math Fundamentals I is a Comprehensive Arts and Science (CAS) Transition course. This course starts with a review of fundamental mathematics skills and continues with an exploration of algebra, including variables, linear equations, algebraic word problems, graphing, functions, exponents and polynomials. A calculator may be used in units 1 and 2 but students must show all workings.

MA1041 - Math Fundamentals II •

Math Fundamentals II is a Comprehensive Arts and Science (CAS) Transition course. This is a course in pre-calculus mathematics that covers topics such as factoring, rational expressions and equations, radicals, linear equations, quadratic equations, graphing, trigonometry, and logarithmic and exponential equations. It is designed to build on students' fundamental mathematical knowledge and skills, thereby providing a solid foundation for success in subsequent mathematics and related College courses.

Prerequisite(s): MA1040

MA1055 - Pharmacological Math •

Students will study basic mathematics as it applies to weight measurements, equations, statistics and graph interpretation. In addition, pharmacokinetics, drug dose calculations, drug administration including intravenous rates, dilutions and solutions will be studied in this course.

MA1070 - Structural Repair Shop Mathematics

This is an introductory course providing practical exercises in mathematics. The course begins with a review of basic mathematics and leads to a solid foundation of practical and realistic application for Aircraft Structural Repair.

MA1072 - Aircraft Maintenance Mathematics

This is a course designed to support the mathematical needs related to the field of Aircraft Maintenance Engineering. This course is to be used in conjunction with MA1070 to fulfill the math requirements for AME.

Prerequisite(s): MA1070

MA1081 - Math Fundamentals for NDT

This course is designed to prepare Non-Destructive Testing (NDT) students to use basic math concepts directly related to the core disciplines in Non-Destructive Testing. The major topics contain content that reflects more specific required topics for NDT applications. The focus of this course is to introduce a technical math to students to enable them to apply the concepts in each of the disciplines of NDT.

MA1085 - Culinary Math

This course introduces students to the basic numeracy skills required to work in the culinary industry. It begins with a review of basic numeracy and measurement skills. Students will learn and use common kitchen measurements. They will also learn to convert measurements within and between the U.S. Customary and Metric systems.

The course entails specific terminology and skills used in the culinary field. It gives students the opportunity to apply numeracy and measurement skills to problems modelled on real life culinary applications and problems. Students will learn to calculate food quantities, food costs and menu prices.

MA1095 - Baking & Pastry Arts Math

This course will build on the fundamentals of math and explore the specific application of mathematics in baking and pastry arts.

Prerequisite(s): AM1101

MA1100 - Mathematics

MA1100 is a course in pre-calculus mathematics that covers several topics in both algebra and trigonometry. Topics include: ratios and proportions, algebraic expressions, fractional algebraic expressions, exponents and radicals, logarithms, trigonometric functions, oblique triangles, and linear equations and determinants. This course focuses on strengthening students' fundamental mathematical knowledge and skills, thereby providing a solid foundation for success in subsequent mathematics and related courses.

MA1101 - Mathematics

This is a course designed to prepare students for the study of calculus as well as to introduce and give them a facility with the concepts of differentiation necessary for a better understanding of a variety of technology courses.

Prerequisite(s): Successful completion of either Mathematics MA1700, MA1100, HS Advanced Mathematics 3200, or a minimum grade of 70% in HS Academic Mathematics 3201

MA1104 - Algebra and Trigonometry

This pre-calculus course is designed to strengthen the student's skills in basic algebra, review and develop a deeper understanding of the concept of a function and make students aware of the importance of trigonometry. MA1104 provides students with the essential prerequisite elements to complete an introductory calculus course. Transferable to MUN's Math 1090. This is a non-calculator course

Prerequisite(s): At least 50% in Mathematics 3200 or Mathematics 3201 and at least 55% on the Mathematics Placement Test or a pass (50%) in MA1041

MA1115 - Mathematics I

This course emphasizes a study of number theory, basic arithmetic, and problem-solving skills. Students will analyze whole numbers, fractions, decimals, and percentage in addition to using Systeme Internationale (SI) measurements.

MA1120 - Finite Mathematics I

Transferable to MUN Mathematics 1050. This course is designed to satisfy part of the first-year mathematics requirement for prospective teachers in primary and elementary education programs. This course is also suitable for students headed into a non-science area of study. A non-graphing calculator is permitted.

Prerequisite(s): At least 50% in Mathematics 3201 or Mathematics 3200 and at least 50% on the Mathematics Placement Test or a pass (50%) in MA1041

MA1121 - Finite Mathematics II

Transferable to MUN Mathematics 1051. This course is designed to satisfy part of the first-year mathematics requirement for prospective teachers in primary and elementary education programs. This course is also suitable for students headed into a non-science area of study. A non-graphing calculator is permitted.

Prerequisite(s): At least 50% in Mathematics 3201 or Mathematics 3200 and at least 50% on the Mathematics Placement Test or a pass (50%) in MA1041

MA1130 - Calculus I

Transferable to MUN Mathematics 1000. This is an introduction to differential calculus including logarithmic, exponential, and trigonometric functions with applications. This is a non-calculator course.

Prerequisite(s): At least 50% in Mathematics 3200 and at least 75% in the Mathematics Placement Test or a pass (50%) in MA1104

MA1131 - Calculus II

This course is an introduction to integral calculus with applications. Transferable to MUN Mathematics 1001. This is a non-calculator course.

Prerequisite(s): A pass (50%) in MA1130 or an acceptable score on the Calculus Placement Test

MA1140 - Applied Mathematics

To provide students with an understanding of the concepts of elementary differential and integral calculus in preparation for technology courses. Throughout the course, students will have the opportunity to develop their analytical reasoning and problem solving skills.

Prerequisite(s): MA1100

MA1150 - Math Refresher for EASA Module 1

This course is designed to prepare the student to write the EASA module 1 exam by building on mathematics skills learned in previous training. It should be noted that the use of a calculator is not allowed during EASA exams.

MA1160 - Practical Mathematics

A practical course in mathematics designed to provide students with fundamental knowledge and skills needed for working in various industries.

MA1215 - Mathematics II

Students will evaluate algebraic concepts, algebraic equations, positive and negative exponents, scientific notation, polynomials, and graphing linear equations upon a coordinate system. This course provides a brief introduction to right triangle trigonometry (Pythagoras Theorem and the three primary trigonometric ratios).

MA1521 - Applied Mathematics for CSN

This course provides a practical mathematical background for Computer Systems and Networking. The course covers topics in number systems, set theory and statistics in the context of supporting computer systems. The examples used in this course have a direct application to network and operating system analysis.

MA1530 - Statistics

This course is designed to introduce the student to the basic principles of statistics with the use of Microsoft Excel.

MA1670 - Statistics •

This course introduces students to the basic principles of probability and statistics, and the decisions that can be made using statistics. In this course the student will explore descriptive statistics, elementary probability, discrete and continuous probability distributions, sampling distributions, hypothesis testing, chi-square distribution, analysis of variance, linear regression and correlation, and multiple linear regression. The student will have the opportunity to apply and interpret the results of a variety of statistical techniques from both descriptive and inferential statistics; to apply the fundamental concepts in statistics including sampling, experimentation, variability, distribution, association, causation, estimation, confidence, hypothesis testing, and significance; to critically review and analyze statistical arguments found in the popular press and in scholarly journals; and to appreciate the relevance and importance of statistics.

MA1700 - Mathematics

This is a course in pre-calculus mathematics designed to help strengthen students' mathematical skills and thereby increase their chances for success in other technical courses.

MA1900 - Problem Solving for Information Technology •

The course is intended to illustrate how to develop logic for computer programs. To aid in the development of the student's use of problem solving techniques necessary for Information Technology, a practical mathematical background is provided in this course as it applies to business data processing. A review of basic algebra and

computer-related mathematical topics is covered.

MA2100 - Mathematics

In this course students will extend their study of topics in differential calculus and will also be introduced to integral calculus. Topics covered will assist students to better understand concepts encountered in other courses.

Prerequisite(s): MA1101

MA2130 - Applied Mathematics

This is primarily an applied calculus course designed to meet the specific requirements of the following technology programs: Mechanical Engineering Technology (HVAC, Power and Manufacturing), Industrial Engineering Technology.

Prerequisite(s): MA2100

MA2150 - Linear Algebra I

Transferable to MUN Mathematics 2050. Linear algebra is the branch of mathematics dealing with solutions of linear equations, and related ideas of vector space and linear transformations. This is a practical, non-calculus course where students learn how to solve systems of linear equations, perform matrix algebra, find eigenvalues, diagonalize matrices, and perform vector geometry.

Prerequisite(s): MA1130 or ten credit hours in first-year mathematics courses (two first year math courses)

MA2180 - Applied Geomatics Mathematics

This course consists of an introduction to probability and statistics with emphasis on descriptive statistics, probability theory and two variable data sets. It also investigates error propagation and error analysis as it pertains to the surveying industry.

Prerequisite(s): MA2100

MA3130 - Advanced Geomatics Mathematics

This course consists of elements of spherical trigonometry and an introduction to conditional adjustment as it pertains to the surveying industry.

Prerequisite(s): MA2180

MA3700 - Production and Operations Management

This course is designed to provide students with an understanding of production management and operations management. With a focus on the building blocks of production and operations management, the course explores the design, planning, control and improvement of the activities or processes that transform a firm's inputs into final products. The course also explores the importance of interaction and coordination of business areas to meet organizational goals. Various mathematical and computerized models are introduced and their application to the decision-making process is emphasized.

Prerequisite(s): FN1140, MA1670, MC1242

MC1080 - Introduction to Computers

This course is designed to give the student an introduction to computer systems. Particular emphasis is given to word processing, spreadsheets, e-mail, the Internet, and major security issues. Upon successful completion of this course, students will have a basic understanding of computer systems and their operation, popular software packages and their applications, and security issues of computers.

MC1130 - Computer Studies

This course is an introduction to microcomputers, their operations, hardware, and popular software applications including the laboratory information system (Meditech). The student will develop the basic skills to use an operating system, a word processor, and a spreadsheet.

MC1150 - Productivity Tools •

This course is designed to give the student a working knowledge of a software suite. Particular emphasis is given to the word processing, spreadsheet, database or presentation components of the suite, e-mail and internet.

MC1240 - Computer Applications I •

This course will introduce the students to the use of e-mail and the Internet, manipulating files in the Windows operating environment, basic word processing techniques, and basic presentation creation techniques. Students will apply concepts through practical application.

MC1242 - Computer Applications II •

The course is designed to expose the student to software packages that can be used to create spreadsheets.

Prerequisite(s): MC1240

MC1850 - Spreadsheet Applications

This course is designed to give the student a working knowledge of a Windows operating system and the use of electronic spreadsheets. This course teaches the student how to work with different types of spreadsheet documents using a variety of core and intermediate features to create and edit professional-looking spreadsheets for a variety of purposes and situations.

ME1400 - Mechatronics I - PLC

This course introduces the student to the general concepts and programming techniques for digital, networked, and peer to peer communications associated with programmable logic controllers (PLCs) with a focus on mechatronics applications.

ME2400 - Mechatronics II - Automation

This course is an introduction to automated process control systems, designed to provide the student with the fundamental techniques used to control various process variables to achieve desired outcomes. Students are shown how the learned concepts are applied to control mechanical systems.

Prerequisite(s): ME1400

ME3400 - Mechatronics III - Robotics

This is an advanced course for students having some background in technology. Graduating students will possess a good understanding of robotics and machine vision systems as well as the necessary technical expertise to be able to meet the current needs of the industry.

MH1300 - Building Operations I

This course will introduce the basic building operation. It will provide the student with an understanding of the operation of commercial buildings and light industrial heating plant equipment.

MH2100 - Building Operations II

This course will expand upon basic building operations. It will provide the student with an understanding of environmental comfort and the operation of commercial buildings and light industrial pumps, compressors, and energy maintenance systems related to heating plant equipment.

Prerequisite(s): MH1300

MH2830 - Mechanical Building Systems I - HVAC

This course will introduce the fundamentals of HVAC. It will provide students with an understanding of the methods of recognition and evaluation of various aspects related to HVAC.

MH3350 - Mechanical Building Systems II

This course will introduce the student with the understanding and application of various codes and standards. It will provide the student with the knowledge of industrial ventilation and applications of industrial ventilation, piping heating and cooling systems for specific operations. It will provide the student with the knowledge and understanding of various components associated with the various systems.

Prerequisite(s): MH2830

MH4610 - Mechanical Building Systems III

This course will introduce the student with the understanding and knowledge of acoustic, fire protection and smoke management, testing, adjusting and balancing of HVAC systems, equipment and ancillary schedule, cost estimate, mechanical specifications and detailed plant system design.

Prerequisite(s): MH3350

MI3100 - Introduction to Cybersecurity

Modern cyber-attacks are designed by skilled, financially motivated, and supported attackers. Targeted attacks hold business networks for ransom and disrupt critical industrial control systems that support our modern way of life. This course is an introduction to cybersecurity through a discovery of today's cyber-attacks and defenses in a digital warfare world. Students will explore information & cybersecurity threats, vulnerabilities, and incident response steps at a basic to intermediate level. Real world attack scenarios from the industry are dissected with a focus on tactical defenses any organization can deploy for protection against persistent digital threats. Students will apply their basic understanding of programming concepts and networking to protect and defend an organization from internal and external threats.

MI3200 - Cybersecurity - Technical Defense

Modern cyber-attacks are designed by skilled, financially motivated, and supported attackers who target and hold business networks for ransom and disrupt critical industrial control systems which are designed to support our modern way of life. This course is a technical cybersecurity class which dissects modern attacks for the purpose of applying practical technical defenses in today's digital war-fare world. Students will walkthrough technical attacks mapped to the cyber security kill chain to determine gaps in common business security controls. Practical takeaways include alignment with the MITRE ATT&CK® framework customized to the students' sector. Students will apply Security Information and Event Management" (SIEM) rules that can be utilized immediately to defend against active threats. The course is modelled after real-world attack scenarios from advanced persistent threats enabling them to apply lessons learned from in-class technical incident response tabletop exercises.

Students should have a background in:

- Programming
- TCP/IP networking and packet analysis
- Common security controls
- Firewall access control lists
- Malware
- Operating systems

This will enable the student to apply advanced technical cybersecurity concepts

Prerequisite(s): MI3100

MI3300 - Managing Cybersecurity Operations

Modern cyber-attacks are designed by skilled, financially motivated and supported attackers who target and hold business networks for ransom and disrupt critical industrial control systems which are designed to support our modern way of life. Managing modern cyber risks for the business requires a tailored approach. This course covers how to discover active threats, best in class risk mitigation methodologies, technology trends, and tips to effectively manage cybersecurity operations with any budget. Students will navigate through the hype of cyber-attacks while getting to what matters - top strategic and technical actions for teams in any organization achieving a high return on investment. The student will walkthrough an executive-level tabletop exercise focused on incident response to minimize business impact and speed up business recovery. Up-to-the-minute case studies from the industry are explored across several sectors for real-world takeaways for cybersecurity risk managers.

Prerequisite(s): MI3200

ML1000 - General Laboratory Knowledge

Students will apply basic principles of mathematics, chemistry and physics to prepare reagents, to perform simple laboratory procedures, and to properly use and maintain basic laboratory equipment.

ML1010 - Orientation and Medical Laboratory Skills

This course provides an orientation to the role and responsibilities of the Medical Laboratory Assistant in the health

care field. Students will define the term professional and examine the desired characteristics of a health care worker. Liabilities of this career will be explored. Students will be introduced to accepted safety procedures for handling specimens, reagents, and equipment (includes WHMIS training). The laboratory sessions will introduce students to selected manual skills that are an integral part of medical technology.

ML1011 - Orientation to MLT

This course provides an orientation to the role and responsibilities of the Medical Laboratory Technologist in the health care field. Students will explore the term professional and examine the desired characteristics of a health care professional. Liabilities of this career will be explored along with an overview of the professional bodies and organizational structure of the profession. Students will be introduced to accepted safety procedures for handling specimens, reagents, and equipment (includes WHMIS training). The laboratory sessions will introduce students to selected manual skills that are an integral part of medical laboratory technology.

ML1025 - Laboratory Calculations

This course will provide students with the mathematical skills required to prepare solutions, to read and record laboratory results, and to monitor quality control and quality assurance testing in the laboratory. Students will utilize these mathematical skills to prepare reagents, solutions, and dilutions.

ML1030 - Practical Clinical Chemistry

Students will collect, assess suitability, store, and prepare samples for chemical analysis, taking into account priority and suitability of the specimen. Students will also perform simple and automated chemical tests under the supervision of a registered medical laboratory technologist.

Prerequisite(s): ML1000, ML1010, ML1025, BL1600

ML1035 - Immunology and Hematology

This course provides the theoretical and applied knowledge associated with routine clinical hematology and immunology required to manipulate clinical hematology specimens. An overview and introduction to routine hematology procedures and the associated immunological concepts will be completed, in preparation for advanced study in hematology and immunohematology.

ML1040 - Practical Hematology

This course provides the theoretical and applied knowledge required to collect, store and prepare samples by routine hematology procedures; prepare and stain peripheral smears; and load automated equipment under the supervision of a registered medical laboratory technologist.

Prerequisite(s): ML1000, ML1010, ML1025, BL1600

ML1050 - Practical Microbiology

Students will learn to prepare, sterilize, store and perform quality control checks on various types of microbiological media. Students will process specimens from a variety of sources including planting, streaking and incubating. Students will perform pre-analytical procedures in the microbiology laboratory.

Prerequisite(s): ML1000, ML1010, ML1025, BL1600

ML1060 - Practical Histotechnology/Cytology

Students will perform routine cytology and histotechnology techniques including paraffin processing, smear preparation of body fluids, and simple stains and cover slipping of slides under the supervision of a medical laboratory technologist.

Prerequisite(s): ML1000, ML1010, ML1025, BL1600

ML1070 - Specimen Collection

Students will collect, store, and prepare blood samples for analysis, and learn collection and handling methods for other types of body fluids and tissue samples.

Prerequisite(s): ML1000 or ML1090, ML1010 or ML1011, ML1025 or ML1021, BL1600

ML1080 - Clinical Practicum

This course allows the student to gain practical experience in a clinical laboratory collection centre including the application of office skills, client communication and specimen collection. It also permits the student to gain practical

experience in the clinical laboratory under the supervision of a registered medical laboratory technologist. Pre-analytical procedures performed include basic hematological techniques, macroscopic urinalysis, simple solution preparation, data entry and loading of automated analyzers, preparation and processing of tissue and body fluids, and preparation, inoculation, streaking and culturing of microbiological media.

Prerequisite(s): BL1600, TM1130, HG1500, MC1130, CM2201, ML1000, ML1010, ML1025, ML1030, ML1040, ML1050, ML1060, ML1070

ML1090 - Medical Lab Knowledge

This course provides an orientation to the standard operating equipment of the medical laboratory technology profession. Students will be introduced to the fundamental equipment and given an opportunity to develop basic applied skills suitable for the clinical laboratory setting which will carry through the remainder of the program. Students will practice accepted safety procedures for handling of laboratory specimens, reagents and equipment. The theory and practical skills gained throughout this course are integral to the performance of laboratory procedures in subsequent MLT courses.

ML1140 - Intro to Quality Management

In this introductory course to quality management, students will examine how quality management in a clinical environment is monitored, maintained and continuously improved. An analysis of different quality systems will allow students to compare the systems and determine their usefulness in the laboratory environment.

ML1160 - Laboratory Pathophysiology

Utilizing a case study spiral learning methodology, this course presents and revisits general concepts of key disease processes covered during the first half of the MLT program and expands upon their impact on health from a clinical laboratory perspective. Through a lens of the five primary laboratory disciplines, the course focuses on major pathophysiologic changes in various disease states, including study of the associated etiology, pathogenesis, and laboratory manifestation. As well as functioning to solidify their understanding of physiology and disease, the course is designed to help the student develop deeper knowledge of the relationships between laboratory results and clinical conditions, most importantly, to recognize possible discrepancies and implausible laboratory values.

Prerequisite(s): Successful Completion of all Semester 4 courses

ML1213 - Hematology 1

This is an introductory course in hematology instrumentation. It is intended to provide students with a fundamental knowledge of the principles of automated analysis in a clinical hematology laboratory. Students will study principles of automated cell counting, with an overview of quality control for automated cell analysis. Students are introduced to case studies pertaining to automated hematological analysis. It also includes various manual laboratory procedures, such as preparation and staining of blood smears and erythrocyte sedimentation rates.

Prerequisite(s): ML1035

ML1335 - Histology

Students will study the microscopic structure and function of normal human tissues which serves as an extension of their study of anatomy and physiology. This course will begin with the cell, progress through the basic tissue types, and finally discuss the major body systems. Common disease processes associated with particular tissue types will also be studied. Students will also be introduced to a routine pathology laboratory setting and given an opportunity to explore the working environment as it relates to safety, accessioning, and operations.

Prerequisite(s): BL1600

ML1360 - Histotechnology 1

The course will introduce the student to the workings of a clinical histotechnology laboratory. Topics include: Safe work practice in a histology laboratory along with an introduction to instrumentation, and routine tissue processing. Students will also be introduced to biological staining principles and the hematoxylin and eosin stain.

Prerequisite(s): ML1335

ML1520 - Intro to Transfusion Medicine

The course will provide students with a fundamental knowledge of transfusion from both the donor and patient perspective. Using the knowledge and skills obtained in ML2401 – Intro to Blood Banking, the following will be examined: clinical transfusion practice, compatibility testing, adverse effects of transfusion, transfusion reaction

investigation, hemolytic disease of the fetus and newborn as well as autoimmune hemolytic diseases. Associated laboratory testing will be introduced in laboratory sessions.

Prerequisite(s): ML2401

ML1660 - Clinical Practicum I

This course allows the student to develop technical competence in pre-analytical procedures while reviewing theoretical material from previous semesters. The two-week hospital rotation will emphasize the pre-analytical phase of the testing process and acquaint the student with the hospital operation and policies.

Prerequisite(s): CH1350, ML1213, BL2425, ML1360, HG2050, ML1070

ML2100 - Hematology 2

This is an intermediate level course in the discipline of Hematology with a specific focus on the erythrocytic series including an overview of the most frequently encountered anemias. It is intended to provide students with a fundamental knowledge of erythrocytes, including: origin, characteristics, functions, routine laboratory procedures, normal and abnormal morphology, and associated pathologies.

Prerequisite(s): ML1213

ML2120 - Histotechnology 2

This course is intended to instruct students in the theoretical and practical aspects of histotechnology. The course will concentrate on aspects of grossing, instrumentation, and routine tissue processing techniques associated with a clinical pathology laboratory. Along with a theoretical overview of tissue processing methods and surgical pathology, students will gross, process, embed, and perform microtomy on both human and non-human tissue to prepare tissues for staining and microscopy.

Prerequisite(s): ML1360

ML2210 - Hematology Sim 1

In a simulated hospital laboratory setting, this course requires students to apply their pre-requisite knowledge of Hematology. Emphasis is on routine Hematology tests and procedures as well as interpretation, documentation and reporting of laboratory results. Additionally, safe work practices and quality control principles are reinforced. It also incorporates significant automated hematological analysis.

Prerequisite(s): ML2225

ML2211 - Hematology Sim 2

This is a comprehensive course in Hematology, encompassing the fundamentals and application of information acquired to date in this discipline. Emphasis is on normal and abnormal blood cell morphology, routine coagulation testing as well as interpretation, documentation and reporting of laboratory results. It also introduces the student to a working theory of special hematology stains. Additionally, applications of flow cytometry to hematopathology will be reviewed.

Prerequisite(s): Successful completion of Semester 6

ML2225 - Hematology 3

This is an intermediate level course in the discipline of Hematology with a specific focus on the leukocytic series and hemostasis including an overview of the most frequently encountered myeloproliferative disorders. It is intended to provide students with a fundamental knowledge of leukocytes and coagulation, including: origin, characteristics, functions, routine laboratory procedures, normal and abnormal morphology, and associated pathologies. An introduction to flow cytometry analysis is also presented.

Prerequisite(s): ML2100

ML2230 - Histotechnology 3

This course further instructs the student in the theoretical and practical aspects of histotechnology, concentrating on the use of various stains used for pathological diagnosis. Principles of "special" staining including immunohistochemistry will be presented. Students will process, cut, and perform various staining procedures and explore the identification of pigments and artefacts. Microscopic identification of tissue sections will be practiced to aid in the evaluation of staining results.

Prerequisite(s): ML2120

ML2310 - Histotechnology Sim 1

The student will be engaged in a laboratory simulation that will require them to apply all the knowledge they have gained. This course concentrates on the improvement of laboratory skills through practice.

Prerequisite(s): ML2230

ML2311 - Histotechnology Sim 2

Students who successfully complete this course will perform processing, embedding, decalcification, section cutting biological staining and coverslipping working independently and as part of the laboratory team. The student will critically evaluate the blocks and slides produced and repeat those which are not of diagnostic quality.

Prerequisite(s): Successful completion of Semester 6

ML2320 - Molecular Diagnostics Sim 1

This clinical simulation course explores the emerging field of molecular diagnostics through a molecular biology lens. It will expand upon material covered in previous courses and allow students an opportunity to manipulate DNA and RNA in a simulated laboratory setting. Topics will include an overview of molecular biology, common and emerging molecular biology methods including both manual and automated techniques, and an overview of molecular diagnostics.

Prerequisite(s): BL2441, CH2513

ML2401 - Intro to Blood Banking

This course will introduce students to the Canadian blood banking system and provide students with the fundamental knowledge of the common human blood products and blood group systems. The implications of the immune system, human genetics, class of antibodies, and antigens will be examined. Common immunohematology testing methodology will be introduced in laboratory sessions.

Prerequisite(s): ML1035

ML2510 - Transfusion Medicine Sim 1

The course will introduce students to a simulated clinical experience in a Transfusion Science laboratory. The knowledge and skills obtained in ML2401 and ML1520 are applied to “real-life” situations. Prenatal and pre-transfusion testing is performed along with associated investigations of atypical human blood group antibodies.

Prerequisite(s): ML1520

ML2511 - Transfusion Medicine Sim 2

The course is a continuation of ML2510 Transfusion Medicine Sim 1. More in-depth investigations of prenatal and pre-transfusion testing are performed, along with post natal, post transfusion, and cord blood testing. Following completion of this course, students will possess the knowledge, skills and attitudes to enter the hospital clinical phase of the program.

Prerequisite(s): Successful completion of Semester 6

ML2610 - Interdisciplinary Studies

This course concentrates on the integration of the knowledge gained in all courses in the program. Students will challenge five (5) comprehensive examinations over the course of the semester, one (1) examination per week. Students will concentrate on analyzing and solving problems involving all competency categories in each discipline. Students are also expected to rotate through the following laboratories: Public Health Laboratory, Canadian Blood Services, Mass Spectrometry, Immunohistochemistry, Immunology, Flow Cytometry and Clinical Genetics for exposure to advanced diagnostic techniques.

Prerequisite(s): Successful completion of Semester 8

ML3210 - Hematology Practicum

This course allows the student to develop technical competence while reviewing theoretical material from previous semesters. The three week hospital rotation will emphasize clinical procedures and acquaint the student with the hospital operation and administration.

Prerequisite(s): Successful completion of Semester 7

ML3310 - Histotechnology Practicum

This course allows the student to develop technical competence while reviewing theoretical material from previous

semesters. The three week hospital rotation will emphasize clinical procedures and acquaint the student with the hospital operation and administration.

Prerequisite(s): Successful completion of Semester 7

ML3510 - Transfusion Practicum

This course allows the student to develop technical competence while reviewing theoretical material from previous semesters. The three week hospital rotation will emphasize clinical procedures and acquaint the student with the hospital operation and administration.

Prerequisite(s): Successful completion of all Semester 7

MM1400 - 2D Digital Graphics

Students will become familiar with "Photoshop" image editing tools and will be introduced to basic colour theory and digital painting techniques.

MM1500 - Introduction to 3D Animation

Students will learn the fundamentals of 3D digital modeling, texturing, and animation. Students will gain a general knowledge of the history and potential applications of the medium, exploring the basics of workflow, organizational structure and specific tool use.

MM1600 - Narrative & Production Design

In Narrative and Production Design students will be introduced to the processes required to realize and present a story in a visual format.

MM1950 - Workplace Professionalism

Students will gain the skills and knowledge necessary to effectively work in a team environment.

MM2310 - Digital Video Techniques

Students will gain an in-depth knowledge of digital video techniques. Topics to be covered include how video works, broadcast video standards, integrating computer and television, shooting and editing video, recording formats, video tips, and video compression.

MM2320 - Digital Audio Techniques

Students will gain a working knowledge of sound capture, audio editing basics and output. Students will also explore audio manipulation and editing techniques for dialog, music and sound effects.

MM2340 - Digital Audio Workstations

This course is designed to provide students with the understanding and skill set required to use various Digital Audio Workstations (DAWs) for daily sound production tasks through practical examples and projects.

Prerequisite(s): SN1160

MM2560 - 3D Texture & Digital Paint

Using standard image processing programs, students will be introduced to the artistic approach and technical aspects of custom texture generation, digital painting and application techniques for 3D.

Prerequisite(s): MM1400

Co-requisite(s): MM2670

MM2620 - 2D Computer Animation

Students will continue with the projection of content covered in previous animation drawing courses into the digital production environment. Emphasis will be on learning 2D animation software tools. Through hands-on activities and assignments students will produce a series of short animation projects using drawn animation skills and digital animation techniques.

Prerequisite(s): VA1161; MM1400

MM2670 - 3D Character Modeling

Students will expand upon the fundamentals of digital modeling presented in Introduction to 3D Animation and will learn the concepts and practical applications of model optimization, animation rigging and weighting.

Prerequisite(s): MM1500

MM2680 - 3D Character Animation

Students will learn to expand upon the fundamentals of digital character animation previously covered in Introduction to 3D Animation. Practical exercises in a variety of animation scenarios, and essential editing and control features will be explored.

Prerequisite(s): MM2560

MM2700 - Multimedia Lab I

Students will work on multimedia applications with formal lab assistance and supervision. In this course students will apply principles and practices covered in the program to practical applications.

MM2710 - Multimedia Lab II

Students will work on multimedia applications with formal lab assistance and supervision. In this course, students will apply principles and practices covered in the program to practical applications.

MM2760 - Animation Design Project

Students will be exposed to a simulation of a professional 3D production and design environment. Through research and collaborative production assignments the students will be expected to produce a fully developed animation project.

Prerequisite(s): MM1600; MM1500; MM2670; MM2560

MM2830 - 3D Post-Production & VFX

Students will explore the concepts and techniques used to digitally create realistic simulations of various environmental conditions and natural phenomenon. This will be achieved by using an industry standard animation package 3D Post-Production and Visual FX.

Prerequisite(s): MM2670

MM2850 - Digital Compositing

In this course, students will learn the concepts, language and fundamental skill sets required for advanced digital image processing and assembling visual effects for film and video.

MM2900 - Portfolio Development

Students will have opportunity to establish the skills of objective, critical self assessment, required to select, collate, and present a body of work that best represents core strengths with a view to identifying and achieving career objectives.

Prerequisite(s): VA1130, MM2670

MN1210 - Organizational Design •

In this course, students will learn theoretical and practical approaches to organizational design. The student will explore the importance of organizational design, they will choose designs to help optimize business performance through practical application assessments and analyze strategies to determine best organizational fit.

MN1410 - Special Events Management

This course will provide students with an understanding of special events as well as the details involved in planning, implementing, and following up of special event activities. Topics covered include event selection, planning, organizing, marketing, budgeting, and overall management. Relevant terminology is defined, and the economic impact of events is discussed. Examples of actual special events will be studied.

Prerequisite(s): RS1280

MN1520 - Supervisory Leadership

This course will prepare the student with skills to work in leadership and supervisory positions in a variety of work place settings. Emphasis is placed on the unique challenges facing the supervisor as the first level of management in most organizations. Concepts and theories will be explored through case studies, projects and in-class exercises designed to simulate the daily challenges facing supervisors and leaders.

MN1800 - Sustainable Forest Management

This course is designed to provide a working knowledge of sustainable forest management principles, procedures and concepts. Emphasis is placed on resource values, adaptive management, and certification requirements while employing a sound, practical, forest technical approach to sustainable resource management. Students are expected to apply knowledge from all forestry courses throughout the program – especially their GIS skills - to construct a strategic sustainable forest ecosystem management plan for a defined forest area.

Prerequisite(s): FR1331, LW2210, SU3210

MN2100 - Supply Chain Management •

In this course students will analyze supply chain management from all angles. Through practical application, the student will examine supply chain integration, delve into forecasting, evaluate suppliers, and utilize the tools of total quality management and inventory management. The students will also reflect on how best to assess and measure supply chain performance.

MN2410 - Workplace Culture & Innovation •

In this course, students will explore innovative workplace cultures and analyze strategies to promote cultures of innovation. Using practical application, students will analyze the pillars of innovation, explore how they connect to an innovative workplace culture and discuss how to implement them in an organization. Students will gain knowledge of leader responsibility and skills to implement innovative change.

MN2600 - Strategic Management •

This advanced course will provide students with exposure to the inter-relationship of the functional areas of business. The focus will be on strategy development for business management, enabling students to apply organizational, financial, human resource, and marketing decisions to business applications. The student will explore the role of strategic management, external environment analysis, internal resources analysis, functional areas strategies, competitive strategies, corporate strategies, and strategic management in other organizations.

Prerequisite(s): AC2260, HN1240, MR2100, CM2300, EC1110, MA1670

MN2605 - Strategic Management for Leaders •

In this course, students will focus on the importance of strategic management and appropriate strategic management processes while analyzing internal and external business environments. Students will analyze and implement business and corporate level strategies for business leadership through practical application.

MN3100 - Business Ethics •

This course will examine business ethical principles/concepts as well as the many ethical issues/dilemmas facing organizations today. The course will also explore the various government regulations and laws impacting and restricting business operations as well as stakeholders and corporate social responsibility/governance, ethical issues in the workplace, business ethics and the law, ethical decision making, ethics program and audits, and globalization and emerging trends. Students will have the opportunity to research, analyze, and critique various organizational practices and policies, particularly codes of conduct and codes of ethics.

Prerequisite(s): AC2260, HN1240, MR2100, and PS2340

MN3105 - Applied Ethics •

In this course students will explore the importance of ethics, privacy, and confidentiality. Students will practice ethical decision making, employ ethical leadership skills, analyze, and provide responses to ethical issues and practice implementing ethics and social responsibility.

MN3200 - Performance Management •

This course will examine the importance of an effective performance management system in helping organizations define and achieve long-term and short-term goals vital to its overall success. It will reinforce the concept that performance management is an ongoing process of planning, facilitating, assessing, and improving individual and organizational performance. The student will explore the value of performance management and its context; performance management process and strategic planning; setting performance standards; effective performance appraisal systems; performance management and employee development plans; performance coaching; and team performance. Students will have the opportunity to apply various performance management practices and techniques using case studies and application assignments.

Prerequisite(s): HN1240 and PS2340

MO1100 - Orientation to Professional Cooking

Upon completion of this course, the learner will understand opportunities and career paths in the food service industry. The learner will be able to identify different establishments, describe the skill levels of food production personnel, and identify behavioral characteristics that food service workers should develop and maintain to achieve the highest standards of professionalism.

MO1110 - Canadian Food Safety

This course will provide the learner with the skills and knowledge required to handle food safely. It will provide an in-depth awareness of the importance of food safety, national legislation as well as food safety hazards and the tools needed to control them. The design of the facility, equipment, utensils and cleaning and sanitation will be explored in detail to ensure that food handlers have all the facts they require to receive, store, prepare and serve safe food. A certificate will be issued for this course that will be recognized anywhere in Canada.

MO1113 - Sanitation & Safety

Upon completion of this course the learner will have the knowledge required to prevent food poisoning and food-borne illnesses by identifying and using recommended practices for food handling and storage, cleaning and sanitizing, and personal hygiene. The learner will be able to identify and demonstrate safe workplace habits to prevent injuries from cuts, burns, the operation of tools and equipment, falls, and back injuries.

Prerequisite(s): MO1100

MO1120 - Basic Cooking Methods

This course will introduce the learner to various methods of cooking and their purposes. It will provide the knowledge and skills required to prepare hot food according to recipe specifications. The course will explore the challenges of different cooking methods, moist heat, dry heat, (including deep frying) and combination heat. The course will review the guidelines for microwave and sous-vide cooking. The learner will become aware of the appropriate use of seasonings and flavourings.

Prerequisite(s): MO1130

MO1130 - Receiving & Storage

The learner will be able to describe receiving and inspection procedures for food and non-food products and use appropriate storage methods and temperatures. The learner will be able to identify, interpret and complete forms related to receiving, inspecting and storing incoming inventory. The learner will use recommended procedures to label, date and rotate stock in order to reduce waste.

Prerequisite(s): MO1100

MO1140 - Vegetables, Mushrooms & Fruits

This course will provide the learner with the knowledge and skills required to select, clean and store fresh, dried, canned and frozen vegetables, fruits, and mushrooms. The course will describe how to section fresh vegetables, fruits and mushrooms into various sizes and shapes with minimum waste, and minimum loss of nutrients, quality, colour and texture in preparation for use in various menu requirements or to freeze for later use.

Prerequisite(s): MO1120

MO1160 - Breakfast Cookery

The course will introduce the learner to breakfast foods, their selection, preparation and storage. It will provide the learner with the knowledge and skills necessary to prepare breakfast foods to maintain maximum nutritional value. Breakfast foods include eggs, meats, toast, cereals, pancakes, crepes, waffles, pastries, fruits, vegetables, tea, coffee, hot chocolate and juice.

Prerequisite(s): MO1120

MO1170 - Potatoes

Upon completion of this course the learner will have the knowledge and skills to identify, select, clean, section, prepare, serve, and store potatoes.

Prerequisite(s): M01120

M01180 - Stocks & Soups

Upon completion of this course, the learner will have the knowledge and skills required to identify, prepare, use, and store stocks and soups.

Prerequisite(s): M01120

Co-requisite(s): M01185

M01185 - Sauces & Glazes

Upon completion of this course, the learner will have the knowledge and skills required to identify, prepare, use, and store sauces and glazes.

Prerequisite(s): M01120

Co-requisite(s): M01180

M01190 - Meat Handling & Preparation

Upon completion of this course the learner will be able to identify the primal cuts of beef, lamb, veal, and pork and list the fabricated cuts obtained from each. The learner will be able to describe the composition and structure of meat and explain how they relate to meat selection and cooking methods. The learner will be able to explain and use the Canadian meat inspection and grading system information when selecting and purchasing meats. The learner will be able to explain ageing of meat, tenderizing techniques, and marinating procedures. The learner will be able to select appropriate cooking methods based on the cut as well as determine doneness in cooked meat. This will include variety meats. The learner will be able to store fresh, processed, cured, canned, frozen, and cooked meats to maximize shelf life.

Prerequisite(s): M01120

M01200 - Poultry Handling and Preparation

Upon completion of this course the learner will be able to describe the composition and structure of poultry and explain how they relate to selection and cooking methods. The learner will be able to explain and use the Canadian poultry inspection and grading system information when selecting and purchasing poultry. The learner will be able to recognize the classification and market forms of poultry and describe how they relate to selection and quality. The learner will acquire the knowledge and skills necessary to handle, prepare, cook, and store poultry.

Prerequisite(s): M01120

M01220 - Fish & Shellfish

Upon completion of this course the learner will have the knowledge and skills required to identify, store, prepare, cook, and serve, North American freshwater and saltwater fish, and shellfish using appropriate methods.

Prerequisite(s): M01120

M01230 - Food Presentation

Upon completion of this course the learner will understand the importance of attractive food presentation. The learner will have the knowledge and skills required to serve hot and cold food that is attractively arranged on a plate or platter, with a balance of colour, shape, and textures, to an individual or on a buffet table. The learner will be able to identify and prepare appropriate garnishes for a wide variety of applications.

Prerequisite(s): M01120

M01240 - Salads & Salad Dressings

This course will enable the learner to identify, prepare, and store basic types of salads and salad dressings.

Prerequisite(s): M01120

M01250 - Sandwiches

This course will provide the learner with the knowledge and skills required to prepare, cut, decorate, garnish display, and store hot and cold sandwiches using a variety of fillings. The course will review the required facilities, equipment, and supplies.

Prerequisite(s): M01120

MO1260 - Orientation to Baking

Upon completion of this course the learner will be able to identify, describe and select the major ingredients of baked goods. The learner will be able to describe their functions and characteristics in the mixing and baking processes.

Prerequisite(s): MO1120

MO1270 - Yeast Products

This course will introduce the learner to baking ingredients and techniques, the learner will explore baking convenience products and their use. To provide the knowledge and skills required to select baking ingredients according to required use and specifications, and ensuring quality, freshness and taste of product. To provide the knowledge and skills required to prepare bread, rolls, doughnuts and a variety of other baked dough products. Learners will examine yeast and bread products and their preparation procedures.

Prerequisite(s): MO1260

MO1280 - Pies & Pastries

This course will introduce the learner to procedures and special care associated with dessert pies, fillings and toppings. and their preparation. The course will also focus on the practical exercises of preparing pies, tarts and fillings.

Prerequisite(s): MO1260

MO1290 - Quick Breads

This course will introduce the learner to quick breads such as biscuits and muffins. The learner will gain knowledge and skills required to select baking ingredients according to required use and specifications, and ensuring quality, freshness and taste of product.

Prerequisite(s): MO1260

MO1300 - Cakes & Icings

This course will introduce the learner to procedures and special care associated with preparing cakes, and icings.

Prerequisite(s): MO1260

MO1301 - Hors d'oeuvres

Upon completion of this course, the learner will be able to identify, plan, prepare, store, and serve many types of hors d'oeuvres.

Prerequisite(s): MO1120

MO1302 - Legumes, Grains, Pasta & Dumplings

Upon completion of this course the learner will be able to select, store, prepare, and serve legumes, grains, pasta, and dumplings.

Prerequisite(s): MO1120

MO1304 - Cultural Cooking

Given recipes and instructions, the learner will be able to prepare international, national, and regional cultural dishes using the skills acquired throughout the Marine Cooking program.

Prerequisite(s): MO1120

MO1306 - Dairy Products

This course provides the learner with an understanding of types of milk, creams, cheeses and butter products used in cooking and baking.

Prerequisite(s): MO1120

MO1310 - Desserts

This course will introduce the learner to baking ingredients and techniques, the learner will explore preparing desserts products and their use. To provide the knowledge and skills required to select baking ingredients according to required use and specifications, and ensuring quality, freshness and taste of product. To provide the knowledge and skills required to prepare cheese cakes, Soufflés, and a variety of baked custard products.

Prerequisite(s): MO1260

MO1320 - Cookies & Squares

This course will introduce the learner to procedures and special care associated with cookies and squares and their preparation. The course will also focus on the practical exercises of preparing cookies and squares and troubleshooting some common problems associated with this type of baking.

Prerequisite(s): MO1260

MO1330 - Marine Safety and Security Certifications

This course will provide students with certifications needed for work in the Marine Industry. Certificate courses will be offered during Semester 2. Students are required to complete these Certifications to meet Marine Personnel Regulations SOR/2007-115 standards. The purpose of this course is to ensure adequate measures are taken to protect students, the environment and assets from potentially harmful consequences of the activities being undertaken within the Marine industry.

MO1340 - Tools & Equipment

Upon completion of this course the learner will be able to select, use, and maintain hand tools, utensils, cookware, and equipment. The learner will have the knowledge and ability to use weights and measures accurately. The learner will be able to read and interpret recipes as well as convert yields to larger or smaller quantities to meet specific menu requirements.

Prerequisite(s): MO1113

MO1350 - Nutrition

Upon completion of this course the learner will understand that nutrients found in food supply fuel, promote cell growth in body tissues, and regulate body processes. The learner will be able to identify and describe these nutrients and the foods in which they are found. The learner will have the knowledge and ability to plan food items rich in nutrients for menus following Canada's Food Guide recommendations.

Prerequisite(s): MO1350

MO1360 - Sea Service

For most learners, this sea trip represents their first experience in a marine environment and therefore presents them with their first opportunity to evaluate their career choice. This work experience occurs during semester 2 in the Marine Cooking program. Learners are expected to learn, develop and demonstrate the high standards of behavior and performance normally expected in the work environment. Learners will experience life at sea and will be required to work with a ship's cook or ship's cook helper and participate in duties assigned to ship personnel. This one month of service will satisfy the student's requirement in Section 173 of Marine Personnel Regulation SOR/2007-115 to apply for Transport Canada's Ship's Cook certification.

Note: A valid passport is required for service on a seagoing vessel.

Prerequisite(s): Successful completion of all previous courses except MO1380 and MO1390

MO1370 - Menu Planning & Costing

Upon completion of this course, the learner will be able to identify and plan menus with variety and balance using the Canada's Food Guide. The learner will have the knowledge and ability to forecast, calculate and control food costs when purchasing and receiving inventory for menus.

Prerequisite(s): MO1110

MO1380 - Marine Cooking Theory Exam

This theory examination will test the student's knowledge of topics presented in the Marine Cooking program. This exam is consistent with *The Examination and Certification of Seafarer TP2293E* Section 48 Ship's Cook Syllabuses of Examinations.

Prerequisite(s): MA1085, CM2161, SD1761, MC1062, TS1520, MO1100, MO1110, MO1120, MO1130, MO1140, MO1160, MO1170, MO1180, MO1190, MO1200, MO1220, MO1230, MO1240, MO1250, MO1260, MO1270, MO1280, MO1290, MO1300, MO1310, MO1320, MO1330, MO1340, MO1350, MO1360, MO1370, MO1301, MO1302, MO1113, MO1304, MO1185

MO1390 - Marine Cooking Practical Exam

This practical examination will test the student's skills and knowledge of topics presented in the Marine Cooking program. This exam is consistent with *The Examination and Certification of Seafarer TP2293E* Section 48 Ship's Cook Syllabuses of Examinations.

Prerequisite(s): MA1085, CM2161, SD1761, MC1062, TS1520, MO1100, MO1110, MO1120, MO1130, MO1140, MO1160, MO1170, MO1180, MO1190, MO1200, MO1220, MO1230, MO1240, MO1250, MO1260, MO1270, MO1280, MO1290, MO1300, MO1310, MO1320, MO1330, MO1340, MO1350, MO1360, MO1370, MO1301, MO1302, MO1113, MO1304, MO1185

MP1700 - Control Engineering

Use Laplace Transforms in the design and optimization of industrial control systems. The practical lab component will support the student's understanding and application of the theory.

Prerequisite(s): MA2100

MP2140 - Circuit Analysis I

This course covers advanced topics in A.C. and D.C. circuit analysis as well as an introduction to Two-Port Networks. It will provide the necessary background for learners to enter second year Electrical and Electronics programs.

Prerequisite(s): ET1101, MA1101

MP2170 - AC Circuits and Machines

This course is designed for Instrumentation and Controls learners. It is designed to strengthen the learner's ability to analyze single- and three-phase AC circuits as well as the learner's understanding of AC machines. The course also introduces the learner to motor control diagrams.

Prerequisite(s): ET2100, MA1101

MP2230 - Power System Harmonics

This is an introductory course in power system harmonics covering sources, problems, Fourier analysis and solutions. The laboratory component will further develop and strengthen the understanding and skills related to harmonic and Fourier analysis.

Prerequisite(s): MA2100

MP2300 - AC Circuits

This course is designed to be a continuation of the electrotechnology courses. It is designed to strengthen the student's ability to analyze single and three phase AC circuits as well as reinforce the student's understanding of magnetic circuits. The laboratory work is included as an application of the theoretical concepts and is intended to enhance skills in the use of AC measuring instruments.

Prerequisite(s): ET2100, MA1101

MP2350 - Transformers

This course is designed to be a continuation of the electrotechnology courses. It is designed to expand the student's knowledge of transformers and the associated applications, standards and loading guides. Additionally it will enhance the student's ability to analyze single- and three-phase AC circuits as well as provide an application for advanced mathematical analysis techniques.

Prerequisite(s): MA2100, MP2300

MP2910 - DC Machines

This course is an introductory course in electrical machine theory. It covers the basics of DC machine theory and provides the necessary background for subsequent courses in electrical machines. It will give the student an appreciation of rotating machinery and through labs, an idea of the type and operating characteristics of the various DC machines.

Prerequisite(s): ET2100

MP2920 - AC Machines

This course follows DC Machines MP2910 and covers topics in AC Machines MP2300. AC generators are studied as well as three-phase and single-phase motors. The theory learned in this course will be applied in future courses in Power Systems and Motor Controls.

Prerequisite(s): MP2910, MP2300

MP3110 - Motor Control Systems

This is an advanced level course designed for Electrical Engineering Technology students. It provides the student with a solid background in designing, installing, and troubleshooting various motor control systems. Upon successful completion, the student should be able to interpret typical control drawings, design automated control solutions for typical industrial applications, install and troubleshoot various control strategies, as well as select and configure protection methods for motor circuits.

Prerequisite(s): MP2920, MP2350, DP2540

MP3150 - Power Devices and Motor Drives

This course is a study of electronic variable speed motor drives. Power electronic device theory is covered as background for drive electronics. AC and DC drives are studied as well as installation, commissioning and trouble shooting.

Prerequisite(s): AE2260, MP3110

MP3170 - Industrial Motor Controls

This course is a study of power systems including single line power schematics, motor controls, relay logic, PLC control and electronic variable speed motor drives. AC and DC drives, with applications in the instrumentation field.

Prerequisite(s): MP2170, ET2100

Co-requisite(s): CE2810

MP3215 - Power Systems: Analysis

This is an introductory course which exposes the student to fundamental design aspects of utility bulk power transmission systems. The student is first introduced to the overall layout and function of each component of typical utility systems. Types and characteristics of overhead line conductors and related hardware are also covered. Sub-transmission and distribution system calculations are introduced, followed by exact and approximate system models used in analysis of medium and long transmission lines. The student is also introduced to basic structural design aspects of high voltage transmission lines. Other major electrical design aspects of high voltage transmission lines are introduced. The course concludes with an overview of the design and construction of high voltage cables for both underground and submarine applications.

Prerequisite(s): MP2920, MP2350

MP3225 - Power Systems: Analysis and Operation

This course covers advanced topics related to electric energy systems, from both system analysis and system operation perspectives. Major topics include unit and plant scheduling, fault calculations, stability analysis, power flow calculations, as well as principles of protection and control. The student is also introduced to high voltage direct current (HVDC) transmission technology.

Prerequisite(s): MP3215

MP3250 - Emergency Standby Systems and Alternative Energy Sources

This course is designed to study emergency standby systems and alternative energy sources. Emergency standby systems will include diesel generator sets, gas turbine driven generators and uninterruptible power supplies. Alternative energy sources covered include gas engines, turbines, waste heat, the sun, the wind, thermoelectric generators, fuel cells and heat pumps.

Prerequisite(s): MP2300, MP2920

MR1100 - Marketing I •

This is an introductory course in the fundamental principles and practices of marketing. The student will explore strategic planning and marketing management, the internet in marketing, marketing research information, consumer markets and behavior, business markets and behavior, market segmentation and targeting, and international marketing. Students will have the opportunity to apply case studies and research various marketing concepts, techniques, and processes.

MR1170 - Culinary Tourism Marketing

This course is an introduction to marketing. Students will use basic marketing skills and relate them to the Culinary Tourism industry. Students will take an idea and build a product. After pricing the product, students will develop an

advertising campaign. Using Microsoft Office Publisher, students will create menus, and promotional and advertising materials which are consistent with their brand.

MR1270 - Customer Service

This course focuses on the role of quality customer service in tourism and hospitality. It stresses the importance of soft skills, communication and problem solving techniques, as well as skills for determining customer wants, needs and concerns. Students will be able to use the skills and knowledge gained in this course to effectively provide a consistent, high level of service to customers in the tourism and hospitality sector and beyond.

MR1340 - Marketing for Graphic Design

Students will gain an understanding of the relationship between marketing and graphic design. Students will be introduced to the process of applying marketing principles when translating clients' needs to specific target audiences.

Prerequisite(s): VA1230

MR1500 - Consumer Behaviour

This course introduces the student to concepts, theories and techniques of consumer behaviour. The student will explore the fundamentals of consumer behavior in order to gain an understanding of the motivation behind purchase decisions. By understanding the consumer's behavior, students are able to make more market focused strategic decisions. Students will have the opportunity to apply the knowledge acquired through the use of case analysis and assignments.

Prerequisite(s): MR2100

MR1600 - Relationship Selling •

This is an introductory course in the fundamental principles and practices of relationship selling through service. The course is designed to teach the student about competencies in prospecting, identifying client needs, and how to effectively handle objections while building client relationships. The student will take part in selling exercises to review and master selling techniques. Students will apply various techniques and practices through case analysis and the use of a sales simulation.

Prerequisite(s): CM1241, CM2200, MR2100

MR2100 - Marketing II •

This is an introductory course in the fundamental principles and practices of marketing. The student will explore product development and lifecycle, price distribution and supply chain management, retailing and wholesaling, promotion, advertising, and personal selling. Students will have the opportunity to apply various marketing techniques and practices using case studies and application assignments.

Prerequisite(s): MR1100

MR2110 - Marketing Methods

This course introduces the concepts and techniques of marketing. Students will learn the principles of modern marketing management and the resources required to successfully promote and market products and services. Students will also take an in-depth look at some of the online tools and emerging technologies available. A major aspect of the course is the development of a marketing plan related to the student's program of studies.

MR2200 - Retailing Management

This course is designed as an introduction to the concepts, theories, and techniques of retailing management. The student will explore the concepts of buyer behavior, strategic retail management, retail design, presentation, and pricing. Students will apply various retail techniques and practices using case studies and application assignments and will develop communication skills through class discussions and group activities.

Prerequisite(s): MR2100

MR2300 - Marketing Research •

This course introduces students to the logic of the marketing research process through examination of the various techniques, principles, skills, and activities required to create and present an effective survey project. Upon completion of the course the student will be familiar with the ways marketing information can be obtained and/or produced and how it is used to provide insight into markets, customers, products, and business strategies for business

decision making purposes. Students will have the opportunity to apply various research techniques and practices using case studies and application assignments culminating in the preparation and presentation of a research report.
Prerequisite(s): MR2100

MR2350 - E-Business

This course is designed to introduce the student to the managerial and technical aspects of electronic business and commerce. Students will gain knowledge of the competitive electronic business field and will be equipped to help businesses assess possible opportunities through this rapidly evolving technology. They will be exposed to the concepts of customer relationship management, marketing communications, supply chain management, web analytics, and taxation and ethical Issues related to E-Business. Students will also have the opportunity to apply various E-Business techniques and practices using case studies and application based assignments.

Prerequisite(s): MR2100

MR2400 - Advertising & Marketing Comm •

This course will examine the current processes, issues, and practices involved in advertising and promotion with an integrated marketing communications approach. The student will explore communications as it relates to traditional and digital forms of media and will have an opportunity to apply creativity in developing tools in select media for local uses wherever possible. The student will examine how advertising & marketing communications affects the purchase and post purchase behavior of the consumer. Students will have the opportunity to apply current marketing communication techniques and practices using case studies, application assignments and a major project.

Prerequisite(s): MR2100, CM1241

MR2450 - Services Marketing

This course is designed to enable students to apply concepts and strategies of marketing relevant to the service sector. The student will explore aspects of services marketing, including service productivity, service marketing distribution, service pricing concepts, positioning in service marketing, and service personnel management. Students will have the opportunity to apply theoretical knowledge of marketing concepts and strategies via experiential learning opportunities using a case project, application assignments and presentations.

Prerequisite(s): MR2100

MR2620 - Sales Management

This course will provide students with an overview of the critical areas for salesperson success as well as evolving trends in professional selling. Students will deepen their knowledge in the areas of sales management, planning, forecasting, and account relationships, as well as sales force organization, operations, staffing and training. Students will have the opportunity to demonstrate the application of concepts through field work assignments, case analysis, research and presentations.

Prerequisite(s): MR1600

MR2700 - International Marketing

This course is designed to enable students to apply the concepts of marketing in an international context. The student will research and evaluate foreign markets and apply marketing concepts relevant to strategy development in foreign markets identified by exporting and trans-national organizations. The student will have the opportunity to acquire knowledge of international environmental influences, preparation for international markets, and the international marketing mix and apply various international marketing techniques and practices using case studies and application assignments.

Prerequisite(s): MR2100

MR2800 - Business-to-Business Marketing

This course will enable students to apply the concepts of marketing in a business customer context, to research and evaluate business markets, and to apply marketing concepts relevant to strategy development in manufacturing, trade, institutional, and not-for-profit organizations. The student will use analysis of business buyer behavior, segmentation and targeting, business marketing strategy, marketing communications, and personal selling techniques to analyze case studies and complete application assignments.

Prerequisite(s): MR2100

MR3100 - Current Topics in Marketing

This student-led seminar-based course will examine issues, topics, and trends in marketing that are of recent and current concern to marketing professionals today. Students will research, develop, and present a seminar/paper on selected issues/topics/trends from among the following areas explored in this course: the field/practice of consumer behavior; advertising and marketing communications; marketing research; retailing management; relationship selling; social media marketing; customer relationship management; services marketing; data analytics, sales management, and customer experience management.

Prerequisite(s): MR1500, MR2400, MR2300, MR2200, MR1600, CP2070, MR2450, MR3130

Co-requisite(s): MR2620, MR2700

MR3125 - AI in Marketing •

In this course, students will learn about the fundamental concepts and technologies that underlie Artificial Intelligence (AI) and how these technologies are used in marketing. They will explore the various AI tools available for marketing, such as predictive analytics, chatbots, and machine learning and how these tools can be used to drive marketing strategies. Students will learn how AI is transforming consumer behavior and how it can be used to improve customer engagement and satisfaction. How to measure the effectiveness of AI in Marketing by identifying key metrics and tracking progress over time and how to develop a driven marketing campaign including targeting, messaging, and optimization is explored. Students will also learn how to analyze data to improve marketing outcomes and how to use AI-powered analytics data to gain insights and make informed decisions necessary to adapt to an AI-driven marketing environment.

MR3130 - Digital Analytics •

This course exemplifies how marketing analytics are the foundation to digital marketing. Students will learn how analytics is the language used to optimize and connect results across all digital marketing tactics (search, social media, email, display, video, etc.). The technical and soft skills of analytics will be highlighted through theory and practical application to better understand data analysis. Upon completion of the course, the student will be able to explain and apply the logic of optimization and attribution in business analytics. The student will be able to apply the practical tools and techniques of business analytics and run field experiments in digital environments using A/B testing. The student will also practice web analytics for better business decision-making.

Prerequisite(s): CP2070

MR3210 - Customer Experience Management

Elevating and managing the customer experience is key in today's fast paced market to gain a competitive advantage. This course introduces students to the increasingly complex demands of customer service in today's marketplace. Students will focus on the key concepts of customer experience including an overview of the profession, skills for success and techniques for building and maintaining relationships and retaining customers. Upon completion of the course students will have the tools to build and implement effective customer service strategies through active learning.

Prerequisite(s): MR1500

MT1115 - Introduction to Mining

In this course, students will acquire a basic understanding of the primary functions, processes, and equipment utilized in Canadian surface and underground mining operations. Students will examine several common ore extraction and mine development techniques and will demonstrate a working knowledge of basic mining industry concepts and terminology. Students will solve simple grade control, productivity rate, and three-dimensional problems; identify the various legislation that applies to the mining sector; and investigate sustainability and innovation opportunities in the industry.

MT1210 - Mining Methods

In this course, students will study the application of the basic surface and underground mining methods typically used in Newfoundland and Labrador, as well as basic modifications to those techniques. Students will examine both the development and production dimensions of surface and underground mining (which includes hard rock metalliferous mining methods), for different types of ore deposits, and conduct simple economic analyses.

Prerequisite(s): MT1115

MT2110 - Industrial Hygiene for Mines

In this course, students will examine the industrial hygiene issues associated with mine operations and discover the

application requirements for auxiliary mine ventilation systems. Students will monitor and evaluate airflows and learn about the various methods for monitoring for common contaminants. Other mine industrial hygiene issues to be reviewed include physical and chemical agents, noise, light, heat, humidity, and temperature. Students will reference the NL Occupational Health and Safety Act to determine regulatory requirements and review other related reference materials and guidelines.

Prerequisite(s): MT1210, MA1101

MT2130 - Mine Layouts and Planning

In this course, students will apply mining and surveying knowledge to produce working layouts for production and development openings typical of most mines. CAD based and/or GIS based techniques will be applied. Mine engineering procedures and selected industrial problems will be examined, as well. An introduction to elements in the mine planning process will be included and an introduction to various mine modelling software will be made, as available. Relevant sections of the NL Occupational Health and Safety Act, and the Environmental Protection Act will be highlighted as they relate to the mining activities being performed.

Prerequisite(s): GE1210, MT1210, SU1230

MT2155 - Mining Ethics

Environmental stewardship is only one aspect of mining sustainably, where legislative requirements govern how the mining industry operates within the various jurisdictions. However, it is also increasingly more important for corporations to develop partnerships with the people, communities, and organizations within their operating regions to ensure a 'social license' exists to operate and that the socioeconomic benefits have as much impact as possible. This course begins with an introduction to the concepts of sustainable development and environmental stewardship, and similar approaches, used in industry. The typical environmental issues associated with the mining industry are then presented, along with the steps required to manage, monitor, and report on environmental impacts. Federal and Provincial legislative requirements will also be reviewed for all stages of the mining life cycle.

MT2320 - Mine Equipment & Safety

In this course, students will be introduced to the mobile and fixed plant equipment maintenance programs used in different mines. The importance of workplace safety and preventative maintenance will be emphasized. Students will be introduced to various pieces of equipment, a typical maintenance department setup, hazard recognition concepts, and safety standards and procedures related to mobile and stationary equipment in the mine environment. Typical industrial safety systems will be reviewed as well as safe work practices and procedures.

Prerequisite(s): MT1210

MT2430 - Mineral Processing

In this course, students will learn how minerals are processed and concentrated. Students will study the basic unit operations that pertain to comminution, beneficiation, and de-watering as they apply to typical industrial processes. The pertinent chemical and physical interactions involved in the processes as well as industrial control strategies will be covered. Students will discuss the associated health, safety, and environmental issues and may visit plants to enhance their understanding. As part of the course, students will perform illustrative laboratory work.

MT2450 - Mine Blasting Techniques

In this course, students will prepare to cope with the problems encountered when blasting in the modern mining industry. Students will select explosives and construct blast designs with proper layouts for development and production drilling. Problem solving techniques will allow for the solution of blasting performance problems. Troubleshooting and adjustment to blast design will use observational methods as well as blast vibration monitoring technology. The effective use of modern blasting technologies to operate efficiently and effectively in the mining environment will be emphasized.

Prerequisite(s): MT1210, MA1101

MT2700 - Ground Control

In this course, students will be exposed to a common sense, practical approach to underground mine opening stability. Major emphasis will be on rock mass conditions, opening shape, selection and evaluation of support systems, effect of mining methods and instrumentation. Students will primarily focus on the hard rock underground mining environment dealing with both structural- and stress-driven opening stability problems and support solutions.

Students will utilize available technical software to undertake a variety of practical activities. Open pit support will be covered if time permits.

Prerequisite(s): MT2130

MU1110 - Music & Culture

This course is designed to trace the history of music and to explore the reciprocal relationship between music and culture. The course traces the development of distinct musical genres and illustrates that these genres serve as mirrors of their respective societies.

MU1130 - Music Theory I

This is an introductory course that explores the basic theory and terminology of music. The intent is to provide students with the skills to read and write music while learning the vocabulary of the industry and the use of music notation software for musical productivity.

MU1140 - Musicianship & Recording

This course is designed to provide the student with the skills required in order to be an effective musician in the recording environment, both in the recording studio and when recording live from the stage. Areas of instruction will include proper preparation for the recording studio, recording terminology, effective studio communication, working with a click track, headphone monitoring, recording a studio performance vs. recording a live performance, the multi-track recording, the mixing process, the musician's role in the overall recording process, and mental focus in the recording studio. Classroom sessions will be augmented through hands-on experience in the recording studio.

MU1150 - Music in Media

This course is designed to introduce students to composing and formatting music for inclusion in 21st Century media platforms: Film, Video, Video Games, Software, Internet, Animations, and Mobile Web Applications. Lectures and labs will focus on both the musical and technical aspects of the creation of music for these contemporary mediums.

MU1160 - Cultural Career Management

This course is designed to provide students with an understanding of the elements of a long-term career plan for cultural industry workers. Students will learn about developing skills in the following areas: short, medium and long-term career goals establishment, career competencies, artistic competencies and incorporation of business planning, self-promotion strategies, project management, grant application processes, life-long artistic development and professional association's affiliation. Students will have an opportunity to complete this course with a clear vision of their career plans and the tools necessary to implement these plans effectively.

MU1200 - Songs & Songwriting

This course provides an overview of effective songwriting principles. Students will review these principles and will listen critically to a wide range of selections from a variety of genres. Throughout the course, students will regularly write original songs and have them peer evaluated.

MU1210 - Music Theory II

This is an advanced music theory course which explores harmony and scoring. The intent is to provide students with the skills to read and write music at an advanced level while learning to apply theoretical concepts to the analysis of musical compositions and scores. The use of music notation software will be an important tool in this course.

Prerequisite(s): MU1130

MU1415 - Performance I

This course is designed to introduce essential skills required to perform music live in front of an audience. Introductory performance skills will be implemented and the evaluation will focus on the development of these skills. Students will be graded through peer evaluation of classroom performances and instructor evaluation of both college and public performances, as well as a graded final jury. At the core of this course will be introductory performance techniques in the music industry, professionalism and performance career planning.

MU1420 - Performance II

This course is designed to continue with the student's ongoing development as a performer. More intermediate performance skills will be implemented and the evaluation will become more focused on these intermediate skills.

Students will be graded through peer evaluation of classroom performances, instructor evaluation of both college and public performances, and portfolio evaluation, which will take place as part of a final jury. At the core of this course will be intermediate performance techniques in the music industry, professionalism, and performance career planning.

Prerequisite(s): MU1415

MU2010 - Music of Atlantic Canada

This course examines the unique musical styles and trends of East Coast Canadian music. An overview of Canada's music history from 1960-present will provide context and point of reference for analyzing the development of Atlantic Canada's music scene and industry. The course will explore East Coast music including pioneer artists, industry representatives, venues, festivals, and organizations whose contributions have helped to shape today's music community and industry infrastructure.

MU2015 - Online Media Strategies

Online Media Strategies trains the student in a variety of techniques and strategies for the development and distribution of music for online media, a skill set that is relevant for all contemporary musicians. Areas of instruction include topics such as media platforms, content users, streaming and cloud technologies, audio and video considerations, and distribution strategies. The course will culminate in the creation and distribution of the student's own content in the form of a capstone project.

Prerequisite(s): SN1170

MU2110 - Instruments

This introductory course explores the families of instruments used in civilizations. Students will use classification systems to categorize instruments and to identify common operating principles.

Prerequisite(s): MU1130

MU2130 - Popular Music History

This course explores the origins of popular music, the evolution of media and mass distribution, and traces the impact of popular music upon society.

MU2135 – Global Music Industry Trends

Through research-based projects, discussions, and presentations, students will examine global markets, emerging release strategies, the effects of artificial intelligence on the music industry, and new models for sustainable economic growth.

MU2420 - Performance III

While the student continues to build a strong portfolio and enhances his or her performance skills, they will prepare larger musical events in various genres at a variety of venues. Students will be graded through peer evaluation of classroom performances, instructor evaluation of both college and public performances, and portfolio evaluation, which will take place as part of a final jury. At the core of this course will be current concert and touring trends in the music industry, professionalism and performance career planning.

Prerequisite(s): MU1420

MU2425 - Performance IV

While the student finalizes a strong portfolio and establishes an online presence, performance skills will be crafted to a semi-professional level. Students will be graded through peer evaluation of live performances, instructor evaluation of both college and public performances and portfolio evaluation, which will take place as part of a final jury. At the core of this course will be professional skill evaluation and clearly defined career planning.

Prerequisite(s): MU2420

MX1300 - Digital Imaging I - CR Systems

This course is designed to give the student a comprehensive knowledge of the process involved in the formation of a diagnostic x-ray image generated through the use of radiant energy. Students will learn and practice computed radiography (CR) image capture and will become familiar with processing and archiving the image. Image capture, technical factor selection and calculation, manipulation, display, archiving and retrieval will be practiced in laboratory sessions ensuring the production of optimum images.

Prerequisite(s): Successful completion of 2nd semester

MX1510 - Clinical Radiography I

This clinical course is designed to provide extensive clinical experience to diagnostic imaging students. Applied knowledge of anatomy and physiology; radiographic technique; pathology, radiation protection; patient care and safety; and quality assurance will be reinforced. Emphasis will be placed on intensive demonstrations and application of clinical skills in professional practice. Students will maintain documentation which demonstrates both the quality and quantity of clinical experience acquired, thus ensuring on-going maintenance of competencies developed.

Prerequisite(s): Successful completion of 5th semester

MX1620 - Clinical Orientation I

The clinical orientation of the student during the fourth and fifth semesters is designed to reinforce the theoretical knowledge acquired during the didactic segment of their training program. For three (3) hours each week, students will participate in a variety of basic routine radiographic procedures within a clinical setting and under the direction of a preceptor or clinical instructor. Students will also be afforded the opportunity to enhance their knowledge of various basic and specialized radiographic equipment used in today's modern diagnostic imaging departments. During their clinical orientation, students are also able to apply their understanding of the concepts used in providing quality patient care and radiation protection in a "real life" setting.

Prerequisite(s): Successful completion of 3rd semester

Co-requisite(s): All courses in the 4th semester

MX1621 - Clinical Orientation II

The clinical orientation of the student during the fourth and fifth semesters is designed to reinforce the theoretical knowledge acquired during the didactic segment of their training program. For three (3) hours each week, students will participate in a variety of basic routine radiographic procedures within a clinical setting and under the direction of a preceptor or clinical instructor. Students will also be afforded the opportunity to enhance their knowledge of various basic and specialized radiographic equipment used in today's modern diagnostic imaging departments. During their clinical orientation, students are also able to apply their understanding of the concepts used in providing quality patient care and radiation protection in a "real life" setting.

Prerequisite(s): Successful completion of 4th semester

Co-requisite(s): All courses in the 5th semester

MX2102 - Radiographic Anatomy I

In this course, students will gain a complete understanding of radiographic landmarks and anatomy to perform diagnostic imaging procedures. Students will learn how to recognize, identify and label radiographic images and corresponding radiographic anatomy. The content learned in this course includes surface landmarks, skeletal, appendicular, and axial skeleton (excluding the skull). The course will cover anatomical structures, functions, locations and any other anatomical variants relevant to the aforementioned systems.

Prerequisite(s): BL1606, TM1130

MX2105 - Radiographic Anatomy II

This course is a continuation of MX2102, where the student will become knowledgeable of the structure, function, location, and radiographic appearance of structures in the skull, as well as the following anatomical systems: Cardiovascular, Digestive, Urinary, Reproductive, Nervous and Endocrine Systems. Identification of anatomical structures on the radiographic image, as well as the ability to differentiate between normal and abnormal anatomical appearance in all three dimensions, is required. Students will learn how to locate the listed anatomical structures on a diagnostic image.

Prerequisite(s): MX2102

MX2110 - Radiographic Technique I

Students will learn fundamentals practices involved in the performance of radiographic positioning, and routine protocols. An introduction to the importance of adapting protocols in response to patient condition and clinical environments will be covered. Students will develop skills in positioning and evaluating the diagnostic quality of routine and trauma images for the appendicular and axial skeleton.

Prerequisite(s): Successful completion of all semester 3 courses

Co-requisite(s): MX2320, MX2210, MX1620

MX2121 - Radiographic Technique II

Students will build on fundamentals positioning practices and incorporate procedures involved in the major body systems Practice of adapting protocols in response to patient condition and clinical environments will be reenforced. They will develop skills in positioning and evaluating the diagnostic quality of routine and trauma images for the cranium, body systems and specialized procedures as well as imaging techniques specific to geriatric and pediatric populations.

Prerequisite(s): MX2110

Co-requisite(s): MX1621

MX2201 - Image Recording: Quality Management

This course is designed to provide the student with a comprehensive knowledge of quality assurance processes associated with image quality management. Performance of specific quality control procedures necessary to maintain a high standard of image quality will be studied. Quality control tests for radiographic, radioscopy, computed tomography, computed radiography, direct radiography, digital networking and archival system, mammography, bone mineral density and accessory equipment will be studied. The importance of faithful adherence to quality control procedures and processes as part of a diagnostic imaging department's overall risk management strategy will be discussed. Students will learn to perform inspection procedures and reject-image analysis as part of the overall quality assurance program.

Prerequisite(s): MX2420, MX2320

Co-requisite(s): MX2520

MX2210 - Digital Imaging II: DDR Systems

This course is designed to give the student a comprehensive knowledge of the process involved in the formation of a diagnostic x-ray image generated through the use of radiant energy. Students will learn and practice digital methods of image capture and will become familiar with the many factors that affect the quality of the radiographic image. Image manipulation, display, and archiving will be discussed and practiced in laboratory sessions, as well as methods of reducing image artifact, ensuring the production of optimum diagnostic images, and best practice to reduce patient dose.

Prerequisite(s): MX1300

MX2311 - Apparatus and Accessories

Students are introduced to both theory and practical laboratory skills relating to radiation safety standards and the use of basic equipment in the diagnostic imaging suite. The student will gain knowledge of the production of x-radiation and prime factors that will be useful for medical purposes. This course provides both knowledge and practical skills for the use of the x-ray apparatus, its components and accessory equipment, and characteristics that will allow the proper control of the x-ray beam. The student will learn about the effective use of grids, filtration, and beam restriction to reduce patient dose and improve image quality. Additionally, students will learn how to safely and effectively manipulate basic computed radiography imaging equipment and accessories. Knowledge of methods employed to facilitate heat dissipation during the production of x-radiation, as well as practical skills employed to conserve tube life.

Prerequisite(s): Successful completion of 1st semester

Co-requisite(s): PH2205

MX2320 - Introduction to CT and Specialized Imaging

This course introduces the medical radiological technology student to specialized and advanced imaging equipment. Students will gain knowledge of basic principles and theories, data acquisition, image display and reconstruction (if pertinent), image quality factors, post-processing and data management and archiving. The student will also learn about safe operation practices and reduction of dose for the patient, support persons and operators. Emphasis will be placed on Computed Tomography and Fluoroscopic Imaging.

Prerequisite(s): MX2311

Co-requisite(s): MS2110, MX2420

MX2415 - Patient Care I

This course is designed to provide the student radiographer with the necessary knowledge to provide effective patient care in a variety of situations that they may encounter in the hospital environment. This course emphasizes

fundamental concepts in general patient care, body mechanics, basic nursing skills, use of common drugs, venipuncture, oxygen administration, suction technique, as well as caring for patients with special needs. Students will also receive instruction in the fundamentals of first aid, basic life support, mental health, and personal wellness.
Prerequisite(s): BL1605, TM1130

MX2420 - Radiographic Anatomy III

This course is a continuation of MX2105 and includes an in-depth study of the sectional anatomy, physiology, and related pathology of different body regions. The primary focus of this course will include CT imaging of the head, neck, spine, chest, abdomen, pelvis, upper extremities, and lower extremities.

Prerequisite(s): MX2102, MX2105

Co-requisite(s): MX2320

MX2430 - Radiographic Image Analysis I

This course is designed to introduce the student to image analysis, evaluation, and critique. The student will use critical thinking and knowledge gained from previous courses to analyze and critique the quality of produced images and to respond and correct errors if applicable. The student will further utilize the previous knowledge acquired from radiographic anatomy, radiographic technique, image recording and acquisition, to develop the skills to evaluate image quality, technical factors, and results to determine if further actions are required.

Prerequisite(s): Successful completion of 3rd semester courses

Co-requisite(s): MX2110

MX2500 - Radiation Protection and Radiobiology

Combined with their knowledge of physics and human biology, students will learn how to utilize radiation to provide maximum diagnostic information with minimal biological damage to the patient. Students will become familiar with international, national and provincial standards. They will learn how to maintain these standards by the correct use of equipment, accessories and other relevant factors. They will learn how to provide maximum protection from ionizing radiation to the patient, general public, co-workers and themselves.

Prerequisite(s): BL1605, PH2205

MX2505 - CT: Imaging Procedures and Protocols

This course is designed to provide the student with knowledge of computed tomography procedures and protocols used in modern imaging facilities. This course requires a student to integrate previously acquired knowledge and skills in physics, patient care, and sectional anatomy. The performance of specific computed tomography procedures and protocols will be explained and described. The signs and symptoms of many diseases and conditions often observed in clinical practice requiring computed tomography imaging will be explained. Students will also become familiar with interventional CT, CT Fluoroscopy and PET/CT Fusion imaging.

Prerequisite(s): MX2320, MX2415, MX2420

MX2510 - Pathology for Imaging Professionals

This comprehensive course provides an overview of the major pathological conditions frequently encountered and diagnosed using medical imaging. The student will learn about common traumatic injuries, pathologies, and abnormalities, using a body systems approach. Specifically, the systems covered will include skeletal, respiratory, digestive, urinary, reproductive, neurological, cardiovascular, hematopoietic, and endocrine system. Building upon a comprehensive knowledge of radiographic anatomy obtained in previous courses, pathologies covered will include those of a congenital, traumatic, inflammatory, neoplastic, and chronic nature. Additionally, the student will become knowledgeable of the mechanism, signs, and radiographic appearance of the different pathological conditions seen on plain X-ray, as well as cross-sectional radiographic signs seen on CT imaging.

Prerequisite(s): MX2102, MX2105, MX2420

Co-requisite(s): MX2505

MX2515 - Patient Care II

This course is designed to provide the student radiographer with the necessary knowledge and skills to provide high-quality patient and family-centered care. Medical Radiological Technology students will learn to anticipate the needs of patients and their families and respond with appropriate patient care strategies in a variety of care environments.

Prerequisite(s): MX2415, MX2320, MX2110

Co-requisite(s): MX2121

MX2520 - Radiographic Image Analysis II

This course is a continuation of radiographic image analysis I. It is designed to further enhance the student's ability and skills to image analysis, evaluation, and critique. The student will use critical thinking and knowledge gained from previous courses to analyze and critique the quality of produced images and to respond and correct errors if applicable. The student will further utilize the previous knowledge acquired from radiographic anatomy, radiographic technique, image recording, and acquisition, to develop the skills required to evaluate image quality, technical factors, and results to determine if further actions are required.

Prerequisite(s): MX2430

Co-requisite(s): MX2121

MX3250 - Clinical Radiography II

All clinical courses are designed to provide extensive clinical experience to students. Applied knowledge of anatomy and physiology, radiographic technique, pathology, radiation protection and patient care and safety will be reinforced. Emphasis will be placed on intensive demonstrations and application of clinical skills in professional practice. Throughout the entire clinical component of the Medical Radiography program students will maintain documentation which demonstrates both the quality and quantity of clinical experience acquired, thus ensuring on-going maintenance of competencies acquired.

This course will also provide the student with the opportunity to become familiar with related disciplines in order to review patient data such as images and reports from other studies through research and observation of other imaging and therapeutic modalities.

Prerequisite(s): Successful completion of 5th semester

MX3260 - Clinical Radiography III

All clinical courses are designed to provide extensive clinical experience to students. Applied knowledge of anatomy and physiology, radiographic technique, pathology, radiation protection and patient care and safety will be reinforced. Emphasis will be placed on intensive demonstrations and application of clinical skills in professional practice. Throughout the entire clinical component of the Medical Radiography program, students will maintain documentation which demonstrates both the quality and quantity of clinical experience acquired, thus ensuring on-going maintenance of competencies acquired.

This course will also provide the student with the opportunity to become familiar with related disciplines in order to review patient data such as images and reports from other studies through research and observation of other imaging and therapeutic modalities.

Prerequisite(s): Successful completion of 5th semester

ND1010 - Intro to Non-Destructive Testing

This course is designed to give students an understanding of the concepts and requirements of Non-Destructive Testing (NDT). The course will cover topics such as the capabilities and limitations of visual testing, penetrant testing, magnetic testing, eddy current testing, ultrasonic testing & radiography testing. It will also give students an overview of the uses of the trade, codes/standards and certification requirements of Natural Resources Canada (NRCan) National Non-Destructive Testing Certification Body (NDTCB).

ND1110 - Penetrant Inspection II

Penetrant Testing Level II prepares students to recognize various surface flaws in industrial components using Liquid penetrant inspection methods. This course provides students theoretical and practical training for liquid penetrant inspection in preparation for national Non-Destructive Technician Certification through Natural Resources Canada (NRCan) National Non-Destructive Testing Certification Body (NDTCB).

Prerequisite(s): TS1520

Co-requisite(s): ND1130

ND1130 - Materials and Process

This course provides students information on various industrial materials, metal forming, casting, welding, service conditions, and flaws. It also introduces the physical, electrical, mechanical, and magnetic properties of metals. This

course provides students training for Materials and Process in preparation for certification through NRCan NDTCB. This training will include theoretical concepts only.

ND1210 - Magnetic Particle Inspection II

This course is designed to train learners to use small magnetic particles to detect flaws in components. For this method to be used the component must be made of ferromagnetic material. Magnetic Particle Testing II provides learners theoretical and practical training for a Magnetic Particle Inspection in preparation for national Non-Destructive Technician Certification through Natural Resources Canada (NRCan) National Non-Destructive Testing Certification Body (NDTCB).

Prerequisite(s): TS1520

Co-requisite(s): ND1130

ND1310 - Industrial Ultrasonics I

Industrial Ultrasonics I trains students to use high frequency sound energy to conduct examinations and make measurements in materials to determine surface or internal flaws in materials. This course provides training for a Level I Industrial Ultrasonics NDT Technician Certification in preparation for national Non-Destructive Technician Certification through Natural Resources Canada (NRCan) National Non-Destructive Testing Certification Body (NDTCB).

Prerequisite(s): ND1130, TS1520, MA1081

ND1311 - Industrial Ultrasonics Level II

Industrial Ultrasonics Level II trains students to use high frequency sound energy to conduct examinations and make measurements in materials to determine flaw locations. This course provides training for a Level II Industrial Ultrasonics NDT Technician Certification in preparation for national Non-Destructive Technician Certification through Natural Resources Canada (NRCan) National Non-Destructive Testing Certification Body (NDTCB).

Prerequisite(s): ND1310

ND1410 - Industrial Radiography I

Industrial Radiography I trains students to send radioactive energy through a material enabling a negative (photo) to be produced of that material illustrating internal flaws or cracks. This course provides training for Level II Industrial Radiography level II national Non-Destructive Technician Certification through Natural Resources Canada (NRCan) National Non-Destructive Testing Certification Body (NDTCB).

Prerequisite(s): TS1520, MA1081, ND1510, ND1130

ND1411 - Industrial Radiography II

Industrial Radiography II trains students to send radioactive energy through a material enabling a negative (photo) to be produced of that material illustrating internal flaws or cracks. Theory and practical components from Industrial Radiography I are expanded upon to enhance capabilities in this discipline. theoretical and practical training. This course provides training for Level II Industrial Radiography level II national Non-Destructive Technician Certification through Natural Resources Canada (NRCan) National Non-Destructive Testing Certification Body (NDTCB).

Prerequisite(s): ND1410

ND1500 - Radiation Safety and CEDO

This course introduces learners to radiation safety techniques, ionizing radiation, quantity, and unit. It presents the procedure for monitoring radiation, biological effects of radiation, maximum dosage and effective dosage, dose control, magic numbers, as well as the standard operating procedure for a radioactive site. This course will also provide learners an opportunity to become nationally certified in CEDO - Certified Exposure Device Operator this is a certification that is required for NDT technicians to handle and work with radioactive materials. This will include both in class and practical training.

Prerequisite(s): TS1520, MA1080

ND1510 - Radiation Safety and CEDO

This course introduces students to ionizing radiation safety techniques, regulatory and safety requirements as dictated by the Canadian Nuclear Safety Commission (CNSC) governing body. The procedure for monitoring radiation, biological effects of radiation, non-destructive testing (NDT) procedures for gamma radiography are covered. Students are also provided the opportunity to become nationally certified in Certified Exposure Device Operator

(CEDO), a certification that is required for NDT technicians to handle and work with radioactive gamma sources. This will include both theoretical and practical training.

Prerequisite(s): TS1520, MA1081

OF1101 - Office Management •

This course examines filing systems and procedures used by office workers, manual and electronic methods of information storage and retrieval, types of microforms, and the need for records retention. Proper procedures for handling mail, planning and organizing business travel, good customer-service techniques, and researching information are also explored. This course will integrate service learning with enhanced networking opportunities and quality community involvement.

OF1105 - Personal and Career Growth

This course will acquaint the student with the significant role of the office employee in business, the importance of effective communication and various communications methods, the use of reference resources, and the need to enhance desirable personality traits and attitudes. This course will integrate service learning with enhanced networking opportunities and quality community involvement.

OF1305 - Digital Tools for the Office

This course introduces the learner to social media skills necessary to carry out specific duties of an administrative professional. Students will use their writing skills to communicate with stakeholders by responding appropriately to inquiries. Students will plan and participate in online meetings and create and collaborate using current technologies to facilitate effective communication.

OF2100 - Career Planning Strategies •

This course is designed to further prepare the student in developing career strategies. The focus is on topics such as self-awareness, personal and professional development, planning business meetings, job search skills and preparation for the workforce to enhance the skills needed to have a successful and professional career. This course will integrate service learning with enhanced networking opportunities and quality community involvement.

Prerequisite(s): CM2110

OF2101 - Office Simulation •

In this course, students will complete an office simulation that will require them to perform research, make decisions, and apply time management skills. Students will apply knowledge they have gained in all previous Office Administration courses.

Prerequisite(s): DM2200, OF2100

OF2300 - MCP Billing •

This course is designed to emphasize the preparation of Medical Care Plan (MCP) claim forms relating to various medical/dental procedures in accordance with the guidelines established by the Newfoundland Medical Care Plan.

Prerequisite(s): TM1100

Co-requisite(s): TM2100

OF2400 - Medical Office Management I •

This course is designed to prepare the student to meet the challenges and responsibilities of working as a medical office administrator (MOA) in a health care setting such as hospital, private clinics, and other health care environments. Upon completion the student will have knowledge of the importance of confidentiality, excellent interpersonal skills to professionally work with patient, visitors, and other health care professions; clinic management; health insurance and funding support; and pharmaceuticals. This course will also provide the student with strong job search skills and interview techniques. The student will participate in a 10-hour service learning component which will provide them with experiential learning in a medical setting.

Prerequisite(s): OF1101, CM2110

OF2401 - Medical Office Management II •

This course further develops the student's ability to effectively and efficiently meet the challenging demands of

working as a Medical Office Administrator (MOA) in various medical environments. The student will become certified in the Personal Health Information Act (PHIA), will gain knowledge of patient charts—both paper and electronic medical records, and gain knowledge and experience in meeting planning and minute taking. A time-limited medical office practice simulation program, using the electronic medical record software (MedAccess), is utilized to acquaint the student with typical medical scenarios and to assist in the development of organizational, time management, and decision-making skills.

Prerequisite(s): OF2400

OF2505 - Legal Office Procedures I

This course focuses on the role of the legal assistant and in areas such as criminal matters, civil litigation, incorporation procedures, maintaining client records, and preparing legal documents and legal correspondence. Emphasis is placed on professional development including confidentiality and professional appearance. This course integrates service learning with enhanced networking opportunities and quality community involvement.

Prerequisite(s): OF1101

OF2531 - Legal Office Procedures II

This course focuses on the purchase and sale of real property in Newfoundland and Labrador, legal procedures regarding wills, probate and administration of estates, and family law. Emphasis is placed on professional development pertaining to ethical behaviour and maintaining confidentiality in a legal environment.

Prerequisite(s): OF2505

OF2700 - Career Readiness •

This course is designed to provide students with the opportunity to apply the principles and skills necessary to successfully enter the workplace. The course will reinforce office management concepts, including human relations, and professionalism and positive work ethic, and will assist students as they prepare to make the transition to the workplace.

Prerequisite(s): OF2100 or OF2500 or OF2400

OJ1300 - On-The-Job Training

This three-week unpaid workplace exposure course is designed to ensure that a graduating student has an opportunity of functioning within a real-world employment setting. This work integrated learning opportunity will allow students to gain experience and build contacts among employers in the forest sector or forest-related agencies. Students will undertake typical duties carried out by forest technicians in the workplace.

Prerequisite(s): Successful completion of all courses within the Forestry program (must be eligible to graduate).

OJ1301 - On-The-Job-Training

This three-week unpaid workplace exposure program is designed to insure that a graduating student has an opportunity of functioning with a real world employment setting. Students are placed with a Fish and Wildlife related agency.

Prerequisite(s): Successful completion of all courses within the Fish and Wildlife program (must be eligible to graduate).

OJ1550 - Work Exposure - HR •

To provide students with a real-world perspective on the business or industry directly related to their area of training, they will be required to complete a six-week period in industry. During this time, they will learn, develop, and demonstrate high standards of behaviour and performance that are expected in the work environment. By applying the skills and knowledge learned in all previous courses in the HR diploma program, students will gain practical experience and develop employability skills such as working independently, team building, customer service, work ethic, attitude, and accountability, which will contribute to their personal growth.

Prerequisite(s): Successful completion of all courses in Semesters 1 to 5 of the HR Diploma program with a minimum GPA of 2.0

OJ1560 - Work Exposure - Marketing

To gain an appreciation for the real work environment in a business or industry directly related to their area of training, students will be required to complete a six-week period in industry. During this time, they will be expected to learn, develop, and demonstrate the high standards of behaviour and performance that are expected in the work

environment. Additionally, students will apply the skills and knowledge gained from previous courses in the Marketing Diploma program and further develop their employability skills, including working independently, teambuilding, customer service, work ethic, attitude, and accountability, leading to personal growth.

Prerequisite(s): Successful completion of all courses in semesters 1 to 5 of the Marketing Diploma program with a minimum GPA of 2.0

OJ1580 - Work Exposure - Accounting •

During a six-week period, students will have the opportunity to gain first-hand experience in a business or industry directly related to their area of training, which will complement the academic content covered in previous courses. By working in the industry, the student will develop an appreciation for the real work environment and will be expected to exhibit high standards of behavior and performance. In addition to applying the skills and knowledge learned in the Accounting Diploma program, students will further develop their employability skills such as working independently, team building, customer service, work ethic, attitude, and accountability, thereby enhancing their personal growth.

Prerequisite(s): Successful completion of all courses in semester 1 to 5 of the Accounting Diploma program

OJ1590 - Work Exposure - General •

The student will gain an appreciation of the real work environment in a business or industry directly related to the area of training. This six-week period will be required in addition to academic content covered. Students will complete six weeks in industry where they are expected to learn, develop, and demonstrate the high standards of behaviour and performance expected in the work environment. Throughout the work exposure experience, students will apply the skills and knowledge learned in all previous courses in the General Diploma program. They will also further develop employability skills such as working independently, team-building, customer service, work ethic, attitude, and accountability, further enhancing their personal growth.

Prerequisite(s): Successful completion of all courses in Semesters 1 to 5 of the General Diploma program with a minimum GPA of 2.0

OJ1860 - Job Placement I

Learners will gain an appreciation of the real work environment through a six week job placement experience directly related to the area of training. This experience will be required in addition to all academic requirements of the Renovation Technician program. Learners will also further develop employability skills such as working independently, team-building, customer service, work ethic, attitude, accountability, and further enhancing their personal growth. This Job Placement will require learners to practice basic skills learned in the first year of study.

Prerequisite(s): Completion of Semester 1 and 2

OJ1861 - Job Placement II

Learners will gain an appreciation of the real work environment through a six (6) week work placement experience directly related to the area of training. This experience will be required in addition to all academic requirements of the Renovation Technician programs. Learners will also further develop employability skills such as working independently, team-building, customer service, work ethic, attitude, and accountability, further enhancing their personal growth. This Job Placement will require learners to practice skills learned in years one and two of the program.

Prerequisite(s): Completion of Semester 3 and 4 and OJ1860

OJ1900 - Work Exposure - Executive Office Management •

The work exposure is a required portion of the program and provides a unique learning experience in a real workplace setting. Work exposure placements must be program relevant, and six weeks in duration.

Students will complete six weeks in industry where they are expected to learn, develop, and demonstrate the high standards of behaviour and performance expected in the work environment. Throughout the work exposure experience, students will apply the skills and knowledge learned in previous courses in the Executive Office Management diploma program. They will further enhance their personal growth by developing employability skills such as team-building, customer service, work ethic, attitude, accountability, and the ability to work independently

Please note: Some objectives will be subject to availability at individual work sites.

Prerequisite(s): Successful completion of all courses in semesters 1-5 of the Executive Office Management program with a minimum Grade Point Average of 2.00

OJ1910 - Work Exposure - Legal Administration

The work exposure is a required portion of the program and provides a unique learning experience in a real workplace setting. Work exposure placements must be program relevant, and six weeks in duration.

Students will complete six weeks in industry where they are expected to learn, develop, and demonstrate the high standards of behaviour and performance expected in the work environment. Throughout the work exposure experience, students will apply the skills and knowledge learned in previous courses in the Legal Administration diploma program. They will further enhance their personal growth by developing employability skills such as team-building, customer service, work ethic, attitude, accountability, and the ability to work independently.

Please note: Some objectives will be subject to availability at individual work sites.

Prerequisite(s): Successful completion of all courses in semesters 1-5 of the Legal Administration Diploma program with a minimum Grade Point Average of 2.00

OJ1920 - Work Exposure - Medical •

The work exposure is a required portion of the program and provides a unique learning experience in a real workplace setting. Work exposure placements must be program relevant, and six weeks in duration. Students will complete six weeks in industry where they are expected to learn, develop, and demonstrate the high standards of behaviour and performance expected in the work environment. Throughout the work exposure experience, students will apply the skills and knowledge learned in previous courses in the Office Administration (Medical) Diploma program. They will further enhance their personal growth by developing employability skills such as team-building, customer service, work ethic, attitude, accountability, and the ability to work independently.

Prerequisite(s): Successful completion of all courses in semesters 1-5 of the Office Administration (Medical) Diploma program with a minimum Grade Point Average of 2.00

OJ1930 - Work Exposure - RIM

The work exposure is a required portion of the program and provides a unique learning experience in a real workplace setting. Work exposure placements must be program relevant, and six weeks in duration. Students will complete six weeks in industry where they are expected to learn, develop, and demonstrate the high standards of behaviour and performance expected in the work environment. Throughout the work exposure experience, students will apply the skills and knowledge learned in previous courses in the Office Administration (RIM) Diploma program. They will further enhance their personal growth by developing employability skills such as team-building, customer service, work ethic, attitude, accountability, and the ability to work independently.

Prerequisite(s): Successful completion of all courses in semesters 1-5 of the Office Administration (RIM) Diploma program with a minimum Grade Point Average of 2.00

OJ2335 - Workplace Integration

Students will gain an appreciation of the real work environment through a work placement in the culinary industry. On placement students will apply culinary and management skills to build confidence and competence. Students will also further develop employability skills such as working independently, team building, customer service, work ethic, attitude, and accountability, further enhancing their personal growth.

Prerequisite(s): Completion of Pre-employment Cook Plan of Training

OJ3040 - IM Work Exposure

The seven-week work exposure is a required portion of the program and will provide a unique learning experience in a real business setting. The College will make every effort to find a suitable placement for students; however, ultimately it is the responsibility of a student to find a placement that satisfies the criteria of the program.

The work exposure will follow the successful completion of all academic courses, must be program relevant, and will be minimum of 7-weeks in duration. During the placement, students will be expected to learn, develop, and demonstrate the high standards of behaviour and performance normally expected in a related work environment. For many students, this work exposure may represent the first opportunity to be engaged in the information management sector, allowing the opportunity to explore and evaluate a variety of information management career paths and help to establish a network of industry contacts. In addition, students will have an opportunity to apply their academic and practical knowledge to further develop their employability and technical skills and enhance their personal growth.

Prerequisite(s): GPA 2.0

Co-requisite(s): CR3540, IM2115, IM3010 *These courses may have been completed as prerequisites

OJ3050 - Work Exposure •

The seven-week work exposure is a required portion of the program and will provide a unique learning experience in a real business setting. The College will make every effort to find a suitable placement for students; however, ultimately it is the responsibility of a student to find a placement that satisfies the criteria of the program.

The work exposure will follow the successful completion of the preceding academic term, must be program relevant, and will be a minimum of 7 weeks in duration. During the placement, students will be expected to learn, develop, and demonstrate the high standards of behavior and performance normally expected in a related work environment. For many students, this work exposure may represent the first opportunity to be engaged in their field, allowing the opportunity to explore and evaluate a variety of career paths and help to establish a network of industry contacts. In addition, students will have an opportunity to apply their academic and practical knowledge to further develop their employability and technical skills and enhance their personal growth.

Prerequisite(s): GPA 2.0, PJ1010, PJ1015, PJ1020, PS2340, PJ1205, PJ1210, PJ1215, LD1220, MN1210, PJ1305, PJ1310, EP1320, MN2100, PJ2000, MN3105, MN2605, MN2410, PJ2005, PJ2010, PJ2015

OJ3100 - ASD Work Exposure

The seven-week work exposure is a required portion of the program and will provide a unique learning experience in a real business setting. The College will make every effort to find a suitable placement for students; however, ultimately it is the responsibility of a student to find a placement that satisfies the criteria of the program.

The work exposure will follow the successful completion of the preceding academic term, must be program relevant, and will be minimum of 7-weeks in duration. During the placement, students will be expected to learn, develop, and demonstrate the high standards of behaviour and performance normally expected in a related work environment. For many students, this work exposure may represent the first opportunity to be engaged in the information technology sector, allowing the opportunity to explore and evaluate a variety of software development career paths and help to establish a network of industry contacts. In addition, students will have an opportunity to apply their academic and practical knowledge to further develop their employability and technical skills and enhance their personal growth.

Prerequisite(s): GPA 2.0, CP1895, CP3566, CP3540, CP4305, CP2030, CP4477

OJ3106 - EWeb Work Exposure •

The seven-week work exposure is a required portion of the program and will provide a unique learning experience in a real business setting. The College will make every effort to find a suitable placement for students; however, ultimately it is the responsibility of a student to find a placement that satisfies the criteria of the program.

The work exposure will follow the successful completion of all academic courses, must be program relevant, and will be minimum of 7-weeks in duration. During the placement, students will be expected to learn, develop, and demonstrate the high standards of behaviour and performance normally expected in a related work environment. For many students, this work exposure may represent the first opportunity to be engaged in the information technology sector, allowing the opportunity to explore and evaluate a variety of software development career paths and help to establish a network of industry contacts. In addition, students will have an opportunity to apply their academic and practical knowledge to further develop their employability and technical skills, and enhance their personal growth.

Prerequisite(s): GPA 1.0

Co-requisite(s): PR3000, CP4475, CP2085, CP2080, CP2075, CP3155, CP3105, CR2800, CP2205, CR1355, CP1505, CP1580, CP2030, CP1895, CP1292, CP1501, CM1401, MA1900 *These courses may have been completed as prerequisites.

OM1635 - Ventilation & Exhaust Systems

This course is designed to give the student the ability to size, install and maintain different types of ventilation and exhaust systems. The student will be aware of code and certification requirements and will be able to complete additional training to become certified as an installer.

Co-requisite(s): OM1471

OM1645 - Electric Furnaces and Boilers

This course will prepare the student to install electric furnaces and boilers and to retrofit and convert existing fuel-fired systems to electric. The course will cover codes, regulations and practices for installation and identify certification requirements to perform electrical modifications or upgrades.

Co-requisite(s): OM1441

OM1665 - Design and Analysis

This course is designed to give the student the knowledge and skills to design heating systems using codes, heat loss and heat gain calculations, regulations and industry standards as well as estimate materials and time. The student will utilize modern technology to develop plans and complete system layout.

Prerequisite(s): OM1441, OM1121

OM1675 - Air Source Heat Pumps

This course will give the student the skills and knowledge required to install air source heat pumps. The student will demonstrate good work practices and the understanding of the training or certification requirements for installing refrigeration lines and charging the system. The course will include the installation requirements, and the operational descriptions of various heat pump layout and designs.

Prerequisite(s): SV1111, OM1665

OM1685 - Solar Heating

This introductory level course is designed to give the student the skills and knowledge to analyze green heating technologies and to identify various types of solar heating systems. The student will be able to identify the various components that form part of a solar heating system and examine methods of incorporating solar heating as an auxiliary heating method into modern building practices.

Co-requisite(s): OM1632

OM1695 - Solid Wood Heating Systems

The student will develop the skills and knowledge to install, maintain and troubleshoot wood and solid-fuel-fired heating appliances and systems and will be provide information that will enable the learner will be able to work towards WETT Certification.

Prerequisite(s): OM1622

OM1705 - Gas Heating

This is an introductory course covering gas fundamentals and installation practices. It is designed to enable the student to identify the principles of the combustion process as it relates to gas fired equipment and appliances. The course will expose the student to specific code requirements and safety concerns regarding the operation of gas fired systems. These will include fuel delivery, combustion venting and specific gas control systems. This course will serve to introduce the student to gas principles in preparation for any gas required examinations as required by regional or national codes.

Prerequisite(s): OM1665, OM1635

OM1715 - Geothermal Heating

This course is designed to give the student the ability to describe the various components that make up a geothermal installation. The student will be able to evaluate and determine the appropriate type of geothermal installation and will be able to interpret codes and complete basic design requirements. Students will also examine the procedure for pipe fusion and utilize the equipment to perform fusion.

Prerequisite(s): OM1675

OP1390 - Information Management I

This course outlines fundamental Information Management (IM) concepts including: the purpose of IM and its importance, program components and management, IM and privacy codes of ethics, accountability and organization, client service, the information life cycle, appraisal and tools, inventory procedures, records retention and legal considerations, active records in manual systems and IM program planning and performance measurement.

OP1401 - Information Management II •

This course expands on the information management program concepts introduced in OP1390. The topics include information protection, risk assessment and management, vital records, disaster planning, prevention and recovery,

inactive records management, archives management and IM education and awareness management.

Prerequisite(s): OP1390

OP1410 - Information Life Cycle

This course focuses on the tools and techniques used to manage the information life cycle. Topics include managing information based on legal and operational value, collection and creation of authentic and reliable records, the development, implementation and maintenance of classification plans and records retention and disposal schedules, information sharing and collaboration including document version control and access management and tracking, inventory management and secure disposal practices.

Prerequisite(s): OP1390

OP1600 - Electronic Records Management •

This course is designed to give students the knowledge necessary to apply standards and best practices to the management of electronic records. The topics covered will give students an understanding of sources of records and appropriate capture mechanisms, concepts of classification, current metadata standards, search and retrieval approaches, retention and disposal schedules and related concepts such as implementation strategies, migration, vital records, digital preservation and discovery and disclosure. Students will be given the opportunity to put these concepts into practice using the enterprise content management (ECM) software.

Prerequisite(s): OP1390

PA1125 - EMS Basics

In this course, learners will become familiar with the profession of paramedicine by gaining knowledge on areas such as historical perspective, requirements of a modern EMS system, roles and responsibilities, and legislation pertaining to paramedicine. Learners will evaluate an emergency scene, carry out a patient assessment at the basic level and modify a basic assessment in circumstances where triage is required. Learners will also study information pertaining to ground ambulance operation including performing vehicle safety checks, safe and defensive driving techniques, emergency driving, cleaning and disinfecting equipment, and utilizing basic equipment commonly found in emergency vehicles.

Co-requisite(s): BL1180

PA1210 - Health & Fitness I

This course introduces learners to the concepts of physical fitness and the importance of developing and maintaining a healthy lifestyle. This course also explores support systems and stress including the importance of these aspects to an individual's overall level of health and well-being. Learners are encouraged to establish their own goals and plan for their future fitness needs related to the paramedic field. Learners will identify their areas of physical fitness requiring improvement through completion of a General Physical Fitness Appraisal.

Prerequisite(s): Completion of Pre-Physical Activity Assessment

PA1211 - Health & Fitness II

This course extends the concepts of fitness acquired in Health & Fitness I. While fitness remains a leading concept in this course, learners will further explore aspects such as biomechanics, lifting, transferring and securing patients including maximizing crash protection for occupants of the patient compartment. Learners will also study regulations and legislation relative to workplace safety as well as demonstrate their ability to safely perform the bona fide occupational requirements of a paramedic.

Prerequisite(s): PA1210

PA1230 - Airway Management

This course focuses on the knowledge, skills and abilities of paramedics in assessing and managing the airway, oxygenation and ventilation of patients. Learners will study and practice methods of evaluating the respiratory system and its airway structures through assessment techniques and diagnostic tests. Learners will demonstrate the knowledge and ability to independently conduct therapeutic management of the airway, and provide oxygenation and ventilation at the basic life support level. Learners will also develop the ability to assist advanced care providers in managing the airway, including below the vocal cords, utilizing specialized techniques and equipment.

Prerequisite(s): BL1180, PA1125

PA1280 - Cardiology

This course provides learners with a comprehensive understanding of cardiac physiology and electrophysiology. Learners will focus on acquiring, analyzing, and interpreting electrocardiogram (ECG) tracings for a variety of arrhythmias. They will also determine when a 12-lead ECG may be required and demonstrate the technique of obtaining a diagnostic-quality 12-lead ECG. Finally, learners will demonstrate competence in the management of cardiac arrest and arrhythmias in accordance with established standards.

Prerequisite(s): BL1180, PA1125, Current CPR-HCP or BLS Certificate

Co-requisite(s): PA1460

PA1290 - Community Paramedicine

In this course, learners will explore and participate in expanded roles of paramedic practice into an area commonly referred to as Community Paramedicine. The course consists of both didactic and practical components. In the practical component, learners may accompany a health care worker, such as a Mental Health Counselor, Addictions Counselor, Public Health Nurse, Community Paramedic, and others. Learners will evaluate methods and tools utilized to perform related assessments and referrals for clients in the community setting that are not related to the usual emergency response and transport model.

Prerequisite(s): PA1125

PA1370 - Pharmacology I

This course introduces learners to the fundamentals of pharmacology. This course will provide learners with the foundation for further studies on drug administration in Pharmacology II and in specific patient-types related to the paramedic's scope of practice.

Co-requisite(s): BL1180

PA1371 - Pharmacology II

This course builds on the previous Pharmacology I course and provides learners with the theory and skills for intravenous cannulation, fluid resuscitation, and safe administration of medications commonly used in the scope of practice of a Primary Care Paramedic.

Prerequisite(s): BL1180, PA1370, PA1125

PA1415 - Interagency Relations

This course focuses on interagency relations in field operations. In this regard, learners will develop an understanding of the responsibility of the paramedic in interacting with police, fire, air transport teams, rescue specialists, and experts in managing dangerous goods incidents. Learners will study the special considerations to be given when paramedics are involved with patients being transferred to or from air medical transport, including the practical skills of packaging a patient in preparation for transfer to air transport. Learners will participate in a practical workshop to learn about the safety issues related to providing patient care while extrication tools are being used. Finally, learners will study the responsibilities of the paramedic at crime scenes and accident scenes, and their role in collaborating with law enforcement agents.

Prerequisite(s): Semester 1-3 courses

Co-requisite(s): PA2000

PA1440 - Clinical

The purpose of this clinical placement is to provide learners with the opportunity to become acquainted with health care settings, and to allow learners to gain proficiency with specific skills and tasks in a controlled environment under the supervision of a clinician or preceptor.

Prerequisite(s): Semester 1 and 2 courses, Current CPR-HCP or BLS level certificate (maintained throughout course), Certificate of Conduct (as per agency requirement), Personal Health Information Act Training Certificate, Acceptable Health Assessment Form, Up-to-date Immunizations and Vaccinations, Fit Mask Test Certificate

PA1460 - Medical Emergencies I

This is the first of two courses focused on illnesses and medical conditions that the paramedic is expected to be knowledgeable about during their professional practice. Students will become familiar with the pathophysiology, common management strategies and treatments for a variety of medical conditions. Management strategies and specific interventions used in the pre-hospital environment and within clinical settings will be included. In cases where a specific intervention is within the paramedic's scope of practice, learners will proficiently demonstrate the correct management of that patient-type in a simulated setting. The course also includes foundational knowledge of

various diagnostic tests that aid in the diagnosis of a variety of medical conditions.

Prerequisite(s): PA1125

Co-requisite(s): PA1230, PA1280, PA1371

PA1470 - Medical Emergencies II

This is the second of two courses with a focus on illnesses and medical conditions that the paramedic is expected to be knowledgeable about during their professional practice. This course further prepares learners with applied knowledge and skills beyond their previous studies related to the pathophysiology, common management strategies, and treatments for a variety of medical conditions not covered previously. The management strategies and specific interventions students will learn will be used in pre-hospital environments and within clinical settings. In cases where a specific intervention is within the paramedic's scope of practice, learners will proficiently demonstrate correct management of that patient-type within a simulated setting. This course also includes foundational knowledge on various diagnostic tests performed to aid in the diagnosis of a variety of medical conditions.

Prerequisite(s): PA1230, PA1280, PA1460

PA1515 - Special Populations

This course addresses special considerations that are required for assessment and treatment of: patients of specific groups; patients with physical and mental impairments; geriatric and bariatric patients; as well as patients with terminal illness or in palliative care. Learners will also study the pathophysiology, manifestations and pre-hospital precautions for a variety of communicable and infectious diseases.

Prerequisite(s): PA1460, PA1470

PA1520 - Mental Health

Learners will develop an understanding of various mental illnesses including how to relate to patients experiencing a mental health crisis. Learners will also study how to protect their mental health as it relates to their paramedicine working experiences.

Prerequisite(s): PA1125

PA2000 - Traumatology

The course focuses on the skills necessary to recognize mechanisms of injury including assessment and management of trauma patients. Through this course, learners will demonstrate organized time-efficient assessments, prioritize and perform critical interventions, appropriately package and transport trauma patients. A major focus of the course is the identification of conditions that require immediate transport ("load-and-go") in order to save the patient. Lifesaving techniques are taught or reviewed in practical exercises.

Prerequisite(s): All Semester 1-3 courses

Co-requisite(s): PA1415, PA2020

PA2005 - Obstetrics and Pediatrics

In this course, learners will apply knowledge and demonstrate skills related to the branches of medicine concerned with diseases of the female reproductive system, pregnancy, and childbirth. More specifically, the study of the physiologic and pathologic function of the female reproductive tract, and the care of the mother and fetus throughout pregnancy, childbirth, and the immediate postpartum period are addressed. Learners will also incorporate skills developed in previous courses to complete specialized training in evaluation and resuscitation of neonates and pediatric patients.

Prerequisite(s): PA1460, PA1470

PA2020 - Simulation Lab

This course is designed to prepare learners for practicum placements through synthesizing and integrating knowledge and skills learned in previous and concurrent courses. Learners will demonstrate proficiency assessing, inferring a differential diagnosis, and providing care to various patient-types in a simulated setting using high fidelity simulation. Using a teamwork approach, learners will simulate the events of a paramedic or clinical response. At the conclusion of simulated scenarios, learners who performed lead roles will complete proper documentation in a medical record.

Prerequisite(s): All Semester 1-3 courses

Co-requisite(s): PA2000, PA2005, PA1515, PA1415

PA2025 - Practicum

In this course, learners will proficiently demonstrate knowledge and perform specific competencies, abilities and job tasks at the national occupational competency level for Primary Care Paramedicine, in a field preceptorship.

Prerequisite(s): All courses in Semesters 1-4, Note: Learners must successfully pass Simulation Testing within 6 months of beginning the Practicum (PA2025) course, Current CPR-HCP/BLS level certificate (maintained throughout course)

PA3110 - Advanced Care for Medical Emergencies I •

This course is the first of three that focus on illnesses and medical conditions for which the Advanced Care Paramedic is expected to be knowledgeable during their professional practice. The course provides learners with the pathophysiology, common management strategies and treatments for a variety of medical conditions. Some of the management strategies and specific interventions are used in the pre-hospital environment and others in the clinical setting. In cases where a specific intervention is within the Paramedic's scope of practice, learners will proficiently demonstrate correct management of that patient-type in a simulated setting. The course also includes foundational knowledge on various diagnostic tests that may be performed to aid in the diagnosis of various medical conditions.

Prerequisite(s): PA2025 or equivalent

Co-requisite(s): PA3115, CM3020

PA3115 - Foundations for Advanced Care •

In this course, learners will further develop their knowledge of the profession of paramedicine. This will be accomplished by gaining knowledge in areas such as professional practice, communications, health and safety, continuing education and professional development, medico-legal aspects of the profession, and effective decision making. The learner will expand upon their patient assessment techniques, while integrating history taking practices and vital sign skills.

Prerequisite(s): PA2025 or equivalent

Co-requisite(s): PA3110, CM3020

PA3220 - Advanced Care for Medical Emergencies II •

This course is the second of three that focus on illnesses and medical conditions for which the Advanced Care Paramedic is expected to be knowledgeable during their professional practice. The course provides learners with the pathophysiology, common management strategies and treatments for a variety of medical conditions. Some of the management strategies and specific interventions are used in the pre-hospital environment and others in the clinical setting. In cases where a specific intervention is within the Paramedic's scope of practice, learners will proficiently demonstrate correct management of that patient-type in a simulated setting. The course also includes foundational knowledge on various diagnostic tests that may be performed to aid in the diagnosis of various medical conditions.

Prerequisite(s): PA3110, PA3115, CM3020

Co-requisite(s): PA3225, PA3230

PA3225 - Advanced Care for Special Considerations •

This course addresses special considerations that are required for assessment and treatment of: patients of specific groups; patients with physical and mental impairments; geriatric and bariatric patients, as well as patients with terminal illness or in palliative care. Learners will also study the pathophysiology, manifestations, and pre-hospital precautions for a variety of communicable and infectious diseases.

Prerequisite(s): PA3110, PA3115, CM3020

Co-requisite(s): PA3220, PA3230

PA3230 - Advanced Care for Trauma •

This course will give learners the knowledge and skills necessary to provide appropriate care to patients as a result of trauma. In the lab, learners will gain mastery of the specific skills required to assess and manage trauma patients. Such skills will then be integrated into overall patient management in the simulated environment.

Prerequisite(s): PA3110, PA3115, CM3020

Co-requisite(s): PA3220, PA3225

PA3310 - Advanced Care for Medical Emergencies III •

This course is the final course of three that focus on illnesses and medical conditions for which the Advanced Care Paramedic is expected to be knowledgeable during their professional practice. The course provides learners with the

pathophysiology, common management strategies and treatments for a variety of medical conditions. Some of the management strategies and specific interventions are used in the pre-hospital environment and others in the clinical setting. In cases where a specific intervention is within the Paramedic's scope of practice, learners will proficiently demonstrate correct management of that patient-type in a simulated setting. The course also includes foundational knowledge on various diagnostic tests that may be performed to aid in the diagnosis of various medical conditions.

Prerequisite(s): PA3220, PA3230, PA3225

Co-requisite(s): PA3320, PA3330

PA3320 - Advanced Care for Obstetrics and Pediatrics •

In this course, learners will apply knowledge and demonstrate skills related to the branches of medicine concerned with pregnancy, childbirth and pediatric emergencies. The student will provide care of the mother and fetus throughout pregnancy, childbirth, and the immediate postpartum period.

Prerequisite(s): PA3220, PA3225, PA3230

Co-requisite(s): PA3310, PA3330

PA3330 - Interagency Relations & Introduction to Critical Care •

This course focuses on interagency relations in field operations. In this regard, learners will develop an understanding of the responsibility of the paramedic in interacting with police, fire, air transport teams, rescue specialists, and experts in managing dangerous goods incidents. Learners will study the special considerations to be given when paramedics are involved with patients being transferred to or from air medical transport, including the practical skills of critical care. Learners will study the responsibilities of the paramedic at crime scenes and accident scenes, and their role in collaborating with law enforcement agents.

Prerequisite(s): PA3220, PA3230, PA3225

Co-requisite(s): PA3310, PA3320

PA3410 - Final Practicum •

This final practicum is designed to provide learners with the opportunity to synthesize and apply the knowledge, skills, and abilities developed throughout the previous three (3) semesters of the Advanced Paramedicine Program. Under the supervision of a qualified preceptor, learners will integrate - as appropriate - the full scope of paramedicine competencies. Throughout the semester, they will be exposed to a variety of environments and situations typical of the paramedic profession. Learners will attend a variety of shifts including nights and weekends, ensuring that they are exposed to the conditions in which they will be working post-graduation.

Prerequisite(s): PA3310, PA3320, PA3330, Practical Skill Evaluations within the previous six (6) months, BLS Certification

PC1100 - Political Science

In this course, students will analyze the discipline of political science and the structure and purpose of federal, provincial, and municipal government institutions in Canada. They will also evaluate some of the major contemporary political issues in the country.

PC1120 - Foundations for Practice

This course is designed to introduce legal and ethical considerations as well as the delivery of health care. Legislation that pertains to the care and the rights of the client and responsibilities of the health care team members is introduced. Members of the health care team, delegation of care, and the role as the Personal Care Attendant (PCA) are highlighted. There is an emphasis on ethics, the significance of professionalism, and the need to maintain personal and professional well-being.

PC1130 - Workplace Safety

This course is designed to provide knowledge related to government legislation, employer responsibilities, and employee responsibilities for maintaining safety in the workplace. There is an emphasis on the significance of implementing safety measures, recognizing and responding to common workplace safety hazards, and documenting/reporting workplace safety concerns.

PC1141 - Understanding Aging, Dementia & Dying

This course is designed to explore the trends in aging, age related physiological and psychosocial changes, abuse, neglect of the older adult, and provide knowledge for the provision of end of life care. Neurocognitive disorders and

illness will be discussed with an emphasis on promoting an optimal level of functioning, promoting client centered care, providing care for families, and promoting self-care for the caregiver. The significance of effective communication, meaningful activities, and the inclusion of family in care is highlighted. Terminal illnesses, death and dying, and the impact of the end of life experience on the client, family and caregiver will be addressed. Concepts of loss and grief, non-pharmacological comfort measures and meeting the needs of the dying client and the family will be discussed. The rights of clients and legal aspects associated with death and dying will be emphasized. Relevant resources that can be used to support client care goals will be identified.

PC1145 - Fundamentals I: Care Basics

This course introduces students to the provision of safe, competent client care in the health care setting. It addresses principles related to personal care, client safety, infection control, body mechanics and safe client/resident handling. Growth and development, along with client care throughout the lifespan, will be highlighted. Opportunities are provided to safely practice fundamental psychomotor skills in a simulated health care environment.

PC1150 - Clinical Practice I

This clinical course provides students with opportunities to integrate theoretical knowledge and apply acquired skills in the clinical practice setting. For this clinical course, long-term care settings will be utilized. Students will be evaluated based upon clinical observations and interactions, participation in clinical conferences, midterm evaluation, and the Clinical Practice Evaluation Form (CPEF) for Clinical Practice I. Prerequisites must be met prior to going to the clinical setting.

Prerequisite(s): Successful completion of all semester 1 courses

PC1210 - Basic Concepts in Medication Awareness

This course aims to provide students with basic knowledge and skills to prepare for and provide safe competent practice in medication assistance. Emphasis is placed on ensuring clients' rights and maintaining safety measures, dignity and respect when assisting with medications. Medication assistance must be carried out in accordance with legislation and employer policies.

Prerequisite(s): Successful completion of semester one courses

PC1220 - Mental Health Concepts

This course is designed to introduce students to basic concepts regarding mental health and mental illnesses. Common mental illnesses and challenges experienced by clients living with mental health issues will be discussed. Students will explore communication and client-centered care strategies in the provision of care for clients experiencing mental illness. Interventions, therapies, and available community resources will be emphasized.

Prerequisite(s): Successful completion of semester one courses

PC1225 - Fundamentals II: Body Systems Approach to Care

This course introduces students to the human body and the basic anatomy and physiology of the various body systems. Age-related changes, common disorders, and client care associated with the body systems will be discussed. Use of appropriate terminology will be emphasized. Students will have the opportunity to safely practice fundamental psychomotor skills in a simulated health care environment. This course builds upon concepts and labs learned in the Fundamentals I: Care Basics course.

Prerequisite(s): Successful completion of semester one courses

PC1230 - Clinical Practice II

This clinical course provides students with opportunities to integrate theoretical knowledge and utilize acquired skills in the clinical practice setting. For this clinical course, long-term care and acute care settings will be utilized in order to promote care of the client across the life-span. Students will be evaluated based upon clinical observations and interactions, participation in clinical conferences, and the Clinical Practice Evaluation Form (CPEF) for Clinical Practice II. Prerequisites must be met prior to going to the clinical setting.

Prerequisite(s): Successful completion of all semester two courses

PC1235 - Clinical Preceptorship

This clinical course provides students with opportunities to further develop and integrate knowledge and skills acquired in courses. For this clinical experience, long-term care agencies will be utilized. In this course each student is assigned to an experienced Personal Care Attendant (PCA). With the guidance and direction of the preceptor, students

will participate in the day-to-day routine of the practice setting and become more familiar with the contributions of the PCA to the health care team. This course is designed to help increase student confidence and competence, and to help students further develop their leadership skills. Students will be evaluated based upon clinical observations and interactions, formal evaluation from the preceptor, student/instructor interactions, clinical preceptorship assignment, agency personnel feedback and the Clinical Practice Evaluation Form (CPEF) for Preceptorship that is completed by the clinical instructor. Prerequisites must be met prior to going to the clinical setting. Students will work the same full shifts as their assigned preceptor (days/evenings/nights, 8h and 12 h shifts, and weekends).

Prerequisite(s): Successful completion of all program courses

PD1105 - Prof. Development I

This course is designed to prepare students for their work term placement. The focus is on acquiring the skills of a successful professional employee. The students will learn how to assess and refine their own skills and to match these skills with employment opportunities. Students will prepare resumes and cover letters to utilize for their up-coming placements. Interview skills and the creation of an interview kit along with mock interviews will further prepare the student for placement competitions. They will develop SMART objectives highlighting their achievement objectives for their upcoming placements.

PD1110 - Portfolio Development

Portfolio Development for filmmaking centers on a special project wherein students will create a demo reel, a website and social media pages in order to showcase their work.

Prerequisite(s): FV2070

Co-requisite(s): FV2080

PD1120 - Portfolio Development I •

This is an introductory course for the development and effective use of portfolios. Students will study portfolio types and requirements for a broad range of applications including post-secondary art and design-based programs, arts awards and employment. The importance of portfolio development and its practical application for a career in art, media and design will be further explored through presentations with professionals within the cultural sector. A portfolio of artwork will be created in order to experience portfolio development as part of a continuous process of self-assessment and learning.

Co-requisite(s): PY1150

PD1125 - Portfolio Development II •

This course will develop skills requiring the objective and critical self-assessment to select, collate, and present a body of work that best represents core strengths with a view to identifying and achieving career objectives in specialized art training programs. Students will learn photo documentation skills for two and three-dimensional artwork and how to create a digital portfolio.

Prerequisite(s): PY1150, PD1120

PD1130 - E-Portfolio •

This course is an introduction to the design and development of static websites. Students will create a portfolio website to showcase artwork produced in the Studio Practice course as well as a selection of completed artwork and works in progress from other courses produced throughout the year.

Co-requisite(s): VA1185

PD2110 - Project Coordination

In this course students will identify the elements and components necessary to launch an event such as an exhibition and/or fashion show. Students will learn the tools necessary to develop and implement a project plan complete with checkpoints and documentation.

Prerequisite(s): Successful completion of semesters one through four.

PD2140 - Work Term Seminar

This is a pass/fail course that is to be completed by students during the academic semester preceding graduation. It is designed to allow the students to share the technical aspects of their work term, give students individual work term performance review and to update their career plans and résumés.

Prerequisite(s): PD2310 or PD2130, and clear academic standing in the semester preceding the final semester of the

student's program

PD2150 - Project Implementation

In this course students will implement a program-related event plan and corresponding timeline. Students will also learn how to critically evaluate the event, make recommendations, and develop corresponding documentation.

Prerequisite(s): Successful completion of all required courses in Semester 5

PD2310 - Prof. Development II

This course reinforces the topics covered in the first professional development course. It provides an opportunity to reflect on their first work term placement and revise or update their Co-op work term objectives. The course discusses the Information Technology industry, ethics and career best practices. Understanding yourself and learning strategies are discussed to improve student performance. An Experiential Education Model will be introduced as part of the co-operative education process. The student will also receive guidelines on the upcoming work term's Reflective Technical report.

Prerequisite(s): PD1105

PD4400 - Work Term II Seminar

This course is designed to prepare students for the workplace. Students will learn how to assess and refine their own skills and to match these skills with employment opportunities. In addition, students will work to develop measurable achievements and/or objectives that are expected to be accomplished during the work term.

Work term opportunities are arranged by the Work Term Coordinator for the program and secured by students in competition with all applicants for the position. This course focuses on fine-tuning the skills learned throughout their program of studies and aids them in finding a meaningful placement and becoming an asset to that organization.

PE1100 - Basic Electronics

This introductory course in electrical theory covers the basic concepts of electricity, circuit analysis and magnetism. The laboratory work is designed to develop skills in the construction of electrical circuits, use of electrical measuring instruments, and reinforce theoretical concepts.

PE1140 - Basic AC Electronics

This course covers basics of AC theory and application. Learners will analyze AC circuits using impedance, admittance and phase to obtain any required circuit quantities as current, voltage, power, and frequency. This course examines resonance frequency and phase relating to sinusoidal waveform on capacitors, inductors, and resistors. Electrical measuring equipment such as an oscilloscope, frequency generators, frequency counters, VOM, and other electronic measuring devices will be used to enforce theoretical concepts.

Prerequisite(s): None

PE1200 - Basic Aircraft Electrical Systems

The purpose of this course is to give the student an overview of aircraft electrical systems. Batteries, generators, alternators, and ground power sources will be explained. Basic wiring practices as well as an introduction to wiring schematics and ignition systems will be completed. The practical portion of this course will include all aspects of wire routing, securing, tying, splicing and attaching.

PE1220 - EASA Module 3, 4, 5 Refresher

This course is designed to prepare the student to write the EASA module exams for modules 3, 4 & 5 through the use of practice exercises and review lessons.

PE1230 - EASA Module 5 Top Up

This course is designed to cover items from EASA Module 5 that were not contained in the Aircraft Maintenance Engineering Technician program. The students will receive instruction in data buses and aircraft networks, software management control and fibre optics.

PE1300 - Battery Maintenance (M, E)

This M and E course is designed to have the students deep cycle an Aircraft NI-CAD battery and charge an aircraft lead acid battery.

Prerequisite(s): PE1200

Co-requisite(s): PE1350

PE1350 - Electrical Power Systems (M, E)

This M and E course is designed to provide an in depth study of AC/DC power generation. External Power systems and Electrical Load Distribution will also be addressed in greater detail.

Prerequisite(s): PE1200, DP1840

Co-requisite(s): PE1300

PE2100 - Analog Electronics

This course is an introduction to analog application. The student will cover all basic theory in semiconductors, power supplies, amplifiers and filters. In labs the student will identify symptoms in malfunctioning equipment and perform preliminary checks and eliminate obvious problems. This course will direct the student through a balanced approach of theory and practical experience in constructing circuits from diagrams, component identification and the use of electronic test equipment.

PE2105 - Electrical Practices

This course covers the installation of heating and lighting controls, electrical drawings and commercial and industrial demand load calculations.

PE2135 - Aircraft Electrical Systems

This course is designed to provide an in-depth study of aircraft electrical systems including various aircraft power sources, electrical system design, and operation.

Prerequisite(s): PE1200

PE2140 - Digital Electronics

This course provides an effective way to teach students the basics of digital methods and techniques. The microprocessor architecture covers the operation, memories, and how personal computers work. All lab experiments and troubleshooting techniques will enhance the student concepts of digital electronics in this course.

PE2240 - Hazardous Areas

This course gives the learner an understanding of hazardous area classifications. It includes system design to confine an explosion inside an enclosure, isolate the ignition source and limit the energy flow into the hazardous area. The learner receives hands on training to install and maintain hazardous area equipment.

Prerequisite(s): MP2170

PE2500 - Electrical Practices

This course covers the care and use of hand tools, safety, types of electrical protection, installation of motor starters and relays, drawing electrical schematics, troubleshooting motor control circuits, installation of circuits using sections of the CSA electrical code.

Prerequisite(s): ET1101, CI1313

PE2501 - Electrical Practices

This is an intermediate level course that covers the testing and dismantling of DC and AC motors, as well as an introduction to electrical installations in hazardous locations.

Prerequisite(s): PE2500, MP2910

PE2730 - Industrial Instrumentation Practices

This course is designed to provide the Instrumentation and Controls Engineering Technologist with the knowledge and skills necessary to implement safe systems in an industrial environment. Emphasis will be on OHS, instrument wiring and grounding considerations, fasteners and adhesives, conduit, EMT and tube and fitting installations.

Prerequisite(s): CI1313

PE2801 - Industrial Mechanical Systems

The purpose of this course is to introduce the learners to the typical equipment included in industrial mechanical systems. The learners are expected to use this knowledge to assist with improving the efficiency of common

industrial processes, in an effort to improve process performance and product quality. Outcomes covered include the operational description and maintenance of: pumps and compressors, power transmission equipment, material handling systems, seals, bearings, and lubrication systems.

Prerequisite(s): PH1101

Co-requisite(s): FM2102

PE3101 - Electrical Practices (Facility Design)

This is an advanced course intended to introduce students to the broad field of electrical facility design. Major topics include electrical distribution design, exterior lighting and controls, lamp technology, interior lighting and controls, electrical heating and controls and electrical distribution design. This course is followed by a project course (PE4100) to reinforce theoretical concepts and enable students to apply those concepts in the design process.

Prerequisite(s): PE2105

PE4110 - Electrical Practices (Facility Design)

This course is project oriented and is a continuation of subject materials covered in all prior Electrical Practices courses. It involves compilation of a complete electrical facility design inclusive of design calculations, preparation of detailed specifications, as well as a complete set of electrical drawings. The final product shall be sufficiently detailed to enable a hypothetical electrical contractor to prepare a complete tender package in order to implement the work.

Prerequisite(s): PE3101

PH1010 - Science for NDT

This introductory science course presents information about the nature of the physical world to prepare learners for success in the non-destructive testing field. Fundamental elements of science are covered along with the science tools required to understand and apply the materials covered in future non-destructive testing courses. Topics covered include force, physical chemistry, waves, sound, light, electricity, heat, radiation, fluid mechanics, and magnetism.

Co-requisite(s): MA1081

PH1030 - Physics Refresher for EASA Module 2

This course is designed to prepare the student to write the EASA Module 2 exams by providing a refresher of basic physics along with a knowledge of the nature of matter, statics, dynamics, fluid dynamics, thermodynamics, optics and wave motion and sound.

Prerequisite(s): PH1300

PH1050 - Introductory Physics I

Introductory Physics I is a Comprehensive Arts and Science (CAS) College Transition course. The course focuses on the fundamentals of Physics. It is the first of two Physics courses offered in CAS College Transition. These courses are designed to assist students with further study in Physics at the post-secondary level and entry in College programs.

PH1051 - Introductory Physics II

Introductory Physics II is a Comprehensive Arts and Science (CAS) College Transition course. It is the second of two physics courses designed to prepare students for entry into a number of programs at the College level as well as CAS Transfer: College-University. Following Introductory Physics I, this course continues the exploration of some of the fundamental topics common to all Physics courses.

Prerequisite(s): PH1050

PH1060 - Physics for Aboriginal Students

The purpose of this course is to provide aboriginal students with an introduction to the discipline of physics. Topics will be explored from a First Nations' perspective using a scientific framework. These topics will include: motion, machines/force, and electricity.

PH1100 - Physics •

This is an introductory physics course designed to extend the students' knowledge and understanding of basic physics principles, concepts and applications related to mechanics. The course also extends abilities in data handling, problem solving and experimentation.

PH1101 - Physics •

This is a second semester course designed to extend the students' knowledge and understanding of basic Physics principles, concepts and applications related to kinetic theory, heat, vibrations, sound and light. It also extends abilities in data handling, problem solving and experimentation.

Prerequisite(s): MA1700, PH1100

PH1110 - Foundational Physics

This is an introductory physics course designed to foster students' competency in basic physics principles, concepts, and applications relating to mechanics, fluids, heat, sound, and electricity. Through practical application, students extend their abilities in data handling, data analysis, experimentation, and problem-solving.

PH1120 - Introductory Physics I

Transferable to MUN Physics 1020. This is an introductory course designed to extend student's knowledge and understanding of the basic concepts, principles and applications of Mechanics. Physics I is a college credit course which may be used as a transfer credit in Physics in a Memorial University degree program. Topics covered include kinematics in one and two dimensions, vectors, dynamics, equilibrium, work and energy, and linear momentum.

Prerequisite(s): High School Level III Academic Mathematics with a minimum mark of 70%, or a pass in Advanced Mathematics; or College MA1104 (or MUN Mathematics 1090). MA1104 (MUN Mathematics 1090) may be taken concurrently

Co-requisite(s): MA1104 (MUN Mathematics 1090) may be taken concurrently

PH1121 - Introductory Physics II

Transferable to MUN Physics 1021. Physics II is an introductory level physics course which may be used as a transfer credit course in physics in a Memorial University academic degree program. Topics covered are Fluids, Vibrations and Waves, Sound, Electric Charge and Electric Field, Electric Potential and Potential Energy, Electric Current, D. C. Circuits and Instruments, Magnetism and Geometrical Optics.

Prerequisite(s): PH1120 or MUN Physics 1020 and College MA1130 or (MUN Mathematics 1000). MA1130 (MUN Mathematics 1000) may be taken concurrently.

Co-requisite(s): MA1130 (MUN Mathematics 1000) may be taken concurrently

PH1130 - Physics I

Transferable to MUN Physics 1050. This course is a calculus-based introduction to mechanics. The course emphasizes problem solving. One goal is to extend students' knowledge and understanding of the basic concepts, principles and applications of mechanics, which underlies so much of science. An equally important goal, however, is to develop methods of learning and problem solving which will be of value in whatever endeavors they ultimately choose to pursue. Physics I is a college course which may be used as a transfer credit course in Physics in a Memorial University degree program. Topics covered include Measurement, Kinematics in one and two Dimensions, Vectors, Laws of Motion, Application of Newton's Laws, Work and Energy, Momentum, and Static Equilibrium.

Prerequisite(s): Completion of Physics 2204 and Physics 3204 in high school and enrolment in Mathematics 1130 (MUN Mathematics 1000) concurrently.

Co-requisite(s): Mathematics 1130 (MUN Mathematics 1000), which may be taken concurrently.

PH1131 - Physics II

Transferable to MUN Physics 1051. Physics II is a Calculus-based Physics course. This course is integrated with the use of computers in a workshop environment. Computers will be used to collect and analyze data on simple physical systems. Physics 1130 (Physics I) introduces mechanics. This course focuses on oscillation, wave motion, physical optics, electricity, and magnetism. This course further develops the processes of logical reasoning and critical thinking as applied to Physics in particular, and Science, in general. Physics II is a college credit course which may be used as a transfer credit course in Physics in a Memorial University degree program.

Prerequisite(s): PH1130 (MUN Physics 1050) or PH1120 (MUN Physics 1020) with a minimum grade of 65%, and MA1131 (MUN Mathematics 1001). MA1131 (MUN Mathematics 1001) may be taken concurrently.

Co-requisite(s): MA1131 (MUN Mathematics 1001), which may be taken concurrently.

PH1140 - Applied Physics

This course introduces students to the physical science concepts applicable to the fields of electrical and

instrumentation technology.

PH1150 - Applied Physics

This course introduces students to basic physics principles and applications related to the mechanical and chemical engineering fields. The course also extends students abilities in problem solving, experimentation.

PH1300 - Physics for Aircraft Maintenance

This is an introductory physics course designed to extend the students' knowledge and understanding of basic physics principles as they apply to an aircraft maintenance environment, and applications related to mechanics. The course also extends abilities in data handling, problem solving and experimentation.

PH2205 - Radiation Physics

This is a radiation physics course designed for medical radiography students. It will give them an understanding of: (1) x-ray physics: the nature of x-rays, the production of x-rays, the interaction of x-rays with matter; (2) radiation dosimetry: radiation exposure, absorbed dose, dose equivalent, effective dose equivalent, detection of radiation and dosimeters (3) the electrical components of imaging systems.

Prerequisite(s): PH1110

Co-requisite(s): MX2311

PJ1005 - Intro to Project Management •

This course provides the practical knowledge to prepare for starting and completing a project successfully. It will cover the components and tasks related to complex projects that often involve multiple functional teams and departments. You will explore how the knowledge areas of the Project Management Body of Knowledge (PMBOK® Guide) are applied during each phase of a project's life cycle as well as the processes related to successful project management. An overview of status reporting and the use of MS Project will be covered. This knowledge will help establish priorities and effectively manage your projects. It will be of particular interest to those students who have a long-term goal of attaining the Project Management Professional (PMP)® or the Certified Associate in Project Management (CAPM)® designations certified by the Project Management Institute.

PJ1010 - Project Planning-Scope & Quality •

Project managers need to ensure that the scope of the project is effectively managed from concept through to implementation. This course will focus on all aspects of scope management, including the link to company strategy, concept development, business case, contract management, requirements gathering, work breakdown, scope definition, and scope control. Directly related is the need to ensure that the project implements the scope as intended. Quality management techniques will be studied in detail.

PJ1015 - PM Software and Excel •

Whether you are a large global company or a small business, there are software tools available to help you manage projects. This course explores two options – Microsoft Project and Microsoft Excel. Students will utilize both for project management. Acting as project managers, students will develop schedules, assign resources to tasks, track progress, manage the budget, and analyze workloads.

PJ1020 - Business Operations •

Business is an amalgamation of various systems and processes. Everything from a local bakery to a supermarket, a multinational corporation to a manufacturing plant, fits into its definition. This course aims to demystify the world of business by providing an overview of its most vital concepts, enabling students to apply the acquired knowledge to projects and businesses regardless of the occupation. While this course explores the Macro and Micro business environment and its relationship with an organization's vision, mission, and objectives, it also discusses business fundamentals like the economic environment, business models, systems, structure and culture, marketing, operations, finance, and strategy. Delivery of crucial concepts and models would be reinforced with the help of team-based exercises, industry examples and case studies from present-day organizations operating in the Canadian and global marketplace.

PJ1205 - PM-Leadership & Teams •

Project leaders need to recruit, orient, maintain and motivate individuals and teams as part of their business strategies. This course will compare leadership theories and practices as they apply to the field of project

management. Students will also learn how to create and manage teams, along with tactics to facilitate constructive problem-solving and decision-making.

PJ1210 - PM-Stakeholder Management •

The world has evolved by using technology to communicate effectively with stakeholders. Hybrid and remote work have changed the culture of organizations and processes regarding stakeholder management. In this course, students will simulate specific situational applications of effectual communication skills in stakeholder change management. This approach to communication and presentation skills will address written, spoken, and electronic modes, non-verbal communication, and body language, to foster business-appropriate competencies for the professional.

PJ1215 - PM-Schedules & Budgets •

This course focuses on the development of project schedules and budgets as a crucial part of the planning and control process. Students will apply project costing and financial management best practices as it relates to projects. Using the popular MS Project software, students will create, analyze and critique extensive project schedules containing time and cost information.

PJ1305 - Risk & Issues Management •

Project risk management and issues management play a key role in achieving a project's objectives by identifying, analyzing, and responding to risks or issues that can impact a project's success. In this course, students will learn a structured multi-tiered approach that can be used to identify the different types of risks associated with projects such as technical, time, costs, and quality.

Students will learn to communicate risks effectively and share the responsibility of managing risks with team members, customers, and management. They will develop creative thinking skills and problem-solving skills in the context of dealing with issues while managing a project.

PJ1310 - Adv Project Planning & Control •

This course will address advanced issues in project planning and control as a continuation of the topics taught in the Introduction to Project Management course. It will concentrate on four primary areas: project governance, procurement of goods and services, earned value management, and project management software.

Prerequisite(s): PJ1005

PJ2000 - Agile Project Management •

Agile project management utilizes an iterative approach that includes frequent and continuous releases, with feedback incorporated throughout. This course will prepare students to apply Agile concepts to manage projects. Students will explore Agile values and principles along with how Lean has influenced Agile. Students will learn how to perform key agile functions such as user story creation, estimation, backlog and sprint planning, sprint execution and scrum, as well as the use of information radiators to monitor sprint progress. Practical case scenarios will be utilized for the effective use of Jira software to manage many Agile functions.

This course will be of interest to students who would like to pursue a career as a Scrum Master or become more familiar with Agile. Successful completion of this course meets the current requirements for students to write the EXIN Scrum Foundations certification.

PJ2005 - PM-Applied Project •

This course focuses on the first phase of an extensive Project Management initiative. Working in groups, students will develop a comprehensive business case outlining a business-focused project demonstrating the application of knowledge and skills developed throughout their program of study. Students will work under the supervision of a facility supervisor and will perform the following.

Identify and research the project idea to be used for the applied project.

1. Develop a comprehensive business case
2. Initiate the project according to the approved business case

3. Develop comprehensive project documents for the approved project
4. Create accurate status reports throughout the project
5. Presentation of their project

This project can be one from industry or one assigned by the College. If it is an industry-driven project, prior faculty approval must be provided to ensure it meets the scope, depth, and focus required to meet the course outcomes.

PJ2010 - PM-Certification Preparation •

This course prepares the student to write the (PMI) ® Certified Associate in Project Management (CAPM) ® certification exam. The exam is designed for those with little or no project experience and is a valuable entry-level certification for project practitioners. At the end of the course, the student will demonstrate an understanding of the fundamental knowledge, terminology, and processes of effective project management.

PJ2015 - Orientation to the Work Exposure •

The work exposure is an integral part of the program's curriculum. Work exposure opportunities are arranged by the Work Exposure Coordinator for the program but ultimately must be secured by students in competition with all applicants for the position. This course focuses on content that will assist students in finding a meaningful placement.

PM2130 - Drilling

This is the first of three courses in drilling technology. This course covers fundamental operations associated with drilling a well for petroleum exploration and production in both onshore and offshore environments. Emphasis will be placed on drilling unit types, rotary drilling rigs, the drill string, drilling fluids and casing and cementing.

Prerequisite(s): FM2102, CF2545

PM2140 - Well Planning

This is the second of three courses in drilling technology. Students apply and build on the skills and knowledge developed in PM2130 - Drilling to carry out drilling engineering analysis and optimization and well planning.

Prerequisite(s): PM2130

PM2180 - Well Control

This is an advanced course in drilling technology which uses simulation software to perform well control operations. Learners build knowledge developed in two previous drilling technology courses and apply these skills to hands-on well control simulation exercises.

Prerequisite(s): PM2140

PM2222 - Production

This is the second course in petroleum production, which focusses on the engineering aspects of well production design and operation. This course stresses an interdisciplinary approach to solving production problems by introducing concepts of total quality management.

Prerequisite(s): PM2230, MA1670

Co-requisite(s): PM2520

PM2230 - Completions

This is the first course in petroleum production operations. As an introductory course in Completion Technology operations, this course describes the major processes and equipment involved in initiating and maintaining production from a wellbore. The course stresses an interdisciplinary approach to well completion. Topics include: well completion design for both conventional and horizontal wells; tubular selection (including interactions with packers); subsurface control equipment; completion fluids; and perforating oil and gas wells.

Prerequisite(s): FM2102

Co-requisite(s): PM2130

PM2321 - Reservoir Estimates

This is the first of two courses designed to provide an introduction to the principles and practices of petroleum

reservoir engineering. The first course serves as an introduction allowing the learner to master the concepts of basic reservoir engineering theory and application, providing them with knowledge and skills to effectively apply the more complex problem-solving techniques that are developed in the second course.

Prerequisite(s): MA2100

PM2330 - Reservoir Analysis

This second course in reservoir engineering subject area builds upon the basics of reservoir estimating presented in the first offering. The mechanics of fluid flow in a porous media are covered in further detail to enable the learner to analyze flow problems for a variety of reservoir boundary conditions. The course also provides significant detail in the analysis of oil and gas well test data, utilizing the methods of pressure build-up testing and type curve matching.

Prerequisite(s): MA1670, PM2321

PM2402 - Production Logging & Applications

This is a course in the analysis & interpretation of production logging data along with an introduction to the analysis of wellbore cement. The course will overview the operation of production logging tools but will focus mostly on the interpretation of production logging data.

Prerequisite(s): PM2420

PM2420 - Logging and Formation Evaluation

This is a course in interpretation of data obtained from down-hole geophysical tools, i.e. open hole well logs. Concentration will be on the basic open hole logging tools some of which are applicable to cased holes. Physical nature (size, weight, etc.) and theory of operation for the various tools will be dealt with briefly. Interpretation of the data derived from the various tools is the main course goal. New technology/specialty tools that are available will be discussed where time permits.

Prerequisite(s): CH2330, GE2510

PM2520 - Oil Facilities

This course presents the basic concepts and techniques necessary to design, specify, and operate oil field processing equipment to separate the produced gas and water from the oil at or near the well site.

Prerequisite(s): CF2545, FM2102, MA2100, PM2321

PM2530 - Gas Facilities & Flow Assurance

A course which presents the basic concepts and techniques necessary to design, specify and operate upstream gas handling systems and facilities.

Prerequisite(s): PM2520, TD3140, CH2335

PM2600 - Intervention

A third course in petroleum production operations introducing the major processes and equipment involved in maintaining production from a wellbore. The course stresses an interdisciplinary approach to intervention and "workover planning".

Various artificial lift methods are introduced which enable depleting reservoirs to sustain viable production rates.

Prerequisite(s): PM2222

PO1000 - Mineral Processing I

The purpose of this course is to familiarize students with various operational elements in an ore processing facility. Students will study particle size measurement, comminution, classification, and concentration methods. De-watering and tailings disposal are also discussed.

Prerequisite(s): CL1110

PO1170 - Industrial Chemical Processes

This course introduces the student to chemical processes found in a variety of industries. Students will obtain an overview of chemical engineering process units and equipment used in a variety of industries. Students will begin to use and analyze block diagrams, process flow diagrams, and piping and instrumentation diagrams.

PO1180 - Unit Operations and Process Design I

Students will be introduced to basic principles of mass transfer operations and their applications in the chemical process industry. Vapor liquid equilibrium is investigated and applied to chemical processes such as distillation. Reaction mechanism and kinetics, and various industrial reactor types will be also covered. Students will examine the operation of different separation processes using both simulation models and pilot units.

Prerequisite(s): CL1110

PO1190 - Natural Gas Processing

Students are introduced to processes common to the oil and gas industry, with a strong focus on natural gas processes. Students examine several processes required to separate and purify natural gas well effluent into valuable products. Sizing and design calculations are performed for common equipment. Pilot plant scale equipment and/or simulators are used to demonstrate the safe start-up, shut-down, and operation of process equipment.

Prerequisite(s): CL1110, PO1180, CH3450

PO1210 - Oil Refining

Students examine processes common to the oil and gas industry, with a strong focus on oil refining. Students examine several processes required to process crude oil into valuable fuel products. Separation processes, conversion processes, treating processes, and other ancillary processes are investigated.

Prerequisite(s): CL1110, PO1180, CH3450

PO1220 - Unit Operations and Process Design II

This course presents the concepts and techniques necessary to design and operate equilibrium-based multistage and continuous contacting unit operations in chemical engineering. It is designed to familiarize the students with the principles and applications of diffusional separation processes involving gas-liquid, liquid-liquid and solid-liquid systems in equilibrium-stage and continuous-contact operations.

Prerequisite(s): PO1180

PO2000 - Mineral Processing II

The purpose of this course is to familiarize the learner with various operational elements in an ore processing facility. It introduces the learner to flow sheets, ore sampling and analysis, metallurgical accounting, test procedures, and quality control. Processes used in hydrometallurgy are also discussed.

Prerequisite(s): PO1000

PO2010 - Water and Wastewater Treatment Operations

This course focuses on operations and management of water and wastewater treatment facilities. Water and wastewater regulations, standards, and collection and measurement techniques are studied. Learners study typical water and wastewater processing systems as it applies to plant operations and will practice various methods/procedures in a lab setting. Storm water systems and best management practices are also studied.

Prerequisite(s): MA1100, CH2451

PR1200 - CCAT Capstone Project

This course will encompass all skills students have acquired throughout the Cultural Culinary Tourism Arts program. Students will refine their culinary tourism skills as they prepare for a variety of culinary tourism events. Each student will have the opportunity to be the executive chef of their own cultural culinary tourism product and have their skills showcased.

PR1410 - Capstone Project I (Seminar)

The capstone project enables the student completing an Advanced Diploma in the Environmental Engineering Technology program to demonstrate the application of skills and knowledge developed throughout the program. Students taking this course will work with minimal supervision on a project, under the guidance of a faculty member. The student can work independently or in teams of two to carry out an in-depth study of a problem, design or technical application, and fully document and present their findings. Larger teams may be permitted depending upon project scope. At the end of this course, the student will have completed a proposal of their capstone project that will be completed in the following academic semester of their program.

Students can commence planning for the course prior to the beginning of Semester 2. Since the project and report are to be prepared through independent study, the assigned hours represent only part of the time that students are expected to allocate to the course. Regular meetings with a faculty supervisor will be scheduled within the assigned hours and it is **mandatory** that students attend these meetings.

This course will be delivered to the students by a technical instructor in collaboration with a communications instructor.

Prerequisite(s): All courses in previous academic semesters and a minimum cumulative GPA of 2.0

PR1415 - Capstone Project I (Seminar)

The capstone project enables the student completing a Diploma in the Electrical Engineering Technology (Power & Controls) Co-op 3-Year Diploma Program to demonstrate the application of skills and knowledge developed throughout the program. Students taking this course will work with minimal supervision on a project, under the guidance of a faculty member. The student can work independently or in teams of two to carry out an in-depth study of a problem, design or technical application, and fully document and present their findings. At the end of this course, the student will have completed a proposal of their capstone project that will be completed in the following academic semester of their program.

Students can commence planning for the course prior to the beginning of the final year of studies. Since the project and report are to be prepared through independent study, the assigned hours represent only part of the time that students are expected to allocate to the course. Regular meetings with a faculty supervisor will be scheduled within the assigned hours and it is **mandatory** that students attend these meetings.

This course will be delivered to the students by a technical instructor in collaboration with a communications instructor.

Prerequisite(s): All courses in previous academic semesters and a minimum cumulative GPA of 2.0

PR1420 - Capstone Project II

The capstone project enables the student completing an Advanced Diploma in the Environmental Engineering Technology program to demonstrate the application of skills and knowledge developed throughout the program. Students taking this course will work with minimal supervision on a project, under the guidance of a faculty member. The student can work independently or in teams of two to carry out an in-depth study of a problem, design or technical application, and fully document and present their findings. Larger teams may be permitted depending upon project scope.

Students can commence planning for the course prior to the beginning of Semester 2. Since the project and report are to be prepared through independent study, the assigned hours represent only part of the time that students are expected to allocate to the course. Regular meetings with a faculty supervisor will be scheduled within the assigned hours and it is **mandatory** that students attend these meetings.

This course will be delivered to the students by a technical instructor in collaboration with a communications instructor.

Prerequisite(s): PR1410 and all courses in previous academic semesters

PR1425 - Capstone Project II

The capstone project enables the student completing a Diploma in the Electrical Engineering Technology (Power & Controls) 3-Year Diploma Program to demonstrate the application of skills and knowledge developed throughout the program. Students taking this course will work with minimal supervision on a project, under the guidance of a faculty member. The student can work independently or in teams of two to carry out an in-depth study of a problem, design or technical application, and fully document and present their findings.

Students can commence planning for the course prior to the beginning of the final year of studies. Since the project and report are to be prepared through independent study, the assigned hours represent only part of the time that students are expected to allocate to the course. Regular meetings with a faculty supervisor will be scheduled within the assigned hours and it is **mandatory** that learners attend these meetings.

This course will be delivered to the students by a technical instructor in collaboration with a communications instructor.

Prerequisite(s): PR1415 and all courses in previous academic semesters

PR2170 - Project Management

This course covers various techniques to ensure a project is successfully completed on time, within budget, and with high quality. The student will explore various aspects of project management, such as scope, time, cost, quality and communications and will use project management software to manage a project.

PR2250 - Capstone Project I (Seminar)

The capstone project enables the student completing a Diploma in the Civil Engineering Technology (Co-op) program to demonstrate the application of skills and knowledge developed throughout the program. Students taking this course will work with minimal supervision on a project, under the guidance of a faculty member. The student can work independently or in teams of two to carry out an in-depth study of a problem, design or technical application, and fully document and present their findings. Larger teams may be permitted depending upon project scope. At the end of this course, the student will have completed a proposal of their capstone project that will be completed in the following academic semester of their program. Students can commence planning for the course prior to the beginning of the final year of studies. Since the project and report are to be prepared through independent study, the assigned hours represent only part of the time that students are expected to allocate to the course. Regular meetings with a faculty supervisor will be scheduled within the assigned hours and it is mandatory that students attend these meetings. This course will be delivered to the students by a technical instructor in collaboration with a communications instructor.

Prerequisite(s): All courses in previous academic semesters and minimum cumulative GPA of 2.0

PR2251 - Capstone Project II

The capstone project enables the student completing a Diploma in the Civil Engineering Technology (Co-op) program to demonstrate the application of skills and knowledge developed throughout the program. Students taking this course will work with minimal supervision on a project, under the guidance of a faculty member. The student can work independently or in teams of two to carry out an in-depth study of a problem, design or technical application, and fully document and present their findings. Larger teams may be permitted depending upon project scope. Students can commence planning for the course prior to the beginning of the final year of studies. Since the project and report are to be prepared through independent study, the assigned hours represent only part of the time that students are expected to allocate to the course. Regular meetings with a faculty supervisor will be scheduled within the assigned hours and it is mandatory that students attend these meetings. This course will be delivered to the students by a technical instructor in collaboration with a communications instructor.

Prerequisite(s): PR2250 and all courses in previous academic semesters

PR2660 - Technical Project and Presentation

This technical thesis project enables the student to demonstrate the application of knowledge and skills developed throughout the program. Students will learn to plan and execute a series of experiments or investigations in a subject area related to the field of study. The student will carry out an in-depth study of a problem, design, or technological application, and fully document and present his/her findings. Emphasis is on long-term planning, organization of information and equipment, record keeping, and presentation of findings. The communication of results, formally and informally, in writing and orally, is stressed throughout. Students taking this course will work independently on a project under the supervision of a faculty advisor in consultation with the communications instructor.

Prerequisite(s): All courses in previous semesters

PR2700 - Project Management •

This course is designed to give the students a general understanding of project management and the various stages of a project. The main topics will be discussed at an informational level. Topics discussed include, but are not limited to: defining a project, project scope, time management, cost management, quality management, human resource management, communications management and risk management including Privacy Impact Assessment (PIA).

PR2740 - Capstone Project I (Seminar)

The capstone project enables the student completing a Diploma in the Instrumentation and Controls Engineering Technology program to demonstrate the application of skills and knowledge developed throughout the program.

Students taking this course will work with minimal supervision on a project, under the guidance of a faculty member. The student will work in teams of two to carry out an in-depth study of a problem, provide design recommendations for a technical application, and fully document and present their findings. Larger teams may be permitted depending upon project scope. At the end of this course, the student will have completed and presented a proposal of their capstone project for approval that will be completed in the following academic semester of their program.

Students can commence planning for the course prior to the beginning of the final year of studies. Since the project and report are to be prepared through independent study, the assigned hours represent only part of the time that students are expected to allocate to the course. Regular meetings with a faculty supervisor will be scheduled within the assigned hours and it is **mandatory** that students attend these meetings.

This course will be co-delivered to the student by a technical instructor and a communications instructor.

Prerequisite(s): All courses in the previous academic semesters and a minimum cumulative GPA of 2.0

Co-requisite(s): CM2800, PR3150

PR2741 - Capstone Project II

The capstone project enables the student completing a Diploma in the Instrumentation and Controls Engineering Technology program to demonstrate the application of skills and knowledge developed throughout the program. Students taking this course will work with minimal supervision on a project, under the guidance of a faculty member. The student will work in teams of two to implement the PR2740 approved design recommendations. Larger teams may be permitted depending upon project scope. At the end of course, the student will have completed the project fabrication, commissioned the modified or new system, and produced appropriate documentation. The student will present a capstone report to faculty and the student body reviewing the project life cycle and providing recommendations for future effort.

Students can commence planning for the two semester course prior to the beginning of the final year of studies. Since the project and report are to be prepared through independent study, the assigned hours represent only part of the time that students are expected to allocate to the course. Regular meetings with a faculty supervisor will be scheduled within the assigned hours and it is **mandatory** that students attend these meetings.

This course will be delivered to the students by a technical instructor in collaboration with a communications instructor.

Prerequisite(s): PR2740 and all courses in previous academic semesters

PR2750 - Capstone Project I (Seminar)

The capstone project enables the student completing a Diploma in the Architectural Engineering Technology program to demonstrate the application of skills and knowledge developed throughout the program. Students taking this course will work with minimal supervision on a project, under the guidance of a faculty member. The student can work independently or in teams of two to carry out an in-depth study of a problem, design or technical application, and fully document and present their findings. Larger teams may be permitted depending upon project scope. At the end of this course, the student will have completed a proposal of their capstone project that will be completed in the following academic semester of their program. Students can commence planning for the course prior to the beginning of the final year of studies. Since the project and report are to be prepared through independent study, the assigned hours represent only part of the time that students are expected to allocate the course. Regular meetings with a faculty supervisor will be scheduled within the assigned hours and it is mandatory that students attend these meetings. This course will be co-delivered to the students by a technical instructor and a communications instructor.

Prerequisite(s): All courses in previous academic semesters and a minimum cumulative GPA of 2.0

PR2751 - Capstone Project II

The capstone project enables the student completing a Diploma in the Architectural Engineering Technology program to demonstrate the application of skills and knowledge developed throughout the program. Students taking this course will work with minimal supervision on a project, under the guidance of a faculty member. The student can work independently or in teams of two to carry out an in-depth study of a problem, design or technical application and fully document and present their findings. Larger teams may be permitted depending upon project scope. Students can commence planning for the course prior to the beginning of the final year of studies. Since the project and report are to be prepared through independent study, the assigned hours represent only part of the time that

students are expected to allocate to the course. Regular meetings with a faculty supervisor will be scheduled within the assigned hours and it is mandatory that students attend these meetings. This course will be delivered to the learners by a technical instructor in collaboration with a communications instructor.

Prerequisite(s): PR2750 and all courses in previous academic semesters

PR2760 - Capstone Project I (Seminar)

The capstone project enables the student completing a Diploma in the Computing Systems Engineering Technology (Co-op) program to demonstrate the application of skills and knowledge developed throughout the program. Students taking this course will work with minimal supervision on a project, under the guidance of a faculty member. The student can work independently or in teams of two to carry out an in-depth study of a problem, design or technical application, and fully document and present their findings. Larger teams may be permitted depending upon project scope. At the end of this course, the student will have completed a proposal of their capstone project that will be completed in the following academic semester of their program. Students can commence planning for the course prior to the beginning of the final year of studies. Since the project and report are to be prepared through independent study, the assigned hours represent only part of the time that students are expected to allocate to the course. Regular meetings with a faculty supervisor will be scheduled within the assigned hours and it is mandatory that students attend these meetings. This course will be delivered to the learners by a technical instructor in collaboration with a communications instructor.

Prerequisite(s): All courses in previous academic semesters and minimum cumulative GPA of 2.0.

PR2761 - Capstone Project II

The capstone project enables the student completing a Diploma in the Computing Systems Engineering Technology (Co-op) program to demonstrate the application of skills and knowledge developed throughout the program. Students taking this course will work with minimal supervision on a project, under the guidance of a faculty member. The student can work independently or in teams of two to carry out an in-depth study of a problem, design or technical application, and fully document and present their findings. Larger teams may be permitted depending upon project scope. Students can commence planning for the course prior to the beginning of the final year of studies. Since the project and report are to be prepared through independent study, the assigned hours represent only part of the time that students are expected to allocate to the course. Regular meetings with a faculty supervisor will be scheduled within the assigned hours and it is mandatory that students attend these meetings. This course will be delivered to the students by a technical instructor in collaboration with a communications instructor.

Prerequisite(s): PR2760 and all courses in previous academic semesters

PR2770 - Capstone Project I (Seminar)

The capstone project enables the student completing a Diploma in the Mechanical Engineering Technology program to demonstrate the application of skills and knowledge developed throughout the program. Students taking this course will work with minimal supervision on a project, under the guidance of a faculty member. The student can work independently or in teams of two to carry out an in-depth study of a problem, design or technical application, and fully document and present their findings. Larger teams may be permitted depending upon project scope. At the end of this course, the student will have completed a proposal of their capstone project that will be completed in the following academic semester of their program.

Students can commence planning for the course prior to the beginning of the final year of studies. Since the project and report are to be prepared through independent study, the assigned hours represent only part of the time that students are expected to allocate to the course. Regular meetings with a faculty supervisor will be scheduled within the assigned hours and it is **mandatory** that students attend these meetings.

This course will be co-delivered to the students by a technical instructor and a communications instructor.

Prerequisite(s): All courses in previous academic semesters and a minimum cumulative GPA of 2.0

PR2772 - Capstone Project II

The capstone project enables the student completing a Diploma in the Mechanical Engineering Technology program to demonstrate the application of skills and knowledge developed throughout the program. Students taking this course will work with minimal supervision on a project, under the guidance of a faculty member. The student can work independently or in teams of two to carry out an in-depth study of a problem, design or technical application, and fully document and present their findings. Larger teams may be permitted depending upon project scope.

Students can commence planning for the course prior to the beginning of the final year of studies. Since the project and report are to be prepared through independent study, the assigned hours represent only part of the time that students are expected to allocate to the course. Regular meetings with a faculty supervisor will be scheduled within the assigned hours and it is **mandatory** that students attend these meetings.

This course will be delivered to the students by a technical instructor in collaboration with a communications instructor.

Prerequisite(s): PR2770 and all courses in previous academic semesters

PR2790 - Capstone Project I (Seminar)

The capstone project enables the student completing a Diploma in the Electronic Systems Engineering Technology (Co-op) program to demonstrate the application of skills and knowledge developed throughout the program. Students taking this course will work with minimal supervision on a project, under the guidance of a faculty member. The student can work independently or in teams of two to carry out an in-depth study of a problem, design or technical application, and fully document and present their findings. Larger teams may be permitted depending upon project scope. At the end of this course, the student will have completed a proposal of their capstone project that will be completed in the following academic semester of their program.

Students can commence planning for the course prior to the beginning of the final year of studies. Since the project and report are to be prepared through independent study, the assigned hours represent only part of the time that students are expected to allocate to the course. Regular meetings with a faculty supervisor will be scheduled within the assigned hours and it is **mandatory** that students attend these meetings.

This course will be delivered to the students by a technical instructor in collaboration with a communications instructor.

Prerequisite(s): All courses in previous academic semesters and a minimum cumulative GPA of 2.0

PR2791 - Capstone Project II

The capstone project enables the student completing a Diploma in the Electronic Systems Engineering Technology (Co-op) program to demonstrate the application of skills and knowledge developed throughout the program. Students taking this course will work with minimal supervision on a project, under the guidance of a faculty member. The student can work independently or in teams of two to carry out an in-depth study of a problem, design or technical application, and fully document and present their findings. Larger teams may be permitted depending upon project scope.

Students can commence planning for the course prior to the beginning of the final year of studies. Since the project and report are to be prepared through independent study, the assigned hours represent only part of the time that students are expected to allocate to the course. Regular meetings with a faculty supervisor will be scheduled within the assigned hours and it is **mandatory** that students attend these meetings.

This course will be delivered to the students by a technical instructor in collaboration with a communications instructor.

Prerequisite(s): PR2790 and all courses in previous academic semesters

PR2810 - Capstone Project I (Seminar)

The capstone project enables the student completing a Diploma in the Chemical Process Engineering Technology (Co-op) program to demonstrate the application of skills and knowledge developed throughout the program. Students taking this course will work with minimal supervision on a project, under the guidance of a faculty member. The student can work independently or in teams of two to carry out an in-depth study of a problem, design or technical application, and fully document and present their findings. Larger teams may be permitted depending upon project scope. At the end of this course, the students will have completed a proposal of their capstone project that will be completed in the following academic semester of their program.

Students can commence planning for the course prior to the beginning of the final year of studies. Since the project and report are to be prepared through independent study, the assigned hours represent only part of the time that

students are expected to allocate to the course. Regular meetings with a faculty supervisor will be scheduled within the assigned hours and it is **mandatory** that learners attend these meetings.

This course will be delivered to the students by a technical instructor in collaboration with a communications instructor.

Prerequisite(s): All courses in previous academic semesters and a minimum cumulative GPA of 2.0

PR2811 - Capstone Project II

The capstone project enables the student completing a Diploma in the Chemical Process Engineering Technology (Co-op) program to demonstrate the application of skills and knowledge developed throughout the program. Students taking this course will work with minimal supervision on a project, under the guidance of a faculty member. The student can work independently or in teams of two to carry out an in-depth study of a problem, design or technical application, and fully document and present their findings. Larger teams may be permitted depending upon project scope.

Students can commence planning for the course prior to the beginning of the final year of studies. Since the project and report are to be prepared through independent study, the assigned hours represent only part of the time that students are expected to allocate to the course. Regular meetings with a faculty supervisor will be scheduled within the assigned hours and it is **mandatory** that students attend these meetings.

This course will be delivered to the students by a technical instructor in collaboration with a communications instructor.

Prerequisite(s): PR2810

PR2830 - Capstone Project I (Seminar)

The capstone project enables the student completing a Diploma in the Electronics Engineering Technology Biomedical program to demonstrate the application of skills and knowledge developed throughout the program. Students taking this course will work with minimal supervision on a project, under the guidance of a faculty member. The student can work independently or in teams of two to carry out an in-depth study of a problem, design or technical application, and fully document and present their findings. Larger teams may be permitted depending upon project scope. At the end of this course, the student will have completed a proposal of their capstone project that will be completed in the following academic semester of their program.

Students can commence planning for the course prior to the beginning of the final year of studies. Since the project and report are to be prepared through independent study, the assigned hours represent only part of the time that students are expected to allocate to the course. Regular meetings with a faculty supervisor will be scheduled within the assigned hours and it is **mandatory** that students attend these meetings.

This course will be delivered to the students by a technical instructor in collaboration with a communications instructor.

Prerequisite(s): All courses in previous academic semesters and a minimum cumulative GPA of 2.0

PR2831 - Capstone Project II

The capstone project enables the student completing a Diploma in the Electronics Engineering Technology Biomedical program to demonstrate the application of skills and knowledge developed throughout the program. Students taking this course will work with minimal supervision on a project, under the guidance of a faculty member. The student can work independently or in teams of two to carry out an in-depth study of a problem, design or technical application, and fully document and present their findings. Larger teams may be permitted depending upon project scope.

Students can commence planning for the course prior to the beginning of the final year of studies. Since the project and report are to be prepared through independent study, the assigned hours represent only part of the time that students are expected to allocate to the course. Regular meetings with a faculty supervisor will be scheduled within the assigned hours and it is **mandatory** that students attend these meetings.

This course will be delivered to the students by a technical instructor in collaboration with a communications instructor.

Prerequisite(s): PR2830 and all courses in previous academic semesters

PR2880 - Capstone Project I (Seminar)

The capstone project enables the student completing a Diploma in the Petroleum Engineering Technology (Co-op) program to demonstrate the application of skills and knowledge developed throughout the program. Students taking this course will work with minimal supervision on a project, under the guidance of a faculty member. The student can work independently or in teams of two to carry out an in-depth study of a problem, design or technical application, and fully document and present their findings. Larger teams may be permitted depending upon project scope. At the end of this course, the student will have completed a proposal of their capstone project that will be completed in the following academic semester of their program.

Students can commence planning for the course prior to the beginning of the final year of studies. Since the project and report are to be prepared through independent study, the assigned hours represent only part of the time that students are expected to allocate to the course. Regular meetings with a faculty supervisor will be scheduled within the assigned hours and it is **mandatory** that students attend these meetings.

This course will be delivered to the students by a technical instructor in collaboration with a communications instructor.

Prerequisite(s): All courses in previous academic semesters and a minimum cumulative GPA of 2.0

PR2881 - Capstone Project II

The capstone project enables the student completing a Diploma in the Petroleum Engineering Technology (Co-op) program to demonstrate the application of skills and knowledge developed throughout the program. Students taking this course will work with minimal supervision on a project, under the guidance of a faculty member. The student can work independently or in teams of two to carry out an in-depth study of a problem, design or technical application, and fully document and present their findings. Larger teams may be permitted depending upon project scope.

Students can commence planning for the course prior to the beginning of the final year of studies. Since the project and report are to be prepared through independent study, the assigned hours represent only part of the time that students are expected to allocate to the course. Regular meetings with a faculty supervisor will be scheduled within the assigned hours and it is **mandatory** that students attend these meetings.

This course will be delivered to the students by a technical instructor in collaboration with a communications instructor.

Prerequisite(s): PR2880 and all courses in previous academic semesters

PR2890 - Capstone Project I (Seminar)

The capstone project enables the student completing a Diploma in the Geomatics/Surveying Engineering Technology program to demonstrate the application of skills and knowledge developed throughout the program. Students taking this course will work with minimal supervision on a project, under the guidance of a faculty member. The student can work independently or in teams of two to carry out an in-depth study of a problem, design or technical application, and fully document and present their findings. Larger teams may be permitted depending upon project scope. At the end of this course, the student will have completed a proposal of their capstone project that will be completed in the following academic semester of their program.

Students can commence planning for the course prior to the beginning of the final year of studies. Since the project and report are to be prepared through independent study, the assigned hours represent only part of the time that students are expected to allocate to the course. Regular meetings with a faculty supervisor will be scheduled within the assigned hours and it is **mandatory** that students attend these meetings.

This course will be delivered to the students by a technical instructor in collaboration with a communications instructor.

Prerequisite(s): All courses in previous academic semesters and a minimum cumulative GPA of 2.0

PR2891 - Capstone Project II

The capstone project enables the student completing a Diploma in the Geomatics/Surveying Engineering Technology

program to demonstrate the application of skills and knowledge developed throughout the program. Students taking this course will work with minimal supervision on a project, under the guidance of a faculty member. The student can work independently or in teams of two to carry out an in-depth study of a problem, design or technical application, and fully document and present their findings. Larger teams may be permitted depending upon project scope.

Students can commence planning for the course prior to the beginning of the final year of studies. Since the project and report are to be prepared through independent study, the assigned hours represent only part of the time that students are expected to allocate to the course. Regular meetings with a faculty supervisor will be scheduled within the assigned hours and it is **mandatory** that students attend these meetings.

This course will be delivered to the students by a technical instructor in collaboration with a communications instructor.

Prerequisite(s): PR2890 and all courses in previous academic semesters

PR3000 - Applied E-Commerce Website Project •

This applied project course enables students to demonstrate the application of knowledge and skills developed throughout their program of studies. Students taking this course will work in teams on a project, under the supervision of a faculty supervisor, and will perform the following:

- a. an in-depth analysis of a problem that requires an e-commerce or enterprise technical solution
- b. a design of the problem solution
- c. implementation of the problem solution
- d. presentation of their solution

The focus of this course is on presenting a clear concise solution with brief supporting documentation. This project can be one from industry or one assigned by the College. If it is an industry driven project, prior faculty approval must be provided to ensure it meets the scope, depth and focus required to meet the course outcomes.

The Applied E-Commerce Website Project course provides students with an opportunity to utilize and demonstrate the tools, knowledge, and skills developed during their program. Students will analyze the requirements of a substantial development project, design and create a dynamic e-commerce solution security, and database interactivity. Emphasis is placed on developing a creatively designed, standards-compliant solution which meets the business goals of the project requirements.

Prerequisite(s): CP2080, CP2075, CP3155, CP3105, CR2800, CP2205, CR1355, CP1505, CP1580, CP2030, CP1895, CP1292, CP1501, CM1401, MA1900

PR3110 - Petroleum Risk Assessment

The course is designed to enable the student to complete an Offshore Petroleum Risk Assessment and Analysis to meet safety standards in the Petroleum industry. The purpose of this course is to ensure adequate measures are taken to protect people, the environment and assets from harmful consequences of the activities being undertaken within the petroleum and offshore industry. This includes but is not limited to health, environment and safety.

Prerequisite(s): MA1670, PM2330

PR3150 - Project Management and Financial Analysis

This course introduces students to the topics of project management and financial analysis, by the introduction of the concepts, tools and techniques of formal project management and financial analysis. Topics include: project management, risk management, project scheduling, concepts of financial management, economic decision making, analysis of alternatives, and depreciation. Students are introduced to the use of project management software.

Prerequisite(s): MA1101 or MA1140

PR3600 - Capstone Project I (Seminar)

The capstone project enables the student completing a Diploma in the Industrial Engineering Technology (Co-op) program to demonstrate the application of knowledge and skills developed throughout the program. Students taking

this course will work with minimal supervision on a project, under the guidance of a faculty member. The student can work independently or in teams of two to carry out an in-depth study of a problem, design or technical application, and fully document and present their findings. Larger teams may be permitted depending upon project scope. At the end of this course, the student will have completed a proposal of their capstone project that will be completed in the following academic semester of their program.

Students can commence planning for the course prior to the beginning of the final year of studies. Since the project and report are to be prepared through independent study, the assigned hours represent only part of the time that students are expected to allocate to the course. Regular meetings with a faculty supervisor will be scheduled within the assigned hours and it is mandatory that students attend these meetings.

This course will be co-delivered to the students by a technical instructor and a communications instructor.

Prerequisite(s): All courses in previous academic semesters and a minimum cumulative GPA of 2.0

PR3620 - Capstone Project I (Seminar)

The capstone project enables the student completing a Diploma in the Mechanical Engineering Technology program to demonstrate the application of skills and knowledge developed throughout the program. Students taking this course will work with minimal supervision on a project, under the guidance of a faculty member. The student can work independently or in teams of two to carry out an in-depth study of a problem, design or technical application, and fully document and present their findings. Larger teams may be permitted depending upon project scope. At the end of this course, the student will have completed a proposal of their capstone project that will be completed in the following academic semester of their program.

Students can commence planning for the course prior to the beginning of the final year of studies. Since the project and report are to be prepared through independent study, the assigned hours represent only part of the time that students are expected to allocate to the course. Regular meetings with a faculty supervisor will be scheduled within the assigned hours and it is **mandatory** that students attend these meetings.

This course will be co-delivered to the students by a technical instructor and a communications instructor.

Prerequisite(s): All courses in previous academic semesters and a minimum cumulative GPA of 2.0

PR3621 - Capstone Project II

The capstone project enables the student completing a Diploma in the Mechanical Engineering Technology (Manufacturing) Co-op program to demonstrate the application of skills and knowledge developed throughout the program. Students taking this course will work with minimal supervision on a project, under the guidance of a faculty member. The student can work independently or in teams of two to carry out an in-depth study of a problem, design or technical application, and fully document and present their findings. Larger teams may be permitted depending upon project scope.

Students can commence planning for the course prior to the beginning of the final year of studies. Since the project and report are to be prepared through independent study, the assigned hours represent only part of the time that students are expected to allocate to the course. Regular meetings with a faculty supervisor will be scheduled within the assigned hours and it is **mandatory** that students attend these meetings.

This course will be delivered to the students by a technical instructor in collaboration with a communications instructor.

Prerequisite(s): PR3620 and all courses in previous academic semesters

PR3640 - Work Integrated Learning Project •

One of the two options available to complete the Strategic Leadership and Project Management post-diploma is the seven-week work integrated learning project. The project is aimed at enriching students by connecting different program areas of study, providing an integrative experience. The work integrated learning project-based course provides an opportunity to apply the skills and concepts acquired throughout the program and make connections between study and industry. This project combines leadership and strategic concepts that lead to organizational sustainability and provide actionable improvement considerations for organizations.

Students will work under the supervision of a faculty supervisor. This project can be one from industry or one assigned by the College. If it is an industry-driven project, prior faculty approval must be provided to ensure it meets the scope, depth, and focus required to meet the course outcomes.

Prerequisite(s): GPA 2.0, PJ1010, PJ1015, PJ1020, PS2340, PJ1205, PJ1210, PJ1215, LD1220, MN1210, PJ1305, PJ1310, EP1320, MN2100, PJ2000, MN3105, MN2605, MN2410, PJ2005, PJ2010, PJ2015

PR3725 - Capstone Project II

The capstone project enables the student completing a Diploma in the Industrial Engineering Technology (Co-op) program to demonstrate the application of skills and knowledge developed throughout the program. Students taking this course will work with minimal supervision on a project, under the guidance of a faculty member. The student can work independently or in teams of two to carry out an in-depth study of a problem, design or technical application, and fully document and present their findings. Larger teams may be permitted depending upon project scope.

Students can commence planning for the course prior to the beginning of the final year of studies. Since the project and report are to be prepared through independent study, the assigned hours represent only part of the time that students are expected to allocate to the course. Regular meetings with a faculty supervisor will be scheduled within the assigned hours and it is mandatory that students attend these meetings.

This course will be delivered to the students by a technical instructor in collaboration with a communications instructor.

Prerequisite(s): PR3600 and all courses in previous academic semesters

PS1140 - Psychology I

This is an introductory psychology course. Current experimentation in the field and the various methods of psychological research are emphasized throughout the course. This course introduces the student to topics such as psychology as a science, brain and behavior, human development, sensation and perception of stimuli, states of consciousness, learning and memory.

PS1145 - Psychology II

This is the second part, and hence a continuation of the introductory psychology course. The course introduces students to psychological theory and research in the areas of cognition, intelligence and creativity, human emotion, motivation, stress and its impact on health, personality, psychological disorders and their treatments, and social psychology.

Prerequisite(s): PS1140

PS1150 - Introduction to Psychology I •

This course introduces students to psychological theory and research in the areas of neuroscience, human development, learning and memory, sensation and perception, and states of consciousness. This course is transferable to MUN Psychology 1000.

PS1151 - Introduction to Psychology II •

This course provides an introduction to psychological theory and research in the areas of human cognition and emotion, motivation, personality, psychological disorders and treatment, social psychology, health and stress, and sexuality. This course is transferable to MUN Psychology 1001.

Prerequisite(s): PS1150 or MUN Psychology 1000.

PS1200 - Drugs & Behaviour

This course examines the relationship between drugs, especially psychoactive substances, and their influence on behaviour. The focus is less on the pharmacology of drug use and more on the impact of drugs on users and their families. Basic concepts and terminology pertaining to substance abuse will be defined. Emphasis will be placed on theories of dependency, pharmacological concepts, major drug classifications, prevention, and treatment paradigms.

PS1240 - Understanding Addictions

This course takes a detailed look at how alcohol and/or drug addiction affects an individual. First, it examines the nature of dependency on a physical, psychological, and emotional level. This information will then be utilized to teach students basic assessment, intervention, and counseling techniques. Students will also receive a detailed

understanding of the process of change, relapse prevention, and stages of recovery in addiction. They will also learn how addiction impacts upon a family. Students will also acquire more knowledge on how addiction affects specific populations (youth, women, seniors, Aboriginal persons, and adult children of alcohol/drug users).

Prerequisite(s): PS1145

Co-requisite(s): PS1200

PS1330 - Organizational Behaviour

This course is designed to provide an understanding of the basic principles underlying workplace behaviour with particular emphasis on the applications for effective supervision in the contemporary workplace.

PS1420 - Health Care Organization and Structure •

This course is an introduction to the study of organizational behaviour and structure within the healthcare system. Students will familiarize themselves with the healthcare system, specifically the roles that directly influence structure and function. Students will examine individual and inter-disciplinary relationships and roles of health professions within the hospital organizational structure. Students will also gain an understanding of the importance of conflict resolution, stress management, and how professionalism guides a healthcare practitioner's ability to work in the demanding and dynamic environment of healthcare.

PS2200 - Developmental Psychology

This course familiarizes students with basic concepts, principles, and theories of human development and examines each stage of development from conception to adolescence.

Prerequisite(s): PS1145

PS2340 - Organizational Behaviour •

This is an introductory course in the study and practical application of organizational behavior. Through the use of workplace examples and the analysis of the interrelated levels of individual behavior, group functioning, and organizational structure, students will examine how employees within organizations achieve both personal and organizational goals. Topics such as motivation, leadership, group dynamics, and organizational communication are studied.

PT1020 - Reciprocating Engines

This course will provide students with the basic knowledge of the design, construction and theory of operations aircraft reciprocating engines and engine components. Students will test, troubleshoot, repair, and adjust power plants and related systems. Students will perform engine ground-runs and basic aircraft servicing.

PT1110 - Reciprocating Engine Fundamentals (M)

This M course will provide students with the basic knowledge of the operation of aircraft reciprocating engines and engine components. Students will test, troubleshoot, repair, and adjust power plants and related systems. Students will perform engine ground-runs and basic aircraft servicing.

Prerequisite(s): GM1120, GM1130

Co-requisite(s): PT1115

PT1115 - Reciprocating Engine Fundamentals (M, E)

This M and E course will provide students with the basic knowledge of the design, construction and theory of operations of aircraft reciprocating engines.

Prerequisite(s): GM1120, GM1130

Co-requisite(s): PT1110

PT1200 - EASA Module 15 Top Up

This course is designed to cover items from EASA Module 15 that were not contained in the Aircraft Maintenance Engineering Technician program. The students will receive instruction in: auxiliary power units (APU's), powerplant installation, along with engine storage and preservation.

PT1210 - EASA Module 15, 17 (A) Refresher

This course is designed to prepare the student to write the EASA module exams for modules 15 & 17A through the use of practice exercises and review lessons.

PT2120 - Reciprocating Engine Systems

This course will provide the student with knowledge of reciprocating engine internal systems, their design, construction, operation, and maintenance. Students will test, troubleshoot, repair, adjust, remove and replace reciprocating engine systems.

PT2121 - Reciprocating Engine Overhaul

This course will provide the student with the knowledge of reciprocating engine inspection removal, installation, overhaul and maintenance procedures, so that he can develop sound maintenance practices. Students will test, troubleshoot, repair, adjust, remove and replace power plants and related systems.

PT2210 - Turbine Engine Maintenance

This course is designed to provide the student with a comprehensive knowledge of turbine engine design and operation. Students will be dismantling a turbine engine and required to identify each component.

PT2240 - Turbine Engine Systems

This course will provide the student with a detailed description of turbine engine systems and their installations. Particular attention is paid to the lubrication and fuel control systems of the Pratt and Whitney PT6 and Allison 250 engines. Helicopter application of turbine engines is also discussed in detail.

Prerequisite(s): PT2210

PW1112 - Mechanics & Dynamics

Elementary Mechanics focuses on the behavior of physical objects, particularly when these objects are subject to external forces. The study of mechanics includes statics, where objects placed under load remain stationary; or dynamics, where objects are subject to motion due to external forces. Once there is an understanding of these physical events, they can be interpreted in mathematical form. The mathematical expression may then be used to solve everyday problems. The purpose of this course is to develop confidence describing the physical world, using mathematical expressions.

PW1113 - Phys. & Chem. Thermodynamics

This course describes and defines physical and chemical systems and explains how atoms and molecules combine to form compounds, mixtures and solutions. It then moves to thermodynamics properties such as temperature, pressure and specific heat within the context of two important thermodynamic laws. Of special importance is the effect of heat transfer fluid on heat exchanger performance and maintenance. The primary focus is on the main working fluid in energy plants: water in its liquid and gaseous states. To understand the thermodynamics of steam, this course introduces the Steam Tables; its use and applications is essential for Power Engineers.

PW1114 - Canada Power Eng. Leg. & Reg.

Power Engineers deal with regulations that govern all aspects of their work, the equipment they use and how work is performed. In Canada, there are federal, provincial, territorial and municipal government jurisdictions. The jurisdictions are responsible for adopting, enacting and enforcing codes, standards and legislation. Some legislation applies only provincially or territorially, while other legislation applies across the country. It is the responsibility of all Power Engineers to be familiar with and to understand the applicable regulations for the jurisdictions they work in. The course also introduces the various Codes and Standards that apply to the Power Engineering profession and explains why they were developed and how they are maintained.

PW1115 - Intro to Plant & Fire Safety

The need for operational safety of energy plants needs to be considered in all phases of their life cycle. The use of appropriately developed and properly installed technology is the key to the safe and efficient operation of all plant processes. A well thought out safety program integrates equipment and technology operation with operator understanding of conditions and hazards to protect both equipment and system from failure.

PW1116 - Plant Operation & Environment

This course will examine specific effects human emissions have on the eco-system. Topics include how greenhouse gases affect global temperatures and how noise affects the environment. Perhaps the most important concept in this course is “attitude”: both individual and collective. The best way to perform a job is not necessarily the “way things have always been done.” The proper attitude towards plant operations and the environment is one of continuous examination and improvement.

PW1117 - Mat. Science & Welding Tech.

This course introduces the basics of boiler and pressure vessel construction. It shows how to identify, categorize and select materials. These are based on properties that are the most useful such as strength, temperature resistance and toughness. Also discussed is how engineering materials develop their properties. Soldering, brazing and welding methods are addressed. It concludes by covering common weld defects and non-destructive testing methods used by boiler and pressure vessel inspectors to find defects.

PW1118 - Fluid Handling Technology

Piping and valves are essential components in an energy plant. Without them the plant simply could not operate. This course will discuss piping materials, expansion joints, water hammer, insulation and types of valves their construction & operation.

PW1119 - Electro-Technology Concepts

Society has advanced greatly due to its ability to generate, distribute and utilize large amounts of electric power. Power Engineers play a key role in the generation, distribution and utilization of electricity. This course, by introducing basic electric and electro- magnetic theory provides fundamental information not only for understanding the generation, distribution and utilization of electric power, but for further studies in instrumentation, control and energy management.

PW1122 - Energy Plant Inst. & Controls

Instrumentation involves the measurement, evaluation and control of various energies, so that energy exchange achieves the desired outcomes. This course begins with fundamental control theory, process measurement and basic components used in control systems. It then moves on to cover different systems used by industry today to achieve process control, programmable logic controls, electronic controls and electric controls.

PW1123 - Industrial Communications

Any language or form of communication requires rules that are understood by both the initiator and the audience. Standard rules also apply when creating and interpreting plant drawings. These rules are usually presented with the use of symbols, which have an agreed upon meaning. Some symbols are universally agreed upon and some are exclusively used in one type of drawing. As well, plants themselves may have a unique set of communication tools. From designers and construction personnel to operations and maintenance professionals, these drawings are valuable communication tools that help every team member understand what the plant does and how it does it.

PW1124 - Introduction to Boiler Designs

Industries that use boilers are so varied in their process fluid requirements that it would be impossible to design one boiler to meet all their needs. For this reason, there are boilers designed to meet practically every specification. The design and development of boilers has proceeded over a few hundred years. Advances in design and technology have led to the present modern-day boiler. These historical advancements inform present-day boiler design. This course examines the historical development of boilers and the different boiler varieties available today.

PW1125 - Elements of Boiler Systems

Good boiler design, construction and installation ensure that heat generation and transformation is efficient, safe and reliable. Successful plant operations depend on the design of the boiler and its associated systems. This is centered on the ongoing creation of heat, its transfer to external processes and boilers support systems.

PW1126 - Power Ops. & Maint. Lab I

Students will have the opportunity to perform lab projects while safely being introduced to a variety of hand tools. Plant maintenance and equipment tasks such as gauge glass replacement, flue gas analysis and various piping procedures will be carried out. This course will provide the student with a basis for safety and environmental

awareness of power plant and boiler operation. Students will experience startup and shutdown of fire tube and water tube boilers with emphasis on operation of equipment and their functions in the plant cycle. Logging of plant parameters will be carried out.

PW1201 - Lubrication & Bearings

Bearings are fundamental components of all machines with moving parts. Properly installed, maintained and lubricated bearings is essential to keep a machine operating smoothly, safely and efficiently. This course covers bearing types, bearing installation, principles of lubrication, lubricant types and methods of bearing lubrication.

PW1202 - Pumps and Compressors

This course introduces pumps and their use as a modern industrial plant. As the course moves along, it will familiarize the student with the types, working principles and construction of a variety of pumps and compressors. The operation, maintenance and troubleshooting will be discussed and illustrated.

PW1203 - Boiler Safety Devices

This course explores the design and operations of pressure relief valves, firing controls, low water level instruments and a variety of boiler fittings. Because they must comply with jurisdictional regulatory requirements they will be designed and operated in alignment with a variety of national and international codes including; ASME Section I, ASME SECTION IV, ASME Section VIII, ASME CDS-1 and CSA B51. The use of devices directly attached to the pressure part of a boiler, called fittings, are also regulated under the same codes as boilers themselves. They are necessary for the efficient and safe operation of the boiler and other pressure vessels.

PW1204 - Plant Operation & Maintenance

This course introduces the elements of boiler and auxiliary plant operations. It begins with typical preparatory steps for placing a power plant in service. It then follows the startup, routine operations and shutdown of both heating and power boiler plants. The importance of shift handover, performing rounds, documenting conditions and safety is stressed throughout. As well this course performs a detailed examination of how to recognize and respond to various adverse conditions that arise on occasion. The processes and procedures discussed in this course form the core Power Engineer's duties and responsibilities.

PW1205 - Energy Plant Maintenance

A boiler maintenance program is a key element to safe and efficient boiler operation. These programs include not only repairs but preventive maintenance as well. The repair and preventative maintenance tasks covered in this course are designed to achieve a reasonably long and safe useful boiler life. These tasks also ensure that the boilers operate as intended.

PW1206 - Water Treatment

This course introduces the basic concepts of water treatment and the various plant systems with particular treatment needs. The challenge in any water quality process is that water is a "universal solvent". As a result, all sources of water contain various natural concentrations of dissolved minerals and gases, in addition to suspended solids and biological matter. The relative amount of each of these impurities varies by geographic location and season. This makes choosing appropriate water treatment a complex decision.

PW1207 - Prime Movers & Heat Engines

The systems discussed in this course explore applications of thermodynamic theory. Power Engineers must understand the technology, systems and equipment used to generate power in thermal plants. The Power Engineer must also comprehend how thermal energy is converted into other forms of energy. A basic understanding of how prime movers convert heat to work is central to this knowledge. This course introduces the principles behind the operation of prime movers, including many familiar types of heat engines.

PW1208 - Plant Auxiliary Systems

This course introduces the various auxiliary support systems for building and power plant operators.

PW1209 - Compress. & Absorption Refrig.

Across Canada, the provincial and territorial jurisdictions agree that refrigeration plants presents potential public safety hazards that Power Engineers are best suited to handle. Therefore, Power Engineers under the various

provincial and territorial regulations, operate large building cooling systems, arena ice-making machinery and industrial refrigeration plants. Refrigeration is an important element to a variety of industrial sectors. This course emphasizes the use of “natural refrigerants” such as ammonia and CO₂.

PW1211 - HVAC for Facility Operators

Nearly all buildings contain HVAC systems to improve human comfort. Power Engineers, as qualified operators, are often charged with the management of air conditioning systems within their facility. This course describes the thermodynamics and operating processes, equipment and auxiliaries used to condition air for human comfort and health.

Prerequisite(s): PW1209

PW1212 - Bldg. Enviro - Systems & Ctrl.

In today's environment, energy costs are high and technological choices are increasing. Building owners, tenants and occupants demand a high level of comfort, healthy environment and more efficiency. New building materials, sophisticated infrastructure requirements and the increasing economic impact all expand the duties of the facility operator and make the role more demanding. Qualified Power Engineers, who are also the facility operators, must have basic knowledge of how these systems are designed. Also how adjustments to HVAC control systems affect the efficiency of human comfort systems.

PW1213 - Ind. Plant Configurations

This course looks at each of these plant types in identifying common processes and equipment that Power Engineers play a role in managing or operating plants. Although many Power Engineers are employed in plants and processes dedicated solely to the production and use of steam, such as thermal power stations and direct heating / cooling plants, the majority of Power Engineers work in industries which use steam or heat as part of a production process. Examples of these types of plants within the energy intensive sectors can include hot oil, wood and biomass processing, liquid hydrocarbon processing, natural gas plants, food processing or metallurgical processing plants.

PW1302 - Power Ops. & Maint. Lab II

In this course students will have the opportunity to carry out power lab projects while being safely introduced to a variety of hand tools. Plant maintenance and equipment tasks such as gasket making, valve and steam trap maintenance will be performed along with a variety of lab operations. Students will be required to practice lockout procedures for equipment and components in accordance with NL provincial regulations. The student will be provided with a basis for safety and environment awareness of power plant and boiler operations. The student will experience inspections, startups and shutdowns of fire tube and water tube boilers with emphasis on operation of equipment and their functions in the plant cycle. Logging of plant parameters will be carried out as well as auxiliary equipment inspections, operation and maintenance.

Prerequisite(s): PW1126

PW2100 - Applied Mathematics

This course serves to build upon and enhance the basic principles of a Power Engineering career learned at the fourth class Power Engineering level. Math skills are further developed to prepare students to apply mathematic principles in Power Engineering. This course is a critical building block to enable students to interpret findings and evaluate specific conditions in the Power Engineering field.

PW2110 - Applied Science

This course will provide the student with additional knowledge to that already gained at the 4th Class level in basic science and is sequentially designed to provide a stronger base from which to build upon in the Power Engineering field. This course covers principles in thermodynamics, thermal expansion, heat transfer, gas laws, chemistry fundamentals, metallurgy, materials and corrosion principles to enhance the ability of the learner to see the relevance in the applied principles of Power Engineering. It is a critical building block.

PW2111 - Ind. Drawings, Leg. & Codes

This course will build on and enhance the knowledge already acquired at the 4th Class Power Engineering level. It will add to the concept of sketching center lines and dimensioning standard object views, sketching techniques and sectioning. This course also provides a practical exercise that enables the student to employ the learned concepts by completing applied drawings. Students will also explore the legislation requirements for Power Engineering.

PW2112 - Code Calculations - ASME I

In this course the student will use the ASME Code - Section 1 and ASME Section II to calculate the design thickness and pressure of boiler tubes, drums and piping and calculate the capacities of pressure relief valves.

PW2113 - Fuels, Combust. & FG Analysis

In this course the student will learn about the properties and combustion of common fuels and the analysis of combustion flu gas. It will build upon the foundation acquired at the Fourth Class Level.

PW2114 - Piping, Valves & Traps

This course will discuss codes, designs, specifications and connection for ferrous, non-ferrous and non-metallic piping and explain expansion and support devices common to piping systems. It will also include discussions on steam traps, causes and prevention of water hammer and the importance of good insulation. This will be followed by discussions of the various valves used in the Power Engineering industry and their actuators.

PW2115 - Electrical Theory & Calc.

In this course we will build upon our knowledge of the basic concepts in the production of electricity and the design, characteristics and operation of AC & DC generators and motors as well as AC systems, transformers Switch gear and safety.

PW2116 - Instrumentation & Control

This course will explore the operation and components of pneumatic, electronic and digital control loops and discuss control modes and strategies. How they are used to measure and control process conditions. It will also explore the general purpose, design, components and operation of distributed and programmable logic control systems.

Prerequisite(s): PW1122

PW2117 - Safety & Fire Prevention

This course will explore safety management and fire protection systems. It will explore typical legislation and programs that are used to manage safety in the industrial workplace. It will also explore the classes and extinguishing media of fires and explain systems that are used to detect and extinguish industrial fires.

PW2118 - Boiler Designs

This course will explore common designs, configurations, and circulation and construction patterns for modern bent-tube water-tube boilers and steam generators and how boilers are rated. It will also explore boiler components, firing methods, heat transfer, operating considerations and special boilers used in industry. High pressure external and internal boiler fittings design and operation will be discussed and explored.

PW2119 - Power Ops. & Maint. Lab III

In this course, students will perform lab projects while utilizing proper plant maintenance and equipment procedures such as repair and replacement. This course will build upon your current knowledge of safety and environment awareness of power plant and boiler operations. You will experience boiler/controls, pumps, pressure valves, steam condensate and boiler operations.

Prerequisite(s): PW1302

PW2200 - Boilers & Furnace Operation

This course will explore typical burners, fuel supply systems and burner/furnace designs for gas, oil and coal fired boilers. Boiler draft systems, fans and equipment used to remove ash from flue gas are also discussed as well as boiler control systems and boiler procedures.

PW2201 - Boiler Water Treatment

This course will explore internal water treatment methods and systems for the control of scale, corrosion and carryover and explain testing and monitoring strategies. It will also explain the purpose, principles, equipment and monitoring of boiler water pretreatment processes.

PW2202 - Pumps, Welding & P. Vessels

This course will explore pump design and operations as well as welding procedures & inspection, along with pressure

vessels. Each of these topics and their understanding is critical to the Power Engineer.

PW2203 - Steam Turbines & Auxiliaries

This course will explore the designs, operating principles and major components of steam turbines, their condensers and auxiliaries. As well as auxiliary support and control systems for steam turbines and their start-up and shutdown procedures.

PW2204 - Gas Turbines, Cogen. & IC Engines

This course will explore common designs, major components, operating principles and arrangements for industrial gas turbines, their auxiliaries, operation and maintenance procedures. It will also explore the operating principles, designs, support systems and operation of industrial internal combustion engines (ICE), as well as, explain cogeneration and describe its common configurations, components and applications.

PW2205 - Compressors

This course will explore classifications, designs and operating principles of industrial air and gas compressors; as well as the controls and system auxiliaries for a typical instrument air system and explain startup procedures for air compressors.

PW2206 - Refrigeration Aux & Operation

This course will explore classifications and properties of refrigerants and describe the operating principles and components of compression and absorption systems. It will also explain control and safety devices on a compression refrigeration system and explain procedures and equipment to control oil, non-condensable, moisture, refrigerant and brine.

PW2207 - Heat Exch. & Wastewater Treat.

This course will explore the design, operation and applications of various types of industrial heat exchangers, as well as direct fired and indirect-fired natural draft process heaters. It will also explore the purpose, designs, processes and control of industrial wastewater treatment.

PW2208 - Plant Maintenance & Admin.

This course will explore typical components of maintenance and administration programs for utilities and process facilities.

PW2209 - Power Ops. & Maint. Lab IV

Students will perform various lab projects while utilizing plant maintenance and equipment procedures such as those for fire tube boilers, feed water systems, steam turbines and auxiliary equipment. This course will provide the student with a continuation of safety and environmental awareness of power plant and boiler operation. Students will experience boilers/controls, steam condensate, pumps, pressure valves and boiler operations.

PW2300 - On the Job Training

Students will gain an appreciation of the real work environment through a six (6) week work placement experience directly related to the area of training. Students will also further develop employability skills such as working independently, team-building, customer service, work ethic, attitude, and accountability, further enhancing their personal growth. Students will be able to perform tasks that are contained within their approved practicum manual.

PY1150 - Photography •

This course will teach students how to operate a digital still camera and the rules of composition through practical and theoretical instruction. Students must have access to a digital still camera.

PY1200 - Photography I

Students will be introduced to the basic principles and mechanics of digital photography as applied to the graphics industry.

PY1201 - Photography III

Students will be introduced to various photographic techniques as applied to the graphics industry.

Prerequisite(s): PY2200

PY1330 - News Photography I

In this course, students will employ basic photographic principles and techniques. They will examine the history of photojournalism, discuss composition, demonstrate the use of digital cameras and lenses, and perform basic image-editing functions using industry-standard digital image editing software.

PY1331 - News Photography II

Building upon the technical foundation acquired in News Photography I, students will demonstrate the principles of news photography including spot news, sports, and event coverage. They will also produce a photo essay, analyze visual literacy, and explore the law and ethics of news photography. Students will continue to operate different kinds of cameras and photographic platforms.

Prerequisite(s): PY1330

PY2200 - Photography II

Students will learn the importance of the well crafted photographic image as it is used in the graphics industry. Consideration of the photographic image as a key element of an overall design, and specifically as a design anchor point, will be especially emphasized.

Prerequisite(s): PY1200

PY2201 - Photography IV

Students will have an opportunity to complete an independent learning project. Working in consultation with their instructor, students will identify a project concept, develop a project plan, complete design research, develop a project design incorporating advanced photographic techniques, and implement the project.

Prerequisite(s): PY1201

PY2205 - Independent Study

Students will have an opportunity to complete an independent learning project. Working in consultation with their instructor, students will identify a project concept, develop a project plan, complete design research, develop a project design incorporating advanced techniques, and implement the project.

Prerequisite(s): VA1230, CM1400, GA1220, MR1340, VA1231, GA1121, GA1180, CR1531, GA1351, GA1520, GA1880, GA2380, GA2640, PY1201

RM1400 - Wildlife Techniques I

This course will expose students to the various techniques used in wildlife research and management. This course provides theoretical and practical training of mammal and bird capture techniques, handling and tagging, chemical immobilization and radio / biotelemetry techniques. Students will also learn how to identify common songbirds through both visual and song characteristics.

Prerequisite(s): BL1400

RM1401 - Wildlife Techniques II

This course investigates methods to determine sex, age, size and maturity of mammals and birds. Current techniques used to inventory and monitor mammal and bird populations will be studied.

Prerequisite(s): BL1400

RM1500 - Fisheries Techniques I

This course will expose students to the various techniques used in fisheries research and management. This course provides theoretical and practical training of fish capture techniques, handling and tagging, chemical immobilization and radio / biotelemetry techniques.

Prerequisite(s): BL1400

RM1501 - Fisheries Techniques II

This course investigates methods to determine sex, age, size and maturity of fish. Current techniques used to inventory and monitor fish populations will be studied.

Prerequisite(s): BL1400

RM2200 - Habitat Assessment

Identify and classify fish and wildlife habitats.

Prerequisite(s): FR1330

RM2410 - Wildlife Techniques III

This course is designed to train individuals in field and laboratory techniques used in wildlife research and management. It involves determining the cause of death of mammals and birds, the collection and preservation of biological samples, analysis of diet and the identification of parasites and diseases. It includes information on anatomy, necropsy techniques, parasites, diseases, preservatives, collecting methods, species identification and safety precautions.

Prerequisite(s): BL1400

RM2420 - Habitat Management

This course identifies the various types of land and wildlife habitat classification systems that are developed for provincial and federal resource management. Fish and wildlife habitat management including habitat enhancement, reclamation, and protection techniques and habitat modeling are thoroughly discussed in this course.

Prerequisite(s): RM2200

RM2500 - Fisheries Techniques III

This course is designed to train individuals in field and laboratory techniques used in fisheries research and management. It involves determining the cause of death of fish, the collection and preservation of biological samples, analysis of diet and the identification of parasites and diseases. It includes information on anatomy, necropsy techniques, parasites, diseases, preservatives, collecting methods, species identification and safety precautions.

Prerequisite(s): BL1400

RP1100 - Introduction to Records Management •

This course is designed to introduce the student to the records and information management discipline. The topics covered will make students aware of the history and role of records management, career opportunities, and professional associations. Students will study the life cycle of records, records inventory procedures, records appraisal, records retention and disposition principles, and the use/function of records manuals. The students will be introduced to electronic document management systems, information governance and current trends in the discipline.

RP1200 - Archives Principles •

This course introduces the student to the area of archival storage. Archives will be examined from their evolution to their current role/function. Students will examine archival principles, procedures and career opportunities in the discipline.

RP1205 - Document Management Systems and Records Control •

This course is designed to introduce students to the fundamentals of an electronic document management system through demonstration and a simulation approach. The course will outline the measures and best practices that will lead to the efficient management of all types of documents ensuring quality control and improvement.

Prerequisite(s): RP1100

RP1301 - Document Control Processes •

This course involves a detailed examination of file management procedures. Students examine records in terms of storage, maintenance, and retrieval procedures; supplies and equipment are examined in terms of suitability and cost. Document control processes are studied. Students will acquire hands-on experience creating and modifying documents using an electronic document conversion software.

RP1400 - Information Security and Procedures •

This course is designed to teach students the fundamentals of information security and procedures. The topics covered will make the students aware of the legislation and litigation procedures involved with information security. Students will study retention requirements, the need for security, and the classification of vital records, as well as disaster prevention and recovery and the use/function of manuals. Students will participate in a combination

of field trips and presentations from various professionals within the Records and Information Management industry.

RP2200 - Classification Systems •

This course is designed to teach students the fundamentals of classification systems using an electronic simulation approach. The topics covered will make students aware of the different types of classification systems and show them how to select one that is appropriate for a particular group of records. Students will be given an opportunity to work on projects involving various systems.

RS1100 - Intro to Community Recreation

This course introduces students to the community recreation delivery system. The importance of dynamic leadership in the recreational delivery process will be emphasized. Students will analyze a variety of settings and populations for which recreation programming and services are offered.

RS1110 - Health and Wellness I

Health and Wellness I examines key components of physical health and wellness with special emphasis on the muscular and cardiorespiratory systems. Improving physical health and wellness involves reviewing life choices to facilitate healthy behaviors, proactively working to prevent disease and injury, and mitigating risk factors.

RS1115 - Media & Public Relations

This course is designed for students intending to work in the human service field. Students will develop strategies and campaigns that fit the needs of individual non-profit organizations and will analyze the function of public relations and media. Students will prepare a public relations strategy for an organization, and use various forms of media, including social media, to address the needs of individual organizations. Upon completion of the course, students will be able to address the media through interviews, give presentations, develop a public relations strategy, and use social media to market an organization to fulfill requirements such as recruitment and fundraising.

RS1210 - Intro to Mental Health

This course explores mental illnesses and addictions that can be experienced throughout the human life span. In the course, students will be provided with hands on experience through creating activities/interventions to learn how to develop positive therapeutic relationships in relation to these illnesses and addictions that can be used in the community and therapeutic settings while gaining knowledge of the various treatments for each of these illnesses.

Prerequisite(s): RS1451

RS1215 - Culture, Diversity, and Inclusion

Students enrolled in this course will develop an in-depth understanding and respect for culture, diversity, and inclusion. Throughout this course, students will gain knowledge, skills, and tools that will support them in promoting and supporting culture, diversity, and inclusive practices when working with the various demographics found in the community and community organizations. The knowledge, skills, and tools presented in this course will assist students pursuing a career in the Community and Therapeutic Recreation field to create a more inclusive and respectful work environment. In addition, issues such as access, equality, and social justice will be explored.

RS1230 - Creative Activities

This course introduces students to basic materials, supplies, and methods necessary to conduct creative activity programs. These activities may be used in a variety of recreation programs such as boys' and girls' clubs, long term care facilities, rehabilitation centres, hospitals, guiding/scouting groups, and community recreation centres.

RS1240 - Recreation Activities

This course will introduce students to a variety of recreational related activities and recreation service programming. The importance of recreation as a regular component of active living will be emphasized. Students will participate in, plan, lead, and evaluate recreation activities. They will also examine the methods of scheduling teams and individual sports competitions.

Prerequisite(s): RS1280, RS1100

RS1250 - Recreation Activities I

This course is designed to provide exposure as well as develop leadership skills in a variety of recreation activities. Students will review various topics including the place of sport in society, the role of all levels of government in

administering sport, safety in recreation activities, and the history of indoor/outdoor recreation activities. Students will be introduced to the methods of scheduling teams and individual sports competitions. A variety of outdoor recreational activities will be introduced including cross-country skiing, snowshoeing, and winter camping.

RS1255 - Outdoor Recreation I

This course is designed to introduce the student to the field of outdoor recreation. Students demonstrate the acquisition of outdoor recreation leadership skills during a winter camp. During the course, students will be provided with a series of activity-based topics and sessions on preparation for outdoor activities (winter related). Students will be introduced to activities such as group planning, winter camping, outdoor cooking, snow shoeing, cross country skiing, survival skills, and other related winter activities. Students may also assist organizations with planning and implementing outdoor recreation activities such as winter carnivals and festivals.

Prerequisite(s): RS1280

RS1260 - Health and Wellness I

Health and Wellness II is a continuation of Health and Wellness I and includes a review of the components of physical wellness. The course focuses on physical wellness, proactive care and life choices to determine healthy eating habits, weight control, nutrition, rest, and working diligently to prevent disease.

Prerequisite(s): RS1110

RS1280 - Program Planning

In this course, students will be introduced to the program planning process. The six steps used to produce quality recreation programs will be covered. These include assessment, program objectives, solutions, design, implementation, and evaluation. Students will analyze human development and select the required resources to provide programming at all stages of life.

RS1320 - Recreation Administration

This course is a study of the administrative and organizational procedures used in the management systems of community and volunteer recreation agencies. Students will analyze the history of recreation and recreation management, recreation organization and management, recreation delivery systems, fundraising, grant and proposal writing, and financial management including the use of Excel spreadsheets.

RS1370 - Outdoor Recreation II

In this course, students will analyze the principles of effective outdoor leadership, with a focus on leadership skills, skill development, group dynamics, and the application of those principles to selected outdoor experiences. Students will be introduced to a wide variety of spring/summer outdoor activities and experiences and gain exposure to a variety of outdoor recreation pursuits. Students will develop the knowledge and skills required to adapt various outdoor recreation programs for various demographics within the community. Skills and practical applications such as compass training, survival skills, shelter building, outdoor cooking, camping, team building, and canoe certification will be assessed at the designated canoe and spring camps at the end of the training sessions.

Prerequisite(s): RS1255

RS1380 - Therapeutic Interventions

This course introduces students to a variety of therapeutic interventions and techniques. Through lectures and labs, students will develop an understanding of the benefits and the delivery of these interventions. These interventions will be used in a variety of settings with diverse populations.

Prerequisite(s): RS1451, RS1280

RS1400 - Community Agencies

In this seminar-based course, students study local, provincial, and national organizations involved in providing community and recreation services in Newfoundland and Labrador. Students will conduct research on organizations and present this research through formal presentations and papers.

RS1440 - Recreation Facilities

This course introduces the student to the theory and practice of the planning, design, operation, and management of recreational facilities. As well, the student will become aware of the general trends in recreation which influence the design and management of selected facilities.

RS1450 - Introduction to Therapeutic Recreation

This course introduces students to the field of therapeutic recreation. The course addresses the provision of recreational services to individuals who face specific challenges.

RS1451 - Intro to Therapeutic Recreation

This course introduces students to the field of therapeutic recreation. Students will examine therapeutic practices, disabilities and impairments, and forms of abilities and disabilities that exist in the community. The various topics related to therapeutic recreation found in this course will be examined and compared to the current recreation services found in the community.

RS1460 - Recreation Programming for the Older Adult

This course examines the physical, cognitive, and emotional changes that occur as an individual ages. Characteristics of aging and disorders associated with aging will be examined to enable students to devise the necessary framework to design recreation programs for older adults.

Prerequisite(s): RS1451, RS1280

RS1520 - Risk Management and Legal Liability

This course provides an overview of the business and legal issues involving recreation administration and the operation of organizations and facilities in the community and therapeutic recreation field. Students will be introduced to the components of the Canadian legal system, forms of liability, and defenses to negligence, and how these apply to the recreation field. Risk management policies will be examined leading to the development of a risk management plan used within all sectors of the recreation field.

Prerequisite(s): RS1280

RS1530 - Principles & Procedures of Therapeutic Recreation

This course introduces students to key principles and procedures that are paramount in the development and delivery of comprehensive therapeutic recreation services and programs. Course material will focus on the importance of therapeutic recreation programming as well as the theoretical and philosophical foundations used in therapeutic recreation services.

Prerequisite(s): RS1451

RT1100 - Introduction to Respiratory Therapy

In this course, learners will be introduced to the profession of respiratory therapy and the equipment related to medical gas therapy in adult and pediatric patient populations.

Co-requisite(s): HG1110

RT1120 - Cardiopulmonary Physiology

This course is an in-depth study of the cardiopulmonary anatomy and physiology, impacting respiratory therapy.

Prerequisite(s): BL1605

RT1130 - Cardiopulmonary Patho I

This course will enable the student to describe the pathophysiologic manifestations, clinical signs, symptoms, diagnosis, and therapeutic management of the major respiratory obstructive and restrictive diseases.

Prerequisite(s): BL1605, RT1100, RT2305

Co-requisite(s): RT1120

RT1140 - Airway Management I

In this course, learners explore the use of various airway management techniques, related equipment, and associated therapies. The primary emphasis is on the operation principles of the various types of equipment utilized in airway management within respiratory therapy. Additional focus will be placed on adult and paediatric airway management.

Prerequisite(s): Successful completion of Semester 2

RT1150 - Clinical Application I

The course is designed to introduce the respiratory therapy student to adult and paediatric clinical settings, using both the simulation laboratory and the hospital environment. Under direct supervision, students will apply previous

classroom and laboratory learning to simulated/clinical performance activities

Prerequisite(s): Successful completion of Semesters 1 and 2

RT1160 - Respiratory Mathematics

Students will focus on the application of formulas used by respiratory therapists in various practice areas. This will build the foundational knowledge and practical application to support the respiratory therapy student throughout the program.

RT2110 - Airway Management II

In this course, learners explore the use of various types of airways: including management techniques, related equipment, and associated therapies used in respiratory therapy. Additional focus will be placed on the adult and paediatric airway management modalities.

Prerequisite(s): RT1140

RT2120 - Mechanical Ventilation I

This course is the first in a series of courses designed to provide students with the knowledge and critical thinking skills required to operate mechanical ventilators effectively and safely in adult pediatric and neonatal patients. The performance of these procedures will take place in a simulated clinical environment.

Prerequisite(s): RT1140, RT1150

RT2130 - Clinical Application II

This course is a continuation of Clinical Application I and is designed to further assimilate the respiratory therapy student to the adult and paediatric clinical settings. Under direct supervision, students will integrate previously learned knowledge and skills through experience in both the simulation laboratory and the hospital environment.

Prerequisite(s): RT1140, RT1150, HG2050

RT2140 - Cardiac Diagnostics

This course introduces the student to the theory and application of hemodynamic monitoring, invasive procedures, cardiovascular assessment and management as utilized in respiratory therapy in adult and pediatric populations. The performance of these procedures will take place in a simulated clinical environment.

Prerequisite(s): RT1140, RT1150

RT2150 - Cardiopulmonary Patho II

This course will enable the respiratory therapy student to describe the pathophysiologic manifestations, clinical signs, symptoms, and therapeutic management of the major neuromuscular, cardiovascular, and renal diseases to facilitate the development of treatment protocols. Important topics such as the effects of thermal injury and hypo/hyperbarism will also be discussed.

Prerequisite(s): RT1150

RT2160 - Mechanical Ventilation II

This course focuses on the physiological implications of instituting, maintaining, and discontinuing mechanical ventilatory support. Emphasis is placed on patient monitoring and evaluation of mechanical ventilation management. The performance of these procedures will take place in a simulated clinical environment.

Prerequisite(s): RT2120, RT2470, RT2130, RT2150

RT2170 - Pulmonary Diagnostics

This course introduces students to the principles of pulmonary diagnostic procedures and explores the significance of the various test data to the respiratory therapist.

Prerequisite(s): Successful completion of Semester 4

RT2180 - Neonatal Clinical Application

This course provides students with a comprehensive understanding of Neonatal Respiratory Care. Under direct supervision, students will be expected to apply the theoretical knowledge and skills previously learned in the simulation and/or hospital environment.

Prerequisite(s): RT2470, RT2120

RT2190 - Mechanical Ventilation III

This course focuses on advanced modes and management strategies for mechanically ventilated patients, utilizing current research and best practices. Students will be introduced to lung recruitment maneuvers; specialty inhaled gases to treat specific conditions; mechanical ventilation in the home setting; neonatal mechanical ventilation; transport of the critically ill; brain death, and apnea testing standards as a diagnostic tool in brain death determination.

Prerequisite(s): Successful completion of Semester 5

RT2240 - Cardiopulmonary Resuscitation

This course will provide respiratory therapy students with the knowledge and skills necessary to better recognize and treat critically ill adults, infants, and children. The course will include the latest standards in neonatal resuscitation (NRP), pediatric advanced life support (PALS), and advanced cardiac life support (ACLS) programs. Presentation of these emergency management strategies will use a combination of laboratory, simulation, and classroom presentations.

Prerequisite(s): RT2130, RT2140, RT2470, RT2150

RT2251 - Clinical Application IV

The course is designed to further assimilate the respiratory therapy student to the adult, paediatric, and neonatal clinical setting through experience in both the simulation laboratory and the hospital environment. Under direct supervision, students will be expected to expand their knowledge and skills of respiratory therapy procedures and build upon previously learned materials.

Prerequisite(s): RT2320, RT2160, RT2170, RT3430, RT2180, RT2240

RT2305 - Pharmacology

This course is an introductory course in Pharmacology as applied to Respiratory Therapy. General principles relating to drug administration are studied. Emphasis is placed on drugs affecting the respiratory and central nervous system.

Prerequisite(s): Successful completion of Semester 1

RT2320 - Anesthesia

This course is an introductory course in the principles and practices of anesthesia pertinent to the respiratory therapist. Major course topics include anesthesia machines, vaporizers, breathing circuits, anesthetic ventilators, preoperative procedures, monitoring the anaesthetized patient, and complications of anesthesia.

Prerequisite(s): RT2130, RT2110

RT2460 - RT Techniques

This course introduces the student to the theory and application of clinical assessment and management skills requisite to the practice of respiratory therapy in a simulated environment.

Prerequisite(s): Successful completion of Semester 1

RT2470 - Neonatal Respiratory Care

This course introduces students to the neonate's anatomical and physiological differences and the clinical management of these patients. Topics include gestational lung development, fetal-neonatal transition, newborn assessment, thermoregulation, neonatal cardiopulmonary pathophysiology, and neonatal ventilation. The performance of the procedures within the course will take place in a simulated clinical environment.

Prerequisite(s): RT1150, RT1140

Co-requisite(s): RT2120

RT3000 - Practicum I

This course is part one of two full-time, fifteen (15) week practicums. The practicum will allow students to apply theoretical knowledge and practical skills acquired throughout the programs' first six semesters to real-time clinical environments. Students are expected to demonstrate independent critical thinking, demonstrate positive and effective interactions with peers, preceptors, faculty, and other healthcare professionals, and assume responsibility for clinical actions and decisions.

Students will be assigned to various clinical environments that will focus on caring for neonatal, pediatric, and adult patients. The practicum will have a delivery format, including class sessions, discussions, assignments, simulation labs, and bedside care. Core values relating to professional behavior, ethical standards, communication, and safe practices will be emphasized and assessed using the Core Competency Evaluation.

Prerequisite(s): Successful completion of all year one and two courses

RT3010 - Practicum II

This course is part two of two full-time, fifteen (15) week practicums. The practicum will allow students to apply theoretical knowledge and practical skills acquired throughout the programs' first six semesters to real-time clinical environments. Students are expected to demonstrate independent critical thinking and assume responsibility for clinical actions and decisions. Students are expected to demonstrate independent critical thinking, demonstrate positive and effective interactions with peers, preceptors, faculty, and other healthcare professionals, and assume responsibility for clinical actions and decisions.

Students will be assigned to various clinical environments that will focus on caring for neonatal, pediatric, and adult patients. Practicum II will have a delivery format, including class sessions, discussion, assignments, simulation labs, and bedside care. Core values relating to professional behavior, ethical standards, safe practices, and effective communication will be emphasized and assessed using the Core Competency Evaluation.

Furthermore, it is expected that skills attained during Practicum I will be performed again as opportunities present themselves. Students will continue to master skills related to clinical and core competencies and are expected to progress to a highly autonomous and independent role as compared to Practicum I.

Prerequisite(s): RT3000

RT3020 - Practicum III

This final practicum course enables students to integrate theories and skills acquired throughout the previous two clinical practicums. Students will complete any remaining skills related to clinical and core competencies. Students will be evaluated on skills proficiency, time management, organizational skills, and decision-making at a high level of independence. Students will also be expected to take a lead role in providing patient care, further mastering/refining skills necessary to function as an entry-level respiratory therapist.

Comprehensive examinations will help prepare students to challenge the national certification exam for entry to practice (CBRC exam). These comprehensive examinations will be delivered in diverse formats, including classroom/online/self-study, where learners will be presented with case studies, quizzes, and discussions that will emphasize the competency areas in the Canadian National Competency Framework (NCF). These examinations will help the learner identify specific respiratory therapy areas where further study is required.

This course will conclude with a Graduate Examination (format similar to the CBRC examinations).

Prerequisite(s): RT3010

RT3430 - Clinical Application III

This course is a continuation of Clinical Application II. The course is designed to further assimilate the respiratory therapy student to the adult and paediatric clinical setting through experience in both the simulation laboratory and the hospital environment. Under direct supervision and by building upon previously learned materials, students will further expand their knowledge and skills of respiratory therapy procedures.

Prerequisite(s): Successful completion of Semester 4

RV1101 - Decks and Fences

This course will focus on the special requirements for constructing fences, decks and other exterior unprotected wooden and synthetic structures. Learners will apply their knowledge through the construction of a fence and deck.

Prerequisite(s): AJ1111, AJ1160

RV1120 - Building Systems I

The learner will be introduced to structural requirements of buildings and the principles of controlling air, moisture, thermal and sound movement and transmission in buildings. Practical exercises in the control of air, moisture, thermal, and sound will be utilized to enhance the learner's ability to apply the concepts.

Prerequisite(s): AJ1111, AJ1160

RV1140 - Accommodated Construction

This course will enable the student to become aware of the requirements and specifications surrounding the basic requirements of barrier-free access for residential and commercial renovations projects. Students will apply the theory through a practical application of construction by planning, drawing and constructing a barrier free structure.

Prerequisite(s): AJ1111, AJ1160

RV1160 - Renovation I

This course provides the learner with the knowledge of construction of heritage and obsolete buildings and the issues surrounding renovating these structures. Learners will apply the knowledge they have gained through practical application of a heritage renovation emphasizing the recycling of reusable materials.

Prerequisite(s): AJ1111, AJ1160

RV1161 - Renovation II

The course will introduce the basic concepts of shoring and needling, and structural tie-ins. Practical work will concentrate on more complex structural integrations, particularly as applied to roof frames. Learners will be introduced to the concepts of challenges associated with unique building structure designs.

Prerequisite(s): RV1160

RV1170 - Basement Renovation

This course will focus on basement renovation techniques and unique situations and solutions when renovating basements. Learners will obtain an understanding through practical application of the presented topics by performing a simulated or complete basement renovation.

Prerequisite(s): AJ1111, AJ1160

RV1200 - Green Renovating

This course will enable the learner to apply good practices of energy conservation, waste management, environmental impact, and indoor air quality management to projects. The learner will gain practical experience through performing a green building practical lab on residential or commercial structure.

Prerequisite(s): AJ1111, RV1160

RV1230 - Project Manager I

The learner will become familiar with the concepts of project organization, time management, materials takeoff and estimating for construction projects. Learners will perform practical projects that apply the concepts of management of a project.

Prerequisite(s): AJ1111, RV1160

RV1231 - Project Manager II

The learner will apply skills acquired in RV1230 - Project Manager I to produce a complete project plan, required specifications, match the working drawings, create the materials take-off and labor estimate for a project.

Prerequisite(s): RV1230

RV1250 - Renovator's Basic Plumbing

This course will introduce the learners to the basics of residential plumbing systems and how to organize them with the renovation project. Learners will perform practical exercise to complete associated renovation plumbing tasks.

Prerequisite(s): AJ1111, RV1160

RV1260 - Renovator's Basic Electrical

This course will introduce the learners to the basics of electrical AC and DC theory as it relates to residential wiring systems, how to enable to identify the materials and tools so they can identify how they can interact with the certified electrical professional is required during a renovation project.

Prerequisite(s): AJ1111

RV1270 - Renovator's Basic HVAC

The learner will be introduced to principles and concepts of equipment, design and operation of Heating, Ventilating

and Air Conditioning (HVAC) systems and components as they relate to residential and light commercial building applications. Practical exercises in heat load calculations, HVAC controls, use of testing instruments, and air balancing will be utilized to enhance the student's ability to apply the concepts.

Prerequisite(s): AJ1111

RV1300 - Residential Estimating II

In this course, the learner will apply knowledge gained from completing AJ1170 - Residential Estimating to construction drawings and situations. All calculations and layouts are to be quality checked using the Canadian Building Code.

Prerequisite(s): AJ1170

RV1320 - Foundation Systems

The learners will develop an understanding of the numerous components and associated installation practices that combine to produce typical residential and light commercial concrete foundations and structures. Several residential forming systems, as well as ICF, will be studied in detail. Practical assignments and activities will support the delivery of this subject matter.

Prerequisite(s): AJ1111, AJ1160

RV1341 - Cabinet Layout and Design

This course will enable the learner to summarize requirements for cabinetry design, site preparation, and installation techniques. Learners will be introduced to both new home and renovation cabinet installation procedures. Learners will receive in class instruction and also have the opportunity to practice and apply the lessons through practical activities.

Prerequisite(s): AJ1111, RV1160

RV1350 - Flooring

Learners will gain an understanding of different types of flooring installation and removal procedures. Topics to be covered include underlayment, resilient tile, wood floors, laminate floors, engineered plywood floors, ceramic, porcelain tile, stone, resilient, and cement floors installation and removal procedures. Additional topics include site preparation, demolition, moisture monitoring, and estimation. Learners will complete practicals in the installation and removal of floors and floor finishes.

Prerequisite(s): AJ1111, AJ1170

RV1360 - Special Trims

Learners will gain an understanding of numerous types of interior trims and finishes. Topics to be covered include interior plastering and wall finishes/drywall, moldings, and painting/wood finishing. Learners will complete practicals in the installation and removal of trims, plastering, priming and painting.

Prerequisite(s): AJ1111, RV1160

RV1400 - Demolition and Waste Management

This course will provide the learner with a basic understanding of demolition and disposal practices. Recognizing hazardous materials will be emphasized in this course. Safe work practices will be emphasized to reduce the risk of accidents and injuries during demolition work. The need for proper waste diversion strategies will also be tabled during the course.

Prerequisite(s): AJ1111

RW3140 - Rotary Wing Aircraft

This course is to introduce the student to the helicopter and the helicopter industry. Its aim is to provide students with knowledge of helicopter fundamentals, theory of flight and the different main rotor systems. This is to enable students to perform maintenance functions on a helicopter main rotor and associated systems.

RW3141 - Rotary Wing Aircraft Systems

This course is to provide the students with knowledge of the basic systems found on a helicopter. This will enable the student to perform maintenance inspections and repairs on the complete aircraft.

Prerequisite(s): RW3140

SC1110 - Intro to Sociology

Sociology I introduces students to understanding people and society. The course covers the foundations of sociology, social structures, social difference, social institutions and global perspectives. Using sociological theory students will learn to analyze various population groups and social issues and problems. While studying culture leads to understanding socialization and how people fit within the social structure of society, studying Canadian society positions students to grasp the impact of a multi-cultural society on health, employment, and families. Through examination of the impact of stratification, students will learn about inequality, racism, gender relations, and crime and deviance.

SC1121 - NL Society and Culture

This is the second of two introductory courses in sociology. Students use sociological methods and perspectives to examine aspects of Newfoundland and Labrador society and culture.

SC1130 - Family Studies

The Family Studies course provides students with information on cultural variations among families in Canada and includes an exploration of cultural influences, attitudes and relations. Media influence, aging populations and the feminist theory are all topics for discussion. Variations in family processes, forms and structures will be analyzed. Parenting responsibilities have changed as communities take on many of the roles that were formerly defined by the family. While examining the needs and challenges of modern families, this course will also explore factors that impact families such as violence, abuse, and divorce. Students will learn appropriate strategies for dealing with dysfunction while learning about the diversity of challenges and the diversity of solutions. As well, students will examine trends concerning families in the 21st century, the meaning of marriage and other forms of partnering while exploring how communities adjust as needs of families and challenges thereof continue to change.

SC1150 - Principles of Sociology •

Transferable to MUN Sociology 1000. Sociology 1150 is an introduction to the concepts, principles and topics of sociology. The theoretical foundations of modern sociology are examined through the works of such social theorists as Karl Marx, Emile Durkheim and Max Weber, in addition to the contemporary theoretical perspectives of functionalism, feminism, conflict theory and symbolic interactionism. The course also examines a range of sociological topics and concepts including research methods, culture, socialization, social stratification, deviance and crime, race and ethnicity, sex and gender, health and healthcare, work and the economy, and populations.

SC1160 - Sociology of Families •

Sociology of Families is a comprehensive and thought-provoking course that examines the dynamics and diverse nature of families within contemporary society. This course explores the social, cultural, economic, and political factors that shape family structures, roles, and experiences. By employing sociological theories, research methodologies, and critical analysis, students will develop a deeper understanding of the complex interplay between families and broader social systems. Throughout the course, students will critically examine types of families and will delve into the effects of globalization, migration, and social inequality on family structures and relationships. Transferable to MUN 2270.

Note: This course does not promote a specific family model or impose a particular value system. It aims to foster a respectful and inclusive learning environment that encourages open-mindedness and critical thinking.

SC1240 - Healthy Aging

This is an introductory course in the area of aging. Using a multidisciplinary approach, students will gain knowledge and understanding of the aging process and older adults. Students will explore, identify and promote healthy aging strategies and lifestyles by rethinking outdated assumptions about aging. They will identify current issues and challenges experienced by the older population. Students will explore proactive alternatives for promoting longevity and quality of life among older adults.

SC1400 - Sociology - Labrador Society and Culture

This course will provide students with an opportunity to take a critical look at Labrador society and culture. By developing a sociological perspective, students gain a better understanding of their own society and culture.

SC1430 - Labrador Society and Culture

This course examines Labrador Society and Culture from its pre-Contact origins through to the present day. Through coursework, guest speakers and documentaries attention will center on specific cultural groups/traits within Labrador, as well as their interrelationships, which constitute Labrador society.

SD1020 - Orientation to Trades Bridging

This course will introduce students to the Trades Bridging program, the world of trades, and the College/campus learning environment. It provides an opportunity to explore the trades shop, the classroom facilities, and Student Services. Students will discuss goals, careers, and learning styles. Students will learn about safety practices, College values, and best practices.

SD1120 - Positive Mindset •

This course introduces students to the applications of having a positive mindset. Students will study the benefits of having a positive mindset, as they will learn about meaningful experiences, character strengths, relationships, and practices. This course examines the positive aspects of people's thoughts, feelings, social interactions, habits, dispositions, responses to environments, and how these facilitate well-being, achievement, and harmony. Students will apply this knowledge through analyzing videos, creating reflective journal entries, and engaging in interactive discussions. The self-awareness, techniques, and insights gained from this course will enable the student to effectively navigate challenging situations and environments. Upon completion, students will be able to utilize the concepts and practical components throughout their social lives, educational pursuits, and professional careers.

SD1170 - Technology Awareness I

This course (with Technology Awareness II) is designed to raise career awareness levels for engineering technology students by providing information regarding the engineering technology profession. This course will prepare students for the workplace by illustrating how the skills and practices of successful students parallel the skills and practices of successful professionals.

SD1171 - Technology Awareness II

This course (with Technology Awareness I) is designed to raise career awareness levels for engineering technology learners by providing information regarding the engineering technology profession. This course will prepare learners for the workplace by illustrating how the skills and practices of successful students parallel the skills and practices of successful professionals.

Prerequisite(s): SD1170

SD1210 - Personal Development

This course introduces students to healthy living skills necessary for student success in post-secondary environments and beyond. It focuses upon creating a healthy self-concept, developing sound financial sense, and establishing an awareness of good nutrition and healthy eating habits. In addition, it assists students in achieving a sense of general well-being.

SD1230 - Career Exploration

This course takes the student through the process of career exploration, acquiring the skills needed to make informed decisions about their future education and career goals. The student will be engaged in personal discovery and self-assessment, will apply multiple research methods to gather career-related information, and develop skills in the career decision-making process.

SD1350 - Portfolios

This course is designed to give students the knowledge and skills necessary to complete a portfolio that documents their achievements; their career plans; and the scope and quality of their experience, training, skills, and abilities. Students will also explore a construction industry overview. The portfolio can be used for job applications and during job interviews in preparation for entry into the job market.

SD1570 - Effective Learning

This course is designed to help Comprehensive Arts and Science students develop the skills, strategies and tools needed to ensure their success in College. Students who successfully complete the course will have a better understanding of themselves as learners and of strategies for improving their learning potential. They will also have a greater appreciation of the need to define their educational and career goals clearly and to develop the habits and

skills which will enable them to achieve those goals. The course will also provide an opportunity for students to become aware of the full range of campus resources available to support their learning and to learn how to use those resources effectively. Students will compile a portfolio during this course which should prove to be of value to them throughout their College life.

SD1580 - Critical Thinking across the Curriculum

This course is designed to help Comprehensive Arts and Science students develop analytical and critical thinking skills for practical application in their post-secondary programs as well as in their lives and careers. Students who successfully complete this course will have a better understanding of how to present sound and logical arguments and how to apply the skills of critical analysis in their studies as well as in their working and social lives. The course also provides an introduction to the principles and processes of informal debating.

SD1710 - Job Search Techniques

This course is designed to give students an introduction to the critical elements of effective job search techniques. Upon completion of this course, students will be able to demonstrate effective use of Job Search Techniques.

SD2200 - Work Exposure Orientation •

The Work Exposure Orientation is designed to provide students with the necessary knowledge and skills to prepare for a successful work exposure. The course covers major topics including work exposure documentation, employment trends, work exposure preparation, and workplace professionalism. This course is designed to provide students with a comprehensive understanding of what is expected of them during their work exposure. Students will learn how to document their experience, prepare for the workplace, and maintain a high level of professionalism. Students will be able to successfully acquire their own work exposure placement by utilizing effective job search strategies and networking techniques, demonstrating their ability to independently apply the knowledge and skills learned in class to the real-world context of the job market.

SE1010 - Fire Protection

This course is designed to give students a thorough understanding of the potential loss, due to fire, both in terms of human values and economic impact. Students will also learn about the practice and theory of fire prevention, fire containment, and fire extinguishing. Students will also understand and apply regulatory codes and standards related to fire protection.

SE1041 - Ergonomics

This course is designed to provide students with knowledge and skills related to the human-machine and human-environment interfaces in the workplace from a design perspective, such that the workplace can be as safe, efficient and comfortable, as possible. The student will consider aspects of engineering, mechanics, motion, light, sound, physiology, psychology, biomechanics, and anthropometrics to ensure that the demands of operating a system do not exceed the capabilities of the user, in terms of individual well-being or system effectiveness. It will also include the application of specific CSA standards and provincial legislation and guidelines.

Prerequisite(s): CG1500

SE1530 - Occupational Health and Safety

This course will introduce the student to the interpretation and application of occupational health and safety legislation and key safety program elements. The importance of an industrial regulatory system is studied. Safety procedures of personal protective equipment and handling of various dangerous chemicals are discussed. In addition, the student will become familiar with the concept of due diligence and behavior-based safety approaches.

SE2150 - Safety Certifications

This course will provide students with certifications needed for work in the Chemical Processing Industry. Certificate courses will be offered during intersession in Semester 3. Students are required to complete these courses to meet safety standards and the purpose of this course is to ensure adequate measures are taken to protect students, the environment and assets from harmful consequences of the activities being undertaken within the chemical processing industry.

SE3310 - Process Safety and Risk Management

The course is designed to enable the learner to utilize industry-recognized standards and methodologies to assess

risk, measure its magnitude, and develop plans to minimize and control it. Case studies from the oil and gas and chemical process industries will be used to demonstrate the necessity for comprehensive Risk Management Systems. Process Safety Analysis/Risk Management, Management of Change and Control of Work systems will be applied.

Prerequisite(s): SE1530

SI1015 - Earth Science

In this course, students will examine the basic principles and concepts of Earth science, including the processes that shape the planet, the formation of rocks and minerals, and the evolution of the Earth's surface. Students will also analyze the physical and chemical properties of the oceans and the causes of weather patterns and climate change. Throughout this course, students will develop critical thinking and analytical skills using scientific data and observation. The course will emphasize the interdisciplinary nature of Earth science, integrating concepts from physics, chemistry, biology, and mathematics.

SI1020 - Science

This course in introductory conceptual science presents knowledge about the nature of science concepts to prepare students for success in the trades field. It provides knowledge of science related to on-the-job skills and practices and uses shop problems to help students relate science to employment situations. Upon completion of the course, students will be able to apply science concepts to trade practices. Topics covered include scientific method, matter, atomic structure, thermal energy, magnetism, and electricity.

SI1205 - Environmental Science

This course provides an interdisciplinary approach to understanding the relationship between humans and the natural world. Students will examine the effects of human activity on the environment, including air and water pollution, land use, climate change, and the depletion of natural resources. Students will also develop critical thinking and problem-solving skills by analyzing case studies and engaging in hands-on activities.

SN1160 - Sound & Microphones

This course is designed to introduce students to the fundamentals of sound, the basics of human hearing, basic acoustics, psychoacoustics and ear training. Students also learn about microphones which are used to transduce sound pressure into electrical voltages which can then be manipulated, encoded, stored to a desired medium or turned back into sound pressure.

SN1170 - Music Production Techniques

This course is designed to get the student out of the classroom and into the recording studio. Students will learn the titles and job descriptions of studio personnel, session flow and terminology, session preparation, microphone and other recording techniques. Students will also get some hands-on time with various signal processing tools and learn about studio signal flow. Lastly, mobile recording equipment and techniques will be discussed.

SN1180 - Exploring Your Industry

This course is designed to give the student much needed insight into the industry they have chosen. Through research and networking with industry professionals, the student will explore their industry in areas such as technical innovation, recent trends, employment prospects and professional organizations within the industry.

SN1190 - Electronic Music Production

This course will introduce the student to the basic equipment, terminology and techniques used in the production of electronic music. Musical instrument digital interface (MIDI), MIDI sequencers, synthesizers and samplers will be examined in terms of their fundamental capabilities and workflows. Upon completion of this course, students will possess the basic skills and knowledge to explore production in much of today's modern genres, like hip-hop, pop and electronic dance music.

Prerequisite(s): MM2340

SN1200 - Music Business

This course will give students an insight into the Music Business. It will deal with Contractual Agreements between participants as well as Copyright laws and Performing Rights Organizations. Career Planning and other employment opportunities will be discussed as well as the perks and pitfalls of Independent Record Productions.

SN1410 - Stage Lighting

This course is designed to introduce the student to the components and applications of stage lighting for the music industry and the performing arts. It will cover such topics as history of stage lighting and design, methods of lighting, design and procedure, introduction to lighting fixtures, consoles, dimmers, DMX, intelligent lighting and lighting control software. Electrical safety practices will be explained and emphasized.

SN2110 - Mixing & Mastering

This course is designed to expose the student to the final two phases of the recording process: mixing & mastering. Mixing philosophies and techniques will be examined as well as intermediate and advanced use of EQ, dynamics processing and special effects. Mastering will touch on the basics of the process and the tools used to create radio-ready final products.

Prerequisite(s): SN2200

SN2120 - Sound in Practice I

This course is designed to immerse the student in a practical, hands-on, interdisciplinary environment. Theory from other courses will be put into practice as students liaise with students in other media arts disciplines. All projects will be assigned and mentored by the instructor.

Prerequisite(s): SN1160, SN2200

Co-requisite(s): SN2420, SN2110

SN2130 - Career Management

This course will introduce learners to the fundamentals of managing a career in the sound recording and production industry. It will identify the skills necessary for successful financial management and will introduce the importance and basics of financial planning. It will review the financial aspects of recording such as budgeting, funding, record keeping and government reporting. Learners will also be introduced to the fundamentals of project management and will be presented with career opportunities that are available in the industry. A combination of theories/concepts and practical illustrations are used to explain the application of sound financial planning.

SN2140 - Acoustics & Studio Design

Acoustics & Studio Design is a Sound Recording & Production course. It is designed to prepare students for a career in the field of sound recording and production. Students will learn the necessary physics of sound and acoustics. They will then apply this theory to the studio, allowing them to design spaces specifically for particular acoustical requirements. Finally, they will take this learning outside of the studio to apply all that they know toward speaker and stage layouts, both enclosed and open air.

SN2150 - Sound in Practice II

This is a continuation of the first Sound in Practice course and is designed to immerse the student in a practical, hands-on, interdisciplinary environment. Theory from other courses will be put into practice as students liaise with students in other media arts disciplines and external community bodies. All projects will be assigned and mentored by the instructor.

Prerequisite(s): SN2120, SN2201

SN2200 - Recording I

This course is an introduction to sound recording technologies. The evolution of those technologies is traced from when sound was first captured and moves to a comprehensive overview of contemporary technologies. Topics include History of Recording, Magnetic Recording, Digital Recording, Analog and Digital Consoles, Analog and Digital Processing.

Co-requisite(s): SN1160

SN2201 - Recording II

This course is designed to give the student hands-on experience of a recording session from pre-production right through the entire modern digital recording process. Modern editing for timing and pitch will be covered as will vocal comping and editing techniques.

Prerequisite(s): SN1160, SN2200

Co-requisite(s): MM2340, SN1170

SN2420 - Sound for Visual Media

This course explores the unique requirements for sound recording and production for visual media. This includes film and video production, digital animation and video game design. Students will review the key technical requirements of these industries and will, through practical sessions, demonstrate required competencies.

SN3100 - Live Sound Production

This course is designed to introduce the student to the various components that make up a public address system. Cabling and connections will be examined and explained. Mixing sound indoors will be compared and contrasted to mixing sound outdoors.

Prerequisite(s): SN1160

SP1200 - Machine Shop Practice

This is an introductory course designed to give students a knowledge and understanding of the fundamental metal-removal and general machine shop concepts which will form the basis for further studies in science and technology.

SP1210 - Machine Shop Practice

This is an introductory course designed to give students a knowledge and understanding of the fundamental metal-removal and general machine shop concepts which will form the basis for further studies in science and technology.

SP1320 - Radiation Safety

This course will have the learner explore the health and safety concerns related to working with industrial radiography radiation sources. The primary intent of the course is to introduce the learner to safe handling, standard operating principles and procedures and emergency operation principles and procedures for industrial radiography exposure devices. Through the principle of ALARA (As Low As Reasonably Achievable) and the concepts of Time, Distance and Shielding this course will prepare the learner for calculating and verifying working radiation dose rates, accumulated dosages, safe distances, and shielding requirements. The relevant sections of the Canadian Nuclear Safety Act and Regulations will be explained in detail. Successful completion of this course will provide the learner the opportunity to further pursue the CEDO Certified Exposure Device Operators designation through the NDT (Non-Destructive Testing) Certifying Agency of CANMET Materials Technology Laboratory, Natural Resources Canada in accordance with the Canadian Nuclear Safety Commission Regulatory Guide G229.

SP1420 - Asset Maint. & Reliability

Development and application of preventive and predictive maintenance programs for industrial equipment and facilities is emphasized. Condition monitoring of equipment, predictive techniques including vibration analysis and fluid sampling are explained with practical applications and related exercises. A preventive and predictive maintenance program is developed as a project, using industry-recognized methods.

SP1450 - Quality Management Systems

This course introduces the learner to the concepts and systems of Quality Assurance. The context of the course will be centred around the elements of quality assurance as it impacts the welding industry. It emphasizes the elements and it demonstrates the practices and procedures that companies employ to meet the requirements of a Quality Management System.

SP1730 - CNC Machining I

This is an introductory course in Computer Numerical Control (CNC). Programming concepts learned through the lecture time will be applied using both a CNC Lathe and CNC Milling Machine.

Prerequisite(s): SP1200

SP1731 - CNC Machining II

This is a course in Computer Numerical Control (CNC) using Computer Applied Manufacturing (CAM) software. It is delivered using computers to produce CAD/CAM programs that are applied through shop floor exercises with CNC Machining Centers. Instruction will be done through lecture, computer lab and hands-on work in the shop.

Prerequisite(s): SP1730

SP1805 - Metrology and Quality Control I

This course integrates the application of statistical process control with the control of quality for a product or service. Measurement of the physical characteristics of a product and its relationship to the manufacture, quality and cost is emphasized. The student will use a variety of measuring tools such as micrometers, scales, the optical comparator and the coordinate measuring machine (CMM) for inspection procedures. In addition, the student will be introduced to the application of Statistical Process Control which will be integrated into the quality control procedures required in the manufacture of the product.

Prerequisite(s): SP1210, MA1670

SP1835 - Applied Statistics and Quality Control

This course integrates the application of statistical process control with the control of quality for a product or service. Measurement of the physical characteristics of a product and its relationship to the manufacture, quality and cost is emphasized. The student will use a variety of measuring tools such as micrometers, scales, the optical comparator and the coordinate measuring machine (CMM) for inspection procedures. In addition, the student will be introduced to the application of Statistical Process Control which will be integrated into the quality control procedures required in the manufacture of the product.

Prerequisite(s): SP1200 or SP1210

SP2110 - NDT-MT & RT

This course is intended to introduce the learner to the theory and practice of the Non-Destructive Testing (NDT) disciplines of Magnetic Particle Inspection (MT) and Radiographic Inspection (RT).

Prerequisite(s): PH1100, WD1440, SP1320

SP2120 - NDT-PT & UT

This course is intended to introduce the learner to the theory and practice of the Non-Destructive Testing (NDT) disciplines of Liquid Penetrant Inspection (PT) and Ultrasonic Inspection (UT).

Prerequisite(s): CF1100

SP2131 - Applied Metrology I

This course provides a hands on introduction to precision measurement using a variety of manual metrology tools. Measurement of the physical characteristics of a product and its relationship to the manufacture, quality and cost is emphasized. The student will use a variety of measuring tools such as micrometers, verniers, height gages, depth gages, steel rule, radius gage, sinebar, surface plates, gage blocks and protractor. The students will be make radius, angularity and thread measurements using an optical comparator. The students will be introduced to the coordinate measuring machine (CMM). In addition, the student will receive a comprehensive introduction to Geometric Dimensioning and Tolerancing including making measurements of form, orientation, runout, profile and location. The students will be introduced to control charts and acceptance sampling.

Prerequisite(s): SP1200 or SP1210

Co-requisite(s): MA1670

SP2132 - Applied Metrology II

This course builds on the theory and practice covered in the previous applied metrology courses. It focuses on application of geometrical dimensioning and tolerances, precision measurement using a contact based co-ordinate measuring machine (CMM), a machine vision system and other digital gages interfaced to computer hardware equipped with statistical process control software. The student will also make surface roughness measurements using contact and non-contact profilometer. The students will also apply a non-contact CMM to scan and measure three dimensional parts.

Prerequisite(s): SP2131, MA1670

SP2325 - Quality Assurance

This course is designed to introduce the concepts, philosophy and application of Total Quality Management, and the International Standards Organization (ISO) 9000 quality standards. Emphasis will be placed on the integration of total quality management philosophy into the production process. Development of quality procedures and documentation will be discussed including reference to existing industry quality specifications. The implementation process for quality assurance manuals and their auditing procedures will be outlined.

SP2355 - QA/QC for NDT

This course is designed to give students an understanding of the requirements of Quality Assurance (QA) and Quality Control (QC) such as interpreting standards, controlling the acceptance of raw materials, controlling quality variables, and documenting the process. Through completion of this course, students will apply QA/QC procedures as related to Non-Destructive Testing (NDT).

SP2370 - Quality Assurance

This course is designed to introduce the concepts, philosophy and application of Lean-six sigma, Total Quality Management, Statistical Process Control and the International Standards Organization (ISO) 9000 quality standards. Emphasis will be placed on the integration of total quality management philosophy into the production process. Development of quality control procedures and documentation will be discussed including reference to existing industry quality control specifications. The implementation process for quality assurance manuals and their auditing procedures will be outlined.

Prerequisite(s): SP1830

SP2450 - OHS Management Systems

This course will introduce the student to the interpretation and application of workplace occupational health and safety (OHS) legislation and provide the student with an understanding of due diligence. The course is designed to enable the student to utilize industry-recognized standards and methodologies to assess risk, determine its magnitude, and develop plans to minimize and control it. Case studies from manufacturing or other industrial settings may be used to demonstrate the necessity for proactive safety systems.

SP2455 - Petroleum OHS Management

This course introduces the student to the interpretation and application of workplace legislation and regulations and key safety program elements. In addition, the student will become familiar with the concept of due diligence and behavior-based safety approaches.

SP2510 - Plant and Facility Layout

The course examines the contribution that a competently performed plant or facility layout plan can make toward achieving a profitable and efficient company or non-profit organization. The course combines fundamental principles and practical methodologies in plant and facility layout and material handling. The student will investigate and apply these principles and techniques in a variety of realistic situations. Further, since any proposal for innovation or change must be analyzed and described thoroughly, this course also emphasizes development of competencies in CADD and communication, with emphasis on the written report.

Prerequisite(s): EG1430

ST2400 - Apparel Design II

In this course students will learn more advanced apparel design and construction techniques. Topics include intermediate sewing techniques and draping techniques. Students will create a series of flat patterns and will also construct four full garments.

Prerequisite(s): TX1400, VA1201

ST2401 - Apparel Design III

In this course, students will continue to learn advanced apparel design techniques. Topics covered include using specialty fabrics in garment designing, constructing, and constructing outerwear garments. Students will be required to complete four full garments.

Prerequisite(s): ST2400, VA2250

ST2405 - Apparel Design II

In this course students will learn more advanced apparel design and construction techniques. Topics include intermediate sewing techniques and draping techniques. Students will create flat patterns and construct full garments.

Prerequisite(s): TX1400, VA1201

ST2406 - Apparel Design III

In this course, students will continue to learn advanced apparel design techniques. Topics include using specialty fabrics in garment designing, constructing, and constructing outerwear garments.

Prerequisite(s): ST2405, VA2250

ST2450 - Fabric Design II

In this course, students will learn more advanced fabric design techniques through knit, weave and felt. Students will continue to maintain records of their work.

Prerequisite(s): TX1220, VA1201

ST2455 - Surface Design II

This is a course in intermediate surface design techniques. Topics covered include intermediate dye techniques, intermediate surface embellishment techniques and intermediate rug hooking techniques. Students will learn to maintain accurate records of their work.

Prerequisite(s): TX1225, VA1201

ST2460 - Fabric Design III

This course provides students with an opportunity to complete an independent learning project. Working in consultation with the instructor, students will identify, design and develop a project concept, complete design research, and carry out project to completion. Topics for independent learning project will include intermediate techniques in knit, weave and felt.

Prerequisite(s): ST2450, VA2250

ST2465 - Surface Design III

This course provides students with an opportunity to complete an independent learning project. Working in consultation with the instructor, students will identify, design and develop a project concept, complete design research, and carry out project to completion. Topics for independent learning project will include intermediate dye techniques, intermediate surface embellishment techniques and intermediate rug hooking techniques.

Prerequisite(s): ST2455, VA2250

SU1130 - Mine Surveying I

This is an introductory surveying course for Mining Engineering Technicians. Topics studied include, but are not limited to: measurement of angles, direction and distance with appropriate instruction in the corresponding areas of traverse and coordinate computation. Also included are differential, profile, trigonometric, and cross section leveling. An introduction to the use of global positioning system (GPS) is included. Field labs and practical exercises emphasize use and care of surveying equipment, note taking, and interpretation and plotting of field notes.

SU1150 - Field Navigation

This course is designed to expose students to concepts of land-based field navigation. It is essentially a field-oriented course in which students will be introduced to navigational skills using: map and compass, aerial photos, and recreational-grade GPS receivers. Students will also be introduced to viewing and manipulating digital data through desktop and mobile mapping apps. The knowledge and skills developed in this course are applied in all field-based courses in the remaining semesters in the programs. Field navigational competencies are validated through the practical examination.

SU1200 - Plane Surveying

Plane Surveying is an introductory surveying course for technologists. Topics studied include, but are not limited to: measure of angle, direction and distance with appropriate instruction in the corresponding areas of traverse and coordinate computation. Also included are differential, profile, trigonometric, and cross-section leveling. An introduction to the use of global positioning system (GPS) is included. Field labs and practicals emphasize use and care of surveying equipment, note taking and interpretation and plotting of field notes.

Prerequisite(s): MA1101

SU1210 - Construction Surveying

This is the second course in surveying for learners in the Civil Technology program. Its purpose is to strengthen the surveying skills of learners, to teach them new skills in surveying that are directly related to the construction of buildings, roads and municipal services.

Prerequisite(s): SU1200

SU1230 - Mine Surveying II

In this course, students will progress through a logical continuation of the contents from Mine Surveying I and progress towards performing survey applications related to underground mines. Students will cover locating and installing survey stations in 3-D; traverse and coordinate calculations in 3-D; determination of irregular areas and volumes; field determination and plotting of profiles and cross-sections; cross sectional area and quantity determination; contours; introduction to electronic distance measurements; computer applications for various survey projects. In addition, students will examine line and grade, drill hole layout and pick-up, and raise location with control.

Prerequisite(s): SU1130

SU1320 - Plane Surveying I

This is an introductory course in surveying presented to Geomatics Engineering Technology (Co-op) program. The topics to be covered are: introduction to the theory of surveying on a plane, the acquisition of linear distances, horizontal angle, vertical angles, the calculation of coordinates and areas, the determination of elevations using spirit leveling, profiles and cross-sections, the graphical presentation of acquired data. The student will use tapes, total stations and spirit levels to acquire the required data.

Prerequisite(s): EG1430, MA1101, PH1100

SU1321 - Plane Surveying II

This is the second course in Plane Surveying in the Geomatics Engineering Technology (Co-op) program. This course expands on the topics covered in SU1320: vertical and horizontal datums, data transformation, total station instrumentation, data collectors, horizontal and vertical curves, and construction surveying.

Prerequisite(s): SU1320, SU1500

SU1360 - Graphics for Geomatics Engineering Technology

This course introduces a surveying software package. The course utilizes and expands on theory and practice from previous cartography, CAD, and plane surveying courses applying this knowledge to a surveying graphics package. Topics covered include applied drafting skills, traverse computations, software adjustments, earthwork volume determination, road design, area calculations, and subdivision design.

Prerequisite(s): SU1320, SU1500

Co-requisite(s): SU1321

SU1450 - Geographic Information Systems (GIS) I

This is the first of two GIS courses and focuses on introducing GIS and its components. The course introduces the GIS and its interlink with the real world. Geospatial data and its influence on maps are explained. The various types of data models and geodatabases are introduced as well as database management. The use of GIS as a facility management tool is addressed with emphasis on the combining of the various themes to answer posed questions. The application of Web and Mobile GIS are explored and their influence on the evolution of GIS is discussed.

Prerequisite(s): SU1320, SU2500

SU1460 - Geographic Information Systems (GIS) II

This course focuses on data analysis and management. Topics included are: data exploration and analysis, vector and raster data analysis, terrain mapping and analysis, viewshed and watershed analysis, spatial interpolation, geocoding, network analysis, analytical modeling, an introduction to Python scripting and project design and management. There will be a strong emphasis on how GIS is utilized to aid in the analysis and management of data with a brief introduction to GIS design and management.

Prerequisite(s): SU1450

SU1500 - Cartography

This course is an introductory course offered to Geomatics Engineering Technology (Co-op) students. The course is divided into two modules. Module one covers topics in cartography while module two expands on the CAD skills acquired by the student in Engineering Graphics EG1110.

Prerequisite(s): MA1101, PH1100, EG1430

SU1540 - Hydrography I

This course is an introductory course in hydrographic principles and procedures. It is designed to emphasize the theoretical and practical applications of hydrography and the marine survey environment.

Prerequisite(s): SU1321

SU1541 - Hydrography II

This course is an advanced course in hydrographic principles and procedures. It is a continuation of SU1540 (Hydrography I) with emphasis on advanced hydrographic systems and their use in marine engineering projects.

Prerequisite(s): SU1540, SU2570

SU1570 - Remote Sensing

This course introduces the student to the principles of remote sensing. The concept of acquiring data outside our visual range and the use of that data to identify and classify objects and phenomena is investigated. The basic data recording systems in common use are addressed.

Prerequisite(s): SU2500, SU2570, SU1460

SU1575 - Remote Sensing Applications for Natural Resources

Remote sensing is an important technology used in base mapping, creating and updating resource inventories, and environmental monitoring. It is continually evolving, with the development and refinement of new sensors, new platforms, and new analysis tools. Consequently, it is essential that technicians understand how and when remote sensing can be used in natural resources management and how it complements field-based measurements and observations. This course is intended to provide an introduction to the fundamentals of remote sensing, along with the technical skills needed to solve practical problems and support natural resource applications and decision-making using remotely sensed data.

Prerequisite(s): SU1150, SU3210

SU1710 - Forest Surveying

This is an introductory course in surveying including basic fundamentals of plane surveying and the use and care of equipment. The measurement of distance, direction and elevation is emphasized. The rope chair, level and hand compass are the major pieces of equipment studied.

SU2330 - Geodesy and Geodetic Positioning I

This course introduces the student to the topic of Geodesy and Geodetic Positioning. Topics covered include fundamental concepts in geodesy and geodetic positioning, coordinate systems and coordinate transformations, geoid models and heights, geodetic datum's, reference systems and reference frames, geodetic positioning techniques, an introduction to the propagation of random errors, and an introduction to GNSS. This course also deals with the acquisition of high precision data, an analysis of the errors associated with this data and the effect of such errors on the accuracy of the calculated parameters. The reduction of collected data to desired datums is also introduced.

Prerequisite(s): MA2100, SU1321, PH1101

SU2500 - Photogrammetry

This course is an introduction to photogrammetry for the Geomatics Engineering Technology (Co-op) program. The course introduces the student to the use of aerial photography for the production of maps. The principals of photogrammetry are addressed and the use of stereoplotters for map compilation is explored. The sources of aerial photography acquisition are identified. The aerotriangulation process for the photo to ground geometry is investigated. The use of aerial photography for the production of rudimentary maps is also addressed.

Prerequisite(s): SU1320, SU1500

SU2540 - Cadastral Surveying I

This is an intermediate level course designed to familiarize the student with legal principles and applicable legislation in the area of Cadastral Surveying. The student will also make practical application of this knowledge.

Prerequisite(s): SU1321

SU2541 - Cadastral Surveying II

This is Cadastral Surveying II with emphasis on the field and office practices of Land Surveyors. It includes the study of real property law and law related to matters of Land Surveying in Canadian jurisdictions.

Prerequisite(s): SU2540, SU1360

SU2570 - GNSS and Spatial Referencing

This course introduces the student to the Global Navigation Satellite System (GNSS) as a precise measuring tool. The satellite systems, operational control and user applications of the GNSS are investigated. A strong emphasis is placed on the fundamentals of NAVSTAR – GPS. The GPS signal structure, broadcast information and the parameters of the navigation message are examined. Celestial, Terrestrial and Orbital Coordinate Systems pertinent to space positioning are defined and coordinate computations performed. The procedural tasks associated with various GPS modes of operation are practiced through completion of specified survey projects. Quality assurance and data analysis is performed to investigate the accuracies of the various GPS methods such as Static, RTK and Post processed solutions. Concepts of Astronomy and the determination of position by use of classical astronomic means within the Celestial Coordinate System is also addressed.

Prerequisite(s): SU2330

Co-requisite(s): MA3130

SU3210 - Geographic Information Systems (GIS)

This course is designed to provide students with an overview of Geographic Information Systems (GIS) technology and an in depth appreciation of the role of GIS technology in natural resources applications. Students will gain valuable skills and hands-on experience to support resource-based GIS projects typical in the workforce. Using vector-based GIS data models, students will create databases, manage spatial and attribute data, generate map-based and tabular outputs, and perform geographic analysis. The course culminates with a major GIS project designed to reinforce the skills covered in the course.

Prerequisite(s): MC1850, SU1150

SU3300 - Geodesy and Geodetic Positioning II

This third year course offered in Geomatics Engineering Technology (Co-op) expands on map projections and develops the higher order corrections to positioning problems. The course introduces geodesy and geodetic concepts to equip students for modeling and measurement in a 3D global context.

Prerequisite(s): SU2570, MA3130

SU3500 - Adjustments

This course further explores the use of the Least Squares technique for the adjustment of survey observations. The parametric model is explored with an introduction to the combined model. The statistical analysis of derived parameters is used for quality assurance.

Prerequisite(s): SU1540, SU2330

Co-requisite(s): SU2570, MA3130

TA1141 - Orientation to Rehabilitation •

The purpose of this course is to introduce the student to the field of rehabilitation, the role of the Rehabilitation Assistant, professional organizations and areas of specialization. The course is followed by a one-week clinical placement.

TA1142 - Orientation to Rehabilitation •

This course aims to introduce the student to the field of rehabilitation, the role of the Rehabilitation Assistant, professional organizations, and areas of specialization. This course also includes 35 hours of clinical observation at an approved clinical site where students will be exposed to the rehabilitation profession.

TA1150 - Intro to Musculoskeletal Anatomy •

This course will provide an overview of the study of anatomy, physiology, and provide an overview of key body systems related to rehabilitation. This course will emphasize a greater focus on the musculoskeletal system and its movement to provide a foundation for work as a Rehabilitation Assistant (OTA & PTA).

TA1231 - Human Movement and Kinesiology •

This course will enable students to describe the human body in motion and to demonstrate safe body mechanics. This course will be based on the theoretical and practical study of human movement and kinesiology and how it applies to persons with atypical movement patterns. The course will include a lab component and a practical skills exam.

Prerequisite(s): TA1150

TA1390 - Anatomy and Physiology •

This course is an introduction to the structure of the human body and its systems with emphasis on the muscular, skeletal and nervous systems. In particular, this course provides the learner with the necessary knowledge base as it relates to anatomy and physiology in order to work as a Rehabilitation Assistant (OTA & PTA).

TA1395 - Anatomy & Physiology for Rehabilitation Assistants •

This course will provide an overview of select body systems and focus on the human body's cells, tissues, organs, and body systems. A particular focus will be placed on the primary organs, tissues, structures, and the associated pathologies commonly observed.

TA1511 - Introduction to Gerontology •

This course defines aging and the Canadian population according to current and forecast age distributions. Implications on the dependency, economic and social status of the elderly are analyzed. Health status and influencing factors are examined with a concurrent review of health care and housing systems available in urban and rural communities.

TA1601 - Introduction to Clinical Skills •

This course will enable students to effectively handle and move patients using safe body mechanics. The course will include a lab component and a practical skills exam.

TA1610 - Clinical Orientation Placement •

The purpose of this course is to introduce the student to the clinical setting and develop their observation and professionalism skills.

Co-requisite(s): TA1141

TA1612 - Advanced Clinical Skills •

This course is a continuation of TA1601 – Introduction to Clinical Skills. The student will learn the theory behind and practice in the lab setting, advanced handling and positioning skills, and therapeutic interventions. Students will utilize appropriate equipment and techniques to enhance client participation in therapeutic procedures. The student will practice these skills in the lab and complete a practical skills exam.

Prerequisite(s): TA1601, TA1142, TA1150

TA1701 - Clinical Placement I •

The student will demonstrate, in the clinical setting, advanced handling and positioning skills and therapeutic interventions. Students will utilize appropriate equipment and techniques to enhance client participation in therapeutic procedures.

Prerequisite(s): TA1612, TA1142, TA1231

TA2140 - Disease, Injury and Intervention I •

Students will be introduced to a selection of diseases and injuries based on broad diagnostic categories, including developmental, physical, and psychosocial conditions in pediatric, adult, and geriatric populations. Emphasis will be placed on the impact these conditions present to the individual and the rehabilitation management of these conditions.

Prerequisite(s): TA1150

TA2141 - Disease, Injury and Intervention II •

Students will continue their study of a selection of diseases and injuries based on broad diagnostic categories, including developmental, physical, and psychosocial conditions in pediatric, adult, and geriatric populations. Emphasis will be placed on the impact these conditions present to the individual and the rehabilitation management of these conditions.

Prerequisite(s): TA2140

TA2150 - Community Rehabilitation and Wellness for the Older Adult •

This course defines and explores the emerging trend towards rehabilitation care in the community and the Rehabilitation Assistant role (OTA & PTA). In addition, this course explores the unique needs and concerns of the aging population and specific supports to enable greater independence.

TA2221 - Communication Disorders in Rehabilitation •

This course addresses communication problems associated with neurological and sensory illnesses, which inhibit a person's ability to communicate effectively. This course focuses on teaching the students practical skills to enhance their communication skills with speech and language difficulties encountered with patients/clients.

TA2521 - Mental Health Concepts and Techniques •

This course provides a general overview of common mental health conditions and their management and mental illness and psychosocial practice theories. As well, current issues in mental health and social-cultural and developmental perspectives will be explored. To facilitate the integration of theory and knowledge into practice, consideration will be given to the role of the OTA, PTA, and Rehabilitation Assistant in this setting.

TA2615 - Therapeutic Skills II for the Rehabilitation Assistant (OTA and PTA) •

This course builds on the knowledge learned in *Therapeutic Skills I for OTA* and *Therapeutic Skills I for PTA*. The course focuses on the duties and role of the Rehabilitation Assistant and the integration of OTA and PTA skills in this role. Professional behaviours such as responsibility and accountability are addressed. Emphasis will be placed on therapeutic interventions with specific populations.

Prerequisite(s): TA2685, TA2671

TA2671 - Therapeutic Skills I for OTA •

This course will introduce students to and familiarize them with the occupational therapist assistant's theoretical knowledge and entry-level practical skills. Students will learn practical skills in therapeutic exercise and activity, occupations of daily living (self-care, productivity, and leisure), adapted techniques, modification of the environment, and adaptive equipment. These skills will be applied to a variety of disabling conditions in the rehabilitation setting.

Prerequisite(s): TA1231, TA1612, TA1701

TA2685 - Therapeutic Skills I for PTA •

This course aims to provide a foundation of exercise principles and techniques and the use of therapeutic modalities. The student will also learn to adjust and fit ambulatory devices and apply the techniques learned to the most common neurological and musculoskeletal conditions.

Prerequisite(s): TA1231, TA1612, TA1701

TA2710 - Clinical Placement III for the Rehabilitation Assistant (OTA and PTA) •

This six-week clinical placement will provide the opportunity for students to continue to develop the therapeutic skills learned in *Therapeutic Skills I for OTA* and *Therapeutic Skills I for PTA*. The student will demonstrate in the clinical setting advanced handling and positioning skills and therapeutic interventions. Students will utilize appropriate equipment and techniques to enhance client participation in therapeutic procedures. The student will practice entry-level competence as a Rehabilitation Assistant, integrating both roles and the higher-level clinical skills learned in *Therapeutic Skills II for the Rehabilitation Assistant* (OTA and PTA).

Prerequisite(s): TA1150, TM1130, CM1270, TA1142, TA1601, PS1420, TA1395, TA2140, TA2221, TA1231, TA1612, TA1701, HG1300, TA2141, TA2685, HG1681, TA2671, TA2521, TA2150, TA2741, TA2751, TA2615

TA2741 - Clinical Placement II for OTA •

This five-week clinical placement will provide the opportunity for students to continue to develop their therapeutic skills learned in *Therapeutic Skills I for OTA* and *Advanced Clinical Skills* and practice entry-level competence as an Occupational Therapist Assistant.

Prerequisite(s): TA1701, TA2671, TA1612, HG1300, TA2521

TA2751 - Clinical Placement II for PTA •

This five-week clinical placement will provide the opportunity for students to continue to develop their therapeutic skills learned in *Therapeutic Skills I for PTA* and *Advanced Clinical Skills* and practice entry-level competence as a Physiotherapist Assistant.

Prerequisite(s): TA1701, TA2685, TA1612, HG1300

TD2100 - Thermodynamics

This is an introductory course in thermodynamics. The course will provide the student with the basics of thermodynamics and its application to various processes.

Prerequisite(s): PH1100 or PH1150, CH1121

TD2120 - Thermodynamics

This course follows from Thermodynamics TD2100 and applies the knowledge obtained in that course to specific mechanical systems. These applications are ones which the mechanical engineering technologist is likely to use in his/her future work.

Prerequisite(s): TD2100

TD2140 - Thermodynamics

This course follows from Thermodynamics TD2100 and applies the knowledge obtained in the course to specific mechanical systems. These applications are ones which the mechanical engineering technologist is likely to use in his or her future work.

Prerequisite(s): TD2100

TD3100 - Thermodynamics

This is both a theory and practical course in the topic of refrigeration and air conditioning. It should draw on knowledge gained in Thermodynamics in the specific application refrigeration.

Prerequisite(s): TD2100

TD3140 - Heat Transfer

This is an introductory course in heat transfer which is designed to familiarize the student with the subject and its application to various system components that they may work with as mechanical engineering technologists.

Prerequisite(s): TD2100

TF1010 - TV & Film Industry Foundations

Working on a TV or film set is both fascinating and demanding. It is a complex work environment that requires attention to detail, resourcefulness, and a strong work ethic. This course is designed to provide an overview of best practices and will introduce students to set etiquette, two-way radio usage, film crew responsibilities, call sheets, unions, and set safety. Students will also participate in a realistic two-location shoot, both inside a studio and at an outside film shoot location.

TF1015 - TV & Film Analysis

Film is both a narrative and visual art form that has evolved from moving pictures to the blockbuster productions of today. In this course, students will be introduced to the cultural and historical contexts that influence film, as well as central concepts in film form and aesthetics. They will develop skills in film analysis and critical interpretation by examining cinematography techniques, various film genres, and cinematic history. The main goal of the course is to familiarize the student with analytical tools to investigate and explain film's multiple effects – in short, to articulate how a film works.

TF1020 - Screenwriting Fundamentals

This course explores the artistic and technical facets of screenwriting, and how the script serves as a blueprint for TV and film production. In this course students will be equipped with a comprehensive understanding of the basics of screenwriting.

TF1025 - Post-Production Process

Students will gain an understanding of the Post-Production pipeline. This course introduces the Post-Production process and workflow. Students will examine the various phases of activity in Post-Production, crew positions and their responsibilities.

TF1030 - Film Design & the Art Dept

This course is aimed at students in Television and Film who want to expand their knowledge in the field of film design and the Art Department; they will explore the essential elements needed to work in a professional Art Department.

Using a combination of theory and practical instruction, students will gain a greater understanding of film design and the role of the Art Department, the positions within the department, the working relationship between those positions, the purpose and professional requirements of those roles and the relationship of those in the art department with other departments.

TF1035 - Intro to Rigging & Special Effects

In this course, students will be introduced to rigging and special effects in television and film. Students will analyze how rigging is used in different departments, study rigging fundamentals, calculate safe working loads, erect, stabilize and dismantle equipment, work safely at heights, and apply and use all rigging and associated equipment. Students will be provided with the fundamentals of industry safety standards and procedures for safe operation in a practical and collaborative hands-on environment, which will enable them to support shoots with professionalism and accuracy.

As well, students will examine how special effects help tell a story and assess how they are incorporated seamlessly on screen. Students will explore various types of physical and practical effects, such as atmospheric effects.

TF1040 - Directing the Documentary

In this course on documentary storytelling, the focus is on honing narrative craft and understanding effective production planning, complemented with instruction in basic camera, lighting, audio and editing skills. The curriculum guides students from the development and pitching of a compelling idea, through all stages of its production, post-production, and final delivery. The course concludes with each student creating a short documentary film based on their approved pitched idea.

TF1110 - Intro to Camera, Lighting & Grip

Camera, lighting, and gripping are key areas in cinematography. This course explores each area and how they support the role of Director of Photography. Topics such as the camera department, camera systems and support, lighting, and gripping are introduced.

TF1115 - Intro to Sound & Sound Recording

On a television and film set, sound recording is an essential part of the entire production. This course is designed to introduce students to the fundamentals of sound and its transmission as it propagates through an acoustic environment. In addition, students will gain knowledge and skills about the use of microphones and how they are used to capture sound which, in turn, can be manipulated, encoded, and stored for the purpose of conversion into sound pressure in homes and theaters.

TF1120 - Intro to Rigging & Special Effects

In this course, students will be introduced to rigging and special effects in television and film. Students will examine how special effects help tell a story and assess how they are incorporated seamlessly on screen. In addition, students will analyze how rigging is used in different departments, and study rigging fundamentals. Students will investigate a range of atmospheric effects such as haze machines, smoke & fog machines, air cannons, flame bars, wind machines, snow machines, rain rigs, and wave makers, and observe how physical and practical effects are used on set.

TF1130 - Script Supervision

In this course, students will acquire the skills and knowledge required to conduct and maintain continuity of persons, plots, objects, places and events for every set up, take, scene, and sequence in a production, thus facilitating post-production editing. Students will study the fundamentals of script supervising, continuity and film grammar, and will collaborate with directors, producers, actors, and other crew members to maintain the internal continuity of the script. They will gain insight into the history and development of the position and develop the skills necessary to track details of each shooting session.

TF1135 - Acting for TV & Film Fundamentals

This course explores the artistic, technical, and business facets of acting for television and film. Students will examine acting techniques, assess acting as a career, and evaluate the requirements of acting on set.

TF1140 - Picture Editing I

Editing is the process of combining picture and sound to realize the director's vision. In this course, students will be

introduced to assembly and editing of picture and sound in a post-production environment. Students will operate a non-linear video editor while applying techniques to create a professional edit. Particular attention will be given to the fundamental concepts and practices used in post-production studios.

TF1145 - Colour Grading

Colour grading is a critical stage of post-production where the colours of television show or film are corrected then adjusted to achieve a desired look. In this course, students will be introduced to the process of colour correction and grading a television or film production. Topics include colour theory, colour calibration and management, colour grading and correction, Digital Imaging Technician functions, and backup and data transfer.

TF1210 - Acting on Camera I

This course introduces students to the process of acting on camera. Starting with the fundamentals, students conduct script analysis and explore the techniques of working on camera. They will learn to navigate the technical demands of working on camera in solo performance. In addition, students will have the opportunity to enhance their skills through filmed exercises that are reviewed in class.

TF1215 - Directing I

In this course, students will be introduced to the art and craft of directing for television and film. Students will learn the language of film, and analyze the frame, shot composition, and mise-en-scène elements from both practical and aesthetic perspectives. The final assignment will be a non-sync sound film that tells a story using a variety of camera shots, composition principles, and lighting and editing techniques explored in the course.

TF1220 - Acting on Camera III

This course builds on the skills acquired in Acting on Camera II. Students will delve deeper into the techniques of acting on camera and the practice of scene study. Students will learn to navigate the technical demands of working on camera in performances of three or more actors. Students will have the opportunity to enhance their skills through filmed exercises that are reviewed in class.

Prerequisite(s): TF2130

TF1225 - Acting on Camera IV

In this course, students will practice the skills developed in previous semesters. In a student led setting, participants will prep and shoot full multi-camera scenes and engage in the dailies process.

Prerequisite(s): TF1220

TF1230 - TV Writing & Story Editing

Building on Screenwriting Fundamentals, this course further explores the creative and technical facets of screenwriting, with a focus on script series. Students will be equipped with a comprehensive understanding of the evolution of script series, standard series genres and formats, how to pitch their series, how a TV writing room works, and how TV scripts are written.

Prerequisite(s): TF1020

TF1310 - Film Project - TV & Film Creation

In this course, students will participate in the production of a short film. Using the skills and knowledge attained in the previous semesters, students will participate as members of a creative team in varying roles. Students will work as a team with others from related programs during all phases of production.

Prerequisite(s): TF1135, TF1210, TF1010, CM1450, TF1015, CP2115, TF1020, TF2130, TF1215, TF2140, CM1115

TF2010 - Post-Production Supervision

The supervision of the post-production process is an important task. This course will introduce the role of the Post-Production Supervisor. It will explore the primary task of overseeing a post-production project from beginning to end. There will be a focus on identifying the workflow then creating and managing the budget and timeline of a post-production project.

Prerequisite(s): TF1025

TF2110 - Location Sound Recording

In this course, students will set up and use sound equipment and accessories to record dialogue and live sound effects

on location for screen productions according to safety and production requirements. Students will work collaboratively in a team environment to meet production requirements and follow procedures for finalizing sound recordings at the conclusion of production.

Prerequisite(s): TF1115

TF2115 - Camera I

The camera department performs a vital role on a television or film project. In this course, students will be introduced to skills required of the assistant cameraperson. Through in-depth lectures and hands-on assignments, topics such as camera systems and support, filters and lenses, and the basic skills of setting up a cinema camera will be demonstrated. In addition, students will be able to block a scene and perform slating.

Prerequisite(s): TF1110

TF2120 - Rigging

Rigging is a vital skill required on a television or film set as it supports camera and lighting operations. To effectively rig, students will be required to calculate safe working loads, erect, stabilize and dismantle equipment, work safely at heights, and apply and use all rigging and associated equipment. In this course, students will be provided with the fundamentals of industry safety standards and procedures for safe operation in a practical and collaborative hands-on environment. This, in turn, will enable them to support shoots with professionalism and accuracy.

Prerequisite(s): TF1120

TF2125 - Props

This course introduces students to the function and responsibilities of the Property Department within the overall production team on a television or film set. Students will analyze the daily operations of the Prop Shop, identify props requirements for a script, build and maintain props, and manage props on set to ensure continuity. By the end of the course, students will break down a script to determine which props need to be built, purchased, or rented; devise a budget for the props needs of a script; coordinate with and compare script breakdowns from different departments; and manage the workflow of the Property Department.

TF2130 - Acting on Camera II

This course builds on the skills acquired in Acting on Camera I. Students will continue to investigate the techniques of acting on camera and practice scene study and auditioning. Students will learn to navigate the technical demands of working on camera in partnered performance. In addition, they will have the opportunity to enhance their skills through filmed exercises that are reviewed in class.

Prerequisite(s): TF1210

TF2135 - Scripts I

This course builds on the knowledge and skills acquired in Screenwriting Fundamentals. In this course, students will delve into character development, conflict, and dialogue in film scripts. Basic concepts of developing the protagonist/antagonist relationship, story conflict, and resolution will be introduced in addition to writing scenes.

Prerequisite(s): TF1020

TF2140 - Production Scheduling

In this course, students will acquire the skills and knowledge necessary to compile production schedules during the pre-production and production planning phase in the television and film industry. Students will analyze production requirements and vet schedules to deliver productions on time and on budget. Students will also take part in the pre-production process for the Film Projects.

TF2145 - Scripts II

The craft of screenwriting shapes the writers' work toward a meaningful script that serves as the blueprint for production. Building on Scripts I, students will explore story, plot structure, and theme, and will enhance their screenwriting skills through a series of exercises culminating in writing a five to ten page short film script.

Prerequisite(s): TF2135

TF2150 - Post-Production Audio

Soundtrack construction for a television or film production is a creative process where recording, editing, track laying, and mixing takes place. While operating industry-standard hardware and software, students will record, edit, process,

and mix dialogue, music and sound effects for film and television productions.

TF2155 - Dialogue Editing & Recording

Dialogue is an important audio element in any production. Effective dialogue can pull viewers into a story to keep them watching. In this course, students will be introduced to tools and techniques to create seamless dialogue tracks. For production dialogue lines that are unsalvageable, students will identify, document, cue, record, and edit new dialogue in a process called automated dialogue replacement (ADR) or looping.

Prerequisite(s): TF2150

TF2160 - Compositing & Effects

This course introduces students to digital compositing for film and television projects. Students will operate digital compositing software while applying the fundamental concepts and techniques of digital compositing. Animation, plate cleanup, noise and grain, rotoscoping and keying, motion tracking and stabilization, effects, and rendering are explored.

TF2210 - Camera II

As a continuation from Camera I, this course will introduce students to intermediate camera systems and support, data management workflow, on-set communications, camera operation and movement, focus pulling and filmmaking techniques. Students will continue their training with hands-on assignments to build upon their previously acquired skills.

Co-requisite(s): TF2115

TF2215 - Grip I

Grips are the key technical support of cinematography on television or film production. In this course, students continue to refine their grip skills. Students will work with both lighting and camera departments to determine how to shape light and shadows that affect the shot, in addition to acquiring knowledge and skills integral to working as a grip on set.

Prerequisite(s): TF1110

Co-requisite(s): TF2120

TF2216 - Grip I

Grips are the key technical support of cinematography on television or film production. In this course, students continue to refine their grip skills. Students will work with both lighting and camera departments to determine how to shape light and shadows that affect the shot, in addition to acquiring knowledge and skills integral to working as a grip on set.

Prerequisite(s): TF1110

Co-requisite(s): TF1035

TF2220 - Lighting

In this course, students will study the fundamentals of providing relevant lighting and power for a film, either on a studio set or on location. Students will be introduced to electrical theory and electrical safety and will safely operate a generator. In addition, they will prepare, install, test, and adjust lighting equipment for a shoot in a team environment.

Prerequisite(s): TF1110

Co-requisite(s): TF2120

TF2225 - TV & Film Finance & Budget

In this course, students will acquire the skills and knowledge necessary to create and manage a production budget for television or film. Students will explore sources of financing for a production, and follow the full budget cycle from project development to completion. In addition, they will examine industry standard banking and petty cash practices.

TF2230 - Directing II

In this course, students will focus on the practical considerations and creative strategies employed in directing actors in the execution of scenes for the screen. Students will apply visual storytelling techniques and production methods while working with actors and other team members. Students will complete a scene as their final project.

Prerequisite(s): TF1215

TF2235 - Directing III

Building upon Directing II, students will work with actors and combine the elements of mise-en-scène to complete a short film. In addition, students will apply cinematic components to illustrate a vision for a film. Utilizing techniques and directing approaches from the course, students will direct, shoot, assemble and deliver a short film that engages in visual storytelling.

Prerequisite(s): TF2230

TF2240 - Business of TV & Film

This course builds upon material introduced in TV & Film Finance & Budget. Students will engage in a comprehensive review of the typical business models for television and film production companies. Students will approach production from the perspective of financing and legal obligations. Using case studies and examples, this course will detail the main funding models, sources, and organizations by project type. Expected business practices within the Canadian industry will be detailed. In addition, students will analyze green production practices and the importance of diversity and inclusion in the industry.

Prerequisite(s): TF2225

TF2245 - Picture Editing II

Editing is much more than putting images together. At its best, it is the conscious action of bringing out a film's text and subtext to fulfill a larger vision. In this course the students will read a script for a story, analyze the shot footage for a story, and assemble all picture and sound elements together to achieve the intended vision.

Prerequisite(s): TF1140

TF2250 - Sound Effects & Foley

Sound effects provide a plethora of information to the audience. They can create and enhance mood which is important in telling the story. In this course, students will be introduced to the art of sound effects (SFX) and Foley. Students will build hard sounds, backgrounds, and record SFX in sync with the picture.

Prerequisite(s): TF2150

TF2255 - Audio Mixing for TV & Film

Mixing audio is the final step in the audio production process for television and film. It includes assembly of dialogue, music, and effects, balanced in perfect harmony, and then incorporated into the picture. In this course, students will be introduced to setting up for a film mix, managing data from dialogue, music and effects sessions - while applying balancing, processing, de-noising, and routing and bussing techniques.

Prerequisite(s): TF2150

TF2260 - Managing On-Set Production

In this course, students will analyze the skills and knowledge required to effectively manage television and film on-set productions. Students will examine leadership, teamwork, and time management skills required for the proper functioning of the set. In addition, they will evaluate the departments and teams responsible for logistics, safety, and production.

TF2310 - Camera III

In this course, students will be introduced to advanced techniques of camera operation, support, lenses, and filters, as well as exploring filmmaking scenarios. There will be a focus on setting up and operating advanced camera gear.

Co-requisite(s): TF2210

TF2315 - Grip II

In this course students will build on the grip skills acquired in Grip I. Training will include how to work with the camera department to create intricate camera moves with dollies and cranes, in addition to manipulating natural and sourced light to create a desired shot.

Co-requisite(s): TF2215

TF2316 - Grip II

In this course students will build on the grip skills acquired in Grip I. Training will include how to work with the

camera department to create intricate camera moves with dollies and cranes, in addition to manipulating natural and sourced light to create a desired shot.

Co-requisite(s): TF2216

TF2320 - Scenic Paint

In this course, students will be introduced to the art of scenic painting and other scenic areas within the Art Department. Materials and processes will be examined in the creation of set walls, surface treatments, and sculptural elements. Students will work collaboratively while being introduced to carpentry, plastering, painting, to create a simple studio set.

TF2325 - Set Decoration

This course explores how set decorators visually interpret a film or television show from script to scene through set décor. The course encompasses all the processes and procedures involved in set decoration, including selection, procurement, and fabrication; storage, movement, and placement; maintenance and replacement; on-set continuity; and workflow management. By the end of the course, students will understand how to tell a story by creating a background for the action unfolding onscreen.

TF2330 - Production Office Management

In this course, students will be introduced to the structure, members, and responsibilities of the production office. Students will evaluate hiring practices in the industry, discuss constructive methods of dealing with conflict, and practice effective communication skills. In addition, they will analyze the duties of key members of the production office team.

TF3010 - Career Development

This course focuses on building a professional and creative career in the television and film industry. Students will plan their short-term, mid-term, and long-term goals, and explore opportunities available within the industry for on-going career advancement. Students will discuss membership in professional organizations and unions, in addition to discussing the purpose of agents, lawyers, managers, and casting directors. Throughout the course, students will determine how to market and promote themselves and how to achieve their career goals.

TF3110 - Film Project - Technical Production

In this course, students will participate in the production of a short film. Using the skills and knowledge attained in the previous semesters, students will participate as members of a film crew in their field(s) of expertise. Students will work as a team with others from related programs during all phases of production.

Prerequisite(s): TF1010, TF1015, CP2115, TF1110, TF1115, TF1120, CM1115, plus: TF2110, TF2115, TF2210, TF2310, or: TF2120, TF2215, TF2315, TF2220, or: TF1130, TF2125, TF2320, TF2325

TF3115 - Field Placement Preparation

This two-week field placement preparation course is designed to assist students enrolled in Television and Film Technical Production or Television and Film Production Management programs in obtaining relevant occupational experience. In this course, students will prepare for the six-week field placement by completing pertinent industry certifications and other preparatory work.

Prerequisite(s): TF1010, TF1015, CP2115, TF1110, TF1115, TF1120, CM1115, plus: TF2110, TF2115, TF2210, TF2310, or: TF2120, TF2215, TF2315, TF2220, or: TF1130, TF2125, TF2320, TF2325

Co-requisite(s): TF3110

TF3120 - Capstone Project - TV & Film Creation

In this capstone project, students will plan and participate in a short film shoot. Using the skills and knowledge attained in the previous semesters, students will collaborate with other television and film programs in organizing and executing a film production. Starting with an idea, students will pitch their project, develop a budget, organize the production crew, shoot the film, and oversee the editing process.

Prerequisite(s): TF1310

TF3125 - Film Project - Production Management

In this course, students will participate in the production of a short film. Using the skills and knowledge attained in the

previous semesters, students will participate as members of a production team in their field(s) of expertise. Students will work as a team with others from related programs during all phases of production.

Prerequisite(s): TF1010, TF1025, TF1130, CM1115, CP2115, TF1015, OF1101, TF2260, TF2330, TF2225, TF2140

TF3130 - Field Placement Preparation

This two-week field placement preparation course is designed to assist students enrolled in Television and Film Technical Production or Television and Film Production Management programs in obtaining relevant occupational experience. In this course, students will prepare for the six-week field placement by completing pertinent industry certifications and other preparatory work.

Prerequisite(s): TF1010, TF1025, TF1130, CM1115, CP2115, TF1015, OF1101, TF2260, TF2330, TF2225, TF2140

Co-requisite(s): TF3125

TF3210 - Field Placement

This field-related course is designed to assist students enrolled in Television and Film Technical Production or Television and Film Production Management in obtaining occupational experience. The purpose of this six-week field placement is to provide students with the opportunity to apply the knowledge and skills acquired in class to an entry level position in the television and film industry.

The supervising program instructors will assist students in securing a suitable and approved placement. The instructors will evaluate student progress in conjunction with the field placement supervisor. Arrangements and expenses for transportation, lodging, and meals are the sole responsibility of the student. (Please note: under extenuating circumstances wherein an external field placement is not secured, an equivalent industry-related project approved and supervised by the instructor is acceptable).

Prerequisite(s): TF1010, TF1015, CP2115, TF1110, TF1115, TF1120, CM1115, plus: TF2110, TF2115, TF2210, TF2310, or: TF1130, TF2125, TF2320, TF2325

Co-requisite(s): TF3115

TF3220 - Capstone Project

The course allows students to demonstrate the application of knowledge and skills acquired throughout the program. Students will be involved in the creation of a television or film project while participating in a simulated professional post-production environment.

Prerequisite(s): TF2010, TF2155, TF2245, TF2160, TF2250, TF2255

TF3225 - Field Placement

This field-related course is designed to assist students enrolled in Television and Film Technical Production or Television and Film Production Management in obtaining occupational experience. The purpose of this six-week field placement is to provide students with the opportunity to apply the knowledge and skills acquired in class to an entry level position in the television and film industry.

The supervising program instructors will assist students in securing a suitable and approved placement. The instructors will evaluate student progress in conjunction with the field placement supervisor. Arrangements and expenses for transportation, lodging, and meals are the sole responsibility of the student. (Please note: under extenuating circumstances wherein an external field placement is not secured, an equivalent industry-related project approved and supervised by the instructor is acceptable).

Prerequisite(s): TF1010, TF1025, TF1130, CM1115, CP2115, TF1015, OF1101, TF2260, TF2330, TF2225, TF2140

Co-requisite(s): TF3130

TI1000 - Trades Profiles

The Trades Profiles course will introduce students to the wide variety of trades offered at College of the North Atlantic (CNA).

TI1010 - Job Search Workshop

This Job Search Workshop is intended to help students prepare for a job search. Students will create a resume, cover letter and will learn how to prepare for an interview.

TI1020 - Certifications

This course provides students with the knowledge and skills to identify and assess workplace crisis and to implement appropriate strategies for prevention and intervention. Students will acquire the appropriate knowledge and skills through the completion of a series of workshops and certifications.

TM1100 - Medical Terminology I •

This course is designed to guide the student from the fundamentals of word building to complete mastery of a medical word building system. Correct spelling and pronunciation are emphasized.

TM1111 - Medical Terminology

This course provides the engineering technologist with the terminologies commonly used in the areas of practice encountered in a healthcare environment to allow them to effectively communicate, on a technical level, with other healthcare professionals. The course integrates the terms for anatomy, physiology and pathology of specified body systems in a manner that meets these needs.

TM1130 - Medical Terminology •

This course is designed to guide the student from the fundamentals of word building to complete mastery of a medical word-building system. Correct spelling and pronunciation are emphasized. The course integrates the terms for anatomy, physiology, and pathology of specified body systems in a manner that maximizes learning opportunities.

TM1150 - Medical Terminology •

This course is designed to guide the student from the fundamentals of word building to complete mastery of a medical word-building system. Correct spelling and pronunciation are emphasized. The course integrates the terms for anatomy, physiology, and pathology of specified body systems in animals.

TM1301 - Medical Terminology for the Legal Field

This course is designed to provide students in the office administration legal program with an understanding of medical terminology often found in legal reports and client files. Students will learn the fundamentals of word building leading to the ability to interpret medical terms. Spelling and pronunciation are emphasized. Topics cover specific body systems that are common to civil actions in Supreme Court. Case law examples will demonstrate the occurrence and use of medical language in court and in the legal office environment.

TM1310 - Technical Modeling - Mechanical Drawings

This intermediate level course is designed to provide students with the ability to interpret and prepare drawings used in specialized areas of mechanical engineering. Students will prepare and interpret Assembly Drawings, Fit Tolerance Drawings, Piping Drawings, Welding Drawings and P & ID diagrams.

Prerequisite(s): EG1430

TM1320 - Technical Modeling - 3D Modeling

This is an advanced course in computer aided drafting and design. Parametric 3D CAD software is used for both virtual prototyping of mechanical systems and development of related working drawings. The command tools commonly used for 2D sketch development, 3D feature creation, and part assembly, 2D drawing generation, 2D drawing annotation, and 3D simulation are explored. For 2D drawing annotation, particular emphasis is placed on the command tools used for geometric dimensioning and tolerancing.

Prerequisite(s): EG1430

TM2100 - Medical Terminology II •

This course is a continuation of TM1100 with emphasis on building and interpreting terminology related to the anatomy, physiology, and pathology of the human body. Correct spelling and pronunciation are emphasized.

Prerequisite(s): TM1100

TR1100 - Cultural Tourism & the Arts

This course introduces the concept of Cultural Tourism and its connection to the Arts. Students will learn the principles and typologies of the cultural tourism industry while focusing on the effect that it has on art, heritage, culture and vice versa. Students will examine tourism's leading role in community economic development through the presence and promotion of the arts & culture.

Arts, cultural & heritage tourism have emerged as a major market segment and a significant pull factor to travel to a specific location. A major aspect of this course is an understanding of how Newfoundland and Labrador and other destinations around the world can capitalize on its arts, culture & heritage in a sustainable manner.

TR1110 - Tourism & Technology

Technology touches almost every aspect of the tourism industry. This course is designed to look at some of the common technology used today in the tourism industry and how tourism businesses use the technology to connect with potential customers. Technology is a powerful tool for tourism businesses if they maximize the options available.

TR1120 - Professional Certifications I

The success of Canada's tourism industry depends on the quality of service guests receive when they visit our hotels, restaurants, parks, museums, and numerous other attractions and events. This quality of service is enhanced through training and certification. This course will encompass nationally recognized credentials granted to a candidate upon successful demonstration of competence as outlined in a series of workshops and seminars. Certification is one of the most important ways of promoting and recognizing a highly skilled workforce. **Students should be aware that additional fees apply for the certifications.**

TR1130 - Professional Certifications II

The success of Canada's tourism industry depends on the quality of service guests receive when they visit our hotels, restaurants, parks, museums, and numerous other attractions and events. This quality of service is enhanced through training and certification. This course will encompass nationally recognized credentials granted to a candidate upon successful demonstration of competence as outlined in a series of workshops and seminars. Certification is one of the most important ways of promoting and recognizing a highly skilled workforce. **Students should be aware that additional fees apply for the certifications.**

TR1600 - NL Tourism Destinations

This course explores Newfoundland and Labrador tourism destinations and delivers an introduction into the rich culture, history, archaeology and geology for which the province is world-renowned, the diverse flora and fauna, the whales, seabirds and icebergs, attractions both physical and man-made, and the festivals and special events that make the province popular with tourists. Students will discover that special charm that makes Newfoundland and Labrador unique. Students will participate in FAM (familiarization) tours to regional tourist attractions to develop a greater understanding and appreciation of the tourism products available.

TR1610 - Intro to Tourism

This course is an introductory course designed to give students an overall view of the tourism industry. Students will explore the theories of travel motivation before moving into the five major industries of tourism. Issues and challenges facing tourism will also be covered.

TS1510 - Occupational Health and Safety

This course is designed to give participants the knowledge and skills necessary to interpret the Occupational Health and Safety Act, laws and regulations; understand the designated responsibilities within the laws and regulations; the right to refuse dangerous work; and the importance of reporting accidents. Upon successful completion of this unit, the apprentice will be able to: prevent accidents and illnesses; improve health and safety conditions in the workplace.

TS1520 - Workplace Hazardous Materials Information System (WHMIS)

This course is designed to give participants the knowledge and skills necessary to define WHMIS, examine hazard identification and ingredient disclosure, explain labeling and other forms of warning, and introduce material safety data sheets (MSDS).

TS1530 - First Aid

This course is designed to give the apprentice the ability to recognize situations requiring emergency action and to make appropriate decisions concerning first aid.

Prerequisite(s): Complete a St. John Ambulance Standard First Aid Certificate course.

TS1550 - Workplace Hazardous Materials Information System (WHMIS)

This course is designed to give participants the knowledge and skills necessary to define WHMIS, examine hazard identification and ingredient disclosure, explain labeling and other forms of warning, and introduce material safety data sheets (MSDS).

TX1100 - Fibre & Fabric Exploration

This course is an introductory course designed to introduce students to various fibers and their properties. Students will learn the basics of studio safety, fibre properties, techniques and applications.

TX1200 - Introduction to Sewing

This course will introduce students to basic sewing skills. Students will be introduced to the industrial straight stitch, the four-thread overlock, the five-thread finishing machine, the industrial blind hemming machine, the double needle machine, the industrial walking foot machine, industrial fur sewing machine and the industrial gravity feed steam iron. Topics include basic sewing tools and techniques transferred into a series of weekly sewing samples while also gaining knowledge in basic flat pattern construction and application. Students will be required to make a pattern, create a knit garment and create a duplicate garment.

TX1210 - Industrial Sewing

In this course, students will use industrial sewing machines and equipment. Students will work with the industrial straight stitch, the four-thread overlock, the five-thread finishing machine, the industrial blind hemming machine, the double needle machine, the industrial walking foot machine, industrial fur sewing machine and the industrial gravity feed steam iron in an industrial production setting. Students will also use industrial cutting tools. Students will develop speed and accuracy using industrial equipment and produce samples according to industry standards. As a group, students are required to complete a production of 50-100 products and use their computer skills to design and create labeling for the product.

Prerequisite(s): TX1200, TX1400

Co-requisite(s): CG1400

TX1220 - Fabric Design I

This course introduces students to basic fabric design, construction and finishing techniques. Content includes knit, weave and felt. Knit and felt includes shaping, texture, and colour usage, while weave content covers basic weave structure, texture and colour in tapestry and floor loom weaving. Students will learn to maintain accurate records of their work.

Prerequisite(s): VA1200, TX1100

TX1225 - Surface Design I

This is an introductory course in surface design techniques. Topics covered include basic dye chemistry and techniques, basic surface embellishment techniques and basic rug hooking techniques. Students will learn to maintain accurate records of their work.

Prerequisite(s): VA1200, TX1100

TX1400 - Apparel Design I

This is the first in a series of courses in apparel design. An overview of the apparel industry is provided with emphasis placed on mastering basic sewing techniques for the purpose of producing garments according to industry standards. Students are required to complete a sleeveless dress and pant.

Prerequisite(s): TX1200, VA1200

TX2100 - Art Marketing

In this course, students will create an online presence for display of their work. Topics include photography, website development, social media, branding, development and maintenance.

Prerequisite(s): GA1130, CM1450

UL1200 - Fundamentals of Sonography

This course provides a general overview of the fundamentals of sonography. Terminology and principles to ultrasound will be reviewed. Orientation to the laboratory will be completed to include orientation to the equipment, usage and maintenance. The student will learn the necessary preparation and implementation of an ultrasound examination. This course will focus on the ergonomics and patient care for the sonographer and patient. This course

will also provide the students with the opportunity to learn their role in interventional procedures, trauma and emergency situations. A full professional overview will be completed to include student accounts necessary for clinical placements, Code of Ethics, Scope of Practice, provincial and federal legislation and regulations to include professional liability.

UL1205 - Scanning I

This is a comprehensive course designed to provide the student with sufficient practice to acquire the basic skills necessary to produce diagnostic ultrasound images. Instruction will be provided in ultrasound practice, principles and protocol. Emphasis will be placed on the recognition of normal sonographic findings utilized for abdominal and abdominal vascular examinations.

Co-requisite(s): UL1210, UL1200

UL1210 - Abdomen

This course is designed to enable the student to acquire a comprehensive knowledge of abdominal ultrasound. The didactic phase of the program will include instruction in abdominopelvic organs and vasculature. Emphasis will be placed on cross-sectional anatomy, pathophysiology, examination procedures and protocol, and normal/abnormal sonographic appearances. This course will provide further opportunity to develop skills and integrate knowledge from first semester courses. Ultrasound images with documented pathology will be presented and reviewed. The etiology, signs and symptoms, differential diagnosis and sonographic appearance will be examined.

Co-requisite(s): UL1205

UL1300 - Scanning II

This is a comprehensive course designed to provide the student with sufficient practice to acquire the basic skills necessary to produce diagnostic ultrasound images. Instruction will be provided in ultrasound practice, principles and protocol. Emphasis will be placed on the recognition of normal sonographic findings utilized for the gastrointestinal tract and superficial structure examinations. In addition to classroom time, students will attend site orientations to experience the clinical environment.

Prerequisite(s): UL1205, UL1200

Co-requisite(s): UL1305

UL1305 - Abdomen & Superficial Structures

This course is designed to enable the student to acquire a comprehensive knowledge of abdominal and superficial structures ultrasound. The didactic phase of the program will include instruction on the gastrointestinal system and superficial structures. Emphasis will be placed on cross-sectional anatomy, pathophysiology, examination procedures and protocol, and normal/abnormal sonographic appearances. This course will provide further opportunity to develop skills and integrate knowledge from first and second semester courses. Ultrasound images with documented pathology will be presented and reviewed. The etiology, signs and symptoms, differential diagnosis and sonographic appearance will be examined.

Prerequisite(s): UL1210

Co-requisite(s): UL1300

UL2100 - Scanning III

This is a comprehensive course designed to provide the student with sufficient practice to acquire the basic skills necessary to produce diagnostic ultrasound images. Instruction will be provided in ultrasound practice, principles and protocol. Emphasis will be placed on basic, alternate and specialized imaging techniques utilized for gynaecological and vascular examinations.

Prerequisite(s): UL1300

Co-requisite(s): UL4230, UL2105

UL2105 - Vascular

This course is designed to enable the student to acquire a comprehensive knowledge of generalist vascular ultrasound. The didactic phase of the program will include instruction in vascular. Emphasis will be placed on cross-sectional anatomy, pathophysiology, examination procedures and protocol, and normal/abnormal sonographic appearances. This course will provide further opportunity to develop skills and integrate knowledge from other courses. Ultrasound images with documented pathology will be presented and reviewed. The etiology, signs and symptoms, differential diagnosis and sonographic appearance will be examined.

Co-requisite(s): UL2100

UL2110 - Simulation I

This course is designed to prepare learners for practicum placements through synthesizing and integrating knowledge and skills learned in previous courses. Learners will demonstrate proficiency in patient preparation, implementation, and post procedure requirements for sonographic examinations for various patient types in a simulated setting. Using teamwork learners will simulate the adverse and challenging events that a sonographer may be faced with.

Prerequisite(s): UL1205, UL1300, UL1210, UL1305

Co-requisite(s): UL2115

UL2115 - Cross Sectional Anatomy

This course is designed to enable the student to acquire a comprehensive knowledge of the abdominopelvic cavity and its structures in the transverse and sagittal planes. Emphasis will be on learning the quadrants, regions, planes, coronal, sagittal and transverse images. This course will build upon prior learning and provide an inclusive look into all structures and relationship anatomy in the abdominopelvic cavity.

Prerequisite(s): UL1210, UL1305

Co-requisite(s): UL2110

UL2200 - Scanning IV

This is a comprehensive course designed to provide the student with sufficient practice to acquire the basic skills necessary to produce diagnostic ultrasound images. Instruction will be provided in ultrasound practice, principles and protocol. Emphasis will be placed on the recognition of how to manipulate measurements, calculations and worksheets required for obstetrical examinations.

Prerequisite(s): UL2100

Co-requisite(s): UL4210

UL2205 - Simulation II

This course is designed to prepare learners for practicum placements through synthesizing and integrating knowledge and skills learned in previous courses. Learners will demonstrate proficiency in patient preparation, implementation, and post procedure requirements for sonographic examinations for various patient types in a simulated setting. Using teamwork learners will simulate the adverse and challenging events that a sonographer may be faced with.

Prerequisite(s): UL4230, UL2105, UL2100, UL2110

UL4110 - Ultrasound Physics

This course is designed to instruct the student in the theoretical and practical application of ultrasound physics and instrumentation. Selected topics include the interaction of sound and matter, properties of ultrasound transducers, pulse echo instrumentation, images and artifacts, and Doppler instrumentation.

Prerequisite(s): MA1700, PH1110

UL4210 - Obstetrics

This course is designed to enable the student to acquire a comprehensive knowledge of obstetrics. The didactic phase will include instruction in normal embryo / fetal growth and development from fertilization to parturition. Emphasis will be placed on cross-sectional anatomy, pathophysiology, examination procedures and protocol, and normal / abnormal sonographic appearances.

Prerequisite(s): UL4230

Co-requisite(s): UL2200

UL4230 - Gynecology

This course is designed to enable the student to acquire a comprehensive knowledge of female pelvic anatomy and physiology. The didactic phase of the program will include instruction in pelvic musculature, peritoneal compartments, reproductive organs and vasculature. Emphasis will be placed on cross-sectional anatomy, pathophysiology, examination procedures and protocol, and normal / abnormal sonographic appearances.

Co-requisite(s): UL2100

UL4310 - Basic Scanning I

This is a comprehensive course designed to provide the student with sufficient practice to acquire the basic skills necessary to produce diagnostic ultrasound images. Instruction will be provided in ultrasound practice, principles and protocol. Emphasis will be placed on basic, alternate and specialized imaging technique utilized for abdominal and vascular examinations.

Co-requisite(s): UL4420, UL4430

UL4311 - Basic Scanning II

This is a comprehensive course designed to provide the student with sufficient practice to acquire the basic skills necessary to produce diagnostic ultrasound images. Instruction will be provided in ultrasound practice, principles and protocol. Emphasis will be placed on basic, alternate and specialized imaging techniques utilized for superficial obstetrical and gynaecological examinations.

Prerequisite(s): Successful completion of semester 1

Co-requisite(s): UL4210, UL4230, UL4610

UL4420 - Abdomen

This course is designed to enable the student to acquire a comprehensive knowledge of abdominal ultrasound. The didactic phase of the program will include instruction in abdominopelvic organs, vasculature and a profession overview. Emphasis will be placed on cross-sectional anatomy, pathophysiology, examination procedures and protocol, and normal/abnormal sonographic appearances.

This course is designed to enable the student to acquire a comprehensive knowledge of abdominal ultrasound. The didactic phase of the program will include instruction in abdominopelvic organs, vasculature and a profession overview. Emphasis will be placed on cross-sectional anatomy, pathophysiology, examination procedures and protocol, and normal/abnormal sonographic appearances.

Co-requisite(s): UL4430, UL4310

UL4430 - Abdomen Pathology

This course is designed to enable the student to acquire a comprehensive knowledge of the pathology encountered with abdominal ultrasound. Emphasis will be placed on cross-sectional anatomy, pathophysiology to know the abnormal sonographic appearances.

Co-requisite(s): UL4420, UL4310

UL4510 - Superficial Structures

This course is designed to enable the student to acquire a comprehensive knowledge of superficial organs and structures. The didactic phase of the program will include instruction in thyroid, parathyroid, scrotal, testes, upper extremity venous, musculoskeletal and salivary gland anatomy. Emphasis will be placed on cross-sectional anatomy, pathophysiology, examination procedures and protocol, normal / abnormal sonographic appearances.

Prerequisite(s): Successful completion of 2nd semester.

Co-requisite(s): UL4611

UL4605 - Clinical III

This phase of the program is designed to enable the student to acquire, to the fullest extent, the technological skills necessary to become competent in the practice of ultrasonography. Emphasis is placed on extensive "hands on" scanning in the clinical setting. Upon completion of training the student will be able to produce high quality scans in all general and most specialty areas in an efficient and effective manner.

Prerequisite(s): UL4611

UL4610 - Clinical I

This phase of the program is designed to enable students to acquire, to the fullest extent, the technological skills necessary to become competent in the practice of ultrasonography. Emphasis is placed on extensive "hands on" scanning in the clinical setting. Upon completion of training the student will be able to produce high quality scans in all general and most specialty areas in an efficient and effective manner.

Prerequisite(s): UL2200, UL2205, HG2050, UL1200, UL4210

UL4611 - Clinical II

This phase of the program is designed to enable the student to acquire, to the fullest extent, the technological skills

necessary to become competent in the practice of ultrasonography. Emphasis is placed on extensive "hands on" scanning in the clinical setting. Upon completion of training the student will be able to produce high quality scans in all general and most specialty areas in an efficient and effective manner.

Prerequisite(s): UL4610

VA1100 - Introduction to Drawing

This course is designed to introduce students to the rudiments of drawing. Students practice observation, identify variations within subject matter, and translate these visions into the drawn form. A variety of basic techniques and drawing styles are introduced and developed during the semester.

VA1101 - Drawing Application

This course consolidates and refines skills developed during the Introduction to Drawing course. Experimentation with various media qualities, techniques, and compositional studies are stressed in relation to developing the drawing. Particular individual attention is paid to drawing problem areas to ensure that the student develops strong drawing skills.

Prerequisite(s): VA1100

VA1110 - Drawing Methods & Media •

Students will be engaged in observational drawing exercises using historical and contemporary drawing processes while developing integral perceptual and technical skills. Students will learn to see and evaluate the visual world and learn to translate visual impressions using a wide range of media. Over the duration of the course, students will document the improvement in their individual drawing skills through the keeping of a working portfolio. Students will benefit from both group and individual instruction and critique.

VA1115 - 2D Design •

This is an introductory course in the elements and principles of design related to two dimensional works. Students will be provided with an understanding of design concepts, the elements of design, the principles of design, and how they can be used in visual communications.

VA1120 - Digital Imaging •

This course introduces students to the digital manipulation of images. Working from photographs, drawn and scanned images and objects, students will focus on the creative process of image development using Adobe Photoshop Creative Cloud. The course will emphasize digital imaging as a tool for the development of ideas, image design and critical thinking. Selected work produced in this course will contribute to personal portfolios.

Prerequisite(s): PY1150

VA1130 - Drawing Fundamentals

Students will learn the rudiments of drawing as a means of communicating objective ideas. Students will study fundamental drawing techniques with a view of developing accurate visual illustration skills required in design, and other collaborative problem solving disciplines.

VA1140 - Figure Drawing •

Students will develop their observational skills to see and analyze the human figure through focus on different principles of drawing using a variety of media in a sequence of exercises to develop insight into the form, structure and gesture of the human figure. Students will continue to contribute work to their personal portfolios.

Prerequisite(s): VA1110

VA1160 - Animation Drawing I

Students will explore the fundamental principles of cel animation using hand drawn sequential images and timing charts.

Co-requisite(s): VA1130

VA1161 - Animation Drawing II

Students will build upon the skills acquired in VA1160 Animation Drawing I and VA1130 Drawing Fundamentals. Through a series of exercises and applying advance principles of animation, students will learn to apply hand drawn sequential images and timing.

Prerequisite(s): VA1160; VA1130

VA1170 - 3D Design •

Students will utilize the elements and principles of art and design, and apply them to the conceptualization and creation of three-dimensional works of art. The three dimensions will be explored through the use of historical and contemporary media and approaches. Artwork will be analyzed through personal and peer critique. It will emphasize conceptual reasoning and consideration of material choice, craft, form, space, site, presentation and context. Students will select work from this course for their portfolios.

VA1180 - Time-based Media •

This course will look at how the concepts of time, movement and transformation are utilized within the creative industries. Students will focus on developing the basic concepts, tools, vocabulary and principles used in time-based creative processes to create visual narratives. A short-stop motion animation piece will be produced along with other related projects. It will provide a foundation for more advanced exploration of time-based media practices. Students will develop production and analytical skills through individual and collaborative projects.

Prerequisite(s): PY1150, VA1115

VA1185 - Studio Practice •

This course will develop the skills required for the production of a thematic body of artwork with an emphasis on conceptual and creative processes. Students will develop a written proposal for the production of artwork investigating a thematic concept through research of a topic, media choice and the technical processes required. The course will prepare students for specialized arts training programs that require skills in research, production and documentation of artwork.

VA1200 - Elements of Design

This is an introductory course in design elements. Students will be introduced to the main elements of design and explore basic design concepts through in-class activities; and how these elements can be used in visual communications. Students will have the opportunity to work through one main term project while applying their knowledge of the elements of design.

VA1201 - Principles of Design

This is an introductory course which discusses the basis of design principles for visual design. Students will be introduced to the principals of design and will explore their application through in class activities and a term project. Students will learn how these concepts apply to visual communications, and how they support the connection between the intent and content of a piece.

Prerequisite(s): VA1200

VA1230 - Graphic Design I

Students will gain a clear understanding of the elements and principles of design, and how they can be utilized for basic graphic arts tasks. Students will also be introduced to the role of the Graphic Designer in the graphics industry and will gain exposure to the basic operation of a design studio environment.

VA1231 - Graphic Design II

Students will develop graphic design skills using digital tools. A specific focus of the course is to introduce students to the design requirements of business, including information graphics, business stationery, signage and display advertising.

Prerequisite(s): VA1230, GA1120, GA1430

VA1400 - Colour Theory •

This introductory course offers students an opportunity to gain a basic understanding of the elements and principles of colour theory and how colour can be used to create more effective visual designs through using acrylic paints, and in combination with dye applications.

VA1600 - Sculpture for Animators

Students will design, document and transpose two dimensional character designs into three dimensional objects using a tactile approach, figurative subjects, and manual clay sculpture techniques.

Co-requisite(s): VA1130

VA2100 - Intermediate Drawing

This course will consolidate and refine skills developed in the Introduction to Drawing and Drawing Application courses. The use of various materials, compositions, and drawing techniques are stressed in relation to developing intermediate technique and style in drawing. With individualized guidance from the instructor, students are encouraged to develop more personal responses in all aspects of drawing.

Prerequisite(s): VA1101

VA2101 - Advanced Drawing

This course is designed to allow students to create a body of drawings which demonstrates their ability to make personal choices in all aspects of developing final drawings. Students will incorporate personal ideas and content in this body of work and continue to refine their use of various materials, composition and drawing techniques in consultation with the instructor.

Prerequisite(s): VA2100

VA2170 - Life Drawing

Students will develop drawing abilities and powers of observation using live models and the time honored practice of drawing from life.

Prerequisite(s): VA1130

VA2260 - Application of Design Theory I

This course is designed to consolidate and refine skills developed in the Elements of Design and Principles of Design courses. Particular attention is paid to developing a personal design process, an individual working method in design that allows the student to use design theory in practical applications. Students will work through a term project that looks at the different aspects of design and how sampled changes can enhance or alter a design concept.

Prerequisite(s): VA1201

VA2251 - Application of Design Theory II

In this course students will have the opportunity to design and produce a body of work that will reflect the accumulated knowledge and experience gained in previous design courses. Students will demonstrate their knowledge of intent and content to create successful and unique pieces, and work through a design process specific to the student. Particular attention is given to independent thinking and the development and creation of personal ideas in terms of style and content with further emphasis on critical analysis.

Prerequisite(s): VA2260

VA2800 - Package Design

Students will be introduced to the theory and practice of package design. Students will also be exposed to a variety of packaging concepts and options, and will apply their knowledge to the development of several packaging projects that will incorporate their own ideas. Students will develop packaging solutions that meet clients' needs using industry standard software.

Prerequisite(s): GA1120, GA1430, GA1640, PY1200, GA1220

VA3550 - Screening & Peer Critique

Students will engage in weekly peer review sessions during which all students will demonstrate the projects that they are working on. The intent is to enable each student to have projects critiqued by peers and the instructor for the program, while availing of the opportunity to learn from the creative applications of those same peers.

VT1100 - Behavior and Ethics •

This course introduces the study of domesticated animal behavior and behavior modifications. With this knowledge students will be able to work with the four main domestic species in a safe manner. Students will learn about regulation and investigate ethics as it pertains to the veterinary profession.

VT1105 - Introduction to Veterinary Technician Practice •

Safe handling of animals is of the utmost priority for veterinary technicians. This course will introduce the student to the profession including canine and feline restraint and handling procedures as well as basic physical examination

techniques. Students will be provided the opportunity to visit various veterinary facilities.

Co-requisite(s): VT1100

VT1110 - Immunology and Genetics •

This course will provide an introduction to the transmission of genetics, inheritance, pedigree, cell division, breed identification and genetic diseases. Various aspects of the immune system will also be examined with a focus on vaccine protocols.

VT1200 - Pharmacology and Physio •

This course will focus on the common medical issues in animals focusing on specific body systems. Students will focus on understanding the clinical signs, pathophysiology and treatment of these diseases. From a pharmacological perspective this course will cover legal classifications, storage, dosing and dispensing of drugs used in veterinary practice.

Prerequisite(s): MA1055, BL1070

VT1205 - Diagnostic Imaging I •

This course introduces radiation safety, patient positioning, diagnostic imaging techniques, contrast procedures and evaluating images for diagnostic acceptability using digital processing.

Prerequisite(s): BL1070, TM1150, VT1105

VT1210 - Parasitology •

This course includes the study of the helminth, protozoan, and arthropod parasites that affect animals and learn which parasites are important in North America. Students will focus on diagnostic features, life cycles, pathogenesis, control, and zoonotic potential. Students will learn to perform fecal exams and identify various parasite life cycle stages during laboratory exercises.

Prerequisite(s): CH1080

VT1215 - Hematology •

Students will be introduced to and develop skills in hematology. This will include blood cell morphology and CBC differential evaluation for the four major domestic species. There will also be an emphasis placed on lab and sample safety.

Prerequisite(s): CH1080, MA1055

VT1220 - Hospital & Office Management •

This course focuses on skills required to manage a veterinary office, including medical documentation, record keeping, veterinary office software, inventory control and managing pharmaceuticals. In addition, students will learn how to recognize and support individuals experiencing mental health issues.

Co-requisite(s): VT1200

VT1225 - Clinical Nursing •

This introduces commonly utilized examination and therapeutic techniques in a small animal veterinary facility. These will include ear/eye examinations, sample collection and injection techniques.

Prerequisite(s): VT1105, BL1070

VT1300 - Large Animal Medicine •

This course will provide students with the entry level knowledge needed in large/farm animal veterinary services. There will be a focus on husbandry, common diseases and production. Students will also gain experience in safe handling, restraint and treatment procedures for horses and ruminants.

Prerequisite(s): VT1225, VT1100

VT1305 - Nutrition •

Instruction is provided in the feeding of animals including an understanding of key nutritional factors in disease conditions and therapeutic foods. Advice and education to clients about feeding companion animals, including the prevention of obesity, specialty diets, prescription diets and common products used in veterinary practices are covered.

Prerequisite(s): MA1055

VT1310 - Anesthesia I •

Students are introduced to common anesthetic drug classes, analgesics and anesthetic equipment used in veterinary practice. This course covers the basics of monitoring animals during anesthesia; and describing the evaluation and management of pain.

Prerequisite(s): BL1070, VT1200, MA1055

VT1315 - Virology and Bacteriology •

Students will be introduced to bacteria and viruses of veterinary significance. Antimicrobials and their resistance will be explored as well as proper sample handling and evaluation. Viral structures and pathology will also be studied.

Prerequisite(s): CH1080

VT2105 - Advanced Nursing Skills I •

This course will introduce the student to advanced nursing techniques and procedures commonly used in veterinary hospitals. These will include sample collection, bandage/splint techniques and intravenous skills.

Prerequisite(s): VT1225

VT2110 - Anesthesia II •

This course introduces the principles of anesthetic management. Students will discuss parameters of preanesthetic management and post-operative care. In addition, students will learn how to intubate and apply blocks to control pain.

Prerequisite(s): VT1310

VT2115 - Clinical Pathology I •

In-house diagnostics are a mainstay of modern veterinary facilities. This course will introduce students to laboratory diagnostic tests and equipment used for serology and clinical chemistry evaluations. Students will also learn the importance of quality assurance/quality control programs.

Prerequisite(s): CH1080, MA1055

VT2120 - Surgical Skills •

Students will gain the required knowledge and skills needed to participate in sterile surgical procedures. There will be a focus on proper patient preparation and sterile techniques as well as the selection and care of surgical instruments and principles of instrument sterilization.

Co-requisite(s): VT2105

VT2125 - Exotics and Lab Animals •

This course focuses on the special needs for lab and exotic animals including handling practices, husbandry, animals used in research studies, lab specifications and injection and sample collections.

Prerequisite(s): VT1105, TM1150, VT1225

VT2130 - Diagnostic Imaging II •

This course will further students understanding and competencies in diagnostic imaging. There will be a focus on dental radiographs, large animal radiographic techniques and an introduction to basic ultrasound principles and techniques commonly used by veterinary technicians in practice.

Prerequisite(s): VT1205

VT2205 - Clinical Pathology II •

The use of diagnostic test kits and cell microscopy is commonplace in modern veterinary facilities. This course will prepare students for the use of point-of-care immunological test kits and abnormal cell cytological evaluation. Case reporting and management will be emphasized.

Prerequisite(s): VT2115

VT2210 - Surgery and Anesthesia •

Students will develop anesthetic protocols for animal species undergoing various surgical procedures and apply

modifications of protocol based on patient condition and health status. Students will be responsible for the care, preparation and post-surgical care of cases assigned and learn the skills required to be both a circulating and scrub nurse in the operating room. There is emphasis on surgical asepsis, patient management, and equipment and instrument management.

Prerequisite(s): VT2120, VT2110, VT2105, VT1215, VT2115

Co-requisite(s): VT2225, VT2205

VT2220 - Dental Procedures •

This course incorporates dental procedures for animals including oral examinations, disease recognition, care and use of dental equipment, home dental care. Students will perform routine dental prophylaxis and dental radiography on models.

Prerequisite(s): VT2130, VT2110

Co-requisite(s): VT2210

VT2225 - Advanced Nursing Skills II •

This course will introduce the learner to additional advanced nursing techniques and procedures commonly used in veterinary hospitals. These will include urinary sample collection and intravenous fluid therapy skills.

Prerequisite(s): VT2105

Co-requisite(s): VT2210

VT2230 - Urinalysis and Mycology •

Students will learn the diagnostic techniques needed for in-hospital evaluation of urine and effusions as well as vaginal cytology techniques. A portion of the course will be dedicated to the study in identification of common fungi seen in veterinary practices.

Prerequisite(s): CH1080

VT2300 - Clinical Placement •

In this course students will proficiently demonstrate knowledge and perform specific competencies, abilities and job tasks at the competency level for a Veterinary Technician, in a clinical setting.

Prerequisite(s): VT2210, VT2225, CM2215, VT1220, VT2130, VT2220, VT2205, VT2230, VT1315, VT1215, VT1210, VT1110, VT2125, VT1300, VT1305

WA1160 - Fluid Mechanics

This course is included in the Civil Engineering Technology program as an engineering science to provide the learner with a knowledge of the principles of fluid mechanics and knowledge to solve practical applied problems.

Prerequisite(s): MA1101; PH1101

WA1230 - Hydrology

This course is designed to introduce the learner to some of the major concepts of surface hydrology.

Co-requisite(s): MA1530

WC1155 - Work Term I

The work term provides a unique learning experience in a real work place setting. Work terms must be program relevant, 12-16 weeks in duration and be a normal work week in terms of at least 35 hours, remunerated (paid), and evaluated. Participation in the work term is determined through a competitive process and successful completion of all courses prior to the work term, with a Grade Point Average of at least 2.00 mandatory for work term eligibility.

This work term follows the successful completion of Semester 2. For most students, it represents their first professional work experience in a business environment and, as such, represents their first opportunity to evaluate their choice of pursuing a career in information technology. Students are expected to learn, develop, and demonstrate the high standards of behaviour and performance normally expected in the work environment.

During the on-the-job experience, students develop their employability and technical skills, further enhancing their personal growth. The students are learning from the new network of contacts and widening their perception of life and career choices.

Prerequisite(s): GPA 2.0, CM1400, CP1850, MA1900, CR2805, CR1130, CP1420, CM1401, CP3416, CP1935, CP1890,

WC1200 - Work Term I

For most learners, this work term represents their first experience in an Electrical engineering environment and therefore presents them with their first opportunity to evaluate their career choice. This work term follows the successful completion of Semester 6 in the Electrical Engineering Technology (Power and Controls) (Co-op) program. Learners are expected to learn, develop and demonstrate the high standards of behaviour and performance normally expected in the work environment. Learners will be evaluated by their employer and submit a work term report to the Co-op Office. This work term must be program relevant, a minimum of 10/11 weeks in duration, a normal work week of at least 35 hours, remunerated (paid) and evaluated.

Prerequisite(s): Eligibility according to Co-op regulations in current College calendar

WC1201 - Work Term II

The second work term provides learners possessing significant knowledge from the Electrical Engineering Technology (Power and Controls) (Co-op) program with the opportunity to contribute to an employer's operation. This work term follows the successful completion of Semester 8. Learners are expected to further develop and expand their knowledge and work-related skills, and should be able to accept increased responsibility and challenge in the workplace. In addition, learners are expected to demonstrate an ability to deal with increasingly complex concepts and problems. Learners should conscientiously assess the various opportunities relative to their individual interests. A substantive work report is also to be prepared by the learner demonstrating competence in both technical content and communication skills and submitted to the Co-op Office. This work term must be program relevant, a minimum of 12 weeks in duration, a normal work week of at least 35 hours, remunerated (paid) and evaluated.

Prerequisite(s): Eligibility according to Co-op regulations in current College calendar

WC1300 - Work Term I

For most students, this work term represents their first experience in a Geomatics/Surveying environment and, therefore presents them with their first opportunity to evaluate their career choice. This work term follows the successful completion of Semester 5 in the Geomatics/Surveying Engineering Technology (Co-op) Program. Students are expected to learn, develop and demonstrate the high standards of behavior and performance normally expected in the work environment. Students will be evaluated by their employer and submit a work term report to the Co-op Office. This work term must be program relevant, a minimum of 12 weeks in duration, a normal work week of at least 35 hours, remunerated (paid) and evaluated.

Prerequisite(s): Eligibility according to Co-op regulations in current College calendar.

WC1301 - Work Term II

The second work term provides students possessing significant knowledge from the Geomatics/Surveying Engineering Technology (Co-op) program with the opportunity to contribute to an employer's operation. This work term follows the successful completion of Semester 7. Students are expected to further develop and expand their knowledge and work-related skills and should be able to accept increased responsibility and challenge in the workplace. In addition, students are expected to demonstrate an ability to deal with increasingly complex concepts and problems. Students should conscientiously assess the various opportunities relative to their individual interests. A substantive work report is also to be prepared by the student demonstrating competence in both technical and communication skills and submitted to the Co-op Office. This work term must be program relevant, a minimum of 12 weeks in duration, a normal work week of at least 35 hours, remunerated (paid) and evaluated.

Prerequisite(s): Eligibility according to Co-op regulations in current College calendar.

WC1310 - Co-op Work Term

For most students, this work term represents their first experience in the field of Electronic Systems Engineering Technology and therefore presents them with their first opportunity to evaluate their career choice. This work term follows the successful completion of Semester 2 in the Electronic Systems Engineering Technology (Co-op) Program. Students are expected to learn, develop and demonstrate the high standards of behavior and performance normally expected in the work environment. Students will be evaluated by their employer and submit a work term report to the Co-op Office. This work term must be program relevant, a minimum of 12 weeks in duration, a normal work week of at least 35 hours, remunerated (paid) and evaluated.

Prerequisite(s): Eligibility according to Co-op regulations in current College calendar

WC1400 - Work Term I

For most students, this work term represents their first experience in an industrial engineering environment and therefore presents them with their first opportunity to evaluate their career choice. This work term follows the successful completion of Semester 5 in the Industrial Engineering Technology (Co-op) Program. Students are expected to learn, develop and demonstrate the high standards of behavior and performance normally expected in the work environment. Students will be evaluated by their employer and submit a major reflective work term assignment(s) to the Co-op Office. This work term must be program relevant, a minimum of 12 weeks in duration, a normal work week of at least 35 hours, remunerated (paid) and evaluated.

Prerequisite(s): Eligibility according to Co-op regulations in current College calendar

WC1401 - Work Term II

The second work term provides students possessing significant knowledge from the Industrial Engineering Technology (Co-op) program with the opportunity to contribute to an employer's operation. This work term follows the successful completion of Semester 7. Students are expected to further develop and expand their knowledge and work-related skills and should be able to accept increased responsibilities. In addition, students are expected to demonstrate an ability to deal with increasingly complex concepts and problems. Students should conscientiously assess the various opportunities relative to their individual interests. A major reflective assignment is also to be prepared by the student demonstrating competence in both technical content and communication skills and submitted to the Co-op Office. The emphasis of this assignment will be placed on the accumulated experiences and skill development over the course of both work terms. This work term must be program relevant, a minimum of 12 weeks in duration, a normal work week of at least 35 hours, remunerated (paid) and evaluated.

Prerequisite(s): Eligibility according to Co-op regulations in current College calendar.

WC1460 - Work Term

For most learners, this work term represents their first experience in a civil engineering environment and therefore presents them with their first opportunity to evaluate their career choice. This work term follows the successful completion of Semester 5 in the Civil Engineering Technology (Co-op) Program. Learners are expected to learn, develop and demonstrate the high standards of behavior and performance normally expected in the work environment. Learners will be evaluated by their employer and submit a work term report within four weeks of returning to classes. This work term must be program relevant, a minimum of 12 weeks in duration, a normal work week of at least 35 hours, remunerated (paid) and evaluated.

Prerequisite(s): Eligibility according to Co-op regulations in current College calendar

WC1520 - Co-op Work Term

This work term for most students represents their first professional work experience in a service/production environment and as such represents their first opportunity to evaluate their choice of pursuing a career in the Environmental Engineering Technology field. Students are expected to learn, develop, and demonstrate the high standards of behaviour and performance normally expected in the work environment. A substantive work report is also to be prepared by the student demonstrating competence in both technical content and communication skills.

Prerequisite(s): Eligibility according to Co-op regulations in current college calendar.

WC1700 - Work Term I

For most students, this work term represents their first experience in a computing systems engineering environment and therefore presents them with their first opportunity to evaluate their career choice. This work term follows the successful completion of Semester 5 in the Computing Systems Engineering Technology (Co-op) Program. Students are expected to learn, develop and demonstrate the high standards of behavior and performance normally expected in the work environment. Students will be evaluated by their employer and submit a major reflective work term assignment(s) to the Co-op Office. This work term must be program relevant, a minimum of 12 weeks in duration, a normal work week of at least 35 hours, remunerated (paid) and evaluated.

Prerequisite(s): Eligibility according to Co-op regulations in current College calendar

WC1701 - Work Term II

The second work term provides students possessing significant knowledge from the Computing Systems Engineering Technology (Co-op) program with the opportunity to contribute to an employer's operation. This work term follows the successful completion of Semester 7. Students are expected to further develop and expand their knowledge and work-related skills and should be able to accept increased responsibility and challenge in the workplace. In addition,

students are expected to demonstrate an ability to deal with increasingly complex concepts and problems. Students should conscientiously assess the various opportunities relative to their individual interests. A major reflective assignment is also to be prepared by the student demonstrating competence in both technical content and communication skills and submitted to the Co-op Office. This work term must be program relevant, a minimum of 12 weeks in duration, a normal work week of at least 35 hours, remunerated (paid) and evaluated.

Prerequisite(s): Eligibility according to Co-op regulations in current College calendar

WC1830 - Work Term

For most students, this work term represents their first experience in a chemical processing engineering environment and therefore presents them with their first opportunity to evaluate their career choice. This work term follows the successful completion of Semester 5 in the Chemical Process Engineering Technology (Co-op) Program. Students are expected to learn, develop and demonstrate the high standards of behavior and performance normally expected in the work environment. Students will be evaluated by their employer and submit a work term report to the Co-op Office. This work term must be program relevant, a minimum of 10/11 weeks in duration, a normal work week of at least 35 hours, remunerated (paid) and evaluated.

Prerequisite(s): Eligibility according to Co-op regulations in current College calendar

WC1850 - Co-op Work Term

For most students, this co-op work term represents their first experience in an Agricultural Industry environment and therefore presents them with their first opportunity to evaluate their career choice. This work term follows the successful completion of Semesters 1 & 2 in the Agriculture Technician 2 Year (Co-op) Program. Students are expected to learn, develop and demonstrate the high standards of behavior and performance normally expected in the work environment.

Prerequisite(s): Eligibility according to Co-op regulations in current College calendar

WC1900 - Work Term I

For most learners, this work term represents their first experience in a mechanical engineering environment and therefore presents them with their first opportunity to evaluate their career choice. This work term follows the successful completion of Semester 5 in the Mechanical Engineering Technology (Manufacturing) (Co-op) program. Learners are expected to learn, develop and demonstrate the high standards of behaviour and performance normally expected in the work environment. Learners will be evaluated by their employer and submit a work term report to the Co-op Office. This work term must be program relevant, a minimum of 12 weeks in duration, a normal work week of at least 35 hours, remunerated (paid) and evaluated.

Prerequisite(s): Eligibility according to Co-op regulations in current College calendar

WC1901 - Work Term II

The second work term provides learners possessing significant knowledge from the Mechanical Engineering Technology (Manufacturing) (Co-op) program with the opportunity to contribute to an employer's operation. This work term follows the successful completion of Semester 7. Learners are expected to further develop and expand the knowledge and work-related skills and should be able to accept increased responsibility and challenge in the workplace. In addition, learners are expected to demonstrate an ability to deal with increasingly complex concepts and problems. Learners should conscientiously assess the various opportunities relative to their individual interests. A substantive work report is also to be prepared by the learner demonstrating competence in both technical content and communication skills and submitted to the Co-op Office. This work term must be program relevant, a minimum of 12 weeks in duration, a normal work week of at least 35 hours, remunerated (paid) and evaluated.

Prerequisite(s): Eligibility according to Co-op regulations in current College calendar

WC2151 - Work Term II

This is the second work term exposure. The student is expected to further develop and expand her/his knowledge and work-related skills and should be able to accept increased responsibility and challenges. In addition, the student is expected to demonstrate an ability to deal with increasingly complex technical concepts and problems. The student should conscientiously assess the various opportunities relative to their individual interests and career aspirations.

The work term provides a unique learning experience in a real work place setting. Work terms must be program relevant, 12-16 weeks in duration and be a normal work week in terms of at least 35 hours, remunerated (paid), and evaluated. Participation in the work term is determined through a competitive process. During the on-the-job

experience, students develop their employability and technical skills, further enhancing their personal growth.

Prerequisite(s): GPA 2.0, MA1900, CR2805, CR1130, CP1420, CM1401, CP3416, CP1461, WC155, EP2410, CM2200, CP1210, CP2280, CP1945, PD2310

WC3151 - Work Term III

This is the final work term. The students should have sufficient academic grounding and work experience to contribute in a positive manner to the management and problem-solving processes needed and practiced in the work environment. The student should become better acquainted with her/his discipline of study, should observe and appreciate the attitudes, responsibilities, and ethics normally expected of information technology professionals and should exercise greater independence and responsibility in her/his assigned work functions.

The work term provides a unique learning experience in a real work place setting. The work terms must be program relevant, 12-16 weeks in duration and be a normal work week in terms of at least 35 hours, remunerated (paid), and evaluated. Participation in the work term is determined through a competitive process. During the on-the-job experience the student develops her/his employability and technical skills, further enhancing her/his personal growth.

Prerequisite(s): GPA 2.0, WC2151, MA1900, CR2805, CR1130, CP1420, CM1401, CP1520, CP1461, EP2410, CM2200, CP1945, PD2310, CP4471, CP2561, CP4281, CR1350, CP2845, CP1295

WD1290 - SMAW for NDT

This course provides training to students enrolled in the Non-Destructive Testing Technician program in Shielded Metal Arc Welding. Students will be introduced to SMAW as it relates to weld faults, causes for weld faults and means of prevention. Learners will also perform basic SMAW welds.

WD1440 - SMAW Fundamentals

This introductory course deals with welding technology and processes as applied to the metal fabricating industry using Shielded Metal Arc Welding (SMAW) processes. Safety practices are emphasized in all aspects of welding applications in the shop. Applications include welding preparations, welding basic joints, and cutting processes, safety and health in the welding industry; basic welding technology.

WD1450 - SMAW Processes

This course is a continuation of SMAW Fundamentals (WD1440) and deals with the fundamentals of welding processes as they relate to Shielded Metal Arc Welding (SMAW) welding, gouging, and cutting. It also introduces the learner to the fundamentals of causes of welding faults, the repair procedures associated with these faults and mechanisms to improve the strength of welds after the welding process has taken place.

Prerequisite(s): WD1440

WD2300 - Welding Failure Analysis

In properly performing a failure analysis, the learners will keep an open mind while examining and analyzing the evidence to foster a clear, unbiased perspective of the failure. Analyzing failures is a critical process in determining the physical root causes of problems. The process is complex, draws upon many different technical disciplines, and uses a variety of observation, inspection, and laboratory techniques.

Prerequisite(s): CF1101, CF2560

WD2450 - Welding Metallurgy

This course explores some of the procedural and metallurgical concerns and microstructures that may affect the weldability and integrity of welded connections in carbon manganese steels, low alloy steels, stainless steels, cast iron and nonferrous metals.

Prerequisite(s): CF1101

Co-requisite(s): WD2650

WD2620 - Wire Feed Arc Welding

This course introduces the learner to the more common industrial semi automatic arc welding processes, the process controls, limitations, and typical industrial applications. Welding processes include GMAW, FCAW, SAW, EGW and ESW. The learner will be required to demonstrate knowledge of and proficiency with the most common of the

welding processes noted.

Prerequisite(s): WD1450

WD2650 - GTAW Processes

This course is designed to introduce the learner with the theory and practice of Gas Tungsten Arch Welding (GTAW). The GTAW course includes the selection and set-up of equipment and accessories and their application to aluminum, steel and stainless steel Processes covered include manual and automated processes.

Prerequisite(s): WD1450

WD2680 - Welding Standards & Codes

This course introduces the learner to welding standards and codes related to the fabrication and inspection of pressure vessels, tanks, structures, and structural steels. Applicable codes such as ASME, Section VIII-1, and Section IX and CSA Standards W47.1, W59, W178.1, and W178.2 are discussed in detail. Other similar codes and standards such as ABS, Lloyds, AWS, and DNV will also be discussed and compared with ASME and CSA.

Prerequisite(s): WD1440; EG1310

WD3120 - Cost Analysis Project

The purpose of this course is to introduce the learner to the concepts involved in the design, costing and management of a welded assembly. Through completing the course the learner will set the specifications, develop drawings, plan timelines, prepare project costing, develop inspection and test plan. The learner will submit a document package that represents a proposal for the design and construction/fabrication of the welded assembly. The learner will present the completed proposal to an audience of their classmates and program instructors.

Prerequisite(s): All courses in previous academic semesters and a minimum cumulative GPA of 2.0

WF1200 - Oxy-Fuel Cutting for Industry

This course requires the student to perform practical activities using of automatic cutting equipment and manual cutting equipment. The course will perform practical exercises to accurately cut irregular shapes such as straight line cuts, bevel cuts, and structural shapes for pipe, angle iron and beams in various thicknesses of steel.

Prerequisite(s): WD1602

WF1300 - Capstone I Welder - Metal Fabricator

The capstone project enables the student completing Year 1 of the Welder Metal- Fabricator (Fitter) program to demonstrate the application of skills and comprehension developed throughout the program. Students taking this course will work with minimal supervision on a project, under the guidance of a faculty member. The student can work independently or in teams to plan for, prepare, document, complete and reflect on the project.

Prerequisite(s): AM1101, CM2161, WD1602

WF2100 - SMAW for Industry I

This course requires the use of Shielded Metal Arc Welding (SMAW) equipment. The SMAW Equipment will be used to weld open corner, tee joints and single bevel tee joint configurations in various positions. The student will be able to identify and repair various weld faults that have occurred.

Prerequisite(s): WD1620

WF2110 - SMAW for Industry II

This course requires the use of Shielded Metal Arc Welding equipment. This equipment is used in conjunction with F3 and F4 category electrodes to weld in vertical and overhead positions for open groove butt joint configurations. The student will be able to identify and repair various weld faults that have occurred.

Prerequisite(s): WF2100

WF2200 - FCAW for Industry

This course requires the use of Flux Core Arc Welding equipment. This equipment will be used to weld corner, and tee joint configurations in various positions. The student will be able to identify and repair various weld faults that have occurred.

Prerequisite(s): WD1892

WF2210 - GTAW for Industry

This course requires the use of Gas Tungsten Arc Welding equipment. This equipment will be used to weld steel plates, using hi-tensile mild steel electrodes in a 1F and 2F positions. Joint configurations include fillet welds on tee and corners in addition square butt, open root positions. The student will identify and repair various weld faults that have occurred.

Prerequisite(s): WD1641

WF2215 - Pipe Welding for Industry

This course requires the use of pipe welding equipment and processes. This equipment will be used to weld steel pipe using F3 and F4 electrodes in a 1G and 2G pipe joint positions. The student will be able to identify and repair various weld faults that have occurred. This course will enable the student to develop proficiency in various procedures of pipe welding and fitting, as well as expose the student to cutting, beveling, preparation, and fit-up of pipe prior to the welding process.

Prerequisite(s): WD1801

WF2300 - Capstone II Welder - Metal Fabricator

The capstone project enables the student completing Year 2 (two) of the Welder Metal- Fabricator (Fitter) program to demonstrate the application of skills and comprehension developed throughout the program. Students taking this course will work with minimal supervision on a project, under the guidance of a faculty member. The student can work independently or in teams to plan for, prepare, document, complete and reflect on the project.

Prerequisite(s): WF1300

WM1110 - Introduction to Gender Studies

This course considers gender, gender studies, and feminisms as areas of exploration from historical, contemporary, transnational, and interdisciplinary perspectives. The aim of this course is to provide a critical framework for thinking about questions regarding gender and related forms of social difference. This course is transferable to MUN Introduction to Gender Studies 1000.

WT1150 - Co-op Work Term

For most learners, this work term represents their first experience in a welding and fabrication engineering environment and therefore presents them with their first opportunity to evaluate their career choice. This work term follows the successful completion of Semester 2 in the Welding Engineering Technician (Co-op) program. Learners are expected to learn, develop, and demonstrate the high standards of behavior and performance normally expected in the work environment. Learners will be evaluated by their employer and submit a work term report to the Co-op Office. This work term must be program relevant, a minimum of 12 weeks in duration, a normal work week of at least 35 hours, remunerated (paid) and evaluated.

Prerequisite(s): Eligibility according to Co-op regulations in current College calendar

WT1185 - Work Term

The work term is a required portion of the program. The work term provides a unique learning experience in a real work place setting. Work terms must be program relevant, and 15 weeks in duration. Participation in the work term is determined through a competitive process and successful completion of all courses prior to the work term is mandatory for work term eligibility.

This work term follows the successful completion of the preceding academic term. For most students, it represents their first professional work experience in a business environment, and as such represents their first opportunity to evaluate their choice of pursuing a career in information technology. Students are expected to learn, develop, and demonstrate the high standards of behaviour and performance normally expected in the work environment.

During the on-the-job experience students develop their employability and technical skills, further enhancing their personal growth. Through the work term students will experience different business cultures (e.g., public, private, and not-for-profit sector, small and large organizations, etc.). They are learning from the new network of contacts and widening their perception of life and career choices.

Prerequisite(s): MA1521, CR1020, CP3125, CR1120, CM1401, CR1260, CR3456, CR2241, EP1130, CM2200, CR2231, CR2250, CR2265, CR2130, CR2970, CR2270, GPA 2.00

WT1400 - Work Term

For most learners, this work term represents their first experience in a petroleum engineering environment and therefore presents them with their first opportunity to evaluate their career choice. This work term follows the successful completion of Semester 5 in the Petroleum Engineering Technology (Co-op) Program. Learners are expected to learn, develop and demonstrate the high standards of behavior and performance normally expected in the work environment. Learners will be evaluated by their employer and submit a work term report to the Co-op Office. This work term must be program relevant, a minimum of 12 weeks in duration, a normal work week of at least 35 hours, remunerated (paid) and evaluated.

Prerequisite(s): Eligibility according to Co-op regulations in current College Calendar

WT1700 - Biomedical Practicum

This course provides comprehensive on-the-job training for Electronics Engineering Technology (Biomedical) learners in a setting within the health care engineering field. The duration of this particular section is seven weeks and will be scheduled upon the successful completion of the eighth semester. Learners will choose among a variety of differing work environments such as placement in a hospital biomedical engineering department or a private sector medical supply company. Learners' abilities will be assessed by the Employer and the College staff.

Prerequisite(s): Completion of all academic subjects and a cumulative GPA above 2.00; Certificate of completion of Government of NL PHIA course; Signed and witnessed Confidentiality Agreement; Current letter of conduct and vulnerable sector clearance

WT4300 - Work Term II

This is the second work term in the Bachelor of Applied Information Technology: Systems and Network Cybersecurity. This course will provide students with a greater exposure to the skill sets and industries required to be successful in their career. On this work term, the student is expected to further develop and expand their knowledge and accept increased responsibility and work-related challenges. In addition, the student is expected to demonstrate an ability to deal with increasingly complex technical concepts and problems. The student should conscientiously assess the various opportunities relative to their individual interests and career aspirations.

Placements are directly related to the student's program of study and provide learning experiences not available in the classroom setting. Work terms provide career-related experience, and workplace abilities that employer's value when hiring new employees. The placement will provide a unique learning experience in a real business setting.

The College will make every effort to find a suitable placement for students; however, ultimately it is the responsibility of a student to find a placement that satisfies the criteria of the program.

Placements could include positions at:

- For profit companies
- Government agencies
- Charitable organizations
- Not-for-profits
- Humanitarian organizations
- Sports organizations
- Clinical and medical settings where it is not the industry practice to pay students
- Start-ups and new entrepreneurial ventures

The work term opportunity follows the successful completion of Semester 9. Students are expected to learn, develop, and demonstrate the high standards of behavior and performance normally expected in the work environment.

Work terms must be program relevant, 15 weeks in duration and be a normal work week of at least 35 hours. Participation will be determined through a competitive process and successful completion of all courses, with a Grade Point Average of at least 2.00.

Students will compile a Work Term Logbook and write a Work term Reflective Report, both to be submitted before the end of the first week of the next semester.

Prerequisite(s): GPA 2.00, WT1185, CR4100, CR4120, CR4105, CR4110, CR4210, CP1855, MN1520, CR4215, CP4450, CR4200, CR4205, PD4400
